The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
*Washington, D.C., April 12, 1978.*

*To the Senate:*

Under the provisions of rule I, section 3, of the Standing Rules of the Senate, I hereby appoint the Honorable WILLIAM D. HATHAWAY, a Senator from the State of Maine, to perform the duties of the Chair.

JAMES O. EASTLAND,
*President pro tempore.*

Mr. HATHAWAY thereupon assumed the chair as Acting President pro tempore.

## SPECIAL ORDER

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from New Mexico (Mr. DOMENICI) is recognized, as in legislative session, for not to exceed 15 minutes.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the distinguished minority leader may have control of Mr. DOMENICI's time.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I understand the assistant majority leader has a request. I will yield to him briefly, and then I want to yield the remainder of the time to the distinguished Senator from Kansas.

## CHILD ABUSE PREVENTION AND TREATMENT AND ADOPTION REFORM ACT OF 1978

Mr. CRANSTON. Mr. President, as in legislative session I ask that the Chair lay before the Senate a message from the House of Representatives on H.R. 6693.

The PRESIDING OFFICER laid before the Senate the following message from the House of Representatives:

*Resolved*, That the House agree to the amendments of the Senate to the bill (H.R. 6693) entitled "An Act to amend the Child Abuse Prevention and Treatment Act to extend the authorization of appropriations contained in such Act, and for other purposes", with the following amendments:

Strike out the matter proposed to be inserted by the Senate amendment to the text of the bill and insert in lieu thereof the following:

That this Act may be cited as the "Child Abuse Prevention and Treatment and Adoption Reform Act of 1978".

TITLE I—AMENDMENTS TO CHILD ABUSE PREVENTION AND TREATMENT ACT

NATIONAL CENTER ON CHILD ABUSE AND NEGLECT

SEC. 101. Section 2 of the Child Abuse Prevention and Treatment Act (42 U.S.C. 5101) (hereinafter in this title referred to as "the Act") is amended by—

(1)(A) striking out "and publish" and inserting in lieu thereof "publish, and disseminate" in clause (1) of subsection (b);

(B) striking out "and publish" and inserting in lieu thereof a comma and "publish, and disseminate" in clause (3) of subsection (b);

(C) striking out "and" after clause (5) of subsection (b);

(D) striking out the period at the end of clause (6) of subsection (b) and inserting in lieu thereof a semicolon and "and"; and

(E) adding after clause (6) of subsection (b) the following:

"(7) in consultation with Federal agencies serving on the Advisory Board on Child Abuse and Neglect (established by section 6 of this Act), prepare a comprehensive plan for seeking to bring about maximum coordination of the goals, objectives, and activities of all agencies and organizations which have responsibilities for programs and activities related to child abuse and neglect, and submit such plan to such Advisory Board not later than twelve months after the date of enactment of this clause. The Secretary shall establish research priorities for making grants or contracts under clause (5) of this subsection and, not less than sixty days before establishing such priorities, shall publish in the Federal Register for public comment a statement of such proposed priorities.";

(2) inserting at the end of subsection (c) the following new sentences: "Grants may be made under subsection (b)(5) for periods of not more than three years. Any such grant shall be reviewed at least annually by the Secretary, utilizing peer review mechanisms to assure the quality and progress of research conducted under such grant."; and

(3) adding after subsection (c) the following new subsection:

"(d) The Secretary shall make available to the Center such staff and resources as are necessary for the Center to carry out effectively its functions under this Act.".

DEFINITION

SEC. 102. Section 3 of the Act (42 U.S.C. 5102) is amended by—

(1) inserting "or exploitation" after "sexual abuse"; and

(2) inserting a comma and "or the age specified by the child protection law of the State in question," after "eighteen".

DEMONSTRATION OR SERVICE PROGRAMS AND PROJECTS

SEC. 103. Section 4 of the Act (42 U.S.C. 5103) is amended by—

(1) amending subsection (a) by—

(A) inserting "or service" after "demonstration" in the first sentence;

(B) striking out "the development and establishment of" in clause (1); and

(C) striking out the last sentence of such subsection;

(2) amending subsection (b) by—

(A) striking out in paragraph (1) "Of the sums" and all that follows through "grants" and inserting in lieu thereof "The Secretary, through the Center, is authorized to make grants", and striking out "for the payment of reasonable and necessary expenses"; and

(B) inserting in paragraph (2) immediately below clause (J) the following new sentence: "If a State has failed to obligate funds awarded under this subsection within eighteen months after the date of award, the next award under this subsection made after the expiration of such period shall be reduced by an amount equal to the amount of such unobligated funds unless the Secretary determines that extraordinary reasons justify the failure to so obligate."; and

(3) amending the heading for such section to read as follows:

"DEMONSTRATION OR SERVICE PROGRAMS AND PROJECTS", AUTHORIZATION OF APPROPRIATIONS, EARMARKING, AND SEXUAL ABUSE CENTERS

SEC. 104. Section 5 of the Act (42 U.S.C. 5104) is amended by—

(1) striking out "and" after "1975," and striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "$25,000,000 for the fiscal year ending September 30, 1978, $27,500,000 for the fiscal year ending September 30, 1979, and $30,000,000 each for the fiscal years ending September 30, 1980, and September 30, 1981, respectively. Of the funds appropriated for any fiscal year under this section, not less than 50 per centum shall be used for making grants or contracts under sections 2(b)(5) (relating to research) and 4(a) (relating to demonstration or service projects), giving special consideration to continued Federal funding of child abuse and neglect programs or projects (previously funded by the Department of Health, Education, and Welfare) of national or regional scope and demonstrated effectiveness, and not less than 25 per centum shall be used for making grants or contracts under section 4(b)(1) (relating to grants to States) for the fiscal years ending September 30, 1978, and September 30, 1979, respectively, and not less than 30 per centum shall be used for making grants or contracts under section 4(b)(1) (relating to grants to States) for each of the fiscal years ending September 30, 1980, and September 30, 1981, respectively."; and

(2) inserting "(a)" after "SEC. 5." and adding at the end thereof the following new subsection:

"(b)(1) There are authorized to be appropriated $3,000,000 for the fiscal year ending September 30, 1978, $3,500,000 for the fiscal year ending September 30, 1979, and $4,000,000 each for the fiscal years ending September 30, 1980, and September 30, 1981, respectively, for the purpose of making grants and entering into contracts (under sections 2(b)(5) (relating to research), 4(a) (relating to demonstration or services projects), and 4(b)(1) (relating to grants to States)) for programs and projects (including the support of not less than three Centers for the provision of treatment, and personnel training, and other related services) designed to prevent, identify, and treat sexual abuse of children, including programs involving the treatment of family units, programs for the provision of treatment and related services to persons who have committed acts of sexual abuse against children, and programs for the training of personnel.

"(2) Of the sums appropriated under this subsection, not more than 10 per centum shall be expended under section 2(b)(5) (relating to research).

"(3) As used in this subsection, the term—

"(A) 'sexual abuse' includes the obscene or pornographic photographing, filming, or depiction of children for commercial purposes, or the rape, molestation, incest, prostitution, or other such forms of sexual exploitation of children under circumstances which indicate that the child's health or welfare is harmed or threatened thereby, as determined in accordance with regulations prescribed by the Secretary; and

"(B) 'child' or 'children' means any individual who has not attained the age of eighteen.

"(4)(A) Nothing contained in the provisions of this subsection shall be construed as prohibiting the use of funds appropriated under subsection (a) for programs and projects described in subsection (b), nor be construed to prohibit programs or projects receiving funds under subsection (a) from receiving funds under subsection (b).

"(B) No funds shall be obligated or expended under this subsection unless an amount at least equal to the amount of funds appropriated in fiscal year 1977 has been appropriated for programs and projects under subsection (a) for any succeeding fiscal year.".

ADVISORY BOARD

SEC. 105. Section 6 of the Act (42 U.S.C. 5105) is amended by—

(1) inserting before the period at the end of the first sentence in subsection (a) a comma and "and not less than three members from the general public with experience or expertise in the field of child abuse and neglect";

(2) striking out "administered" both places it appears in the second sentence in subsection (a) and inserting in lieu thereof "planned, administered,"; and

(3) striking out subsection (b) and subsection (c) and inserting in lieu thereof the following new subsections:

"(b) The Advisory Board shall review the comprehensive plan submitted to it by the Center pursuant to section 2(b)(7), make such changes as it deems appropriate, and submit to the President and the Congress a final such plan not later than eighteen months after the effective date of this subsection.

"(c) Members of the Advisory Board, other than those regularly employed by the Federal Government, while serving on business of the Advisory Board, shall be entitled to receive compensation at a rate not in excess of the daily equivalent payable to a GS–18 employee under section 5332 of title 5, United States Code, including traveltime; and, while so serving away from their homes or regular places of business, they may be allowed travel expenses (including per diem in lieu of subsistence) as authorized by section 5703 of such title for persons in the Government service employed intermittently.".

## TITLE II—ADOPTION OPPORTUNITIES

FINDINGS AND DECLARATION OF PURPOSE

SEC. 201. The Congress hereby finds that many thousands of children remain in institutions or foster homes solely because of legal and other barriers to their placement in permanent, adoptive homes; that the majority of such children are of school age, handicapped, or both; that adoption may be the best alternative for assuring the healthy development of such children; that there are qualified persons seeking to adopt such children who are unable to do so because of barriers to their placement; and that, in order both to enhance the stability and love of the child's home environment and to avoid wasteful expenditures of public funds, such children should not be maintained in foster care or institutions when adoption is appropriate and families for them can be found. It is, therefore, the purpose of this title to facilitate the elimination of barriers to adoption and to provide permanent and loving home environments for children who would benefit by adoption, particularly children with special needs by—

(1) promoting the establishment of model adoption legislation and procedures in the States and territories of the United States in order to eliminate jurisdictional and legal obstacles to adoption; and

(2) providing a mechanism for the Department of Health, Education, and Welfare to (A) promote quality standards for adoption services (including preplacement, postplacement, and postadoption counseling and standards to protect the rights of children in need of adoption), and (B) provide for a national adoption and foster care information data gathering and analysis system and a national adoption information exchange system to bring together children who would benefit by adoption and qualified prospective adoptive parents who are seeking such children.

MODEL ADOPTION LEGISLATION AND PROCEDURES

SEC. 202. (a) Not later than eighteen months after the date of enactment of this Act, the Secretary of Health, Education, and Welfare (hereinafter referred to as the "Secretary") shall issue, based on the recommendations of the panel described in subsection (b) of this section, proposed model adoption legislation and procedures and publish such proposal in the Federal Register for comment. After soliciting and giving due consideration to the comments of interested individuals, groups, and organizations and consulting further with such panel, the Secretary shall issue and publish model adoption legislation and procedures which shall not conflict with the provisions of any interstate compact in operation pursuant to which States are making, supervising, or regulating placements of children.

(b)(1) Not later than ninety days after the date of enactment of this Act, the Secretary shall appoint a panel (hereinafter referred to as the "panel") to be composed of not less than eleven nor more than seventeen members generally representative of public and voluntary organizations, agencies, and persons interested and with expertise and experience in facilitating the achievement of the purposes of this title (including, but not limited to, National, State, and local child welfare organizations, including those representative of minorities, and adoptive parent organizations). The panel shall (A) review current conditions, practices, and laws relating to adoption, with special reference to their effect on facilitating or impeding the location of suitable adoptive homes for children who would benefit by adoption and the completion of suitable adoptions for such children; and (B) not later than twelve months after the date on which the members of the panel have been appointed, propose to the Secretary model (including adoption assistance agreement) legislation and procedures relating to adoption designed to facilitate adoption by families of all economic levels.

(2) The panel shall be terminated thirty days after the Secretary publishes the final model legislation and procedures pursuant to subsection (a) of this section.

(3) Members of the panel, other than those regularly employed by the Federal Government, while serving on business of the panel shall be entitled to receive compensation at a rate not in excess of the daily equivalent of the rate payable to a GS–18 employee under section 5322 of title 5, United States Code, including traveltime; and, while so serving away from their homes or regular places of business, they may be allowed travel expenses (including per diem in lieu of subsistence) as authorized by section 5703 of such title for persons in the Government service employed intermittently.

(c) The Secretary shall take such steps as he or she deems necessary to encourage and facilitate the enactment in each State of comprehensive adoption assistance legislation and the establishment in each State of the model legislation and procedures published pursuant to subsection (a) of this section.

INFORMATION AND SERVICES

SEC. 203. (a) The Secretary shall establish in the Department of Health, Education, and Welfare an appropriate administrative arrangement to provide a centralized focus for planning and coordinating of all departmental activities affecting adoption and foster care and for carrying out the provisions of this title. The Secretary shall make available such consultant services and personnel, together with appropriate administrative expenses, as are necessary for carrying out such purposes.

(b) In connection with carrying out the provisions of subsection (a) of this section, the Secretary shall—

(1) provide (directly or by grant to or contract with public or private nonprofit agencies and organizations) for the establishment and operation of a national adoption and foster care data gathering and analysis system utilizing data collected by States pursuant to requirements of law;

(c) conduct (directly or by grant to or contract with public or private nonprofit agencies or organizations) an education and training program on adoption, and prepare, publish, and disseminate (directly or by grant to or contract with public or private nonprofit agencies and organizations) to all interested parties, public and private agencies and oragnizations (including, but not limited to, hospitals, health care and family planning clinics, and social services agencies), and governmental bodies, information and education and training materials regarding adoption and adoption assistance programs.

(3) notwithstanding any other provision of law, provide (directly or by grant to or contract with public or private nonprofit agencies or organizations) for (A) the operation of a national adoption information exchange system (including only such information as is necessary to facilitate the adoptive placement of children, utilizing computers and data processing methods to assist in the location of children who would benefit by adoption and in the placement in adoptive homes of children awaiting adoption); and (B) the coordination of such system with similar State and regional systems;

(4) provide directly or by grant to or contract with public or private nonprofit agencies or organizations, including parent groups) for the provision of technical assist-

ance in the planning, improving, developing, and carrying out of programs and activities relating to adoption; and

(5) consult with other appropriate Federal departments and agencies in order to promote maximum coordination of the services and benefits provided under programs carried out by such departments and agencies with those carried out by the Secretary, and provide for the coordination of such aspects of all programs within the Department of Health, Education, and Welfare relating to adoption.

STUDY OF UNLICENSED ADOPTION PLACEMENT

SEC. 204. The Secretary shall provide for a study (the results of which shall be reported to the appropriate committees of the Congress not later than eighteen months after the date of enactment of this Act) designed to determine the nature, scope, and effects of the interstate (and, to the extent feasible, intrastate) placement of children in adoptive homes (not including the homes of stepparents or relatives of the child in question) by persons or agencies which are not licensed by or subject to regulation by any governmental entity.

AUTHORIZATION OF APPROPRIATIONS

SEC. 205. There are authorized to be appropriated $5,000,000 for the fiscal year ending September 30, 1978, and such sums as may be necessary for the succeeding three fiscal years to carry out this title.

Amend the Senate amendment to the title of the bill so as to read: "An Act to promote the healthy development of children who would benefit from adoption by facilitating their placement in adoptive homes, to extend and improve the provisions of the Child Abuse Prevention and Treatment Act, and for other purposes.".

Mr. CRANSTON. Mr. President, I rise to urge my colleagues to support the compromise agreement on H.R. 6693, the Child Abuse Prevention and Treatment and Adoption Reform Act of 1978, which was passed unanimously Monday by the House.

Mr. President, this measure will provide authorizations of appropriations for an additional 4 years for the child abuse prevention and treatment program established within the Department of Health, Education, and Welfare by Public Law 93–247. It will also provide authorization of appropriations for two new programs: One dealing with sexual abuse or exploitation of children and the other dealing with adoption reform—an area which has been of great concern to me for a number of years.

Mr. President, the House passed a 5-year extension of the Child Abuse Prevention and Treatment Act last fall. We substituted for the House-passed H.R. 6693, the provisions of S. 961, as amended, which contained two titles, one dealing with the child abuse program and the other incorporating an adoption reform measure, and sent the amended bill back to the House on October 27, 1977. The Senate-passed amendment provided a 2-year extension of the authorization of appropriations for the child abuse prevention, and treatment program, along with authorizations for a new sexual abuse treatment program modified based on my subsequent work and the adoption reform initiative. The adoption reform provisions had been modified based on my subsequent work with the administration on S. 1928, the major provisions of which regarding adoption assistance and foster care protections have been incorporated by the Finance Committee in H.R. 7200 as reported by that committee. The compromise agreement which we have been able to work out with the Members of the other body includes each of these activities, along with various provisions strengthening the Child Abuse Prevention and Treatment Act.

Mr. President, in order that all Senators and the public may fully understand the various agreements reached in arriving at the compromise measure, I ask unanimous consent that there be printed in the RECORD at the conclusion of my remarks a document, prepared with the House committee, in lieu of a joint explanatory statement accompanying a conference report, entitled, "H.R. 6693—Joint Explanatory Statement of House Bill, Senate Amendment, and Compromise Agreement," followed by a text of existing law showing changes made by the compromise agreement, and the full text of the House amendment.

The PRESIDING OFFICER. Without objection it is so ordered.

(See exhibit 1.)

Mr. CRANSTON. Mr. President, I would like to explain in summary fashion the provisions of the compromise agreement reached with the members of the Committee on Education and Labor of the other body.

TITLE I

Mr. President, title I of H.R. 6693 would amend the provisions of the Child Abuse Prevention and Treatment Act (Public Law 93–247) to provide authorization of appropriations for an additional 4 years, as well as certain amendments to the existing law to strengthen the on-going child abuse prevention and treatment program.

ACTIVITIES OF THE NATIONAL CENTER ON CHILD ABUSE AND NEGLECT

The compromise agreement contains a number of provisions—taken from both the House bill and the Senate amendment—to enhance the activities and contributions made by the National Center on Child Abuse and Neglect which was established within the Department of Health, Education, and Welfare by Public Law 93–247.

The existing law provides that the Secretary of Health, Education, and Welfare, shall, through the national center, carry out a variety of functions under the act. The compromise agreement contains the following provisions relating to these activities by the national center.

First, the legislation directs the national center to "disseminate" as well as "compile, analyze, and publish" research and training materials. This provision should insure that the information and data collected by the national center is made more readily available to researchers and other interested individuals and organizations.

Second, the national center is directed to prepare a comprehensive plan for seeking to bring about maximum coordination of the goals, objectives, and activities of all agencies and organizations involved in child abuse and neglect. This provision—part of the Senate amendment—is designed to assure the development of maximum coordination among the various agencies and organizations involved in child abuse prevention and treatment. The compromise agreement also provides for review of the plan developed by the national center by the Advisory Board on Child Abuse and Neglect, also established by Public Law 93–247.

Third, the compromise agreement provides for the establishment of research priorities for making grants or contracts under the act, and publication of proposed priorities in the Federal Register for public comment. This provision should encourage the active participation of researchers and program personnel in focusing and directing the research activities carried out under the child abuse prevention and treatment program.

Fourth, the compromise agreement contains provisions authorizing the center to make 3-year grants for research from a single year's appropriation. While the center currently has authority under HEW policies to make grants for more than 3 years out of multiple year appropriations, this new provision will enable the center to make multiple year grants from a single year's appropriation. This provision provides for annual review, utilizing peer review mechanisms to assure the quality and progress of research conducted under such grants. These provisions should strengthen the ability of the national center to carry out longitudinal studies.

Fifth, the Secretary is directed to make available to the national center the necessary staff and resources for the center to carry out effectively its functions. Both Senate and House authorizing committees have been concerned that insufficient staff and resources have been made available to the national center in the past. It is expected that the Secretary will promptly take the necessary steps to rectify this problem.

AMENDMENTS TO DEFINITIONS OF CHILD ABUSE

The legislation contains two amendments to the definition of child abuse and neglect in section 102 of the act.

First, the definition is amended to add "or exploitation" after "sexual abuse." This amendment will make it clear that sexual exploitation of children—such as is occuring in the disturbing epidemic of child pornography—will be covered under the act.

Second, the definition of "child" is amended to allow the age of the child to be defined by State law. This provision from the Senate amendment is aimed at allowing those several States whose child abuse laws specify maximum ages below 18 to participate in the State grant program under the act.

AMENDMENTS TO DEMONSTRATION PROGRAM AUTHORITY

Under the existing law, 50 percent of the funds appropriated under the act are earmarked for grants and contracts under section 4(a) of the act. Section 4(a) authorizes the Secretary, through the center, to make grants and contracts with public agencies or nonprofit private organizations for demonstration programs and projects designed to prevent, identify, and treat child abuse and neglect.

The amendment in the compromise agreement will authorize the Secretary to make these grants and contracts for service, as well as demonstration programs and, as provided in the Senate amendment, will also include research grants and contracts within the 50 percent earmark. This provision will authorize the Secretary to fund programs under the act which are no longer considered demonstration programs or to fund new programs which are service, rather than demonstration, in nature. Additionally, the compromise agreement includes the Senate provision that special consideration be given to refunding of programs or projects of national or regional scope and demonstrated effectiveness.

STATE GRANT PROGRAM

The compromise agreement makes several changes in the State grant program set forth in section 4(b) of the act.

First, it provides that the State grant program, as are the research and demonstration programs, will be carried out through the national center.

Second, it provides, as did the Senate amendment, for a reduction in grants awarded to a State which fails to obligate funds within 18 months after its award. This provision is designed to encourage States to utilize funds awarded under the act in a more expeditious manner.

Additionally, as a compromise between the House and Senate provisions, the percentage of funds earmarked for the State grant program is increased from not less than 5 percent, nor more than 20 percent, under existing law, to not less than 25 percent for each of fiscal years 1978 and 1979 and not less than 30 percent for each of fiscal years 1980 and 1981. These increases will provide the States with needed resources to continue and expand State efforts regarding child abuse and neglect problems.

ADVISORY BOARD ON CHILD ABUSE AND NEGLECT

The compromise agreement also makes several changes in the law relating to the composition and functions of the Advisory Board on Child Abuse and Neglect established under Public Law 93-247.

First, the amendment includes the Senate provision that not less than three public members be added to the Advisory Board, which now consists of representatives from the various Federal agencies involved in child abuse and neglect programs. This provision is important to insure public input into the activities and deliberations of the Advisory Board.

Second, the amendment includes the Senate provision that the Advisory Board members shall discuss the planned, as well as existing activities, of their various agencies in the area of child abuse and neglect and that the Advisory Board shall review the comprehensive plan prepared by the national center and submit the plan to the President and Congress no later than 18 months after enactment.

NEW PROGRAMS RELATING TO SEXUAL ABUSE OF CHILDREN

Mr. President, this legislation blends together the House and Senate provisions to authorize the appropriation of funds for a new program to deal with sexual abuse of children. This new provision authorizes the appropriation of $3 million for fiscal year 1978, $3.5 million for fiscal year 1979, and $4 million each for fiscal years 1980 and 1981. These funds will be used for the funding of programs and projects, including not less than three centers for the provision of treatment, personnel training, and other related services, including programs involving the treatment of family units, programs for the provision of treatment and other related services to persons who have committed acts of sexual abuse, and programs for the training of personnel. The legislation also provides that not more than 10 percent of the sums appropriated under this authority are to be used for research activities.

Included is the Senate provision that child abuse programs receiving other support under the act may receive additional funds under this authorization for sexual abuse programs, that ongoing child abuse programs dealing with sexual abuse of children may continue to do so with other funds appropriated under this act and, finally, that no funds are authorized to be obligated and expended for the new sexual abuse programs unless funds are appropriated for the child abuse and neglect programs at at least the fiscal year 1977 level. This provision is to insure that the level of funding for child abuse programs generally is not reduced in order to meet the need to address the problems of sexual abuse of children.

TITLE II

Mr. President, title II of the H.R. 6693 compromise agreement contains the Adoption Reform Act of 1977 which the Senate passed on October 27, 1977, as part of the substitute for the House-passed H.R. 6693.

Mr. President, I am delighted to report that the Members of the other body agreed to accept these provisions from the Senate amendment without substantive change or modification. As my colleagues well know, I have sought the enactment of adoption reform legislation for the past several years. The passage of title II of H.R. 6693 represents the first major step toward enactment of comprehensive adoption reform measures that are vitally essential to facilitate the placement of thousands and thousands of children presently locked into the uncertainties of the foster-care system.

Mr. President, title II of H.R. 6693 represents the culmination of almost 6 years of research, drafting, counseling with experts in the adoption field, redrafting, and introduction into the legislative process—first in the 93d Congress, and again in the 94th. The first hearings on the adoption proposals were held during the summer of 1975 by the former chairman of the Senate Subcommittee on Children and Youth, now Vice President MONDALE. When we were unsuccessful because of time pressures last Congress in securing Senate passage of the Opportunities for Adoption Act, I introduced the new version—S. 961—in the 95th Congress.

BACKGROUND

I called hearings on S. 961 on April 4, 1977, as one of my first actions as chairman of the newly designated Subcommittee on Child and Human Development of the Human Resources Committee. The hearings dramatically demonstrated the disincentives to adoption inherent in our present foster-care system, and demonstrated as well that there are many compassionate adults who are eager to shower love and affection on children with special needs if only they could be freed from the limbo of foster care. The hearings increased my own enthusiasm about the prospect of providing more meaningful and stable lives for many of these youngsters who in the present system have no hope of ever returning to their homes of birth, and for making a real difference in the otherwise uncertain, too often hopeless lives of thousands of children.

ADMINISTRATION SUPPORT

Shortly after the hearings, Mr. President, Vice President MONDALE, prompted by congressional concern, initiated discussions within the administration in an effort to accelerate work on proposals for reform in this area. Last July after scores of hours of discussion and negotiations within the administration and between congressional staffs and HEW and White House staffs, the Vice President unveiled a major administration proposal to reform the present Federal foster care system and to remove the present disincentives to the adoption of "special needs" children which our foster care system perpetuates. Two weeks later, on July 26, I introduced on behalf of the administration legislation embodying that proposal—S. 1928, the proposed Child Welfare Amendments of 1977. S. 1928 was referred to the Committee on Finance, and was considered by the committee in conjunction with its work on H.R. 7200, the House-passed legislation to amend the Social Security Act. Last November the Finance Committee reported H.R. 7200 with the adoption provisions in S. 1928 accepted virtually intact as part of H.R. 7200.

The adoption provisions of S. 1928 and H.R. 7200 were derived from section 103 of S. 961 as reported by the Human Resources Committee, which authorized Federal financial participation in adoption assistance programs. Briefly, the Finance Committee bill specifically would permit the use of foster care maintenance money—title IV-A of the Social Security Act—and medicaid funds—title XIX of the Social Security Act—for adoption assistance to meet the costs associated with caring for a "special needs" child who might otherwise have been relegated to spending his or her childhood years in foster-care placements.

The passage of the adoption provisions of H.R. 7200, along with title II of H.R. 6693, will provide for a comprehensive mechanism to facilitate the adoptive placement of "special needs" children and the overall reform of adoption policies and practices. This constitutes a truly giant step forward for the estimated 120,000 children now in foster

care waiting—sometimes endlessly—to be adopted.

Mr. President, I will briefly summarize the provisions of title II of H.R. 6693.

MODEL ADOPTION LEGISLATION AND PROCEDURES

First, title II provides for the appointment by the Secretary of Health, Education, and Welfare of an advisory panel to recommend, to the Secretary, model adoption legislation and procedures to facilitate the interstate adoption of children. This panel shall be composed of persons generally representative of public and voluntary organizations and agencies and persons interested and with expertise and experience in adoption. Not less than 18 months after the date of enactment of this act, the Secretary shall issue proposed model adoption legislation and procedures based upon the recommendations of the panel, and shall publish such proposed models in the Federal Register for public comment. Thereafter, the Secretary shall issue the final version of the model law and procedures.

ADOPTION INFORMATION AND SERVICES

Title II further provides that the Secretary shall establish in the Department of Health, Education, and Welfare an appropriate administrative arrangement to provide a centralized focus for planning and coordinating of all departmental activities affecting adoption and foster care and for carrying out the provisions of this title. This planning and coordination would relate to all departmental activities in this field, including those to be carried out pursuant to the provisions of H.R. 7200 I have just described. In connection with this responsibility, the legislation also directs the Secretary to provide for the establishment and operation of a national adoption and foster care data-gathering and analysis system. This system, utilizing data collected under other requirements of law—such as the Social Security Act amendments in H.R. 7200—should provide us for the first time with comprehensive, national data reflecting the patterns of foster care and adoptive placement throughout the States, the District of Columbia, and the territories and possessions.

Title II also requires the Secretary to conduct an education and training program on adoption and to disseminate information and education and training materials regarding adoption and adoption assistance programs, as well as to provide technical assistance to all interested agencies and organizations.

ADOPTION INFORMATION EXCHANGE

Mr. President, one of the most important features of title II is the provision directing the Secretary to provide for—directly or by grant or contract—the operation of a national adoption information exchange system to assist in the location of children who would benefit by adoption and in the placement in adoptive homes of children awaiting adoption and to coordinate the system with similar State and regional systems. The Adoption Resources Exchange of North America, ARENA, operated by the North American Center on Adoption of the Child Welfare League of America, demonstrate the potential of such a system for locating adoptive homes for a child anywhere in the country. I believe that the enactment of this provision will contribute to the continuance and improvement of the ARENA type exchange mechanism, and will assure all children waiting for adoption of a far greater opportunity for permanent placement with a loving family.

STUDY OF UNLICENSED ADOPTION PLACEMENTS

Mr. President, title II also provides that the Secretary provide the appropriate committees of Congress with the results of a study designed to determine the nature, scope, and effects of black market adoption. Testimony at Senate hearings strongly suggested that most black market placements occur between States with weak adoption laws and procedures, and that these placements are extraordinarily exploitive of all parties involved. The information derived from this study should be very helpful to determining how best to tackle this very difficult problem.

AUTHORIZATION OF APPROPRIATIONS

Mr. President, title II of H.R. 6693 provides authorizations of appropriations of $5 million for fiscal year 1978 and such sums as necessary for fiscal years 1979, 1980, and 1981.

CONCLUSION

Mr. President, the provisions of both title I and title II of H.R. 6693 provide for important services and programs for children in need. I believe these amendments and new programs are critical to meeting our commitments to distressed children and their families.

In closing, I want to express my thanks to the chairman of the Committee on Human Resources, Mr. WILLIAMS, and the ranking minority member of the committee, Mr. JAVITS, as well as the members of the Child and Human Development Subcommittee, Mr. HAYAKAWA and Mr. RIEGLE, for their support and contributions to this measure. I also want to express my gratitude to the chairman of the Subcommittee on Select Education of the House Education and Labor Committee, Mr. BRADEMAS, and the ranking minority member of the full committee, Mr. QUIE, as well as my colleague from California (Mr. MILLER) for their great cooperation in fashioning the compromise agreement. In addition, I would like to congratulate Jack Duncan and Marty LaVor of the House committee staff and John Lawrence of Congressman MILLER's staff, whose expertise and hard work made the development of this measure possible as well as members of our committee staff Susanne Martinez, Fran Butler, Bonnie Connors, Pat Markey, Jack Andrews, and David Morse, and John Backer of Senator HAYAKAWA's staff and Craig Polhemus of Senator RIEGLE's staff, and all who contributed in this endeavor.

I urge adoption of the compromise agreement.

EXHIBIT 1

H.R. 6693—JOINT EXPLANATORY STATEMENT OF HOUSE BILL, SENATE AMENDMENT, AND COMPROMISE AGREEMENT

TITLE I—CHILD ABUSE PREVENTION AND TREATMENT AMENDMENTS

Sec. 101—National Center on Child Abuse and Neglect.—

*Dissemination of research and training materials*

The House bill would add a requirement to the Child Abuse Prevention and Treatment Act that the National Center on Child Abuse and Neglect "disseminate" as well as "compile, analyze, and publish" (requirements of existing law) research and training materials.

The Senate amendment contained no comparable provision.

The compromise agreement contains the House provision.

*Comprehensive plan for maximum coordination of activities of all agencies and organizations involved in child abuse and neglect*

The Senate amendment would require that the National Center on Child Abuse and Neglect prepare a comprenhensive plan for seeking to bring about maximum coordination of the goals, objectives, and activities of all agencies and organizations involved in child abuse and neglect.

The House bill contained no comparable provision.

The compromise agreement contains the Senate provision.

*Research priorities*

Both the House bill and the Senate amendment would require that the Secretary of H.E.W. establish research priorities for making grants or contracts under the Act and, not less than sixty days before establishing such priorities, publish a statement of such proposed priorities in the Federal Register for public comment.

The compromise agreement contains this provision.

The Committees anticipate that the research and demonstration priorities for fiscal year 1978 will reflect the amendments to the Act contained in the compromise agreement.

*Research grants*

Both the House bill and the Senate amendment, with slightly different phraseology, would provide that research grants may be made for periods up to three years with a review, at least annually, by the Secretary of H.E.W. utilizing peer review mechanisms to assure the quality and progress of research conducted under such grants.

The compromise agreement contains this provision utilizing the House phraseology.

*Staff and resources*

Both the House bill and the Senate amendment would provide that the Secretary of H.E.W. shall make available to the National Center on Child Abuse and Neglect the necessary staff and resources for the Center to carry out effectively its functions.

The Compromise agreement contains this provision utilizing the Senate phraseology.

The Committees note that while insufficient staff and resources have been made available to the National Center on Child Abuse and Neglect to enable it to carry out its functions, the support staff at the Assistant Secretary for Human Development's level has grown significantly over the past few years. The Committees expect that adequate staff and resources will promptly be made available at the program level to carry out this Act effectively.

The Committees would like to make clear that they expect that no funds appropriated

under this Act would be utilized for research programs or activities which are not specifically authorized by this Act, nor would such funds be transferred to any office or other activity of the Department of H.E.W. which is not directly responsible to the Commissioner of the Administration for Children, Youth, and Families or other successor office or activity which performs substantially similar functions with respect to the child abuse and neglect programs. The Committees have been assured that no such diversion of research funds appropriated under this Act has been implemented with respect to fiscal year 1978 appropriations, and the Committees expect that this situation will continue hereafter.

Sec. 102—Definitions.—

*Sexual exploitation*

The House bill would add "or exploitation" after "sexual abuse" in the definition of child abuse and neglect in section 3 of the Act.

The Senate amendment contained no comparable provision.

The compromise agreement contains the House provision.

*Failure to provide medical treatment*

The House bill would add to the definition of child abuse and neglect a provision excluding from the definition of child abuse and neglect a failure to arrange for medical treatment because of religious belief.

The Senate amendment contained no comparable provision.

The compromise agreement does not contain the House provision.

*Definition of Age*

The Senate amendment would amend the definition of "child" to allow the age of the child to be defined by State law.

The House bill contained no comparable provision.

The compromise agreement contains the Senate provision.

Sec. 103—Demonstration or Service Programs and Projects.—

*Service programs and projects*

The House bill would add "service" programs to the demonstration program authority. The Senate amendment would provide for special consideration to be given to continued Federal funding of programs or projects of national or regional scope and demonstrated effectiveness.

The compromise agreement incorporates the provisions of both the House bill and the Senate amendment. The provisions of the House bill are included in section 103 and the provisions of the Senate amendment are included in section 104.

*Development and establishment of training programs*

The House bill would strike out "the development and establishment of" in the training authority for demonstration programs.

The Senate amendment contained no comparable provision.

The compromise agreement contains the House provision.

The Committees stress that this change is intended to clarify that funds may be utilized for maintenance of training programs and is not intended to eliminate the authority for development and establishment of training programs.

*Relocation of appropriations earmarking provisions*

The Senate amendment would move the provision earmarking the funds appropriated under the Act for programs or projects from section 4 to section 5.

The House bill contained no comparable provision.

The compromise agreement contains the Senate provision.

*Disbursement of State grant funds*

The House bill would add "(through the Center)" to the provisions dealing with disbursement of State grant money and strike out the phrase "for the payment of reasonable and necessary expenses" in the provisions dealing with reimbursement in the State grant program. The Senate amendment would also add "through the Center" to these provisions along with a conforming amendment to facilitate the movement of the earmarking provisions of the Act from section 4 to section 5.

The compromise agreement contains the Senate phraseology.

*Obligation of State grants*

The Senate amendment would require a reduction in grants awarded to a State which fails to obligate funds within 18 months after its award.

The House bill contained no comparable provision.

The compromise agreement contains the Senate provision.

Sec. 104—Authorization of Appropriations, Earmarking, and Sexual Abuse Treatment Programs.—

*Authorization of appropriations*

The House bill would provide for a five-year extension of the authorization of appropriations at levels of $25 million for fiscal year 1978, $27.5 million for fiscal year 1979, and $30 million each for fiscal years 1980, 1981, and 1982. The Senate amendment would provide for a two-year extension at $25 million each for fiscal years 1978 and 1979.

The compromise agreement provides for a four-year extension at $25 million for fiscal year 1978, $27.5 million for fiscal year 1979, and $30 million each for fiscal years 1980 and 1981.

*Earmarking of appropriations*

The Senate amendment would move the earmarking provisions of the Act from section 4 to section 5 and would include research activities as among those (presently demonstration programs and projects) for which 50% of the funds are earmarked under existing law.

The House bill contained no comparable provision.

The compromise agreement contains the Senate provision.

*Continued funding of national or regional projects of demonstrated effectiveness*

The House bill, the Senate amendment, and the compromise agreement, to extent previously described in section 103, provide for funding of service programs within the existing demonstration program authority and for special consideration for continued Federal funding of child abuse and neglect programs or projects, previously funded by the Department of H.E.W. of national or regional scope and demonstrated effectiveness.

*Earmarking of appropriations for State grant program*

The House bill would provide that not less than 30% of the funds appropriated shall be used for the State grant program. The Senate amendment would provide that not less than 20% of the funds appropriated shall be used for the State grant program.

The compromise agreement provides that not less than 25% of the funds appropriated for each of fiscal years 1978 and 1979 shall be used for the State grant and not less than 30% for each of fiscal years 1980 and 1981.

*Sexual Abuse Treatment Center, programs, and projects*

The House bill would provide for the establishment of not less than five centers for provision of treatment and other services to sexually-abused children and those who commit sexual abuse against children, and authorizes the appropriation of such sums as may be necessary. The Senate amendment would authorize the appropriation of $2 million each for fiscal year 1978, and 1979 for (1) research, (2) demonstration projects, and (3) State grants for programs and projects to prevent, identify, and treat sexual abuse of children, including the treatment of family units. The Senate amendment also would provide that not more than 20% of the sums appropriated each year may be spent on research.

The compromise agreement incorporates provisions from both versions to: (1) provide for authorizations of appropriations of $3 million for fiscal year 1978, $3.5 million for fiscal year 1979, and $4 million each for fiscal years 1980 and 1981; (2) provide for programs and projects (including the support of not less than three centers for the provision of treatment, personnel training, and other related services) designed to prevent, identify, and treat sexual abuse of children, including programs involving the treatment of family units, programs for the provision of treatment and other related services to persons who have committed acts of sexual abuse, and programs for the training of personnel, and (3) provide that not more than 10 percent of the sums appropriated under this authority shall be expended for research.

*Definition of sexual abuse, utilization of funds by other programs or projects, and limitation upon appropriations for sexual abuse programs*

The Senate amendment would provide (1) a definition of sexual abuse for the purpose of funding programs and projects under the separate authorization of appropriation contained in section 5(b) of the Act; (2) that funds appropriated under the section 5(a) authorization in the Act may also be used for the purposes specified in the section 5(b) authorization; (3) that programs and projects receiving funds under the section 5(a) authorization may also receive funds for activities under the section 5(b) authorization; and (4) that no funds may be spent for section 5(b) unless funds are appropriated under section 5(a) at at least the fiscal year 1977 level.

The House bill contained no comparable provision.

The compromise agreement contains the Senate provisions.

*Criminal penalties for sexual exploitation of children*

The House bill would establish criminal penalties for the sexual exploitation of children.

The Senate amendment contained no comparable provision.

The compromise agreement does not contain the House provision.

Sec. 105—Advisory Board

*Elimination of Advisory Board report submission requirement*

The House bill would eliminate the provision in the Act (Sec. 6(b) & (c)) requiring the Advisory Board on Child Abuse and Neglect to prepare and submit, within eighteen months of the date of enactment, a report to Congress and the President on the programs, projects, and activities related to child abuse and neglect sponsored by other agencies. This report has already been submitted.

The Senate amendment contained no comparable provision.

The compromise agreement contains the House provision.

*Public members on Advisory Board*

The Senate amendment would add not less than three public members to the Advisory

Board, and provide for compensation for public board members while serving on the Advisory Board.

The House bill contained no comparable provision.

The compromise agreement contains the Senate provision.

*Activities of Advisory Board*

The Senate amendment would require the Advisory Board members to discuss planned activities as well as existing activities and would require the Board to review the comprehensive plan prepared by the National Center under the provisions of section 101 (1)(E) of the compromise agreement, and submit the plan to the President and Congress no later than eighteen months after the date of enactment of this provision.

The House bill contained no comparable provision.

The compromise agreement contains the Senate provision.

TITLE II—ADOPTION REFORM

The Senate amendment would provide for:

1. Appointment by the Secretary of HEW of an advisory panel to recommend model adoption legislation and procedures to facilitate interstate adoption of children, and the later adoption of such model legislation and procedures by the Secretary;

2. Establishment of a national adoption and foster care information data gathering and analysis system and national adoption information exchange system;

3. Establishment of an appropriate administrative arrangement within HEW to provide centralized focus for planning and coordination of all departmental activities affecting adoption and foster care, including an education and training program on adoption, preparation, publication, and dissemination of information and education and training materials regarding adoption assistance programs, and technical assistance in the planning, improving, developing, and carrying out of programs and activities related to adoption; and

4. A study of the nature, scope, and effects of interstate (and to the extent feasible, intrastate) placement of children in adoptive homes by unlicensed persons or agencies.

5. Authorizations of appropriation of $5 million each for fiscal years 1978, 1979, 1980, and 1981 for carrying out this title.

The House bill contained no comparable provisions.

The compromise agreement contains the Senate provisions.

---

H.R. 6693

Strike out the matter proposed to be inserted by the Senate amendment to the text of the bill and insert in lieu thereof the following:

"That this Act may be cited as the "Child Abuse Prevention and Treatment and Adoption Reform Act of 1978".

TITLE I—AMENDMENTS TO CHILD ABUSE PREVENTION AND TREATMENT ACT

NATIONAL CENTER ON CHILD ABUSE AND NEGLECT

SEC. 101. Section 2 of the Child Abuse Prevention and Treatment Act (42 U.S.C. 5101) (hereinafter in this title referred to as "the Act") is amended by—

(1)(A) striking out "and publish" and inserting in lieu thereof "publish, and disseminate" in clause (1) of subsection (b);

(B) striking out "and publish" and inserting in lieu thereof a comma and "publish, and disseminate" in clause (3) of subsection (b);

(C) striking out "and" after clause (5) of subsection (b);

(D) striking out the period at the end of clause (6) of subsection (b) and inserting in lieu thereof a semicolon and "and"; and

(E) adding after clause (6) of subsection (b) the following:

"(7) in consultation with Federal agencies serving on the Advisory Board on Child Abuse and Neglect (established by section 6 of this Act), prepare a comprehensive plan for seeking to bring about maximum coordination of the goals, objectives, and activities of all agencies and organizations which have responsibilities for programs and actvities related to child abuse and neglect, and submit such plan to such Advisory Board not later than twelve months after the date of enactment of this clause. The Secretary shall establish research priorities for making grants or contracts under clause (5) of this subsection and, not less than sixty days before establishing such priorities,

(2) inserting at the end of subsection (c) the following new sentences: "Grants may be made under subsection (b)(5) for periods of not more than three years. Any such grant shall be reviewed at least annually by the Secretary, utilizing peer review mechanisms to assure the quality and progress of research conducted under such grant."; and

(3) adding after subsection (c) the following new subsection:

"(d) The Secretary shall make available to the Center such staff and resources as are necessary for the Center to carry out effectively its functions under this Act.".

DEFINITION

SEC. 102. Section 3 of the Act (42 U.S.C. 5102) is amended by—

(1) inserting "or exploitation" after "sexual abuse"; and

(2) inserting a comma and "or the age specified by the child protection law of the State in question," after "eighteen".

DEMONSTRATION OR SERVICE PROGRAMS AND PROJECTS

SEC. 103. Section 4 of the Act (42 U.S.C. 5103) is amended by—

(1) amending subsection (a) by—

(A) inserting "or service" after "demonstration" in the first sentence;

(B) striking out "the development and establishment of" in cause (1); and

(C) striking out the last sentence of such subsection;

(2) amending subsection (b) by—

(A) striking out in paragraph (1) "Of the sums" and all that follows through "grants" and inserting in lieu thereof "The Secretary, through the Center, is authorized to make grants", and striking out "for the payment of reasonable and necessary expenses"; and

(B) inserting in paragraph (2) immediately below clause (J) the following new sentence: "If a State has failed to obligate funds awarded under this subsection within eighteen months after the date of award, the next award under this subsection made after the expiration of such period shall be reduced by an amount equal to the amount of such unobligated funds unless the Secretary determines that extraordinary reasons justify the failure to so obligate."; and

(3) amending the heading for such section to read as follows:

"DEMONSTRATION OR SERVICE PROGRAMS AND PROJECTS".

AUTHORIZATION OF APPROPRIATIONS, EARMARKING, AND SEXUAL ABUSE CENTERS

SEC. 104. Section 5 of the Act (42 U.S.C. 5104) is amended by—

(1) striking out "and" after "1975," and striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "$25,000,000 for the fiscal year ending September 30, 1978, $27,500,000 for the fiscal year ending September 30, 1979, and $30,000,000 each for the fiscal years ending September 30, 1980, and September 30, 1981, respectively. Of the funds appropriated for any fiscal year under this section, not less than 50 per centum shall be used for making grants or contracts under sections 2(b)(5) (relating to research) and 4(a) (relating to demonstration or service projects), giving special consideration to continued Federal funding of child abuse and neglect programs on projects (previously funded by the Department of Health, Education and Welfare) of national or regional scope and demonstrated effectiveness, and not less than 25 per centum shall be used for making grants or contracts under section 4(b)(1) (relating to grants to States) for the fiscal years ending September 30, 1978, and September 30, 1979, respectively, and not less than 30 per centum shall be used for making grants or contracts under section 4(b)(1) (relating to grants to States) for each of the fiscal years ending September 30, 1980, and September 30, 1981, respectively."; and

(2) inserting "(a)" after "SEC. 5." and adding at the end thereof the following new subsection:

"(b)(1) There are authorized to be appropriated $3,000,000 for the fiscal year ending September 30, 1978, $3,500,000 for the fiscal year ending September 30, 1979, and $4,000,000 each for the fiscal years ending September 30, 1980, and September 30, 1981, respectively, for the purpose of making grants and entering into contracts (under sections 2(b)(5) (relating to research), 4(a) (relating to demonstration or services projects), and 4(b)(1) (relating to grants to States)) for programs and projects (including the support of not less than three Centers for the provision of treatment, personnel training, and other related services) designed to prevent, identify, and treat sexual abuse of children, including programs involving the treatment of family units, programs for the provision of treatment and related services to persons who have committed acts of sexual abuse against children, and programs for the training of personnel.

"(2) Of the sums appropriated under this subsection, not more than 10 per centum shall be expended under section 2(b)(5) (relating to research).

"(3) As used in this subsection, the term—

"(A) 'sexual abuse' includes the obscene or pornographic photographing, filming, or depiction of children for commercial purposes, or the rape, molestation, incest, prostitution, or other such forms of sexual exploitation of children under circumstances which indicate that the child's health or welfare is harmed or threatened thereby, as determined in accordance with regulations prescribed by the Secretary; and

"(B) 'child' or 'children' means any individual who has not attained the age of eighteen.

"(4)(A) Nothing contained in the provisions of this subsection shall be construed as prohibiting the use of funds appropriated under subsection (a) for programs and projects described in subsection (b), nor be construed to prohibit programs or projects receiving funds under subsection (a) from receiving funds under subsection (b).

"(B) No funds shall be obligated or expended under this subsection unless an amount at least equal to the amount of funds appropriated in fiscal year 1977 has been appropriated for programs and projects under subsection (a) for any succeeding fiscal year.".

ADVISORY BOARD

SEC. 105. Section 6 of the Act (42 U.S.C. 5105) is amended by—

(1) inserting before the period at the end of the first sentence in subsection (a) a comma and "and not less than three members from the general public with experience or expertise in the field of child abuse and neglect";

(2) striking out "administered" both places it appears in the second sentence in subsection (a) and inserting in lieu thereof "planned, administered,"; and

(3) striking out subsection (b) and subsection (c) and inserting in lieu thereof the following new subsections:

"(b) The Advisory Board shall review the comprehensive plan submitted to it by the Center pursuant to section 2(b)(7), make such changes as it deems appropriate, and submit to the President and the Congress a final such plan not later than eighteen months after the effective date of this subsection.

"(c) Members of the Advisory Board, other than those regularly employed by the Federal Government, while serving on business of the Advisory Board, shall be entitled to receive compensation at a rate not in excess of the daily equivalent payable to a GS–18 employee under section 5332 of title 5, United States Code, including traveltime; and, while so serving away from their homes or regular places of business, they may be allowed travel expenses (including per diem in lieu of subsistence) as authorized by section 5703 of such title for persons in the Government service employed intermittently.".

## TITLE II—ADOPTION OPPORTUNITIES

### FINDINGS AND DECLARATION OF PURPOSE

SEC. 201. The Congress hereby finds that many thousands of children remain in institutions or foster homes solely because of legal and other barriers to their placement in permanent, adoptive homes; that the majority of such children are of school age, handicapped, or both; that adoption may be the best alternative for assuring the healthy development of such children; that there are qualified persons seeking to adopt such children who are unable to do so because of barriers to their placement; and that, in order both to enhance the stability and love of the child's home environment and to avoid wasteful expenditures of public funds, such children should not be maintained in foster care or institutions when adoption is appropriate and families for them can be found. It is, therefore, the purpose of this title to facilitate the elimination of barriers to adoption and to provide permanent and loving home environments for children who would benefit by adoption, particularly children with special needs by—

(1) promoting the establishment of model adoption legislation and procedures in the States and territories of the United States in order to eliminate jurisdictional and legal obstacles to adoption; and

(2) providing a mechanism for the Department of Health, Education, and Welfare to (A) promote quality standards for adoption services (including preplacement, postplacement, and postadoption counseling and standards to protect the rights of children in need of adoption), and (B) provide for a national adoption and foster care information data gathering and analysis system and a national adoption information exchange system to bring together children who would benefit by adoption and qualified prospective adoptive parents who are seeking such children.

### MODEL ADOPTION LEGISLATION AND PROCEDURES

SEC. 202. (a) Not later than eighteen months after the date of enactment of this Act, the Secretary of Health, Education, and Welfare (hereinafter referred to as the "Secretary") shall issue, based on the recommendations of the panel described in subsection (b) of this section, proposed model adoption legislation and procedures and publish such proposal in the Federal Register for comment. After soliciting and giving due consideration to the comments of interestd individuals, groups, and organizations and consulting further with such panel, the Secretary shall issue and publish model adoption legislation and procedures which shall not conflict with the provisions of any interstate compact in operation pursuant to which States are making, supervising, or regulating placements of children.

(b)(1) Not later than ninety days after the date of enactment of this Act, the Secretary shall appoint a panel (hereinafter referred to as the "panel") to be composed of not less than eleven nor more than seventeen members generally representative of public and voluntary organizations, agencies, and persons interested and with expertise and experience in facilitating the achievement of the purposes of this title (including, but not limited to, national, State, and local child welfare organizations, including those representative of minorities, and adoptive parent organizations). The panel shall (A) review current conditions, practices, and laws relating to adoption, with special reference to their effect on facilitating or impeding the location of suitable adoptive homes for children who would benefit by adoption and the completion of suitable adoptions for such children; and (B) not later than twelve months after the date on which the members of the panel have been appointed, propose to the Secretary model (including adoption assistance agreement) legislation and procedures relating to adoption designed to facilitate adoption by families of all economic levels.

(2) The panel shall be terminated thirty days after the Secretary publishes the final model legislation and procedures pursuant to subsection (a) of this section.

(3) Members of the panel, other than those regularly employed by the Federal Government, while serving on business of the panel shall be entitled to receive compensation at a rate not in excess of the daily equivalent of the rate payable to a GS–18 employee under section 5322 of title 5, United States Code, including traveltime; and, while so serving away from their homes or regular places of business, they may be allowed travel expenses (including per diem in lieu of subsistence) as authorized by section 5703 of such title for persons in the Government service employed intermittently.

(c) The Secretary shall take such steps as he or she deems necessary to encourage and facilitate the enactment in each State of comprehensive adoption assistance legislation and the establishment in each State of the model legislation and procedures published pursuant to subsection (a) of this section.

### INFORMATION AND SERVICES

SEC. 203. (a) The Secretary shall establish in the Department of Health, Education, and Welfare an appropriate administrative arrangement to provide a centralized focus for planning and coordinating of all departmental activities affecting adoption and foster care and for carrying out the provisions of this title. The Secretary shall make available such consultant services and personnel, together with appropriate administrative expenses, as are necessary for carrying out such purposes.

(b) connection with carrying out the provisions of subsection (a) of this section, the Secretary shall—

(1) provide (directly or by grant to or contract with public or private nonprofit agencies and organizations) for the establishment and operation of a national adoption and foster care data gathering and analysis system utilizing data collected by States pursuant to requirements of law;

(2) conduct (directly or by grant to or contract with public or private nonprofit agencies or organizations) and education and training program on adoption, and prepare, publish, and disseminate (directly or by grant to or contract with public or private nonprofit agencies and organizations) to all interested parties, public and private agencies and organizations (including, but not limited to, hospitals, health care and family planning clinics, and social services agencies), and governmental bodies, information and education and training materials regarding adoption and adoption assistance programs;

(3) notwithstanding any other provisions of law, provide (directly or by grant to or contract with public or private nonprofit agencies or organizations) for (A) the operation of a national adoption information exchange system (including only such information as is necessary to facilitate the adoptive placement of children, utilizing computers and data processing methods to assist in the location of children who would benefit by adoption and in the placement in adoptive homes of children awaiting adoption); and (B) the coordination of such system with similar State and regional systems;

(4) provide (directly or by grant to or contract with public or private nonprofit agencies or organizations, including parent groups) for the provision of technical assistance in the planning, improving, developing, and carrying out of programs and activities relating to adoption; and

(5) consult with other appropriate Federal departments and agencies in order to promote maximum coordination of services and benefits provided under programs carried out by such departments and agencies with those carried out by the Secretary, and provide for the coordination of such aspects of all programs within the Department of Health, Education, and Welfare relating to adoption.

### STUDY OF UNLICENCED ADOPTION PLACEMENTS

SEC. 204. The Secretary shall provide for a study (the results of which shall be reported to the appropriate committees of the Congress not later than eighteen months after the date of enactment of this Act) designed to determine the nature, scope, and effects of the interstate (and, to the extent feasible, intrastate) placement of children in adoptive homes (not including the homes of stepparents or relatives of the child in question) by persons or agencies which are not licensed by or subject to regulation by any governmental entity.

### AUTHORIZATION OF APPROPRIATIONS

SEC. 205. There are authorized to be appropriated $5,000,000 for the fiscal year ending September 30, 1978, and such sums as may be necessary for the succeeding three fiscal years to carry out this title.

Amend the Senate amendment to the title of the bill so as to read: "An Act to promote the health development of children who would benefit from adoption by facilitating their placement in adoptive homes, to extend and improve the provisions of the Child Abuse Prevention and Treatment Act, and for other purposes.".

---

### CHANGES IN EXISTING LAW MADE BY PROPOSED COMPROMISE AGREEMENT ON H.R. 6693

Changes in existing law made by the proposed amendment are shown as follows (existing law proposed to be omitted is enclosed in black brackets, new matter is printed in italics, existing law in which no change is proposed is shown in roman):

### CHILD ABUSE PREVENTION AND TREATMENT ACT

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may

be cited as the "Child Abuse Prevention and Treatment Act".

THE NATIONAL CENTER ON CHILD ABUSE AND NEGLECT

SEC. 2. (a) The Secretary of Health, Education, and Welfare (hereinafter referred to in this Act as the "Secretary") shall establish an office to be known as the National Center on Child Abuse and Neglect (hereinafter referred to in this Act as the "Center").

(b) The Secretary, through the Center, shall—

(1) compile, analyze, [and] publish, *and disseminate* a summary annually of recently conducted and currently conducted research on child abuse and neglect;

(2) develop and maintain an information clearinghouse on all programs, including private programs, showing promise of success, for the prevention, identification, and treatment of child abuse and neglect;

(3) compile [and publish], *publish, and disseminate* training materials for personnel who are engaged or intend to engage in the prevention, identification, and treatment of child abuse and neglect;

(4) provide technical assistance (directly or through grant or contract) to public and nonprofit private agencies and organizations to assist them in planning, improving, developing, and carrying out programs and activities relating to the prevention, identification, and treatment of child abuse and neglect;

(5) conduct research into the causes of child abuse and neglect, and into the prevention, identification, and treatment thereof; [and]

(6) make a complete and full study and investigation of the national incidence of child abuse and neglect, including a determination of the extent to which incidents of child abuse and neglect are increasing in number or severity[.]; *and*

(7) *in consultation with Federal agencies serving on the Advisory Board on Child Abuse and Neglect (established by section 6 of this Act), prepare a comprehensive plan for seeking to bring about maximum coordination of the goals, objectives, and activities of all agencies and organizations which have responsibilities for programs and activities related to child abuse and neglect, and submit such plan to such Advisory Board not later than twelve months after the date of enactment of this clause.*

*The Secretary shall establish research priorities for making grants or contracts under clause (5) of this subsection and, not less than sixty days before establishing such priorities, shall publish in the Federal Register for public comment a statement of such proposed priorities.*

(c) The Secretary may carry out his functions under subsection (b) of this section either directly or by way of grant or contract. *Grants may be made under subsection (b)(5) for periods of not more than three years. Any such grant shall be reviewed at least annually by the Secretary, utilizing peer review mechanisms to assure the quality and progress of research conducted under such grant.*

*(d) The Secretary shall make available to the Center such staff and resources as are necessary for the Center to carry out effectively its functions under this Act.*

DEFINITION

SEC. 3. For purposes of this Act the term "child abuse and neglect" means the physical or mental injury, sexual abuse *or exploitation*, negligent treatment, or maltreatment of a child under the age of eighteen, *or the age specified by the child protection law of the State in question*, by a person who is responsible for the child's welfare under circumstances which indicate that the child's health or welfare is harmed or threatened thereby, as determined in accordance with regulations prescribed by the Secretary.

DEMONSTRATION (*or service*) PROGRAMS AND PROJECTS

SEC. 4. (a) The Secretary, through the Center, is authorized to make grants to, and enter into contracts with, public agencies or nonprofit private organizations (or combinations thereof) for demonstration *or service* programs and projects designed to prevent, identify, and treat child abuse and neglect. Grants or contracts under this subsection may be—

(1) for [the development and establishment of] training programs for professional and paraprofessional personnel in the fields of medicine, law, education, social work, and other relevant fields who are engaged in, or intend to work in, the field of the prevention, identification, and treatment of child abuse and neglect; and training programs for children, and for persons responsible for the welfare of children, in methods of protecting children from child abuse and neglect;

(2) for the establishment and maintenance of centers, serving defined geographic areas, staffed by multidisciplinary teams of personnel trained in the prevention, identification, and treatment of child abuse and neglect cases, to provide a broad range of services related to child abuse and neglect, including direct support and supervision of satellite centers and attention homes, as well as providing advice and consultation to individuals, agencies, and organizations which request such services;

(3) for furnishing services of teams of professional and paraprofessional personnel who are trained in the prevention, identification, and treatment of child abuse and neglect cases, on a consulting basis to small communities where such services are not available; and

(4) for such other innovative programs and projects, including programs and projects for parent self-help, and for prevention and treatment of drug-related child abuse and neglect, that show promise of successfully preventing or treating cases of child abuse and neglect as the Secretary may approve. [Not less than 50 per centum of the funds appropriated under this Act for any fiscal year shall be used only for carrying out the provisions of this subsection.]

(b)(1) [Of the sums appropriated under this Act for any fiscal year, not less than 5 per centum and not more than 20 per centum may be used by the Secretary for making grants] *The Secretary, through the Center, is authorized to make grants* to the States [for the payment of reasonable and necessary expenses] for the purpose of assisting the States in developing, strengthening, and carrying out child abuse and neglect prevention and treatment programs.

(2) In order for a State to qualify for assistance under this subsection, such State shall—

(A) have in effect a State child abuse and neglect law which shall include provisions for immunity for persons reporting instances of child abuse and neglect from prosecution, under any State or local law, arising out of such reporting;

(B) provide for the reporting of known and suspected instances of child abuse and neglect;

(C) provide that upon receipt of a report of known or suspected instances of child abuse or neglect an investigation shall be initiated promptly to substantiate the accuracy of the report, and, upon a finding of abuse or neglect, immediate steps shall be taken to protect the health and welfare of the abused or neglected child, as well as that of any other child under the same care who may be in danger of abuse or neglect;

(D) demonstrate that there are in effect throughout the State, in connection with the enforcement of child abuse and neglect laws and with the reporting of suspected instances of child abuse and neglect, such administrative procedures, such personnel trained in child abuse and neglect prevention and treatment, such training procedures, such institutional and other facilities (public and private), and such related multidisciplinary programs and services as may be necessary or appropriate to assure that the State will deal effectively with child abuse and neglect cases in the State;

(E) provide for methods to preserve the confidentiality of all records in order to protect the rights of the child, his parents or guardians;

(F) provide for the cooperation of law enforcement officials, courts of competent jurisdiction, and appropriate State agencies providing human services;

(G) provide that in every case involving an abused or neglected child which results in a judicial proceeding a guardian ad litem shall be appointed to represent the child in such proceedings;

(H) provide that the aggregate of support for programs or projects related to child abuse and neglect assisted by State funds shall not be reduced below the level provided during fiscal year 1973, and set forth policies and procedures designed to assure that Federal funds made available under this Act for any fiscal year will be so used as to supplement and, to the extent practicable, increase the level of State funds which would, in the absence of Federal funds, be available for such programs and projects;

(I) provide for dissemination of information to the general public with respect to the problem of child abuse and neglect and the facilities and prevention and treatment methods available to combat instances of child abuse and neglect; and

(J) to the extent feasible, insure that parental organizations combating child abuse and neglect receive preferential treatment.

*If a State has failed to obligate funds awarded under this subsection within eighteen months after the date of award, the next award under this subsection made after the expiration of such period shall be reduced by an amount equal to the amount of such unobligated funds unless the Secretary determines that extraordinary reasons justify the failure to so obligate.*

(3) Programs or projects related to child abuse and neglect assisted under part A or B of title IV of the Social Security Act shall comply with the requirements set forth in clauses (B), (C), (E), and (F) of paragraph (2).

(c) Assistance provided pursuant to this section shall not be available for construction of facilities; however, the Secretary is authorized to supply such assistance for the lease or rental of facilities where adequate facilities are not otherwise available, and for repair or minor remodeling or alteration of existing facilities.

(4) The Secretary shall establish criteria designed to achieve equitable distribution of assistance under this section among the States, among geographic areas of the Nation, and among rural and urban areas. To the extent possible, citizens of each State shall receive assistance from at least one project under this section.

(e) For the purpose of this section, the term "State" includes each of the several States, the District of Columbia, the Com-

monwealth of Puerto Rico, American Samoa, the Virgin Islands, Guam and the Trust Territories of the Pacific.

AUTHORIZATIONS

SEC. 5. (a) There are hereby authorized to be appropriated for the purposes of this Act $15,000,000 for the fiscal year ending June 30, 1974, $20,000,000 for the fiscal year ending June 30, 1975 [and] $25,000,000 for the fiscal year ending June 30, 1976, and for the succeeding fiscal year[.], *$25,000,000 for the fiscal year ending September 30, 1978, $27,500,000 for the fiscal year ending September 30, 1979, and $30,000,000 each for the fiscal years ending September 30, 1980, and September 30, 1981, respectively. Of the funds appropriated for any fiscal year under this section, not less than 50 per centum shall be used for making grants or contracts under sections 2(b)(5) (relating to research) and 4(a) (relating to demonstration or service projects), giving special consideration to continued Federal funding of child abuse and neglect programs or projects (previously funded by the Department of Health, Education, and Welfare) of national or regional scope and demonstrated effectiveness, and not less than 25 per centum shall be used for making grants or contracts under section 4(b)(1) (relating to grants to States) for the fiscal years ending September 30, 1978, and September 30, 1979, respectively, and not less than 30 per centum shall be used for making grants or contracts under section 4(b)(1) (relating to grants to States for each of the fiscal years ending September 30, 1980, and September 30, 1981, respectively.*

*(b)(1) There are authorized to be appropriated $3,000,000 for the fiscal year ending September 30, 1978, $3,500,000 for the fiscal year ending September 30, 1979, and $4,000,000 each for the fiscal years ending September 30, 1980, and September 30, 1981, respectively, for the purpose of making grants and entering into contracts (under sections 2(b)(5) (relating to research), 4(a) (relating to demonstration or services projects), and 4(b)(1) (relating to grants to States)) for programs and projects (including the support of not less than three Centers for the provision of treatment, personnel training, and other related services) designated to prevent, identify, and treat sexual abuse of children, including programs involving the treatment of family units, programs for the provision of treatment and related services to persons who have committed acts of sexual abuse against children, and programs for the training of personnel.*

*(2) Of the sums appropriated under this subsection, not more than 10 per centum shall be expended under section 2(b)(5) (relating to research).*

*(3) As used in this subsection, the term—*

*(A) "sexual abuse" includes the obscene or pornographic photographing, filming, or depiction of children for commercial purposes, or the rape, molestation, incest, prostitution, or other such forms of sexual exploitation of children under circumstances which indicate that the child's health or welfare is harmed or threatened thereby, as determined in accordance with regulations prescribed by the Secretary; and*

*(B) "child" or "children" means any individual who has not attained the age of eighteen.*

*(4)(A) Nothing contained in the provisions of this subsection shall be construed as prohibiting the use of funds appropriated under subsection (a) for programs and projects described in subsection (b), nor be construed to prohibit programs or projects receiving funds under subsection (a) from receiving funds under subsection (b).*

*(B) No funds shall be obligated or expended under this subsection unless an amount at least equal to the amount of funds appropriated in fiscal year 1977 has been appropriated for programs and projects under subsection (a) for any succeeding fiscal year.*

ADVISORY BOARD ON CHILD ABUSE AND NEGLECT

SEC. 6. (a) The Secretary shall, within sixty days after the date of enactment of this Act, appoint an Advisory Board on Child Abuse and Neglect (hereinafter referred to as the "Advisory Board"), which shall be composed of representatives from Federal agencies with responsibility for programs and activities related to child abuse and neglect, including the Office of Child Development, the Office of Education, the National Institute of Education, the National Institute of Mental Health, the National Institute of Child Health and Human Development, the Social and Rehabilitation Service, and the Health Services Administration, *and not less than three members from the general public with experience or expertise in the field of child abuse and neglect.* The Advisory Board shall assist the Secretary in coordinating programs and activities related to child abuse and neglect [administered] *planned, administered,* or assisted under this Act with such programs and activities [administered] *planned, administered,* or assisted by the Federal agencies whose representatives are members of the Advisory Board. The Advisory Board shall also assist the Secretary in the development of Federal standards for child abuse and neglect prevention and treatment programs and projects.

[(b) The Advisory Board shall prepare and submit, within eighteen months after the date of enactment of this Act, to the President and to the Congress a report on the programs assisted under this Act and the programs, projects, and activities related to child abuse and neglect administered or assisted by the Federal agencies whose representatives are members of the Advisory Board. Such report shall include a study of the relationship between drug addiction and child abuse and neglect.

[(c) Of the funds appropriated under section 5, one-half of 1 per centum, or $1,000,000, whichever is the lesser, may be used by the Secretary only for purposes of the report under subsection (b).]

(b) The Advisory Board shall review the comprehensive plan submitted to it by the Center pursuant to section 2(b)(7), make such changes as it deems appropriate, and submit to the President and the Congress a final such plan not later than eighteen months after the effective date of this subsection.

(c) Members of the Advisory Board, other than those regularly employed by the Federal Government, while serving on business of the Advisory Board, shall be entitled to receive compensation at a rate not in excess of the daily equivalent payable to a GS–18 employee under section 5332 of title 5, United States Code, including traveltime; and, while so serving away from their homes or regular places of business, they may be allowed travel expenses (including per diem in lieu of subsistence) as authorized by section 5703 of such title for persons in the Government service employed intermittently.

COORDINATION

SEC. 7. The Secretary shall promulgate regulations and make such arrangements as may be necessary or appropriate to ensure that there is effective coordination between programs related to child abuse and neglect under this Act and other such programs which are assisted by Federal funds.

Mr. CRANSTON. Mr. President, I move that the Senate concur in the amendments of the House of Representatives.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the motion of the Senator from California.

The motion was agreed to.

Mr. CRANSTON. Mr. President, I move to reconsider the vote by which the motion was agreed to.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. CRANSTON. Mr. President, I move that the Senate concur in the House amendments to the Senate amendments to the title of the bill.

The motion was agreed to.

The ACTING PRESIDENT pro tempore. The Senator from Tennessee.

## ORDER OF BUSINESS

Mr. BAKER. Mr. President, I yield the remainder of the time remaining under the Domenici special order to the distinguished Senator from Kansas.

The ACTING PRESIDENT pro tempore. The Senator from Kansas.

## EMERGENCY FARM BILL—H.R. 6782

Mr. DOLE. Mr. President, this afternoon the House of Representatives will take up the conference report on H.R. 6782, the Emergency Agricultural Act of 1978.

The House considers this important legislation in an atmosphere of concern for our Nation's farmers and with a sense of urgency for the financial pressures which confront America's farm families.

We can be proud that the U.S. Senate has already gone on record in favor of this market oriented farm program, an initiative which will enable the American farmer to continue to produce abundant supplies of food for America and the world. It is a fiscally responsible program, one which will give farmers a reasonable prospect of making a profit without inordinately increasing food prices for the American consumer. It is a proposal which merits the support of the House of Representatives.

Without more money from the marketplace and some limited additional funds from the Government, farmers face financial disaster. The need for emergency farm legislation has been fully documented in hearings before the Senate and House Agriculture Committees.

WHITE HOUSE PRESSURES

I am concerned and disturbed about the atmosphere created by the White House and the USDA in their efforts to defeat any and all attempts by the Congress to deal effectively with the farm crisis.

The House vote comes at a time when the White House has announced the bill will be vetoed if passed and has circulated vague and unreasonable objections to the bill.

I have found the cost figures used by the White House on the bill to be inaccurate and exaggerated. The White House and the USDA have used "worst-case" figures. They have deliberately

tried to scare the Congress and the American public and particularly the American consumer, into being against the emergency legislation.

I am hopeful that our colleagues in the House of Representatives will not be distracted by the exaggerated inaccurate and, in some cases, outright false, cost estimates on the bill or the threat of a Presidential veto. The Congress has its responsibility and the President has his responsibility.

It is not a Republican initiative, it is not a Democratic initiative; it is an initiative by Republicans and Democrats in the House and in the Senate to assist America's farmers who, in turn, will assist the American consumer.

Monday, I wrote my colleagues in the House a letter stating my objection to the White House claims. I ask unanimous consent for the letter to be inserted in the RECORD.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. (See exhibit 1.)

Mr. DOLE. Unfortunately, Mr. President, the President of the United States, President Carter, has been against all attempts by Congress to assist the farmer. The President, as recently as yesterday, said that he would veto any effort by Congress to help American farmers that he has not already recommended. I would hope the House would keep that in mind this afternoon.

It is not enough, and it cannot be said accurately, that we can veto or defeat this legislation in the House and then offer something else, because that is not the alternative.

The President indicated very directly he would veto anything. Let me suggest again that may be his responsibility, but our responsibility in Congress is to pass meaningful and responsible legislation, and we have done that as far as the American farmer is concerned in the Senate just this week.

The President seems willing to sacrifice our Nation's family farmers in the name of inflation, and I believe this is a smokescreen that is being used to hide the President's lack of concern about American farmers, about the farming situation and, frankly, about the American consumer.

I find it somewhat amusing that the Consumers Federation of America is lobbying night and day against this bill, calling it inflationary—the very group that met with farmers earlier and talked with farmers and talked about their willingness and wanting to assist the American farmer.

I might also suggest the Consumers Federation of America was in the forefront in 1975 in supporting emergency farm legislation. But, of course, then we had a Republican President.

In his inflation message yesterday the President asserted:

> Inflation cannot be solved by placing the burden of fighting it on only a few.

That is precisely what he is asking the American farmer to do. He is saying to the American farmer, "You ought to be able to produce your products below the cost of production. You should not make a profit."

It just seems to me if we are really concerned about America's farmers, if we are concerned about the fact that more than 5 percent of American farmers left the farms last year, we ought to address that problem.

Today the American farmer is less than 5 percent of the total population. They have been bearing more than their share of the burdens of inflation.

By fighting the farm bill, and by indicating that it would be vetoed, the President and Secretary Bergland and others who are leading the fight against the farm bill are helping to insure that fighting inflation will continue to be the burden of the few.

BURDEN OF INFLATION

The farmers have certainly borne the burden of inflation. They have been accepting low prices for what they sell and paying higher and higher prices for what they buy. Let me give you one concrete example.

Right now, the value of the wheat in a loaf of bread is 3 cents. The price of wheat is $3 a bushel. If the price went to $5 a bushel, that would add about 2 cents to the cost of the wheat in a loaf of bread.

We are told by the administration that this bill is going to cost billions and billions of dollars. That is not the case. I suggest that those who have not thus far focused on the farm problem, those who have not focused upon the rural crisis in America, take a moment to stand and reflect on the farmers' plight. Not all farmers are in difficulty, but many are, particularly the small family farmers.

They have been bearing the burden through huge financial losses on their farms.

They have been bearing the burden through bankruptcy, increased borrowing at the bank and by selling their farms and moving to the city.

They have been bearing the burden by selling equity in their farms to foreign countries through grain exports that are sold below the costs of production.

They have been bearing the burden of inflation long enough. They cannot bear it any longer and survive.

Last fall the farmers started telling America they could bear the burden no longer by themselves. By the thousands they have come to Washington to tell their story.

DEAF EARS AT WHITE HOUSE

The farmer's story has been heard and understood by Congress and the American people. The only roadblock has been the White House and the USDA. The people who work at that level seem to have deaf ears. They seem to have turned away from the American farmer. President Carter told a group of American farmers when they visited the White House a couple of months ago, "Those of you who survive will have it all right." I suggest that that is hardly the way to address a group of loyal and hard-working Americans.

TIME FOR ACTION

The time for action is now. I call upon my colleagues in the House of Representatives to make their own decision, independent of White House pressures.

The Emergency Agriculture Act of 1978 was adopted by the Senate and the Senate-House conference committee after several months of deliberation. The act was carefully considered and will provide reasonable farm incomes, protect consumers from extreme price rises, enhance our balance of payments and agricultural exports, and allow us adequate reserves to meet our humanitarian food commitments.

The bill reaches a compromise and gives the farmer more money from the marketplace. It is a 1-year bill.

I strongly urge our colleagues in the House to support the bill, and urge the President to reconsider his objections and announced veto threat.

The bill is a small price to pay for the economic health of our farmers, for economic vitality in rural America, for the creation of jobs in the agribusiness sector of our economy, and for the assurance of a plentiful, reasonably priced food supply for the American people and the world.

Finally, Mr. President, let me say this: This Senator finds it very difficult to believe that the American Farm Bureau Federation, one of the Nation's largest representatives of the American farmer, is fighting this bill. Fighting a bill that is market-oriented. I find it difficult to rationalize the American Farm Bureau Federation's policy on this bill with their stated policy around the country.

I can say to the credit of many State Farm Bureaus that they support the legislation. They support flexible parity. They support affording an opportunity for the farmer to make it in the marketplace; and I still fail to understand the reason why the American Farm Bureau Federation, which professes to be geared to free enterprise and a market economy for the American farmer, are saying "We cannot support this bill".

I hope that those in the House of Representatives who have to make this decision later today will take a look at the bill and at its orientation, and will cast their vote for the American farmer.

Mr. PEARSON. Mr. President, will my distinguished colleague yield?

Mr. DOLE. I yield to my colleague from Kansas.

Mr. PEARSON. I just want to say to my colleague, who has exercised such a tremendous role not only in emergency farm legislation but in all aspects of legislation dealing with rural America, that one might almost be amused, if it were not so serious a matter, to see the continued commentary in the media as to the increased cost of foodstuffs and food as related to the farmers' prices. It is, I think, one of the great distortions and misunderstandings of American economics to relate the end use and the initial production together.

I have not seen anywhere, Mr. President, in the discussion of this particular problem, any reference to the increased cost of production in food processing, the middle man, or the retail stores, by any responsible person in this Government. It is a fact that some years ago in the Commerce Committee we looked into this very question, and we found that, particularly at the retail level, when prices go up at the farm level, they go up in the supermarket, but they never come down.

So it just seems to me, Mr. President, that one ought to really consider what the true dynamics of the agricultural economy in this country today are, and to reflect upon what the result would have been, Mr. President, had agricultural prices increased at the inflationary rate that the cost of industrial goods increased in the 1970's. What would food prices be today? The farmers of this country, whatever might be the result of this particular bill or other bills, have, through the whole period of the 1970's, been one of the most forceful dampers upon inflationary pressures in this country. They cared; and they gave America the greatest quantity of food and the best food at the lowest prices in the world.

So, Mr. President, I would hope that from the President on down, given his statement on inflation yesterday, there would be some understanding, some place in the Government, as to what the real forces are.

I compliment my colleague on his statement and his leadership in this field.

Mr. DOLE. I thank my distinguished colleague from Kansas.

This is a day of decision for the American farmer. This is a day of decision in the House of Representatives. As my colleague, Senator PEARSON, just pointed out, when farm prices go down it is not reflected in the supermarket.

I think many consumers would be surprised to know that it costs more for the bread wrapper than the cost of the wheat in a loaf of bread.

EXHIBIT 1

U.S. SENATE,
*Washington, D.C., April 10, 1978.*

DEAR COLLEAGUE: Today the Senate accepted the House/Senate Conference Report on the Emergency Agricultural Act of 1978, H.R. 6782. An affirmative Senate vote, 49 yeas to 41 nays, was achieved in spite of a strong-concerted Administration effort to defeat any emergency farm legislation by the use of "worst case" figures.

Both USDA and CBO estimates for H.R. 6782 failed to recognize that payment limitations per farm of $40,000 as specified in last year's farm bill will apply to H.R. 6782. We deliberately structured the flexible parity provision to benefit the small family farmer. We did not include any exemption for existing payment limitations. Perhaps they failed to take this into account because President Carter has mistakenly claimed that this bill "would direct the vast majority of its benefits to a small number of the very largest of our farmers."

Further, the CBO in their cost estimates assumes that 90 percent of wheat producers will choose the 50 percent setaside. In their earlier estimate they assumed an average of a 35 percent participation level. CBO and USDA are using farm price levels so low under the program that it distorts the deficiency payment cost estimates.

CBO estimate of cost over a two-year period of $5.3 billion would be reduced $1.4 billion using a 35 percent participation level and another $1.9 billion if we assume that prices to farmers will average out at just current levels. This leaves a cost of only $2.0 billion—not even considering the fact that neither CBO nor the USDA took into account the payment limitation factor.

Other scare stories are that consumer prices will be raised inordinately and that we may draw down grain stocks too far.

My reply is that with a carryover of 2.3 billion tons of wheat and feed grains and nearly 6 million bales of cotton, we face no danger of shortages from the effects of this one-year bill.

Concerning the cost of this bill at the grocery store, a family of four will pay somewhere between $1 and $2 more per week. A recent Harris poll showed that a majority of Americans are willing to have food prices rise by five percent to help farmers achieve their income goals.

I urge my colleagues in the House to put the need for saving the family farmer in the proper perspective and to analyze objectively the figures that are being orchestrated by the Administration. I believe that your objective analysis will result in your support of the "Emergency Agricultural Act of 1978."

Sincerely yours,

BOB DOLE,
*U.S. Senate.*

The ACTING PRESIDENT pro tempore. The Senator's time has expired.

## ROUTINE MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, there will now be a period for the transaction of routine morning business, as in legislative session, not to extend beyond the hour of 11 a.m., with statements therein limited to 3 minutes.

## AUTHORIZING U.S. DISTRICT COURT SESSIONS TO BE HELD AT HEMPSTEAD, N.Y.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 669.

Mr. BAKER. Mr. President, reserving the right to object, and I shall not object, I rise only to advise the majority leader that Calendar Order No. 669 is cleared on this side. We have no objection to proceeding with its consideration and passage at this time.

The bill (S. 2597) to amend title 28, United States Code, to move the place for holding court for the district court of the Eastern District of New York to Brooklyn and Hempstead, and for other purposes, was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the second paragraph of section 112(c) of title 28, United States Code, is amended to read as follows:

"Court for the Eastern District shall be held at Brooklyn and Hempstead (including the village of Uniondale).".

SEC. 2. The United States District Court for the Eastern District of New York, by order made anywhere within its district, may pretermit the regular session of court at Hempstead until Federal quarters and accommodations are available and ready for occupancy, except that for the entire period and such pretermission, a special session of the court shall be held at Westbury. Pretermission may be ordered without regard to the provisions of section 140(a) of title 28, United States Code.

SEC. 3. Notwithstanding the provisions of section 142 of title 28, United States Code, the Administrator of General Services, at the request of the Director of the Administrative Office of the United States Courts, shall continue to provide existing quarters and accommodations at Westbury for the duration of the special session held pursuant to section 2 of this Act. Appropriations to the judicial branch of Government shall be available to the Director to make necessary disbursements for such quarters and accommodations, and to pay user charges as required by section 210 of the Federal Property and Administrative Services Act of 1949, as amended (40 U.S.C. 490), at rates otherwise authorized by law.

SEC. 4. Notwithstanding the provisions of section 456 of title 28, United States Code, any judge, and any officer or employee of the judicial branch, whose official station is, on the day before the date of enactment of this Act, Westbury, may maintain that official station for the duration of the special session held pursuant to section 2 of this Act.

SEC. 5. The Director of the Administrative Office of the United States Courts may pay travel and transportation expenses in accordance with subchapter II, chapter 57 of title 5, United States Code, to any officer or employee of the judicial branch whose official station changes as a consequence of this Act and who relocates his residence incident to such change of official station.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BAKER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

PURPOSE

The purpose of the proposed legislation is to authorize the U.S. District Court for the Eastern District of New York, which is now authorized to hold court at Brooklyn, Mineola, and Westbury, to instead hold court at Brooklyn and Hempstead (including the village of Uniondale, which is a part of the town of Hempstead).

STATEMENT

At present, 28 U.S.C. 112(c) delineates the configuration of the Eastern (judicial) District of New York and authorizes the U.S. District Court for that district to hold court as follows:

"The Eastern District comprises the counties of Kings, Nassau, Queens, Richmond, and Suffolk and concurrently with the Southern District, the waters within the counties of Bronx and New York.

"Court for the Eastern District shall be held at Brooklyn, Mineola, and Westbury."

S. 2597 would, in effect, substitute Hempstead as a place of holding court in lieu of Westbury, and provide related necessary authority to govern the provision and use of court facilities at those locations for the transition period during which the court is transferring from Westbury to Hempstead.[1]

[1] Prior to 1970 when Westbury was added as a place of holding court, court was held in borrowed state facilities in Mineola. The reference to Mineola in section 112(c) should have been stricken in 1970 since it has not been used as a sitting place for court proceedings since the institution of Westbury. Therefore, this technical oversight is now corrected by deletion of Mineola.

For several years a "Long Island Courthouse" for the Eastern District of New York at Westbury has been growing progressively more inadequate to the court's needs. The courtroom is small, prohibiting the trial of any case involving more than three parties. With an existing seating capacity for spectators of only 40 seats, redesigning the courtroom is not a realistic solution for that problem. Library space has always been inadequate, as has been the available space for the use of the clerk's office, the probation unit, the U.S. marshal's office (in fact the marshal has no office space now) and the U.S. attorney's office.

In recent years the court has been searching for alternative facilities which would better serve its needs without greatly disrupting access and availability to the local community in which it is now located. In late 1977, the court learned that the General Services Administration had leased space in a building at Hofstra University for intended use by the Internal Revenue Service, only to discover, after leasing, that the Service had changed its plans. Upon inquiry, the court confirmed availability of the space, the General Services Administration's willingness to lease it, and the University's genuine enthusiasm for such an arrangement. Only 8 miles from its present location, the Hofstra building would provide the Court with several advantages in addition to a more adequate physical facility. The new location is adjacent to the University's Law School, and thus its library. That physical proximity will be of real advantage to both institutions, providing the opportunity for law students and faculty members to observe court proceedings easily and enabling the court's personnel to call upon the research and other services of the law school. In addition, the Hofstra building has sufficient space to accommodate two resident district judges, three bankruptcy judges, related clerks' offices and the needs of the probation, U.S. marshal, and U.S. attorney offices. When the currently pending judgeship legislation, which does provide an additional judicial position for the Eastern District of New York, has become public law, the court intends to assign two judges to the "Long Island Courthouse" as full-time resident judges. That, of course, will not be possible unless an alternative facility has been authorized in lieu of Westbury.

Although the Judicial Conference of the United States has for many years usually advised against the proliferation of additional places of holding district courts, and this Committee has consistently agreed with that policy, S. 2597 does not present that problem. An additional district court location is not at issue here; an alternative one is. Under this bill, the court itself will "phase out" the Westbury facility as soon as the Hempstead facility is fully functioning. Under Judicial Conference policy guidelines proposed changes in district court locations must be approved by both the district court and the Judicial Council for the circuit in which the district is located. Both the U.S. District Court for the Eastern District of New York and the Judicial Council of the Second Circuit have approved substituting the Hofstra location for the Westbury location.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–728), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

COST

The authorizations for appropriations contained in this bill are required to facilitate the operation of the court during the period between the establishment of Hempstead as a place of holding court and the actual occupancy of the facilities located there by the court. Because all costs of renovation at Hempstead will be met by the General Services Administration, as incidental to its leasing of the space, the funds appropriated for the special session at Westbury during that period, which are already allocated to the judiciary, will not increase. When the court actually moves into the new Hempstead facility the $186,000 per year now being spent for space at Westbury will be transferred to Hempstead. Because the increased space at that location will, in rental payments to G.S.A., cost approximately $279,000 per year, the net increase in costs for the new facilities will be $93,000. In addition, at the time of the move, a judge who now resides in Hempstead will transfer his official station from Brooklyn to Hempstead, giving that location the services of two full-time resident judges. Although his change of official station will result in no relocation costs (under section 5 of the bill), the relocation of two deputy clerks of court and secretarial personnel, associated with his transfer of official station, will incur some relocation costs, estimated to not exceed $7,000. Therefore, the estimated additional costs of the bill in the first year will be $100,000 and the estimated costs for each year thereafter $93,000, plus whatever space rental increases may be assessed by G.S.A. upon renegotiation of the original lease. These amounts are far less than would be incurred by an expansion of the present Westbury facility or construction of a new facility.

## CONVEYANCE OF CERTAIN LANDS TO THE COUNTY OF MINERAL, NEV.

Mr. ROBERT C. BYRD. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives on H.R. 4979.

The PRESIDING OFFICER laid before the Senate the following message from the House of Representatives:

*Resolved*, That the House agree to the amendment of the Senate to the bill (H.R. 4979) entitled "An Act to direct the Secretary of the Interior to convey certain public and acquired lands in the State of Nevada to the county of Mineral, Nevada", with the following amendment:

Page 3 of the Senate engrossed amendment, strike out all after line 5, over to and including line 3 on page 4, and insert:

SEC. 2. Upon receipt of a request from the county of Mineral, State of Nevada, for the purchase of a tract of the lands described in section 1, the Secretary shall immediately cause the same to be appraised and, upon completion of such appraisal, shall notify the county of Mineral of the appraised value of such tract and the county shall have six months from the date of such notice to complete the purchase of such tract by payment of the appraised value into the Treasury of the United States whereupon the Secretary shall issue a patent or other instrument conveying such tract to such county. Any such patent or other instrument of conveyance shall be subject to valid existing rights and easements of record; and shall contain any reservation necessary to protect the continuing uses by the United States of real property owned by the United States that is adjacent to the tract conveyed. In addition, conveyance of section 29, township 8 north, range 30 east, shall be made only in accordance with the provisions of section 209 of the said Federal Land Policy and Management Act of 1976 (90 Stat. 2757; 43 U.S.C. 1719).

Mr. ROBERT C. BYRD. Mr. President, on behalf of Mr. JACKSON, I move that the Senate concur in the House amendment.

The motion was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the motion was agreed to.

Mr. BAKER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

(Routine morning business transacted and additional statements submitted are printed later in today's RECORD.)

## CONCLUSION OF MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is closed.

## THE PANAMA CANAL TREATY

The ACTING PRESIDENT pro tempore. Under the previous order, the Senate will now resume consideration of Executive N, 95th Congress, first session, Calendar No. 2, which the clerk will state.

The assistant legislative clerk read as follows:

Executive N, 95th Congress, 1st Session, The Panama Canal Treaty.

The Senate resumed the consideration of the treaty.

AMENDMENT NO. 102

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there may be 10 minutes for discussion of the pending amendment by Mr. HELMS, to be equally divided between Mr. HELMS and Mr. SARBANES, before any vote occurs.

The ACTING PRESIDENT pro tempore. Is there objection? Without objection, it is so ordered.

The Senator from North Carolina.

Mr. HELMS. Mr. President, I ask for the yeas and nays on the amendment.

The ACTING PRESIDENT pro tempore. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. HELMS. I thank the Chair.

Does the Senator from Maryland wish to proceed first?

Mr. SARBANES. Either way would be quite all right.

Mr. HELMS. Mr. President, I want to thank my good friend and distinguished colleague from Maryland for making my case yesterday evening in his comments on this amendment. When I pointed out that 42 percent of the Panamanian workers would lose their jobs with the canal company and 75 percent of the U.S. citizen employees would be gone within 3 years, the able Senator from

Maryland in rebuttal quoted detailed statistics given by Governor Parfitt before the Armed Services Committee.

Of course, as we agreed yesterday, the statistics cited by the able Senator came from the response of Governor Parfitt to questions which this Senator from North Carolina had propounded to Governor Parfitt. They were exactly the same statistics which I used, which I had analyzed, and which I presented to the Senate yesterday.

As the distinguished Senator discovered when he got down to question 6 of the questions I had propounded to Governor Parfitt, it was rather clear, I think, that the Governor's opinion was that within 3 years half of the U.S. citizens who are needed, half of those in necessary jobs, will leave the canal.

Of course, when half of the U.S. citizens who are needed leave, there will not be enough experts to run the canal or even to train Panamanians to take their places. Why are they leaving? They are leaving because they can see what it is like to live under a dictatorship and they do not like it.

If we are to keep the canal functioning, and I assume that all Senators agree that is absolutely essential, we must respond to the concerns of these American citizens and try to give them enough reassurance so that they will stay long enough to keep the canal from breaking down.

The pending amendment, Mr. President, provides the bare minimum of reassurance for some—and I emphasize the word some—of their concerns.

First, it would remove Panama's arrogant claim that the children of U.S. citizens born in the Canal Zone are Panamanians subject to the whims of the dictatorship.

Second, it would give the English-speaking black people in the Canal Zone, decendants of the original canal builders from the West Indies, a chance to become U.S. citizens and thereby escape Panama's claim that they are Panamanian nationals.

Third, it will provide at the treaty level a bill of rights, a guarantee of procedural rights, for any U.S. citizen who might be prosecuted by the notorious courts under the control of a dictator.

A vote to defeat this amendment, a vote to table this amendment, is a vote, Mr. President, against human rights. It is a vote against the constitutional protections which are the privilege of every citizen of the United States.

I urge my colleagues to consider carefully the consequences when they cast their votes on this amendment.

I thank the Chair.

The ACTING PRESIDENT pro tempore. Who yields time?

The Senator from Maryland.

Mr. SARBANES. Mr. President, Governor Parfitt himself, in testimony before both the Foreign Relations Committee and the Senate Armed Services Committee really pointed out that this whole question of whether people stay on or not depends in part on the implementing legislation, which we have complete control over in terms of how we deal with our early retirement rights and job placement rights and with how the transition is accomplished. Let me just quote him twice, first before the Foreign Relations Committee:

> Governor PARFITT. The Secretary is quite correct. The assurances that have been given to date, both in terms of the assurances provided by the Secretary—

And second, referring to the Secretary of the Army, who is a stockholder in the Panama Canal Company—

> and in terms of those that are embodied in the treaties themselves, have been very reassuring. In the last few months there has been more of a wait-and-see attitude among the population. I would think from the standpoint of the employee guarantee if the assurances are fulfilled in the legislative package, that that would do much to retain the necessary skills that we have to have.

Before the Armed Services Committee, Governor Parfitt addressed the question of employees leaving. The question was put to him—

> In your answer, could you address yourself specifically as to how many of the skilled employees might leave and the importance of the implementing legislation in their decisions?

The Governor referred to the fact that a survey was made and that it indicated they might leave. And of course, he made the statement which we quoted earlier in response to the question posed by the distinguished Senator from North Carolina.

Governor Parfitt went on to say:

> It has always been my perception that this could be prevented by two initiatives. One is providing implementing legislation which deals fairly and equitably and generously with the employees; and, two, by establishing and maintaining a high order of cooperation with Panama in order to insure that when jurisdiction passes to Panama it is done very softly, very sensitively, and thus avoids provocative incidents which will assuredly result in the outward flow of our employees.
>
> So we must effectively deal with both of those situations, in my view, in order to have an assurance of continued efficient operation of the canal.

I say to the Senator from North Caroline that the problem he has referred to is one that I am sensitive to as well. On my visit to Panama, in fact, I met at some length with Americans who work for the company and reside in the Canal Zone. I have expressed earlier in this debate on the floor my respect and admiration for the professionalism of the work they have done in operating the canal.

In fact, early on, in April of 1977, when we had the treaty negotiators at a meeting of the Committee on Foreign Relations, we received a report at that time. One of the concerns I expressed to them, which was echoed by other members of the committee, was the need for greater consultation with the American employees in the zone and sharpened attention to some of their concerns.

Now, the rights which they have been guaranteed in terms of procedures, if they become involved in some legal dispute, are quite extensive. That applies both to civilian employees and to military employees, and includes such things as a prompt and speedy trial; the right to be informed in advance of trial of the specific charge or charges to be made against them; the opportunity to confront and be allowed to cross-examine witnesses and to have legal representation, and so forth and so on. So there is an extensive list of procedural guarantees that both the military component and the civilian component, which will continue to function in Panama, either in the employ of or for the dependents of those who are in the employ of the United States Government, will have available to them and will have as protection. I think it is very important to underscore that fact.

There is a great deal of apprehension, I know, but I do think a great number of safeguards have been written in to deal with some of those concerns. Some of the other concerns are not matters that involve the Republic of Panama. Those are matters completely within the control of the Government of the United States, including the Congress. Those are matters that deal with early retirement questions and alternative job placement opportunities, and things of that sort. These are completely within the control and the purview of the U.S. Government.

The PRESIDING OFFICER (Mr. DECONCINI). The Senator's time has expired. The Senator from North Carolina has 1 minute remaining.

Mr. HELMS. I ask unanimous consent that the distinguished Senator have 2 more minutes to finish his train of thought.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SARBANES. I appreciate the Senator's consideration.

There is another point, and I think it is an important point to make. It is estimated that some 6,000 to 7,000 Americans currently live and work in the Republic of Panama; in other words, not connected with the Panama Canal Company. They do not live in the zone, they live in the Republic of Panama, just as Americans live and work in France or England or Germany. The reports that we have received from the community have been that they have lived and worked there without any difficulties and without any troubles. I know that the people who live in the zone feel that they are considered or perceived differently and that there is going to be antagonism. There is some concern about that. But as Governor Parfitt has expressed here, the sensitivity of the transition is enormously important. That, I think, has been underscored to Panamanian officials.

In testifying before us, Captain Williams of the Pilots Association stated, in response to this very question:

> Recognizing this, however, it should be borne in mind that what was previously blind resistance to change has moderated considerably, to the point that a more open-minded tolerance to "wait and see" is now prevalent.
>
> How many key employees, such as pilots, will terminate their employment if this treaty enters into force?

Then he says the estimate is 5 or 10, it could go higher. But it all depends on how this transition is accomplished.

I think it can be done well. There are guarantees. Therefore, I oppose the

amendment of the Senator from North Carolina.

Mr. HELMS. Mr. President, I have absolutely no problem with the good intentions of the distinguished Senator from Maryland. I know his intentions are of the best. The problem here is that he is talking about legislation; we are talking about a constitutional right and the preservation thereof. The closer the impending loss of those rights, the more quickly people leave. The Captain Williams whom the Senator just quoted himself has already left the Canal Zone. He lives in Corpus Christi, Tex. No matter what his opinion last year, today he is exactly what we are talking about when we speak of the exodus of U.S. citizen employees who are so apprehensive about what will happen. Their concerns will not be allayed.

At this very moment, I say to the distinguished Senator, there are four of the canal pilots from the Canal Zone in the Senate appropriations room, one floor below us, who are stating their concerns to the American people through the press. So we have a very real problem here which the Senator, himself, has recognized. I think it is essential that the Senate, at the treaty level, address itself——

The PRESIDING OFFICER. All time has expired.

Mr. HELMS. I ask unanimous consent that I may have 1 more minute.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. HELMS. I think it is absolutely essential that the Senate address this human rights problem now at the treaty level, rather than have to rely on a legislative remedy which may or may not be effective.

Mr. President, I ask unanimous consent that the statement which has just been delivered to the press conference downstairs by the four pilots be printed in the RECORD at the conclusion of my remarks.

I thank the Chair.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF PANAMA CANAL COMPANY PILOTS JUNIUS CHAUVIN, JOHN WALLACE, BURLEY PRUETT, AND RAY HALL

The four of us are all pilots with the Panama Canal Company. Among us we count 53 years of service with the Company. We are not by nature politically oriented. In fact, we are just the opposite. Because of the sensitive nature of our jobs in piloting the ships of many nations, we have tried to avoid political controversies.

In addition, we don't claim any expertise in political affairs and in general would prefer to leave them to other people. But we do know the business of piloting ships through the Panama Canal. Our years of service on commercial ships and additional years of service as Panama Canal pilots gives us, we believe, a unique expertise in this specialized area. In addition, we have gained a deep appreciation of the maintenance requirements of the Canal and of the conditions necessary to keep it running smoothly.

We have taken the step of coming to Washington at our own expense to speak to members of the Senate and members of the press because we are deeply concerned that, if the Panama Canal treaties are ratified, they will have drastic effects on the operations of the Canal.

Our observation of the maintenance capability seen under the present regime in the Republic of Panama is that it is very poor. There are many roads, hospitals, power plants, industries and the like which are not functioning because of improper attention to maintenance.

Should this level of maintenance prevail in the Canal Zone after the treaties are ratified, this would make it extremely difficult to operate the Canal.

These considerations among others have caused a high level of apprehension in the Canal Zone about these treaties. And I should point out that this apprehension exists among the Panamanian employees as well as among the American employees because studies show that the present Panamanian employees will be hurt at least as much as we will—and probably more. If these treaties are ratified, it is probable that several thousand Panamanian employees will be put out of work.

Because of the intolerable living and working conditions that we foresee if the Canal Zone is placed under the new jurisdiction, we estimate that as many as 50 of the total of 206 pilots now on the force will leave within a year if the treaty is ratified.

We believe that there will also be an exodus of many hundreds of other American Canal employees—including many highly skilled technicians and supervisors.

If the treaties are ratified, the Americans in the Canal Zone would be subject to the jurisdiction of Panamanian courts and at the mercy of the Panamanian National Guard.

We should point out that there is already a shortage of pilots. More and more large ships are going through the canal and these ships require four pilots instead of the two required on average ships. Also, only senior pilots can take these ships through the Canal. For this and other reasons, there has recently been a squeeze on the pilot force which has caused many pilots to work overtime. Efforts by the company to recruit more pilots have largely been unsuccessful.

What has made the piloting jobs attractive for us has been the steady work, good pension plan, and—most important—the good living conditions for us and our families. If the treaties are ratified, these living conditions will no longer exist.

It should be emphasized that Panama will not be able to supply pilot replacements for many years to come. It is a small country and it does not have any nautical tradition. A school has recently been established to train mariners but, the graduates of this must first serve on ships at sea before they can become qualified to begin training as canal pilots.

In closing, we want to emphasize that we are not against a new treaty but against this treaty. We believe, however, that any new treaty should above all insure that the Canal continues to function smoothly. These treaties do not do that.

The PRESIDING OFFICER. The yeas and nays have been ordered.

Mr. SARBANES. Mr. President, I move to lay the amendment of the Senator from North Carolina on the table, and ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

There is not a sufficient second.

Mr. SARBANES. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. SARBANES. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HELMS. I ask for the yeas and nays.

Mr. SARBANES. I move to lay on the table the Helms amendment and ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay the amendment of the Senator from North Carolina on the table. The yeas and nays have been ordered. The clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Minnesota (Mr. ANDERSON), the Senator from Hawaii (Mr. MATSUNAGA), the Senator from New Hampshire (Mr. MCINTYRE), and the Senator from Michigan (Mr. RIEGLE) are necessarily absent.

I further anounce that, if present and voting, the Senator from Minnesota (Mr. ANDERSON), the Senator from Michigan (Mr. RIEGLE), and the Senator from New Hampshire (Mr. MCINTYRE) would each vote "yea."

Mr. STEVENS. I announce that the Senator from Oklahoma (Mr. BARTLETT) is necessarily absent.

The result was announced—yeas 54, nays 40, as follows:

[Rollcall Vote No. 93 Exec.]

YEAS—54

NOT VOTING—6

| | | |
|---|---|---|
| Abourezk | Bartlett | McIntyre |
| Anderson | Matsunaga | Riegle |

So the motion to lay on the table Mr. HELMS' amendment No. 102 was agreed to.

Mr. SARBANES. Mr. President, I move to reconsider the vote by which the motion was agreed to.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ARTICLE VI

Mr. ROBERT C. BYRD. Mr. President, may we move to the next article?

The PRESIDING OFFICER. Are there further amendments to article V? If not, the clerk will report article VI.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the reading of the article be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The article is as follows:

ARTICLE VI

PROTECTION OF THE ENVIRONMENT

1. The United States of America and the Republic of Panama commit themselves to implement this Treaty in a manner consistent with the protection of the natural environment of the Republic of Panama. To this end, they shall consult and cooperate with each other in all appropriate ways to ensure that they shall give due regard to the protection and conservation of the environment.

2. A Joint Commission on the Environment shall be established with equal representation from the United States of America and the Republic of Panama, which shall periodically review the implementation of this Treaty and shall recommend as appropriate to the two Governments ways to avoid or, should this not be possible, to mitigate the adverse environmental impacts which might result from their respective actions pursuant to the Treaty.

3. The United States of America and the Republic of Panama shall furnish the Joint Commission on the Environment complete information on any action taken in accordance with this Treaty which, in the judgment of both, might have a significant effect on the environment. Such information shall be made available to the Commission as far in advance of the contemplated action as possible to facilitate the study by the Commission of any potential environmental problems and to allow for consideration of the recommendation of the Commission before the contemplated action is carried out.

ARTICLE VII

The PRESIDING OFFICER. Are there amendments to article VI? If not, the clerk will report article VII.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the reading of the article be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The article is as follows:

ARTICLE VII

FLAGS

1. The entire territory of the Republic of Panama, including the areas the use of which the Republic of Panama makes available to the United States of America pursuant to this Treaty and related agreements, shall be under the flag of the Republic of Panama, and consequently such flag always shall occupy the position of honor.

2. The flag of the United States of America may be displayed; together with the flag of the Republic of Panama, at the headquarters of the Panama Canal Commission, at the site of the Combined Board, and as provided in the Agreement in Implementation of Article IV of this Treaty.

3. The flag of the United States of America also may be displayed at other places and on some occasions, as agreed by both Parties.

ARTICLE VIII

The PRESIDING OFFICER. Are there amendments to article VII? If not, the clerk will report article VIII.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the reading of the article be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The article is as follows:

ARTICLE VIII

PRIVILEGES AND IMMUNITIES

1. The installations owned or used by the agencies or instrumentalities of the United States of America operating in the Republic of Panama pursuant to this Treaty and related agreements, and their official archives and documents, shall be inviolable. The two Parties shall agree on procedures to be followed in the conduct of any criminal investigation at such locations by the Republic of Panama.

2. Agencies and instrumentalities of the Government of the United States of America operating in the Republic of Panama pursuant to this Treaty and related agreements shall be immune from the jurisdiction of the Republic of Panama.

3. In addition to such other privileges and immunities as are afforded to employees of the United States Government and their dependents pursuant to this Treaty, the United States of America may designate up to twenty officials of the Panama Canal Commission who, along with their dependents, shall enjoy the privileges and immunities accorded to diplomatic agents and their dependents under international law and practice. The United States of America shall furnish to the Republic of Panama a list of the names of said officials and their dependents, identifying the positions they occupy in the Government of the United States of America, and shall keep such list current at all times.

The PRESIDING OFFICER. Are there amendments to article VIII? If not, the clerk will report article IX.

ARTICLE IX

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the reading of the article be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The article is as follows:

ARTICLE IX

APPLICABLE LAWS AND LAW ENFORCEMENT

1. In accordance with the provisions of this Treaty and related agreements, the law of the Republic of Panama shall apply in the areas made available for the use of the United States of America pursuant to this Treaty. The law of the Republic of Panama shall be applied to matters or events which occurred in the former Canal Zone prior to the entry into force of this Treaty only to the extent specifically provided in prior treaties and agreements.

2. Natural or juridical persons who, on the date of entry into force of this Treaty, are engaged in business or non-profit activities at locations in the former Canal Zone may continue such business or activities at those locations under the same terms and conditions prevailing prior to the entry into force of this Treaty for a thirty-month transition period from its entry into force. The Republic of Panama shall maintain the same operating conditions as those applicable to the aforementioned enterprises prior to the entry into force of this Treaty in order that they may receive licenses to do business in the Republic of Panama subject to their compliance with the requirements of its law. Thereafter, such persons shall receive the same treatment under the law of the Republic of Panama as similar enterprises already established in the rest of the territory of the Republic of Panama without discrimination.

3. The rights of ownership, as recognized by the United States of America, enjoyed by natural or juridical private persons in buildings and other improvements to real property located in the former Canal Zone shall be recognized by the Republic of Panama in conformity with its laws.

4. With respect to buildings and other improvements to real property located in the Canal operating areas, housing areas or other areas subject to the licensing procedure established in Article IV of the Agreement in Implementation of Article III of this Treaty, the owners shall be authorized to continue using the land upon which their property is located in accordance with the procedures established in that Article.

5. With respect to buildings and other improvements to real property located in areas of the former Canal Zone to which the aforesaid licensing procedure is not applicable, or may cease to be applicable during the lifetime or upon termination of this Treaty, the owners may continue to use the land upon which their property is located, subject to the payment of a reasonable charge to the Republic of Panama. Should the Republic of Panama decide to sell such land, the owners of the buildings or other improvements located thereon shall be offered a first option to purchase such land at a reasonable cost. In the case of nonprofit enterprises, such as churches and fraternal organizations, the cost of the purchase will be nominal in accordance with the prevailing practice in the rest of the territory of the Republic of Panama.

6. If any of the aforementioned persons are required by the Republic of Panama to discontinue their activities or vacate their property for public purposes, they shall be compensated at fair market value by the Republic of Panama.

7. The provisions of paragraphs 2–6 above shall apply to natural or juridical persons who have been engaged in business or nonprofit activities at locations in the former Canal Zone for at least six months prior to the date of signature of this Treaty.

8. The Republic of Panama shall not issue, adopt or enforce any law, decrees, regulation, or international agreement or take any other action which purports to regulate or would otherwise interfere with the exercise on the part of the United States of America of any right granted under this Treaty or related agreements.

9. Vessels transiting the Canal, and cargo, passengers and crews carried on such vessels shall be exempt from any taxes, fees, or other charges by the Republic of Panama. However, in the event such vessels call at a Panamanian port, they may be assessed charges incident thereto, such as charges for services provided to the vessel. The Republic of Panama may also require the passengers and crew disembarking from such vessels to pay such taxes, fees and charges as are established under Panamanian law for persons entering its territory. Such taxes, fees and charges shall be assessed on a nondiscriminatory basis.

10. The United States of America and the Republic of Panama will cooperate in taking such steps as may from time to time be necessary to guarantee the security of the Panama Canal Commission, its property, its employees and their dependents, and their property, the Forces of the United States of America and the members thereof, the civilian component of the United States Forces, the dependents of members of the Forces and the civilian component, and their property, and the contractors of the Panama

Canal Commission and of the United States Forces, their dependents, and their property. The Republic of Panama will seek from its Legislative Branch such legislation as may be needed to carry out the foregoing purposes and to punish any offenders.

11. The Parties shall conclude an agreement whereby nationals of either State, who are sentenced by the courts of the other State, and who are not domiciled therein, may elect to serve their sentences in their State of nationality.

ARTICLE X

The PRESIDING OFFICER. Are there amendments to article IX? If not, the clerk will report article X.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the reading of the article be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The article is as follows:

ARTICLE X

EMPLOYMENT WITH THE PANAMA CANAL COMMISSION

1. In exercising its rights and fulfilling its responsibilities as the employer, the United States of America shall establish employment and labor regulations which shall contain the terms, conditions and prerequisites for all categories of employees of the Panama Canal Commission. These regulations shall be provided to the Republic of Panama prior to their entry into force.

2. (a) The regulations shall establish a system of preference when hiring employees, for Panamanian applicants possessing the skills and qualifications required for employment by the Panama Canal Commission. The United States of America shall endeavor to ensure that the number of Panamanian nationals employed by the Panama Canal Commission in relation to the total number of its employees will conform to the proportion established for foreign enterprises under the law of the Republic of Panama.

(b) The terms and conditions of employment to be established will in general be no less favorable to persons already employed by the Panama Canal Company or Canal Zone Government prior to the entry into force of this Treaty, than those in effect immediately prior to that date.

3. (a) The United States of America shall establish an employment policy for the Panama Canal Commission that shall generally limit the recruitment of personnel outside the Republic of Panama to persons possessing requisite skills and qualifications which are not available in the Republic of Panama.

(b) The United States of America will establish training programs for Panamanian employees and apprentices in order to increase the number of Panamanian nationals qualified to assume positions with the Panama Canal Commission, as positions become available.

(c) Within five years from the entry into force of this Treaty, the number of United States nationals employed by the Panama Canal Commission who were previously employed by the Panama Canal Company shall be at least twenty percent less than the total number of United States nationals working for the Panama Canal Company immediately prior to the entry into force of this Treaty.

(d) The United States of America shall periodically inform the Republic of Panama, through the Coordinating Committee, established pursuant to the Agreement in Implementation of Article III of this Treaty, of available positions within the Panama Canal Commission. The Republic of Panama shall similarly provide the United States of America any information it may have as to the availability of Panamanian nationals claiming to have skills and qualifications that might be required by the Panama Canal Commission, in order that the United States of America may take this information into account.

4. The United States of America will establish qualification standards for skills, training and experience required by the Panama Canal Commission. In establishing such standards, to the extent they include a requirement for a professional license, the United States of America, without prejudice to its right to require additional professional skills and qualifications, shall recognize the professional licenses issued by the Republic of Panama.

5. The United States of America shall establish a policy for the periodic rotation, at a maximum of every five years, of United States citizen employees and other non-Panamanian employees, hired after the entry into force of this Treaty. It is recognized that certain exceptions to the said policy of rotation may be made for sound administrative reasons, such as in the case of employees holding positions requiring certain non-transferable or non-recruitable skills.

6. With regard to wages and fringe benefits, there shall be no discrimination on the basis of nationality, sex, or race. Payments by the Panama Canal Commission of additional remuneration, or the provision of other benefits, such as home leave benefits, to United States nationals employed prior to entry into force of this Treaty, or to persons of any nationality, including Panamanian nationals who are thereafter recruited outside of the Republic of Panama and who change their place of residence, shall not be considered to be discrimination for the purpose of this paragraph.

7. Persons employed by the Panama Canal Company or Canal Zone Government prior to the entry into force of this Treaty, who are displaced from their employment as a result of the discontinuance by the United States of America of certain activities pursuant to this Treaty, will be placed by the United States of America, to the maximum extent feasible, in other appropriate jobs with the Government of the United States in accordance with United States Civil Service regulations. For such persons who are not United States nationals, placement efforts will be confined to United States Government activities located within the Republic of Panama. Likewise, persons previously employed in activities for which the Republic of Panama assumes responsibility as a result of this Treaty will be continued in their employment to the maximum extent feasible by the Republic of Panama. The Republic of Panama shall, to the maximum extent feasible, ensure that the terms and conditions of employment applicable to personnel employed in the activities for which it assumes responsibility are no less favorable than those in effect immediately prior to the entry into force of this Treaty. Non-United States nationals employed by the Panama Canal Company or Canal Zone Government prior to the entry into force of this Treaty who are involuntarily separated from their positions because of the discontinuance of an activity by reason of this Treaty, who are not entitled to an immediate annuity under the United States Civil Service Retirement System, and for whom continued employment in the Republic of Panama by the Government of the United States of America is not practicable, will be provided special job placement assistance by the Republic of Panama for employment in positions for which they may be qualified by experience and training.

8. The Parties agree to establish a system whereby the Panama Canal Commission may, if deemed mutually convenient or desirable by the two Parties, assign certain employees of the Panama Canal Commission, for a limited period of time, to assist in the operation of activities transferred to the responsibility of the Republic of Panama as a result of this Treaty or related agreements. The salaries and other costs of employment of any such persons assigned to provide such assistance shall be reimbursed to the United States of America by the Republic of Panama.

9. (a) The right of employees to negotiate collective contracts with the Panama Canal Commission is recognized. Labor relations with employees of the Panama Canal Commission shall be conducted in accordance with forms of collective bargaining established by the United States of America after consultation with employee unions.

(b) Employee unions shall have the right to affiliate with international labor organizations.

10. The United States of America will provide an appropriate early optional retirement program for all persons employed by the Panama Canal Company or Canal Zone Government immediately prior to the entry into force of this Treaty. In this regard, taking into account the unique circumstances created by the provisions of this Treaty, including its duration, and their effect upon such employees, the United States of America shall, with respect to them:

(a) determine that conditions exist which invoke applicable United States law permitting early retirement annuities and apply such law for a substantial period of the duration of the Treaty;

(b) seek special legislation to provide more liberal entitlement to, and calculation of, retirement annuities than is currently provided for by law.

Mr. ROBERT C. BYRD. Mr. President, I understand that there will be an amendment or amendments to this article.

Mr. HELMS. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order.

AMENDMENT NO. 82

Mr. HATCH. Mr. President, I call up amendment No. 82 and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Utah (Mr. HATCH) proposes an amendment numbered 82:

After paragraph 10 of Article X, insert the following new paragraph:

11. In order to fulfill the prior assurances by the Government of the United States respecting the economic well-being and job security of any United States national employee of the Panama Canal Company, United States nationals who are employees of the Panama Canal Company or of another instrumentality of the Government of the United States in the Canal Zone prior to the entry into force of this Treaty and who subsequently after ratification of this Treaty elect to leave the Zone or are removed from such employment for reasons other than misconduct, neglect of duty, or malfeasance shall have the right to job placement with no reduction in grade or step in a Federal position with the Government of the United States within the continental United States subject to the provisions of subchapter II of chapter 5, of title 5 of the United States Code.

Mr. HATCH. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will come to order. Senators will please refrain from conversation on the floor.

Mr. HATCH. Mr. President, if these treaties are approved by the Senate, and I think there is a great deal of doubt about that, they contain no assurances by the U.S. Government for the American nationals in the Canal Zone who work there other than a vague and ambiguous statement to the effect that things will be adjusted in their behalf. What has been said is that, "They will be provided for." Union and civic leaders in the Canal Zone have repeatedly asked for a detailed explanation as to exactly what these rather vague assurances mean. Their requests have either been ignored or answered with a similar vague statement, and indeed in some cases, half truths.

There is no question that an effective and efficient transition to Panamanian operation of the canal will necessitate the cooperation of those experienced U.S. employees who are presently employed by the canal. Unfortunately, because of the uncertainty that these citizens are experiencing with regard to their own employment circumstances, morale is at an all-time low among them, and the Panama Canal Company is expecting twice as many U.S. citizens to leave than is required by the treaty-imposed changes.

The employees are tired of being pushed aside and they have reached a point where they must have some assurances as to what their fate will be assuming these treaties are approved. I submit to my colleagues that it is shabby treatment for this Government to pull the rug out from underneath them and to make no firm commitment to them regarding their livelihood. Hence, this amendment seeks nothing more than fair and equitable treatment for them by guaranteeing them a job opportunity in the United States for any eligible employee who elects to leave the Canal Zone for whatever reason he deems appropriate.

I think it is important to know here that the AFL–CIO endorsed the Panama Canal Treaties as "a just and enduring basis for harmony in the Western Hemisphere." Obviously, there is a good deal of disagreement with that position in the Senate.

But I think of more importance here is the fact that their support, which has been published and distributed to all Senators, is contingent upon the equitable treatment and protection of all workers in the Canal Zone, who big labor says must not be caught in the middle and victimized as a result of their government's foreign policy.

The AFL–CIO goes on to say that in keeping with the treaty provisions requiring protection for the job rights and benefits of U.S. citizens employed in the Canal Zone, the Government has established an outplacement service for those employees faced with voluntary or involuntary separation from their current positions. They say that this is a good step toward meeting the Government's obligation to the citizens, but more must be done. For once I find myself in agreement with the leaders of the AFL–CIO in desiring to protect the job security of canal employees. We both agree that the administration and the Department of Defense should promptly develop, in concert with the unions representing Canal Zone workers, provisions for full and complete protection of the job rights and benefits of all these workers.

I believe this is a laudable and necessary objective and my amendment would serve as the focal point for requiring that this protection include the job placement guarantees which are rightfully due these employees who are caught so much in the middle of this complicated situation.

It should be noted that these employees have been told that they will be given job placement priority in the civil service system if, and only if, their jobs are abolished. It came to my attention by two employees of the Canal Zone who visited me in my office that the Civil Service Commission in Miami and New York have been instructed not to hire Panama Canal employees who desire to transfer to those cities even though jobs were available there. It is fairly obvious to me that the Carter administration is holding them captive so that they may be forced to provide the technical expertise to Panamanians in order for them to be able to continue to operate the canal unless these American employees are willing to terminate their civil service careers. If these tactics are being used now, before the treaties are ratified, it is clear that U.S. employees will have no priority placement after the treaties are implemented and when living and working conditions in the Canal Zone are bound to deteriorate even more so than they are at the present moment.

As for those U.S. employees who do not lose their jobs, they will by virtue of the situation become prisoners with no avenue of escape other than the termination of their civil service careers and the ultimate forfeiture of all they have worked for over a period of years.

This is an extremely unfair situation which should not be condoned by any Member of the Senate. If ever there were a group of Federal employees in need of such a guarantee, it is these. Supposedly hired with the protections of civil service provisions, the number of American employees in the Canal Zone will undergo a forced 20-percent drop within 5 years of the effectiveness of the treaties. The remainder will gradually be phased out by a discriminatory system of preferential hiring. Accordingly, American nationals will be subject to forced rotation into less preferable jobs, and will be given no guarantee of nondiscriminatory assignment or promotion. As a shrinking minority of American employees become a vestige in the eyes of the Panamanians of what they will perceive to be U.S. imperialism, pressures to force the civil servants out of their jobs will become greater and greater.

I submit that they will have at that point no way to stem the tide of adverse action unless we act here and now to make it clear as to what their job security rights are.

The supposed quid pro quo is a U.S. Government promise to the effect that it will act as a placement service "to the maximum extent feasible." This is surely a weasle-type language which signifies nothing and the reports that the Civil Service Commission offices in Miami and New York have been instructed not to hire Canal Zone employees surely suggest that this commitment, as diluted as it is, is meaningless.

Hollow assurances is not justice and fairness to those Americans who are victimized, at no fault of their own, by ratification of these treaties.

My amendment would add teeth to our commitment to the employees of the Canal Zone by binding the U.S. Government to offer certain minimum guarantees which in principle are right and necessary. However, because it would be unilaterally binding on the United States, it would not require another plebiscite nor should the Government of Panama object to the personnel policies which we determine reasonably necessary to safeguard the interests of American employees.

My amendment attempts to attract similar guarantees for superlevel civil servants contained in the Ribicoff-Percy-Sasser-Javits civil service reform bill. My thesis is that if we can make job guarantees to GS–18's situated well-paid and comfortably in Washington, as we are doing pursuant to that measure to the civil rights reform bill, surely we can make a modest commitment to American's abroad who find their jobs and lifestyle hostage to the dictates of American foreign policy.

Mr. President, I submit to you that all decency and honor demands that we provide the modest job assurances that my amendment calls for so that the American nationals who work for the Panama Canal Company will know exactly where they stand and can plan their future accordingly. I believe that the Senate should join with the AFL–CIO executive council and approve this amendment which provides for some protection for the job rights and benefits of all those affected workers. I recommend the adoption of my amendment.

I certainly recommend the adoption of my amendment.

I can say that when I was in Panama last August one of the most interesting meetings we had was with the employees and the union leaders of those employees in Panama. In addition to the fact that almost to a man the U.S. employees were against these treaties, their chief secondary concern was what will be their labor rights, assuming these treaties go through. They did not believe that they were being well taken care of. I might just add one of their chief concerns was that they should have their rights incorporated within the treaty as a protection

to them because they know that if this Government does not make the commitment by having their rights incorporated within the treaty it is very unlikely that this Government will make the commitment thereafter and they will be lost in the shuffle.

They know that. I believe that. Therefore, I sincerely bring forth this amendment, which cannot affect or hurt, it seems to me, the Panamanians, because of the nonnecessity to have a plebiscite, and I think will be human. decent. and will bring human rights right here home to those whose human rights and laboring rights are being violated by, I think, the present leadership in Washington.

Mr. GRIFFIN. Mr. President, will the Senator from Utah yield?

Mr. HATCH. I am delighted to yield.

Mr. GRIFFIN. I wish to comment that the amendment of the distinguished Senator from Utah underscores and focuses upon a number of concerns that I have had about this treaty and how it would work between now and the year 2000.

I find in my State, as I discussed this subject, that most people do not realize that 30 months after ratification the employees, whether they be Panamanian or U.S. citizens, even while performing their duties with respect to the canal itself, will be subject to Panamanian laws, Panamanian courts——

Mr. HATCH. That is right.

Mr. GRIFFIN (continuing). And Panamanian police.

While we do not turn the canal over to Panama until the year 2000, we do turn all jurisdiction and control of the Panama Canal Zone over to the Republic of Panama 30 months after the treaties become effective. This creates a lot of interesting questions, I mean, about employee rights during this period between now and the year 2000.

For example, while this recites that labor relations with employees of the Panama Canal Commission shall be conducted in accordance with the form of collective bargaining established by the United States of America after consultation with employee unions, let me ask the Senator from Utah, who is a distinguished lawyer and has studied these things, where does the union go, to what court will the union go, to get relief after these treaties become effective?

Mr. HATCH. That is a good question. Once Panama receives all civil and criminal jurisdiction over the Canal Zone they will have to go to the Panamanian courts.

As the distinguished Senator from Michigan well knows there are wide varieties within this country of exercises under the collective-bargaining systems of this country, and that vague language does not protect those employees one bit.

One of the points brought up innumerable times is that a lot of these U.S. employees are married to Panamanian nationals. If they do not leave now and give up their civil service jobs, because there are no jobs being provided for up here, they may, once jurisdiction is transferred to Panama, which occurs within 30 months after the day of ratification of these treaties, as I understand it, never be able to leave Panama without leaving their spouses down there and leaving their children. That is a tremendous injustice they have to face, that my amendment corrects.

Mr. GRIFFIN. Just looking at such a situation as a labor dispute that might develop 48 months or whatever after the treaties become effective, does anybody know whether there is relief available in a Panamanian court under a situation like this, and do we know not only what the laws of Panama are today but what they will be 48 months from now?

Mr. HATCH. We do not.

As the Senator very interestingly pointed out and, as a matter of fact, it should also be pointed out, there is no labor law really protecting these citizens even under U.S. labor laws because they are employees of the Federal Government, and our labor laws do not particularly cover these employees, except the Government does treat them equally and fairly. But if my amendment is not enacted, there will be absolutely no protection to them other than, I would have to say, an inane promise that is already being abridged.

Mr. GRIFFIN. The Panama Canal Commission that will be established, presumably by implementing legislation if the treaties are ratified, will be immune from suit under the treaties.

Mr. HATCH. That is correct.

Mr. GRIFFIN. And could only be sued, as I understand it, in the Federal court in the State of Louisiana. This will create an interesting situation for the employees, whether they are Panamanians or U.S. citizens, who have complaints against the Panama Canal Commission, will it not?

Mr. HATCH. Well, it is intolerable for them because how can they afford to press their rights, if they have rights that are litigable? They cannot press their rights.

Mr. GRIFFIN. On the other hand, if there is a strike in violation of a collective bargaining agreement, they will be dependent, the Panama Canal Commission will be dependent, upon whatever relief they may be able to get from a Panamanian court.

Mr. HATCH. That is right, and that may be no relief at all.

Mr. GRIFFIN. Yes. Unless the DeConcini amendment, of course, or some version thereof, is written into this treaty, and it is accepted not only by General Torrijos but also by the people of Panama so that we will have the right, if the canal is closed down for any reason, to do something about it.

Mr. HATCH. The Senator has very clearly pointed that out.

Mr. GRIFFIN. I think it is very interesting that so much of the argument of the proponents in this particular area depends upon the enactment of implementing legislation. For example, this treaty holds out in rather vague terms very generous benefits to come, having to do with early retirement, and so forth, if Congress will get around to passing this very generous legislation.

Yet the proponents are against having the House of Representatives pass on the treaties themselves.

Not only, as the Senator from Utah has pointed out, is there a constitutional argument having to do with the transfer of real estate for which there is a good argument that the House of Representatives should participate in the approval of the treaty, but aside from that, and it is a constitutional requirement that the House of Representatives approve the treaties, it seems to me, as I have said over and over again, it would make good commonsense to call upon the House of Representatives to approve the treaties if you expect the House of Representatives later on not only to create a Panama Canal Commission but also to pass this legislation for these employees.

What are they going to do in the meantime? Are they just going to sit around and hope that the House of Representatives, the Congress, is going to pass this very generous legislation, because they may very well decide, well, they do not know when that is going to happen? They have had no indication from the House of Representatives that they approve of these treaties, so who could blame them if they leave, which is unfortunately what a lot of them will do.

Mr. HATCH. That is right. They want to be protected now because they know it is very unlikely that they will be protected later, and I want to protect them now because it just plain is unfair.

But the distinguished Senator has also pointed out another very important thing, and that is why should not the House be called upon to vote at least on the transfer of American property since it will be called upon to vote with regard to implementing legislation, and they may be very irritated because their rights have been avoided, or at least not listened to, especially since 235 of them have demanded the right to vote on the transfer of American property down there.

That is no insignificant thing. I think for our colleagues to waive that right for and on behalf of the House of Representatives without giving them that opportunity, by having voted down the amendments pertaining to this precise constitutional issue, was tremendously foolhardy on the part of my colleagues who voted against the House in that manner because they have basically allowed the President to extend his power, to my way of thinking, in violation of the doctrine of the separation of powers, and I think it is detrimental to the Senate in the final analysis.

But be that as it may, we lost on that amendment, and I suppose now it is in thehands of two bodies: The Supreme Court of the United States—and I hope they will read this record, because I think we made an overwhelming case—and I suppose in the final analysis the House itself, because the House has to decide whether they will implement this treaty. If they decide not to do so we are in deep trouble. So I think the House will

have a double shot, once before the Supreme Court and once on the floor of the House of Representatives.

But today we are debating and arguing for the labor rights, human rights, and employment rights of American citizens in Panama, who have been promised by this Government and their own leaders here in Washington that they will be protected.

Mr. GRIFFIN. I understand from the testimony General Parfitt gave that there are in the neighborhood of 500 U.S. citizens employed in connection with the Panama Canal operation whose services are absolutely essential, and for whom Panamanian replacements cannot possibly be trained in the short term.

I further understand that a poll was taken—this was at the time of the hearings in the Foreign Relations Committee—which showed that 60 percent of the U.S. personnel working down there planned to leave if these treaties are ratified by the Senate. I do not know whether there has been subsequent updating of that or not.

I would think the President would be concerned whether these employees are going to remain on the job. If he wants to encourage them to remain on the job, he would want to resolve the constitutional question that will hang over these treaties, it seems to me, and just as a matter of good commonsense he would want to have a resolution before the House of Representatives approving these treaties, because if the House does not approve the treaties, it will mean not only is there a constitutional question to be litigated, but in the meanwhile until the House sometime thereafter acts, there is going to be concern about these employees and whether they will stay. Would it not be ironic and tragic if the Senate itself, by ratifying these treaties, should trigger an exodus that closes down the canal?

Mr. HATCH. The Senator has spoken well. One of the reasons for this amendment is to let those workers down there know that their rights are being protected and will be protected, so there will be no desire on their part to leave the Canal Zone at this time.

There may be those who are married to Panamanian nationals with dual citizenship problems, who may be forced to remain in Panama if we do not pass this amendment. I feel very sorry for those people, and would like to help them. The fact is that commonsense and reason, true paternalism, and true concern for their welfare—which are one and the same thing, as this Senator see it—mandate that we protect these workers, and that we protect them in writing in accordance with their specific requests to be protected; and we will be doing no less than we ordinarily do for all the highly paid Government employees who sit here in perfect safety, security, and comfort in Washington, D.C. I think it is unfair to do otherwise.

I thank the distinguished Senator from Michigan, and I reserve the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment. The Senator from Maryland is recognized.

Mr. HATCH. Mr. President, will the distinguished Senator yield for a unanimous-consent request?

Mr. SARBANES. Surely.

Mr. HATCH. Mr. President, I ask unanimous consent that we not have a vote on this amendment until after the hour of 12:35 p.m. A number of Senators have come to me and indicated that they had commitments downtown, and they would like to be protected so that they could vote on this matter. I think it would only be fair.

Mr. SARBANES. Mr. Preident, if the Senator would withhold the request and we can go ahead with the debate on this amendment a bit, I would like to check on how that would affect our side.

Mr. HATCH. The people who have come to me have been from your side. This is not a partisan matter.

Mr. SARBANES. Well, we will certainly accommodate them, but meanwhile we will check it out.

Mr. HATCH. I also have to be off the floor for about 10 minutes right now.

Mr. SARBANES. I will assure the Senator that we certainly will not go to a vote until he returns to the floor, and that we will not go to a vote which does not accommodate the request. As a matter of fact I accede to the unanimous-consent request that there not be a vote earlier——

Mr. HATCH. Let us make it 1 o'clock.

Mr. SARBANES. Members might then face a different problem.

Mr. LAXALT. We already have a 1 o'clock unanimous-consent agreement. It would have to be after that.

Mr. SARBANES. I think the problem is that by 1 o'clock Senator STEVENS must be recognized in order to offer his amendment.

Mr. HATCH. Well, 12:35 will be fine.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. LAXALT. What was the final agreement? What was the time?

Mr. SARBANES. No vote will occur until 12:35.

Mr. ROBERT C. BYRD. And could we say not later than 12:45?

Mr. HATCH. That will be fine.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

The Senator from Maryland.

Mr. SARBANES. Mr. President, we have heard a number of arguments made in the course of the presentation of the pending amendment including, to some extent, a replay of the argument that the House of Representatives is constitutionally required to participate in a transfer of property, that it cannot be done by treaty.

We have been over that argument at great length in this body. We spent 3½ days on that argument. It was rejected by the Senate by a very decisive majority, and then subsequently the Court of Appeals for the District of Columbia handed down a decision which rejected the argument.

So I do not intend to replay that theme. I think it has been fully dealt with. Let me turn to the specifics of this amendment, and address myself to them.

I said earlier in this debate that I intended to oppose amendments which would seek to place in the text of the treaty subject matter which could be handled by statute here in Congress because it dealt with a subject that was entirely within the jurisdiction of Congress. I take the view, on those matters where we retain jurisdiction and can change by statute how the matter is dealt with, that we should not place those matters in a treaty between ourselves and another country.

The other country has no role in dealing with such matters. In fact, one really should ask the question, why should we seek to do that if we want to maintain the maximum amount of control in our own hands? Why should we lose the control, we have to deal with certain subject matters through statute by placing those matters in a treaty, requiring that any changes we might want to make in how we deal with them would require an amendment to the treaty, thereby requiring the concurrence of the other country? It really defies logic, it defies commonsense, and it defies what best looks after American interests to seek to take subject matter that we can handle by statute, place it in a treaty, and give the other country that is party to the treaty influence—in fact, control, with respect to any changes, since the other party could always refuse to accede to the changes—over the subject matter.

The matter dealt with in the amendment offered by the Senator from Utah is such a matter. It deals with the question of employment rights in this country of American citizens who have been working for the Canal Company. That is a matter we will be called upon to deal with here in the Congress in the implementing legislation. We have full discretion and full scope in how we handle that matter.

We have some days on the floor when the debate is of such a nature that all of the alleged defects in the treaty are being set out from the point of view of the Panamanian people. Members of the Senate opposed to the treaties take to their feet to discuss at great length how, from their perspective, these treaties are not good for the Panamanian people. They recite all the things which are wrong with the treaties. In fact, we have the very interesting argument where it is asserted, "Well, the Panamanians should really be mad about what has happened with respect to these treaties." Having made that assertion, the same speaker then turns to the Members of the Senate and says, "We ought not to approve these treaties because the Panamanians will be mad about what is in the treaties."

On the one hand they say to the Panamanians, "You ought to be mad," and the Panamanians are all listening to this on the radio. Then Members turn to the Senate and say, "The Panamanians will be mad, and if they are going to be mad

we should not approve the treaties." It is a very skillful argument.

Today is the day on which some Members of the Senate, in effect, say to the Americans in the Canal Zone that they ought to be upset, truly upset. "If they become truly upset they are going to leave their jobs, and if they leave their jobs the canal will not be able to operate. Therefore, we ought not to approve the treaties. So let us talk today about all the reasons why the Americans ought to be so truly upset in working there, they will leave their jobs. If we can bring that about we will have an argument that we are not approving the treaties because the Americans will not be there to do their jobs."

Again, it is a very interesting sort of argument. Let us just talk about it for a moment.

I know that many Americans working in the Canal Zone, working for the Panama Canal Company or the Canal Zone Government, the two American entities there, and for other Americans stationed there with the Department of Defense, are concerned about the transition and concerned about the future. That is an understandable concern. I first want to assure them that I think it is a concern of which every Member of the Senate is sensitive.

I want to repeat that: I think it is a concern of which every Member of the United States Senate is sensitive.

I recall in the spring of 1977 when the Foreign Relations Committee asked the two negotiators to come in and brief us on how matters were proceeding that one of the issues that arose at that meeting, brought up by Members of the Senate, myself included, was the amount of consultation taking place with the American employees of the Panama Canal Company and the Canal Zone Government, and how much information was being transmitted to them about what the possibilities were.

We had received reports, and I think they were reports with some substance to them, that the employees really felt they were being left in the dark; that a good deal of apprehension which might be present in any event was heightened by the fact that they just did not know.

I think as a consequence of that meeting—and I checked this out during my visit to Panama in talks with Americans who live and work in the Canal Zone—there was greater consultation, there was greater information, there was an effort to be more responsive. I think that is important. But it seems to me that the protection for those employees lies within the jurisdiction which we have over how they are to be dealt with through statute.

It makes no sense to seek to put those provisions into a treaty, thereby making Panama a party to the provisions both in the first instance and a party to the provisions thereafter with respect to changes one might wish to make. It makes no sense at all to place those provisions in the treaty rather than dealing with them by statute here in the Congress.

I think it is clear to anyone who has any understanding of the Senate and of the House of Representatives, since it requires both to enact legislation, that responding to the legitimate concerns of the Americans who have worked in the Canal Zone would be a matter of the highest priority.

It is really not necessary to assert that the administration will do everything it can, because it is the Congress that, in the end, will make the determination.

(Mr. CLARK assumed the chair.)

Mr. SARBANES. Secondly, I submit there is every indication that the administration will indeed do everything that it can do.

The Senator from Utah, in the course of his presentation with respect to this amendment, asserted that two regional offices of the Civil Service Commission—I think he said—had issued instructions that there was to be no hiring of people seeking jobs who currently were working for the Panama Canal Company or the Canal Zone Government.

Is that an accurate statement of the assertion?

Mr. HATCH. I apologize, Mr. President. I did not hear the question of the Senator from Maryland.

Mr. SARBANES. As I understood it, the assertion was that two regional offices of the Civil Service Commission had issued a directive that there was to be no hiring of Americans seeking employment in this country who had been with the Panama Canal Company or the Canal Zone Government.

Mr. HATCH. I do not know that they have a written directive, but complaints have been made to us by American citizens working in Panama that the jobs have dried up the minute they applied for them up here, and that they believed that the two Civil Service Commission offices are drying up the jobs and not giving them the opportunity of coming to this country.

Some of them just have to leave now because they are married to Panamanian nationals and will not be able to leave later, once Panamanian law takes effect.

Mr. SARBANES. Of course, I do not for a moment concede that point. I am going to get to the assertion that somehow people will be locked in or frozen in Panama and not be able to leave. But for the moment, I want to leave that point to one side and just deal with the question of the complaints which the Senator says have been brought to his attention.

Mr. President, when I heard that, it was a matter of very deep concern to me. I mean, if, in fact, it were true, then I think a reasonable charge could be made that the Government of the United States was not being responsive to the situation of these employees, as it should be. So, immediately upon hearing them, we naturally went to seek fuller information with respect to the matter. We have been in touch with the Civil Service Commission and have received the following statement from the Chief of the Agency Staffing Liaison of the Bureau of Recruiting and Examining. I want to read the statement in full:

> With reference to the recruiting and employing of former Panama Canal Company and Canal Zone Government United States citizen employees who may lose their jobs because of the Panama Canal Treaty, the Civil Service Commission has recently instructed all of its regions to give priority consideration to the hiring of these employees. Additionally, the Commission has instructed all regions throughout the United States that they must not hire other U.S. citizen employees outside of their own agency if an available Panama Canal Company/Canal Zone Government employee is available and qualified for the position.

I submit, Mr. President, that this is a forthright statement that is responsive to the problem about which we may all have a legitimate concern. I think it is obviously directly contradictory to the basic assertions upon which the complaints to the Senator from Utah rest.

I am frank to say that I do not think the matter should rest there. It should be pursued further. It is quite possible that someone down the line is not carrying out the directives that have been given. But as I indicated, these are instructions that have been sent by the Commission to all regions throughout the country and they are designed to be responsive to this problem.

Mr. HATCH. If the Senator will yield, I was happy to know that our President has said the same, the labor leaders here in Washington have said the same. But the complaints we receive are complaints of people who paid their own way to come up here to America, who are U.S. citizens working in Panama who feel that they cannot leave Panama and they are being held hostage there; and they are going to have to give up their civil service status and leave anyway and lose their civil service status because they have to leave.

Whether the Commission issues a bulletin or not or a policy or not, and whether the President says this or not, all I am asking to do is nothing less than we would do for any civil servant here in Washington; that is, provide these people with some job rights and job protections, because they have not brought this about. This has been brought about as a result of treaty negotiations by the last four administrations.

I do not think that it is an untoward request. Let me say that the distinguished Senator from Maryland has pointed out, and I think quite accurately, that this would not be binding on Panama.

Mr. SARBANES. No, if the Senator will let me resume, I think this is an important point. I am not really addressing, and certainly not quarreling with, the substance of the Senator's concern, or even addressing these concerns. It is quite conceivable that, in dealing with legislation, I might even want to go further than the Senator from Utah in how we accommodate the employees. I want to say to the Senator, and I stated this at the very outset of the debate and on more than one occasion subsequent to that, that I have a high regard and respect for the pro-

fessionalism of the employees who have worked in the Canal Zone and the contribution they have made.

Mr. HATCH. So do I.

Mr. SARBANES. Second, I have met with them and I think I have some appreciation of their problems and their concerns. What I am saying is that we ought not to take a matter, a subject matter that we can deal with here, in the Congress of the United States, and place it into a treaty; because if we put it into a treaty, first of all, we may get a provision on which the other government has to agree, or has some role in agreeing to. They have no role in this. This is our problem and our business.

Third, if in the future we want to change how we deal with it, make it more favorable, adjust to changing circumstances, we would have to go back and amend the treaty with the other country and the other country would then be in a position to put the veto on the proposed change, because it would be in the treaty and they could refuse to agree to it.

Why do that?

Mr. HATCH. If the Senator will yield on that point, I shall answer him.

Mr. SARBANES. Let me finish the question, then I shall yield.

Why put it into the treaty when we can address it here in Congress, in legislation, and have the full range of control over the subject matter?

Mr. HATCH. I think that is a fair question. Why put article X in the treaty? We have basically three pages of protections for our laboring people down there that really, basically, according to the Senator's argument, do not have anything to do with the rights of Panamanians down there, or with Panama.

Since we have taken such deliberative care to put almost three or four pages in here about employment with the Panama Canal Commission, why not include these protections? All I am asking is, if a man or a woman in Panama is working pursuant to a Civil Service Commission appointment or job, if they want to leave, they ought to be able to leave and we ought to find them equivalent jobs in this country. That ought to be part of that article X. It is only fair.

I think we ought to be concerned with the human rights of our employees; especially since it will not require a plebiscite or any other passing upon by the Panamanian Government.

Mr. SARBANES. It would require their approvol. You are putting it into a treaty. Once you put it into a treaty, the other party has to agree to it or it is not part of the treaty.

Mr. HATCH. Can you imagine their not agreeing to it?

Mr. SARBANES. I do not want them to have the right to agree or not to agree to it, because we control it in the United States and in Congress, and the Panamanians ought not to have authority over it.

I do not understand why the Senator wants to bring them in as a party with respect to dealing with this problem, other than for different considerations having to do with opposition to the treaties themselves. But on this subject matter—

Mr. HATCH. If I might answer that, the different consideration does not even play a role here. I fought actively and hard against these treaties for very good reasons and I have listed those reasons on the floor. That does not enter into this particular discussion, because I happen to know, and I think nobody can argue against this proposition, that Panama could not care less whether we protect our employee rights here in America. And if they did care, I could not care less whether they do care, because I think we have an obligation as U.S. citizens to do that. I think it is our obligation to protect our employees' rights, especially since our President, our ambassadors, our State Department, and many of the people who are voting for these treaties have said they will be provided. I do not want, any more than those people down there in Panama want, to have that left up to a subsequent bit of legislation here after the fact.

If I were absolutely certain that my amendment here would become law through legislation immediately following these treaties, maybe I would back off on this point. But I am not certain.

As a matter of fact, I do not believe it will ever become law. So I want it in here along with all these other protections, almost four pages in the Panama Canal Zone treaty.

I would submit, knowing the concern which the distinguished Senator from Maryland, and I would say many others of the 68 who voted for the Neutrality Treaty, have for workers' rights, I would submit it is a valid, worthwhile thing for us to do and there is, really, no reason for stonewalling that particular objection. Not any reason whatsoever. There is no problem with Panama. There will be no problem with Panama.

I would think they would be as interested in this as the Senator, my friend from Maryland, indicated he is, and I certainly am by bringing this amendment to the floor.

If these workers' rights are not important, why have it in the treaty at all?

I would not argue that article X should be stricken from the treaty, but since article X is there, let us get this final protection, on which I think all reasonable minds would have to agree is a minimum. We have to protect those people, who did not bring this on themselves down there and who deserve a protection, as civil service employees in Washington, it has been advocated, should have, sitting here in the confines of comfort, peace and tranquility of this city, rather than within the tremendously dislocated and problematical situation they are sitting in down there in Panama.

I am sorry to have interrupted the distinguished Senator from Maryland at this point. I just wanted to make this point. I appreciate his comments thereon.

Mr. SARBANES. Mr. President, I think it is clear, or ought to be clear, that there is no difference here with respect to responding to the concerns of the American employees or providing them protection. I made the assertion earlier in this debate that in my view every Member of the U.S. Senate would be sensitive to that consideration.

The real difference arises with respect to the approach which seeks to deal with a subject matter that we can deal with in the Congress by statute and makes that subject matter part of the treaty, which then means that the other party to the treaty has a role to play in shaping the subject matter.

Why in the world should we do that? Why in the world should we take the matter of these employees with respect to their opportunities for other employment or their early retirement considerations, if that should be brought forth, and make that subject to agreement by the Republic of Panama, or any future changes subject to agreement by the Republic of Panama?

In fact, it is interesting that the Senator from Utah earlier was so anxious for the House of Representatives to participate in disposition of property by this approach, but, of course, would eliminate the House of Representatives from dealing with the question of retirement or Government rights.

The fact of the matter is that these employment rights can be dealt with solely by the Government of the United States, including the Congress and, therefore, that is how we ought to address this question.

I daresay when we address it on the substance, I will be every bit, if not more, responsive to these problems as the Senator from Utah.

I think that there is a matter of equity here that does need be responded to, and I have so expressed myself publicly on many previous occasions. But I do not want to take a subject matter that we can handle here and place it in a treaty, and thereby give the other party to the treaty, the other country, a right, as it were, to pass on that provision, or later to pass on any revision of it. If we later wanted to revise it, they, of course, would be in a position to block or veto it.

So it is really a matter of how we address this.

I have consistently taken this position, as I said earlier, with respect to amendments which propose to include in the text of the treaty between ourselves and another country a subject matter which we can deal with entirely and completely ourselves here by statute.

I do not think it is logical. It do not think it makes good commonsense. It does not give us as much discretion to protect our interests as we otherwise would have, and that has been the essential thrust of this argument.

I am not about to be placed in the position, and I have indicated that, of being insensitive or unresponsive to these concerns. I do not think any Members of the Senate will be insensitive or unresponsive to these concerns.

But I do not think the way to deal with them is to seek to put them in the treaty and thereby give a role to Panama with respect to matters that are entirely our own responsibility and ought to be handled by us here within the scope of our own discretion and our own judgment.

Mr. HATCH. Will the Senator yield?

Mr. SARBANES. I yield to the Senator.

Mr. HATCH. With regard to that particular point, there is every reason to do it because we have given all of these other labor roles within the treaty that are not protective of our people.

But, more importantly than that, even if this amendment is adopted and incorporated within this treaty as a protection of our laborers down there, and as a minimum protection to them, there is nothing that says we have to have Panamanian consent to extend those protections, to enhance those protections, or to do anything else except lower those protections.

I have been very appreciative that the distinguished Senator from Maryland agrees with me that they ought to have these protections.

Can the distinguished Senator from Maryland guarantee to me right here today on this floor that they will have those protections within a month after these treaties are ratified, if that happens, an assumption I think at this point nobody should easily make, can he guarantee me they will have those protections through legislation formally passed through the Congress and signed into law by the President?

Mr. SARBANES. If by the question of guarantee the Senator asks, is such legislation now law, the answer is "no."

Mr. HATCH. Well, that is not my question.

Mr. SARBANES. If the question is, do I believe that there is every reasonable probability that such legislation will be enacted into law, the answer is "yes."

Mr. HATCH. Of course, that is not my question. My question is, can he guarantee it, and, of course, I already know the answer, it is that he cannot guarantee it.

Mr. SARBANES. As I say, it depends——

Mr. HATCH. If I could finish.

Mr. SARBANES. Well, I just say it depends on——

Mr. HATCH. This way, by adding to the treaty itself, we would make sure that protection is in, with no fear of anything Panama might do later, with no fear of having to obtain consent from Panama, because we would not want to have to reduce these rights once we grant them.

If we want to extend them, or enhance them, all we have to do is pass legislation later.

So the distinguished Senator's argument, it seems to me, is fatally flawed and very illogical.

Mr. SARBANES. Mr. President, I want to address myself to this guarantee question.

As I said to the Senator, if he meant by that to ask whether I can say that the law has been enacted and therefore we are beyond the lawmaking stage, the answer is "no." If by "guarantee" he means to ask whether I have every reasonable expectation that some legislation will be enacted, my answer to that is a very definite "yes."

The executive branch of our Government already has moved to respond to this problem.

The Senator earlier said that he had received complaints that regional offices of the Civil Service Commission were not accepting employment applications from U.S. citizen employees who were losing their jobs with the Panama Canal Company or the Canal Zone Government. If it were true, that matter would be of very deep concern to me. Therefore, as soon as the statement was made, we sent someone to check with the Civil Service Commission with respect to this matter.

The information we received from the chief of the agency staffing liaison of the Bureau of Recruiting and Examining of the Civil Service Commission was as follows, with respect to their policy. I want to read this again, because I think it is important in showing how the Government of the United States already is responding to the concern which the Senator from Utah outlined earlier and which others of us have outlined from time to time.

The Commission said the following with respect to its policy in this matter:

With reference to the recruiting and employing of former Panama Canal Company and Canal Zone Government of United States citizen employees who are losing their jobs because of the Panama Canal Treaty, the Civil Service Commission has recently instructed all of its regions to give priority consideration to the hiring of these employees.

Let me read that again:

* * * the Civil Service Commission has recently instructed all of its regions to give priority consideration to the hiring of these employees.

Additionally, the Commission has instructed all regions throughout the United States that they must not hire other United States citizen employees outside of their own agency if an available Panama Canal Company-Canal Zone Government employee is available and qualified for the position.

Let me repeat that sentence:

Additionally, the Commission has instructed all regions throughout the United States that they must not hire other United States citizen employees outside of their own agency if an available Panama Canal Company-Canal Zone Government employees is available and qualified for the position.

So our Government already is seeking to be responsive.

I submit that the legislation to be enacted will be fully responsive to this problem and that certainly the way to proceed is not to seek to deal with it as a treaty matter and thereby involve the other country that is party to the treaty in the decisionmaking with respect to this matter, when we can decide it here, by statute, ourselves.

For that reason, Mr. President, I oppose the amendment of the Senator from Utah.

Mr. HATCH. Mr. President, I am interested in the Civil Service document that the distinguished Senator from Maryland read; because if he reads it clearly, the rights I have been talking about here are not protected. That document does not say that they have the right to transfer, but only that they are going to have the right to be new hirees. It is not nearly as protective of our Americans who work in Panama, who are upset and disgruntled and hurt and tremendously concerned about their futures, pursuant to a treaty which does not really protect their futures, to be anything but new hirees, if they are lucky to make the transfer, if they need it, to the United States.

My amendment protects them, rather than hurts them. My amendment says:

In order to fulfill the prior assurances by the Government of the United States respecting the economic wellbeing and job security of any United States national employee of the Panama Canal Company, United States nationals who are employees of the Panama Canal Company or of another instrumentality of the Government of the United States in the Canal Zone prior to the entry into force of this Treaty and who subsequently after ratification of this Treaty elect to leave the Zone or are removed from such employment for reasons other than misconduct, neglect of duty, or malfeasance shall have the right to job placement with no reduction in grade or step in a Federal position with the Government of the United States within the continental United States subject to the provisions of subchapter II of chapter 5, of title 5 of the United States Code.

That is very protective. It is precisely what the distinguished Senator from Maryland indicates that he agrees with.

If we read all of article X, we find that it covers matters such as employment and labor regulations, a system of preference in hiring Panamanian employees, the terms and conditions of employment, employment policies, training programs for Panamanian employees and apprentices. Within 5 years we have to reduce our employment by 20 percent. How are our people protected? It says:

The United States of America shall periodically inform the Republic of Panama, through the Coordinating Committee, established pursuant to the Agreement in implementation of article III of this Treaty, of available positions within the Panama Canal Commission.

It goes on to establish qualification standards for skills and experience.

It talks about a policy of periodic rotation, at a maximum of every 5 years, of U.S. citizen employees and other non-Panamanian employees hired after the entry into force of this treaty. It reads:

It is recognized that certain exceptions to the said policy of rotation may be made for sound administrative reasons . . .

They talk about wages, fringe benefits, nationality, sex, race. They talk about those who are displaced from their employment as a result of the discontinuance by the United States of America of certain activities pursuant to this treaty. There is a long paragraph on that.

They talk about—

A system whereby the Panama Canal Commission may, if deemed mutually convenient or desirable by the two parties, assign certain employees of the Panama Canal Commission, for a limited period of time, to assist in the operation of activities transferred to the responsibility of the Republic of Panama as a result of this Treaty.

It talks about the salaries and other costs of employment. It talks about the negotiation of collective contracts.

It says:

Employee unions shall have the right to affiliate with international labor organizations.

It provides for early optional retirement programs.

I could go on and on. All this is discussed in article X.

We come up with something which really protects American citizens, which should be no problem to the Panamanians and will not require a plebiscite, and which the distinguished Senator from Maryland admits is something he would favor by separate legislation, but he cannot guarantee that we will have such separate legislation, and we are having trouble getting it amended to these treaties.

I submit, Mr. President, that this is a minimum amendment that we should have to these treaties and that my colleagues should vote for it. Unfortunately, with the stonewalling that has gone on during the last weeks and months, we realize the uphill battle we have. But when these treaties are finally disposed of one way or the other, by ratification or by defeat in the Senate, I want it to be known that I have stood up for the workers in Panama and for their rights, which I think have been neglected by those who should have been representing them.

I find it very interesting that although no Senator or representative of a Senator was on the treaty negotiating team, a representative of the AFL–CIO was on the treaty negotiating team and did not insist, as a minimum prerequisite, on what I have in this amendment today.

Mr. President, I am prepared to yield back the remainder of my time and to proceed to a vote on this matter.

The PRESIDING OFFICER. Is all time yielded back?

Mr. SARBANES. I yield back the remainder of my time.

Mr. HATCH. Mr. President, I ask for the yeas and nays on my amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. SARBANES. Mr. President, I move to table the amendment of the Senator from Utah, and I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to table the amendment of the Senator from Utah. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Minnesota (Mr. ANDERSON), the Senator from Mississippi (Mr. EASTLAND), the Senator from Louisiana (Mr. JOHNSTON), the Senator from Washington (Mr. MAGNUSON), the Senator from New Hampshire (Mr. MCINTYRE), and the Senator from Michigan (Mr. RIEGLE) are necessarily absent.

I further announce that, if present and voting, the Senator from Minnesota (Mr. ANDERSON), the Senator from New Hampshire (Mr. MCINTYRE), the Senator from Michigan (Mr. RIEGLE), and the Senator from Washington (Mr. MAGNUSON) would each vote "yea."

Mr. STEVENS. I announce that the Senator from Oklahoma (Mr. BARTLETT), the Senator from New Mexico (Mr. DOMENICI), the Senator from Arizona (Mr. GOLDWATER), the Senator from Pennsylvania (Mr. HEINZ), and the Senator from Connecticut (Mr. WEICKER) are necessarily absent.

The result was announced—yeas 55, nays 33, as follows:

[Rollcall Vote No. 94 Exec.]

YEAS—55

| | | |
|---|---|---|
| Baker | Hart | Matsunaga |
| Bayh | Haskell | McGovern |
| Bentsen | Hatfield, Mark O. | Metzenbaum |
| Biden | Hatfield, Paul G. | Morgan |

NOT VOTING—12

| | | |
|---|---|---|
| Abourezk | Eastland | Magnuson |
| Anderson | Goldwater | McIntyre |
| Bartlett | Heinz | Riegle |
| Domenici | Johnston | Weicker |

So the motion to lay Mr. HATCH'S amendment No. 82 on the table was agreed to.

Mr. CHURCH. Mr. President, I move to reconsider the vote by which the motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion was agreed to.

AMENDMENT NO. 90

The PRESIDING OFFICER. Under the previous order, the Senator from Alaska (Mr. STEVENS) is recognized to call up amendment No. 90 to article XIV.

Mr. STEVENS. Mr. President, that is an amendment to article XIV, I believe, and it is amendment No. 90 that is at the desk.

The PRESIDING OFFICER. The clerk will report.

The assistant legislative clerk read as follows:

The Senator from Alaska (Mr. STEVENS) for himself and Mr. THURMOND proposes an amendment numbered 90:

At the end of Article XIV add the following new paragraph:

"(2) If at any time before or after December 31, 1999, either the Republic of Panama or the United States of America abrogates, terminates, or otherwise declares void under their respective domestic laws the Panama Canal Treaty, the Treaty concerning the Permanent Neutrality and Operation of the Panama Canal, or any amendments, reservations, understandings, or declarations thereto exchanged as part of or with the instruments of ratifications of such treaties then such treaties shall terminate and the following treaties which would have been superseded by the Panama Canal Treaty shall remain in full force and effect:

"(a) The Isthmian Canal Convention between the United States of America and the Republic of Panama, signed at Washington, November 18, 1903;

"(b) The Treaty of Friendship and Cooperation signed at Washington, March 2, 1936, and the Treaty of Mutual Understanding and Cooperation and the related Memorandum of Understandings Reached, signed at Panama, January 25, 1955, between the United States of America and the Republic of Panama;

"(c) All other treaties, conventions, agreements and exchanges of notes between the United States of America and the Republic of Panama, concerning the Panama Canal which were in force prior to the entry into force of this Treaty; and

"(d) Provisions concerning the Panama Canal which appear in other treaties, conventions, agreements and exchanges of notes between the United States of America and the Republic of Panama which were in force prior to the entry into force of this Treaty.

As used in this treaty the term supersede (supersedure) means to stay, set aside or render dormant.".

Renumber the existing paragaph in Article XIV accordingly.

In the title of Article I delete the word "Abrogation" and insert in lieu thereof the word "Supersedure".

In Article I, paragraph 1, delete the words "terminates and".

In Article I, paragraph 1, delete the words "This Treaty" and insert in lieu thereof "All of the Articles of this Treaty except Article XIV".

The PRESIDING OFFICER. The time on this amendment is limited to 3 hours, to be equally divided between and controlled by the Senator from Alaska (Mr. STEVENS) and the Senator from Idaho (Mr. CHURCH).

The Chair recognizes the Senator from Alaska.

Mr. STEVENS. I thank the Chair. I ask unanimous consent to have added as cosponsors of this amendment the names of the Senator from Nevada (Mr. CANNON), the Senator from Arizona (Mr. DECONCINI), the Senator from Wyoming (Mr. WALLOP), the Senator from Kansas (Mr. DOLE), and the Senator from Arizona (Mr. GOLDWATER).

The PRESIDING OFFICER (Mr. HODGES). Without objection, it is so ordered.

Mr. STEVENS. Mr. President, I previously have pointed out to the Senate the legal research that my staff and I have done concerning Panamanian Su-

preme Court cases and the legal treatises written by distinguished Panamanain lawyers and intellectuals which indicate that the Republic of Panama may, under its domestic law, be able to declare declarations, reservations, and understandings which were not submitted to a plebiscite at the time of the original treaty, not having been reviewed by plebiscite in Panama, void under Panamanian law. The Panamanain Supreme Court has, in fact, on one occasion declared a treaty unconstitutional because it was not properly published during the ratification process.

The problem that bothers me is that reservations, declarations and understanding are primarily attached to the Resolution of Ratification under the domestic procedures of the United States and the procedures of the Senate in connection with the previous treaty that was approved. It is apparent that that will be the situation with regard to this initial treaty, which would take effect now, if approved, and be effective until the year 1999.

It appears to me that under the interpretation given by the Panamanians under their own domestic law, these reservations, declarations, and understandings such as the DeConcini reservation are effective only if they are in fact amendments to the treaty itself, which, under the Panamanian law, would require a subsequent plebiscite in order to be valid.

Under our domestic law, any reservation, declaration, or understanding attached to a treaty or to the resolution of ratification is binding. Under the Panamanian law that is not the situation, as we understand it, because under their law the treaty must be subject to a plebiscite. The Resolution of Ratification is not subject to a plebiscite, and there is serious doubt as to whether the reservations, declarations, and understandings that the Senate has previously adopted would in fact be binding upon the Panamanians unless this amendment is adopted.

I point out again that I am one who believes and has believed that we need a new relationship with Panama. Unfortunately I cannot support these treaties, because I find they are in fact interpreted one way in the United States and another way in Panama. The net effect of that, in my opinion, is to give a legacy to succeeding generations of Americans that can only lead to a collision between our two countries, and ultimately would mean that the United States would have to abondon its legitimate interests in the canal or use force in order to assert our rights in Panama, to protect the Panama Canal, or to continue its operations, and I consider the Panama Canal to be an area and a facility that will be of substantial importance to the United States in terms of our economy and our national security for many years to come.

It is with a great deal of reluctance that I have opposed these treaties, because I think that a new relationship is necessary. On the other hand, I do not think this generation has the right to establish a situation in which there is no alternative for future generations to protect the interests of the United States except through the use of force. The DeConcini reservation, I think, is the action of the Senate that has raised the interest of the Panamanian regime. We are informed that General Torrijos has in fact reserved judgment on this reservation, and I have placed in the RECORD already a series of translations from the Panamanian media which indicate an overwhelming reaction against that reservation.

I think that legally, as I have said before, any of the actions taken by the Senate in attaching amendments or reservations or declarations to the resolution of ratification are ineffective and will be ineffective in Panama unless this amendment is adopted.

The research that I have referred to, conducted not only by my office but independently by the Library of Congress, showed that the Republic of Panama, under its domestic law, may declare a reservation, declaration, or understanding of a substantive nature which has not been submitted to a plebiscite in Panama void under their constitutional procedures. In fact, as I mentioned, in 1963 the Panamanian Supreme Court ruled that the 1949 Geneva Convention on the Red Cross was unconstitutional in Panama because of a defect in the ratification procedure, as far as the Panamanian law was concerned.

I see no alternative except to declare that unless Panama is ready to accept the reservations, declarations, and understanding attached to both of these treaties and to their resolutions of ratification, as adopted by the Senate, we in effect have not reached agreement. The effect of my amendment would be to declare that if Panama voids the action taken by the U.S. Senate in attaching a reservation, a declaration, or an understanding either to the treaties or to the resolutions of ratification, then the existing treaty relationship between Panama and the United States, so far as we are concerned, remains in effect.

I know that a similar amendment was offered before, and was rejected. I hope that in this amendment we have taken sufficient pains to see that it is drafted in a way that will accomplish the objective that we seek. We have located this amendment in article XIV, which is the dispute settlement provision. The article that terminates the Panama Canal Treaty on December 31, 1999, is also amended by this amendment. As amended, that article would terminate all of the Panama Canal Treaty except the dispute settlement mechanism on December 31, 1999. The dispute settlement mechanism, as amended by my amendment, would remain in force in perpetuity, simultaneously with the Neutrality Treaty.

There is nothing inconsistent about this approach. In fact, it is, in connection with the Neutrality Treaty, a permanent dispute settlement mechanism. There is nothing that would prohibit the application of the dispute settlement mechanism to any problem which might arise under the Neutrality Treaty. I think that would be an improvement. This is, in effect, a safety device. What it says to the Panamanians is that "If you are not prepared to accept U.S. understandings of the two treaties presented for ratification under the terms on which the United States is willing to accept them, then the old treaties remain in effect."

I am hopeful that all those who are interested in the reservations, the amendments, and the declarations which have been considered in the past will consider this amendment long and hard. I consider it to be, in my humble opinion, the key amendment in the debate and the battle so far. There is no question in my mind that General Torrijos has set the stage internationally for unilteral action on the part of the Panamanians to void the DeConcini reservation and the other amendments to the resolution of ratification on the Neutrality Treaty.

Without this amendment, without some action that clearly states the position of the United States, we are in the unfortunate position that under our constitutional system, under the decisions of our Supreme Court, the United States is bound by the treaties, if we ratify them, and we are bound by the actions we have taken in the resolution of ratification.

Under the Panamanian procedure, they are not bound by the resolution of ratification. They are not bound by the reservations, such as the DeConcini reservation, unless the resolution of ratification and the treaties are both submitted to the people of Panama in a subsequent plebiscite.

I believe General Torrijos knows that well. He has some very astute negotiators and people who have been working with him in connection with these treaties.

When I was in Panama, along with other Members of the Senate, I was privileged to meet with General Torrijos and to discuss very frankly these treaties. He knew at the time that I opposed the treaties. We discussed the matter very frankly off the record.

I have honored the conversation. I have not put on the record, here or elsewhere, the discussion which we had. I am convinced from the conversations I had that General Torrijos is a very resourceful leader, and he has taken action which any of us would have taken if we were in his position sitting in Panama with Panamanian domestic law which gives him the right to ignore the action of the U.S. Senate, if he sees fit to do so, despite the fact that we would be bound by the treaty ratifications if we, in fact, adopt the resolution of ratification.

I also should state that for myself I am concerned about the fact that the people of Panama have heard the statements here on the floor. I am certain that in the translation some of our comments have come across in Panama which have either been misunderstood or people do not understand statements which are being made in connection with the justification of maintaining our national interest as opposed to the Panamanian national interest.

We seek not to insult or to in any way denigrate the actions of our Panamanian neighbors. I, as one who has lived in a territorial status, certainly have felt the same emotions as the people of Panama and understand what the Panama Canal in the past has meant to the Panama-

nian national psyche. I do not blame them for wanting to seek a change in their relationship to the Panama Canal.

I fault our own people for not having explained thoroughly to the Panamanians the process of ratification of a proposed treaty under our system. I particularly fault our own people in not having protected against the misunderstandings which have arisen out of these two documents, misunderstandings which have led to meetings between the President of the United States and General Torrijos with the issuance of a statement attempting to explain the provisions of the treaty, which led to a series of amendments offered by Members of the Senate in the utmost of good faith, trying to protect the interest of the United States, and which have led to the Senate having adopted the DeConcini resolution which states that we intend to take such action as may be necessary to protect our national interest with regard to the Panama Canal.

The situation I see is that without the amendment we have proposed today we can look into the future and see the action that will take place. We will be presented with a resolution of ratification. If it is adopted there will be an exchange of documents between Panama and the United States, at which time our State Department will deliver to Panama the reservations and the declarations, the understandings, which were attached by the U.S. Senate to the resolution of ratification.

It is a very simple matter under Panamanian law to have those actions of the U.S. Senate declared void in Panama, notwithstanding the fact that the United States has already ratified, or would at that point have already ratified, the Neutrality Treaty and the Panama Canal Treaty and would be bound by its terms.

I say that the seeds of war, Mr. President, for future generations of Americans and Panamanians exist in the misunderstandings which are apparent in these documents. There is no greater responsibility for the Members of this Senate than to make certain that these documents are interpreted in Panama and in the United States in the same way, and to make certain that the Panamanians accept, freely and openly, any reservations, declarations, or understandings made by the Senate in its ratification process of these treaties.

If we do not do that, future generations of Americans, as I say, will have but two alternatives: Either to abandon the legitimate economic and military interests of the United States, in the future use of the Panama Canal, or to use force to assert our legitimate national interests over that claimed by the Panamanians as their legitimate national interests.

That is a terrible legacy to leave to future generations. For myself, I cannot support documents which will do that.

I urge the Senate to carefully consider this amendment. I am convinced that if this amendment is agreed to and General Torrijos does declare void the reservations which have previously been adopted, we would at least preserve the framework of the treaty relationship between the United States and Panama which exists today.

Mr. WALLOP. Will the Senator yield?

Mr. STEVENS. Mr. President, I yield to the Senator from Wyoming such time as he may desire.

The PRESIDING OFFICER. The Senator from Wyoming (Mr. WALLOP).

Mr. WALLOP. Mr. President, I will briefly comment. I compliment my colleague for the remarks he has just delivered. I would point out again, as I tried to do once before, that this is no killer amendment. It is placed in the treaty document as a more useful and understandable article with regards to the results it expects to effect.

The problems which were mentioned by the distinguished Senator from Alaska relate to what almost amounts to a unilateral act of ratification on the part of the United States. I do not think it is fair to our people, and surely not fair to the Panamanians, to put this kind of a burden on the process of the conduct of relations between our two countries without understanding, fairly clearly, what expectations there are, and to which standards we would return should either party fail to live by the articles of the two treaties, resolutions, reservations, and amendments thereto.

Much of the argument in favor of this amendment has already been presented. I associate myself with the argument in its behalf.

The arguments in favor of the amendment are not dissimilar to those I offered earlier to this treaty. Basically, this treaty, if it is abrogated, provides no ground to which to return, leaving the decision to some future American leader, or Panamanian leader, to resort to force or to accept the failure of one party or the other to abide by the terms of the treaty.

We are, in short, left in thin air as two nations trying to conduct relations between each other.

The American people and the world, I think, deserve to know to what standard we would revert should these treaties be broken. While this appears on its face to be an argument or an agreement to contract, if you will, between Panama and the United States alone in this world, there is a world economic interest involved here that I think we, as a nation, and Panama, as a nation in the location of the canal, owe some allegiance. The standard proposed under this amendment is recognizable by both parties and it should have standing in the world community.

Simply stated, the amendment would provide that if the treaty or any of its amendments, reservations, declarations, or understandings are voided by either party, then these treaties shall terminate and we shall return basically to the status quo. If both sides uphold the terms of the new agreements, the amendment will never be used.

If it is the intent of both parties to abide by the terms of the treaties and other more evil influences on the world stage do not orchestrate or instigate an abrogation, no one will ever know of this amendment, no sovereignty be subject to it, no national loss of face be compelled by it.

Mr. President, recent events mentioned by Senator STEVENS and spread across the newspapers of this land and the world bring to light the extent to which an abrogation of a treaty reservation could become a possibility, a reality. Daily, the press reports that Panama is not pleased with the DeConcini reservation, delineating what was already implied by U.S. negotiators. Panama's reaction to this interpretation highlights two points: First, that Panama and the United States do not agree on what the vague terms of this treaty mean; second, that the administration's reassurances to the Senate were more based on wishful thinking rather than rooted in solid legal fact for mutual understanding between our country and Panama.

Mr. President, I want to state again that I am not opposed to a new relationship between our country and Panama. In a speech on the Senate floor, back at the beginning of the debate on these treaties, I established my position that, in the interest of justice and in the interest of the dignity of both countries, we should reexamine our relationship with Panama and establish a new circumstance between ourselves.

I am not opposed to new treaties. I am not opposed to redefining our role in Panama and in the Canal Zone. But the issue has always been these treaties before us and, in effect, nothing else. While we are trying to build a new relationship on a faulty and unclear document, the world, perhaps unaware of some of the implications of the documents before us, awaits action. What the Senate has been trying to do for the last 2 months is to clarify that document and to insure that both parties know what is expected of each other. Any contract is only as solid as the language of the contract, that which is contained within the four walls of the contract, as it were. Now we are given an indication of the degree to which that document is unclear.

The reaction of the Panamanians to the DeConcini reservation makes it all the more imperative that we have something upon which to fall back should these new treaties be abrogated. We need a legal and a moral foothold on which to base our actions. Mr. President, in my opinion, the Stevens amendment, of which I am pleased to be a cosponsor, gives us that basis. If the treaty is upheld, the amendment is irrelevant. But if the terms of the treaty are broken, we know what happens; Panama knows what happens, and the world, indeed, what happens. Perhaps, if that were to happen—and I, for one, hope that it will not—that new relationship desired between our two countries might be negotiated more carefully in the interest of both our countries.

Mr. President, I yield back to the distinguished Senator from Alaska.

Mr. STEVENS. Mr. President, I thank the distinguished Senator from Wyoming for his contributions in support of this amendment.

Mr. President, I ask unanimous consent that the Senator from Massachu-

setts (Mr. BROOKE) be added as a cosponsor of this amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STEVENS. I reserve the remainder of my time.

The PRESIDING OFFICER. The Senator from Maryland (Mr. SARBANES).

Mr. SARBANES. Mr. President, will the Chair let us know the time situation on this amendment?

The PRESIDING OFFICER. Originally it was 3 hours. The opposition has 90 minutes. Approximately 27 minutes have been used by the proponents.

Mr. SARBANES. Is there a time fixed for a vote?

The PRESIDING OFFICER. There has not been a time fixed for the vote. There was a 3-hour time limit only.

Mr. SARBANES. Mr. President, the amendment offered by the Senator from Alaska begins, if I may say so, from an extraordinary premise, which is that you should put into an agreement that you are concluding with another party to a provision saying in effect to the other party, "We anticipate or expect that you are going to violate this agreement; therefore, we are going to write into the agreement what will happen when and if you violate it."

That is an interesting way to go about making contracts and approaching agreements. In effect, what you do is, at least up to a point, make an assumption of bad faith rather than good faith on the part of the other party to the agreement. I think it is important to make that point at the outset. A country such as Panama, for 70 or more than 70 years, has really carried out the obligations of the 1903 treaty, despite resentment toward it and a feeling of antagonism that it was not fairly negotiated and that it has not kept abreast of a changing world which has made many of the concepts contained in that treaty outdated. No one, I think it is reasonable to say, would expect two independent nations today, negotiating a treaty, to be able to include in the treaty many of the provisions that are in the 1903 treaty.

Conceivably, the Soviet Union might impose such an arrangement upon a country by force. But I do not think anyone looking around the world today, at the nature of the world, would seriously suggest that two independent nations seeking to reach an agreement with one another could arrive or would arrive at the arrangements, all of the arrangements, embodied in the 1903 treaty.

Many of the issues which have been the source of contention over the years—and the contention in many respects has escalated in recent years—matters that may not really have been tenable even in 1903 between two totally independent countries. But I do not think the same sensitivities concerning many of those provisions existed then that exist now, and no two self-respecting nations could reach an agreement of that sort today.

To begin by making the assumption, as we do with the other party, that they are, in fact, going to violate the agreement, I think is an extraordinary assumption to make. I really think people ought to consider how we would feel if the other party to an agreement being reached were to say, "Well, we are reaching this agreement that is going to govern our relations over the rest of this century, and then indefinitely into the future, and this is how we perceive these matters will develop." Then at the same time if they said to us, "But you know we have a real suspicion and doubt that you are not going to keep this agreement, that you are entering into it but not in full good faith, and you are not going to keep it; and, therefore, we are going to add another provision to this agreement, which we want you, the other party, to agree to, that when you break the agreement, certain things are going to happen."

Now, just as a starter, that is an unfair premise.

The second thing is what we say is going to happen if it is broken, so that we are going back to the 1903 treaty.

Well, of course, the reason we are here with these treaties is that the 1903 treaty has proven to be inadequate and unsatisfactory to the situation.

If the 1903 treaty were adequate and satisfactory, we would not be here. We would not have negotiated these new treaties and the Senate would not have spent the last 9 weeks considering whether to advise and consent to them.

The reason we are here, and the reason the new treaties have been negotiated, is that the old 1903 arrangement, to which this amendment would return us, has clearly been inadequate, to put it mildly; inadequate to govern the relationship between the two countries in the latter part of the 20th century.

So that is why we are here. We are here because the 1903 treaty is not satisfactory. We are here, I would hope, proceeding on the premise that both parties have negotiated in good faith and agreement which they would hope to keep with one another.

Third, there is the notion that if it should happen that a substantive treaty provision is not adhered to, it would be an act of bad faith on the part of the other party. I want to underscore again that we have no reason to make that projection on the basis of Panama's past performances. The few difficulties that have occurred on occasion in Panama have not really gone to the substance of the Panamanians keeping their end of the bargain.

I do not think it is an overstatement to suggest that virtually every Member of this body, away from the heat and the dramatics of the fight over the approval or disapproval of these treaties, in some calmer, quieter time, without a specific issue to which the rhetoric of the debate had to adjust itself, if he or she were to sit and read the history and the record of our activities in Panama since 1903 and the conduct of the Panamanian governments and the Panamanian people, would seriously contend that the Panamanian people and Panamanian governments have not kept their end of the bargain, kept their end of a bargain they have long regarded—indeed, from the very outset—as being an unfair bargain for them.

But I think in all fairness it would have to be conceded that they have really carried out their end of the treaty arrangements over the past three-quarters of a century.

I know the attention and seriousness with which the able Senator from Alaska (Mr. STEVENS) has approached this matter. Partly in response to that seriousness of purpose which he manifested and which he has expressed in discussing the amendment today and discussing, at least, the concept of it earlier in the course of the debate, we sought from the legal adviser to the Department of State an opinion with respect to a unilateral attempt to abrogate a treaty for a material breach.

I shall take a few moments of the Senate's time to read the response that was received. Mr. President, this is a communication from the legal adviser, Mr. Herbert J. Hansell, to the Department of State:

> Your staff has requested that we respond to your inquiry concerning the legal effect of (a) a unilateral attempt by Panama to abrogate the Panama Canal Treaty prior to its termination date, or (b) a material breach by Panama of the terms of that Treaty.
>
> The termination of a treaty, or the suspension of its operation, may take place only in conformity with generally accepted rules and practices of international law. In the case of the Panama Canal Treaty, the governing rule is set forth in Article II(2) of the Treaty itself. That article stipulates that the Treaty will terminate at noon, Panama time, December 31, 1999. Absent mutual consent to an earlier termination, or a termination with another appropriate basis in international law, such as material breach by the United States or impossibility of performance, the Panama Canal Treaty will remain in force until the specified time. A unilateral declaration of abrogation or suspension by Panama, prior to the specified date, will not be effective.
>
> Therefore, until the Panama Canal Treaty is terminated on December 31, 1999, the United States will have the legal right to assert and enforce all U.S. rights under the Treaty. Moreover, a material breach of the Panama Canal Treaty by Panama would entitle the United States to suspend performance of its obligations in whole or in part. Article 60(1) of the Vienna Convention on the Law of Treaties provides that
>
> "A material breach of a bilateral treaty by one of the parties entitles the other to invoke the breach as a ground for terminating the treaty or suspending its operation in whole or in part."
>
> In the Panama Canal Treaty, the United States has agreed, *inter alia*, (a) that Panama will receive certain payments each year during the life of the Treaty, (b) that Panamanian nationals will increasingly participate in the operation and maintenance of the Canal and that Panama's forces will participate in the defense of the Canal, (c) to transfer to Panama certain property at the entry into force of the Treaty and during its lifetime, and (d) to transfer the Canal and related property to Panama on December 31, 1999.
>
> In the event of a material breach by Panama of its obligations, it would be perfectly appropriate for the U.S. to withhold performance of these and other U.S. obligations under the Treaty until Panama complied once again with its obligations.
>
> We are, of course, confident that both the United States and Panama will faithfully comply with their respective obligations under the Treaties. Indeed, in over seventy years, Panama has not committed any significant breach of the existing treaties de-

spite the fact that it considers those treaties unfair and unjust. It is reasonable to assume that compliance with the Treaties freely entered into by Panama in 1977 will be at least as good as that experienced under a treaty entered into in the circumstances of 1903. But, as the foregoing demonstrates, the Parties would have satisfactory remedies available in the event either were to fail to comply with its obligations in the future.

That is the end of the letter.

I wish particularly to underscore the statement in the letter that—

A unilateral declaration of abrogation or suspension by Panama prior to the specified date will not be effective. Therefore, until the Panama Canal Treaty is terminated on December 31, 1999, the United States will have the legal right to assert and enforce all U.S. rights under the treaty.

As the legal adviser concluded:

We are, of course, confident that both the United States and Panama will faithfully comply with their respective obligations under the treaties. Indeed, in over 70 years, Panama has not committed any significant breach of the existing treaties, despite the fact that it considers those treaties unfair and unjust. It is reasonable to assume that compliance with the treaties freely entered into by Panama in 1977 will be at least as good as that experience under a treaty entered into in the circumstances of 1903. But as the foregoing demonstrates, the parties would have satisfactory remedies available in the event either were to fail to comply with its obligations in the future.

I have discussed to some extent—and I am going to go on to do so—the amendment offered, accepting the premise of its proponents, namely; that one of the parties to this agreement will, in fact, repudiate it. I do that simply because I want to address the substance of that contention, although, as I have said, I think it is an extraordinarily discomfiting premise to proceed upon, and its implications to the other party, of an agreement that has been freely entered into, might well be very harmful. The premise, in effect, has been put out in this amendment, and therefore I want to go on to address it.

I underscore, as I proceed to do so, that the Republic of Panama has faithfully complied with its obligations under the 1903 treaty, a treaty whose modification they have sought continuously from the very outset. Even so, they have not committed any significant breach of the existing treaties in the more than 70 years in which they have been in effect.

The first point is that if you are going to have the premise of abrogation or violation of treaties, you certainly cannot go back to the 1903 treaty. The remedy for that rests in carrying forward our rights under these treaties, under these arrangements. These arrangements have been freely entered into by both parties. The other party is entitled to expect us to carry out our part of the bargain, and we are entitled to expect them to carry out their part of the bargain.

The fact is that we are entitled, as the Department of State has said, to the legal right to assert and enforce our rights under the treaty. If an abrogation or repudiation should occur—if—our remedy is to enforce our rights under the treaty, which we are very clearly in a position to do.

Second, the treaty arrangements contained here begin the development of new arrangements between our two countries. Some changes will take place at once; others will take place in 3 years; others will take place over a continuing period of time. Very significant changes will take place at noon on December 31, 1999.

Seven years from now, or 11 years from now, or 15 years from now, if there should be some abrogation of a treaty term, it would be senseless to seek to remedy that by going back to the 1903 provision; clearly there is no reason to expect that the other party would agree to put that provision in the treaty, in any event, since those are the terms they want to get away from. But even if you add it in and it is agreed to, to try then to go back to the 1903 treaty would mean unscrambling the developments that had taken place over that 7-year period or 11-year period or 15-year period, or whatever it may be.

In effect, new treaties are cooking a new omelette; and once you start that process of cooking it, you cannot then go back to the earlier arrangement.

I urge the proponents of the amendment to stop and think for a moment about various steps that are going to occur over a period of time, and then think about what would be involved in reversing all those steps. What kind of action would you then be calling upon the United States to take?

Reference was made earlier to troubles, and so forth. Imagine for a moment, if you will, the troubles that would be associated with that process.

Second, you are then talking about a very mixed up situation. The treaty arrangements have been worked out in a very careful way. Some Members of the Senate think that they are good treaties and they support them; other Members of the Senate oppose them. But I think both sides would have to state that they constitute a fully developed comprehensive scheme as to how matters are going to proceed.

You cannot start down that path and go part way down that path, and then stop and say, "No, now we are going to leap backwards to that earlier arrangement from which we were moving." If you start down that part and something happens that impedes continuing in that direction, your remedy is to take measures to insure that you continue to assert the rights that are contained in the comprehensive arrangements which have been worked out in these treaties.

I mean the practicalities, let alone the principle, of going back to the 1903 treaty defy imagination when we ask how it could possibility be accomplished.

Of course, if you are going to make this premise about the bad faith of the Panamanians in not carrying out the treaty and therefore abrogating one of its terms—if you are going to make that assumption—then why would they not abrogate the 1903 treaty to which you are seeking to go back? In other words, the premise upon which the supporters of the amendment proceed as to how the Panamanians will behave is equally as applicable to the 1903 treaty. In fact, if they were to repudiate or abrogate the 1977 treaties, which have tried to meet many of the problems over those three-quarters of a century, there is every reason to suppose that that attitude would obviously apply to the 1903 treaty. I do not see how one can escape that conclusion.

So, we have started on a process here and if it is interrupted, the way to solve it is to continue the process. There is no way we can leap out of the middle of that process and go back to an earlier arrangement.

Some references were made as to anticipated troubles, but if you really want to imagine a situation which would bring troubles, I submit that such a situation would be an effort to go back to the 1903 treaty after we have begun the process of trying to implement and make work the 1977 treaties that are before the Senate today, assuming we advise and consent to them.

There are many, many ways, of course, in which we can seek to have the treaties complied with. The Neutrality Treaty establishing a regime of neutrality for the Panama Canal, gives to both the United States and the Republic of Panama, each acting separately, the right to take such action as is necessary to maintain the regime of neutrality embodied in that treaty. That is an important authority and one that obviously comes into play with respect to the provisions of these two treaties.

So, Mr. President, I submit that the premise on which the amendment proceeds is faulty with respect to the attitude of the Panamanian people and the Panamanian governments toward treaty obligations; but further, that even if one proceeds on that premise, the remedy for an abrogation is to enforce the rights contained in these treaties. Obviously, we cannot go back to the 1903 treaty. That is the very treaty we are trying to move away from. So, in principle, you cannot go back to it, and, in practice, I suggest that once we have started out on the process of implementing the 1977 treaties it will be virtually impossible to return to the 1903 situation because changes will have taken place—changes with respect to jurisdiction over the zone, the sovereignty which Panama exercises over its own territory, the territorial lines that are drawn, and services that are provided. For example, the Panama Canal Commission, which will become the successor American agency of the Panama Canal Company and will operate and maintain the Panama Canal for the rest of the century, will not engage in all of the retail-type activities which the Company has been engaged in over its history. They are no longer going to be running bowling alleys, food stores, shoe stores, and so forth and so on. Those, then, are going to be done privately in the economy of the country.

So a lot of things are going to happen that cannot be reversed.

If we move on these treaties, we will have entered into certain specified arrangements. Our joint responsibility, the responsibility of both countries, then, is to see that these arrangements are adhered to and carried out. It is my own belief that they will be adhered to and carried out voluntarily by both parties. There is everything in the record of our relationship to lead us to such a conclusion. But if it should happen that that is not the case, I think there are adequate authorities contained in the treaties to keep the relationship on the basis of the terms of these treaties.

For those reasons, Mr. President, I oppose the amendment which the distinguished Senator from Alaska has offered and to which the distinguished Senator from Wyoming has also addressed his thoughtful remarks, and I reserve the remainder of my time.

The PRESIDING OFFICER. The Senator from Alaska (Mr. STEVENS).

Mr. STEVENS. Mr. President, one of the great difficulties we have in addressing this issue is the difficulty of trying to determine how we can get around the domestic law in Panama. I wish there had been proper advice given to the Panamians about our ratification procedure. I have the feeling that had there been a real attempt to bring about understanding of this procedure the ratification process, the plebiscite that took place where Panama did, in fact, endorse these treaties before the U.S. Senate addressed them, would not have taken place prior to our consideration of the treaties.

I may be wrong in that, but that is just my own feeling. There is no way under the current situation that these two procedures mesh.

The Senator from Maryland said why should we, in effect, enter into a contract that presumes in the beginning that one party may try to terminate it or abrogate it or declare it void.

The difficulty is that under the procedures in Panama, as I understand them—and I do not interpret the statement read by the Senator from Maryland from the Department of State legal counsel to contradict that—they can, in fact, declare a portion of the documents as not binding on Panama if they have not complied with their domestic law in the ratification process.

Again the problem in Panama as far as the Red Cross situation was concerned in terms of the Geneva Convention, as I understand it, was that the convention had not been published properly. By not having been published properly it was not before the Panamanian Government properly and, therefore, was not subject to the ratification process.

It does seem to me that the problem I am trying to address is how to make certain that we have an understanding, and my response to the Senator from Maryland would be that with due regard and respect to our Panamanian friends, the adoption of this amendment would make them carefully evaluate their actions before they attempted to void the reservations, such as the DeConcini reservation, that have been added to the resolution of ratification. If my amendment has been adopted, the Panamanians will be voiding our reservation with the knowledge that we take the position that the prior treaty arrangements between the United States and Panama remain in effect until they use their domestic law to comply with and to, in fact, adopt the reservations, understandings, and declarations of the U.S. Senate.

I do not want to get into a deep legal argument over the matter. It is my understanding that under the new constitution of Panama they except themselves from any action required by international law, if such action would be prejudicial to the national interests of Panama. Certainly all of the furor we have heard from Panama in the last few days concerning the DeConcini reservation indicates that a substantial portion of the Panamanian people believe that action of the Senate was prejudicial to the national interests of Panama.

It is obvious that the Senate believes it was in the national interests of the United States to declare, as it did in the DeConcini reservation, our intent to protect our national interests in the Panama Canal.

I must say that as the debate has gone on, and continues, I have developed a frustration over the processes of our ratification procedure because there is no way that those of us who seek to make the treaties effective, in our opinion, and to make them reflect the desires of a majority of the people of the United States can achieve those goals.

It is fairly apparent that those of us who have tried to improve these treaties do not have a majority in the Senate.

On the other hand, whether it will be possible to have two-thirds of the Senate ratify this Panama Canal Treaty unless some action is taken to protect the reservations, declarations or understandings adopted by the Senate in its consideration of this treaty, cannot presently be predicted.

I am delighted and honored to have the support of the Senators from Arizona, both of them, Senator DECONCINI and Senator GOLDWATER; of Senators BROOKE and CANNON; and of Senators WALLOP and DOLE. The impact of their cosponsorship of this amendment demonstrates to me that they, too, would like to make certain that the actions taken by the Senate in the past, and which may be taken in connection with declarations, reservations or understandings attached to the resolution of ratification on this treaty will, in fact, be binding upon Panama.

I find no way to assure that that will be the case unless we tell Panama in no uncertain terms that if they do not accept the treaties, as we understand them, and subject to those reservations, declarations or understandings, then so far as we are concerned, we will continue to act under the treaty of 1903.

We have been careful in this amendment, as I have said, to eliminate the provisions of the treaty which would abrogate the preceding treaty arrangements, and we have changed the technical words to reflect the supersedure procedure.

We say that this treaty supersedes the prior treaties. If Panama interprets this treaty and the Treaty of Neutrality as we do then the 1903 treaty lies dormant forever. If they do not accept the treaties on the same terms, if we do not have a deal, if we do not have an agreement which is not subject to misunderstanding, then we will continue under the 1903 arrangements.

I should think from my visit to Panama that their feelings about the 1903 treaty and subsequent arrangements that are set forth in this amendment, the treaty of March 2, 1936, and the memorandum of agreement of January 25, 1955, their feelings about those prior arrangements are so well expressed that they would think twice about refusing to accept the DeConcini reservation and the other understandings and declarations that have been attached.

At the very least, Mr. President, I would say that this amendment will mean that the leader of Panama will, in fact, have to submit the treaties and the resolutions of ratification passed by the Senate to the people of Panama for a plebiscite, a second plebiscite, and the issue would then be whether or not the people of Panama wish to accept these new two treaties as interpreted by us or whether they wish to leave in effect the existing treaty relationships between our two countries. I think that is a clear-cut issue that the people of Panama ought to have the opportunity to vote on.

As I understood what I heard when I was down there it would be pretty clear to me that if they really thought about it, the Panamanians would accept these treaties with the DeConcini reservation and the other reservations, declarations or understandings. I think it is one whale of a good deal for the Panamanians. There is still a lot in these treaties that is totally unacceptable to the people of the United States.

Mr. WALLOP. Mr. President, will my colleague yield just for a question?

Mr. STEVENS. I am happy to yield.

Mr. WALLOP. He heard in the argument of the distinguished Senator from Maryland that our premise is wrong. I would submit that our premise is different. But I doubt that it can be termed wrong until history has proven that it is wrong.

I would ask my colleague from Alaska inasmuch as he is an attorney, and I assume has seen, participated in, drawn up, given counsel on a number of contracts in his life, in his professional life, it is not an unusual thing for a contract, as it were, to include a penalty clause or a return-to clause, or a clause that in some manner describes circumstances if the other pieces of the contract are not lived up to. Perhaps in this instance we would not want to call it a penalty clause, but it is a reservation clause. Is that a reasonable thing?

Mr. STEVENS. Well, legal treatises are full of materials concerning the doctrine of anticipatory breach, with actions for liquidated damages or whatever you want to call it in terms of the actions used, no matter what the terms of the relationships of the parties might be.

I hasten to add, however, that this amendment has been drafted so that if the people of Panama take action to void unilaterally a portion of the understanding as it was reached through our constitutional processes, including this process here in the Senate, we say that these treaties have no force and effect in terms of superseding the existing treaty relationship. In other words, that existing treaty relationship goes on until this process is in fact validated.

Mr. WALLOP. I appreciate that. I did not really mean—I was searching for a word. There is a sort of condition subsequent type of premise that we are working on. I do not think it is my premise, and I doubt that it is the premise of the Senator from Alaska or the other cosponsors of this amendment, that Panama will definitely abrogate this treaty. This is a condition that we hope to forestall by the kind of amendment or the kinds of conditions set forth within this amendment; is that not correct?

Mr. STEVENS. Yes, I certainly agree. I cannot contemplate that the Panamanians would refuse to accept these documents, even with these reservations and understandings, because they are so one-sided.

Mr. WALLOP. That is true. It is, therefore, not a supposition, but rather it is a recognition of a possible condition.

Mr. STEVENS. This is a winner-take-all document as far as I am concerned. After the year 2000, we have no relationship to the Panama Canal except to guarantee its neutrality. The DeConcini reservation gives us the right to protect our national interests unilaterally, but it does not restore the balance of the relationship I think should have existed in terms of a continuing partnership for the operation, maintenance, and defense, of this facility, which is so much in our national interest and the interest of every other nation in this hemisphere.

Mr. WALLOP. I certainly agree with my colleague. Not only this hemisphere but virtually the entire world of commerce, that it is virtually unilaterally laid on us to preserve after the year 2000.

I thank the Senator.

Mr. STEVENS. I reserve the remainder of my time. Did the Senator from Alabama wish me to yield? I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. SARBANES. Mr. President, the Committee on Foreign Relations, in reporting out the treaties, says the following in its recommendations to the Senate:

> The Committee recommends that the resolution of ratification of the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal be amended by striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "subject to the following understanding:
>
> "The President shall include all amendments, reservations, understandings, declarations, and other statements incorporated by the Senate in its resolution of ratification respecting this Treaty in the instrument of ratification exchanged with the Government of the Republic of Panama."

Now, the same recommendation occurs with respect to the Panama Canal Treaty. The resolution of ratification with respect to the Neutrality Treaty, which we approved in the Senate, more than two-thirds of the Senators present concurring therein, provides in its concluding paragraph:

> "The President shall include all amendments, reservations, understandings, declarations and other statements incorporated by the Senate in its resolution of ratification respecting this Treaty in the instrument of ratification exchanged with the Government of the Republic of Panama."

That has been included in the resolution of ratification, and the committee has recommended that a similar provision be included in the resolution of ratification of the Panama Canal Treaty; and the chairman of the committee, as he did in the consideration of the prior treaty, will of course offer that understanding at the appropriate time.

That then becomes the treaty in its entirety. It is included in the resolution of ratification and included in the instruments of ratification to be exchanged by the respective governments, to which they would have to accede. That establishes the relationship.

I would simply repeat the previous analogy, that once you begin this relationship, if there is some abrogation later on, you cannot really unscramble the eggs. The only way to proceed is to carry forward the arrangements provided for in these treaties, and assert our rights under the treaties. That is both the practical and principled way to proceed.

The Senator from Wyoming said that I had a different premise and that he could not say it was altogether wrong to anticipate that the Panamanians will not abide by the treaty.

I am not sure I said that. What I said was that their past history was one of abiding by the previous treaty over about three-quarters of a century, in which they had substantially kept all of its terms; and I suggested that almost every Member of the Senate, when we got away from this debate would concede that upon examination of the historical records, and that past history made an assumption of abrogation an inappropriate premise on which to proceed.

But I went on to address the premise that lies behind the amendment, and to try to discuss the substance of what it proposes.

It is not for us to tell Panama how to do its business. We will have to make our judgments here as to what we think has to be done, and Panama will have to make its judgments. They did not condition their plebiscite on approval of the treaties by the Senate of the United States, nor did they condition their plebiscite on some other provision, that the treaties be approved by the House of Representatives, for example, and not by the Senate.

Suppose they had done that, and said, "Well, we are going to condition our processes on their processes," and then proceed to write our processes for us? What would our reaction have been? I do not think it is hard to predict what our reaction would have been. We have to make our judgment here with respect to what we think is appropriate, and they will have to make their judgment there.

Mr. WALLOP. Mr. President, will the Senator yield for a question on that last statement?

Mr. SARBANES. Surely.

Mr. WALLOP. You ask what the reaction would have been had the Panamanians conditioned it on ratification by the House rather than the Senate, which would have changed our processes.

I think, as I understand one of the arguments of the Senator from Alaska, what he is trying to do is fit this in to processes under the Panamanian Constitution which have been already ruled upon by their supreme court. The difference, I think, is that we would have had to say we cannot do that under our constitutional processes.

As I understand the contention of the Senator from Alaska it is that the Panamanian constitution and their record with regard to the Geneva Convention has been that they cannot accept certain of these reservations that have been attached by the Senate without another plebiscite or without some other understanding from this Senate.

I would suggest that it is not our intent to ask Panama to change their processes. It is the contention of the Senator from Alaska, as I understand it, that their processes almost demand either another plebiscite or some understanding as to what takes place if it is ruled to be unconstitutional or otherwise is abrogated by some action within Panama.

(Mr. ALLEN assumed the chair.)

Mr. SARBANES. Let us take the question of the United States entering into an executive agreement. What would be the Senator's reaction if the country said, "We are telling the United States we will not enter into this agreement unless it is done by treaty. In any event, we are telling you, in terms of your own processes, what you must do."

Mr. WALLOP. We would have to say we cannot.

Mr. SARBANES. Obviously, I submit that we are in the position where we will have to make our judgments and the Panamanians will have to make theirs. The nature of how we perceive they will make the judgment may affect how Senators vote on the treaties, but for the opponents to propose this kind of an amendment is basically to state opposition to the treaties. That is what I am trying to say.

Mr. WALLOP. I would suggest that is certainly not my motive. I would not speak for the other cosponsors. It was not designed as a killer amendment and, in effect, does not do anything to their processes.

Mr. SARBANES. I did not use the term "killer amendment."

Mr. WALLOP. I agree.

Mr. SARBANES. It was not used by me with respect to this amendment.

Mr. WALLOP. Not with respect to this amendment. I am talking about the earlier amendment offered by the Senator from Wyoming.

Mr. SARBANES. In fact, I do not think I have ever used that term.

Mr. WALLOP. Well, it was a word of art in some other day which was being used with some frequency. I have not participated in the debate for some days, and I am back in the old cliches. Please forgive me.

It really has not been the intent to interfere with their processes, or at least it is not my understanding that it interferes with their processes.

I would ask the Senator from Alaska if he considers it to be such.

Mr. SARBANES. I yield to the Senator from Alaska.

Mr. STEVENS. Mr. President, on page 13 of the report of the Senate Foreign Relations Committee is this statement:

In the event the Senate concludes that some additional change is necessary, the Committee strongly urges (1) that such material be incorporated in the resolutions of ratification as an understanding, interpretation, declaration, or some similar designation; and (2) that that material not alter the rights, duties and obligations contained in the treaties. Any material so incorporated in the Senate's resolutions of ratification will have precisely the same force and effect, under both domestic and international law, as material included in the text of the treaties themselves. Any amendment to the text of the treaties, however, is virtually certain to require a new Panamanian plebiscite—which the Committee-recommended amendments will not.

The committee goes on later to say:

While the Committee does not believe that the Senate should, to avoid the need for a new Panamanian plebiscite, alter the substance of any new material which it believes the national interest of this country requires, it does believe that the Senate can and should take into account the form in which such material is added, since that form, even though legally inconsequential, could mean the ultimate success or failure of the ratification of these treaties.

I have no argument with that statement. That is in the report of the Senate Foreign Relations Committee, the statement "As it applies to the domestic law of the United States and to international law."

The difficulty comes as that statement is applied to the Panamanian domestic law, and as Panamanian domestic law relates to international law. The document that we are amending, which we have amended in the past and it is apparent we are going to amend this time; namely, the resolution of ratification, is clearly subject to attack under Panamanian domestic law, since under Panamanian law it is not presented to their people in a plebiscite but it is the treaty which was presented. We have, under our domestic law and our understanding of international law, interpreted these treaties in one fashion in the United States; they, under their domestic law as it relates to international law, may interpret these treaties in another manner. The Panamanians necessarily do not accept our interpretation. We may well be entering into a new treaty relationship with the Panamanians with a situation where we have stated our understanding of these treaties in one way and they have, under their constitutional process, the absolute right to ignore what we have done, what we have said, and the statements we have made as to our understandings of the agreement into which we have entered.

In effect, what I am saying is if we pursue the course we are on now, there will not be a meeting of the minds between the Panamanians and the United States in terms of a new agreement.

This amendment should be adopted, because it will state that unless there is a meeting of the minds, unless we have actually arrived at a total consensus on the new relationship between Panama and the United States, the old relationship should remain in effect.

That is the intent of my amendment.

I might state to the Senator from Maryland, subject, of course, to his response, I am prepared to bring the matter to an end in any way he wishes to do so. We thought one other Senator wanted to speak but he is tied up in a hearing and will not be here.

Mr. SARBANES. Mr. President, I am prepared to yield back the remainder of my time and go to a vote with respect to this amendment, if that is the suggestion of the Senator from Alaska.

Mr. STEVENS. That is my suggestion, subject to whatever time the Senator from Maryland wants to take.

The PRESIDING OFFICER. Do both sides yield back the remainder of their time?

Mr. SARBANES. Yes, Mr. President.

Mr. STEVENS. Yes, Mr. President.

The PRESIDING OFFICER. Both sides having yielded back the remainder of their time, the question is on agreeing to the amendment of the Senator from Alaska.

Mr. SARBANES. Mr. President, I move to lay on the table the amendment of the Senator from Alaska and I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table the amendment of the Senator from Alaska. The yeas and nays have been ordered and the clerk will call the roll.

The legislative clerk called the roll.

Mr. EASTLAND. Mr. President, on this vote, I have a pair with the distinguished Senator from Alabama (Mr. SPARKMAN). If he were present and voting, he would vote "aye"; if I were permitted to vote, I would vote "nay." Therefore, I withhold my vote.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Minnesota (Mr. ANDERSON), the Senator from Michigan (Mr. RIEGLE), and the Senator from Alabama (Mr. SPARKMAN) are necessarily absent.

I further announce that, if present and voting, the Senator from Minnesota (Mr. ANDERSON) and the Senator from Michigan (Mr. RIEGLE) would each vote "yea."

Mr. STEVENS. I announce that the Senator from Oklahoma (Mr. BARTLETT) and the Senator from Oregon (Mr. PACKWOOD) are necessarily absent.

The result was announced—yeas 53, nays 40, as follows:

[Rollcall Vote No. 95 Exec.]

YEAS—53

PRESENT AND GIVING A LIVE PAIR AS PREVIOUSLY RECORDED—1

Eastland, against.

NOT VOTING—6

| | | |
|---|---|---|
| Abourezk | Bartlett | Riegle |
| Anderson | Packwood | Sparkman |

So the motion to lay Mr. STEVENS' amendment No. 90 on the table was agreed to.

Mr. SARBANES. Mr. President, I move to reconsider the vote by which the motion to table was agreed to.

Mr. JAVITS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER (Mr. MATSUNAGA). Under the previous order, the Chair recognizes the Senator from Virginia (Mr. SCOTT).

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent, and I have cleared this with Mr. SCOTT, that Mr. THURMOND be recognized at this time to call up an amendment, and that upon the disposition of that amendment Mr. SCOTT then be recognized.

The PRESIDING OFFICER. Is there objection?

Mr. CHURCH. Mr. President, I understand that it would be agreeable with Senator THURMOND that there be a time agreement on this amendment, the time agreement being limited to 1 hour and the time being divided equally, 30 minutes to a side.

Mr. THURMOND. Mr. President, I can agree if we make it 35 minutes. I may not take that, but I would rather have it.

Mr. CHURCH. Very well. It is agreeable to the Senator from Idaho.

I, therefore, ask unanimous consent that the time be limited on the Thurmond amendment to an hour and 10

minutes, with 35 minutes allocated to each side, Mr. THURMOND being in charge of the side for the proponents and I being in charge of the side for the opponents.

Mr. ROBERT C. BYRD. Mr. President, I ask that it be in order for Mr. THURMOND to call up his amendment out of order.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 24

Mr. THURMOND. Mr. President, I send my amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The second assistant legislative clerk read as follows:

The Senator from South Carolina (Mr. THURMOND), for himself and Messrs HARRY F. BYRD, Jr., HELMS, GARN, LAXALT, SCHWEIKER, HANSEN, ALLEN, and SCHMITT, proposes unprinted amendment numbered 24:

At the end of paragraph 4 of article XIII, add the following:

"(d) Notwithstanding the provisions of subparagraphs (a) and (b), the funds required to be paid in any year under this paragraph to the Republic of Panama may be paid only to the extent that the operating revenues of the Canal exceed all operating expenses of the Panama Canal Commission not including payments made to Panama under this paragraph."

The PRESIDING OFFICER. The Senator from South Carolina (Mr. THURMOND) is recognized for 35 minutes, in support of his amendment.

Mr. SCOTT. Mr. President, will the Senator from South Carolina yield briefly?

Mr. THURMOND. I am pleased to yield to the Senator from Virginia.

Mr. SCOTT. It is my understanding that the previous unanimous-consent agreement, insofar as it relates to the Senator from Virginia, is not changed in any way, other than that I will follow the Senator from South Carolina in the amendment that he brings up.

The PRESIDING OFFICER. The Senator from Virginia is correct.

Mr. SCOTT. I thank the Chair.

Mr. THURMOND. Mr. President, I would like to address myself to the financial aspects of the Panama Canal treaties. I believe the American people are not fully aware of what it will cost them if these treaties are ratified. Let me just say, on that score, that I do not blame the American people for not being fully aware of the costs of these treaties primarily because of totally misleading statements by leading proponents of these treaties.

MISLEADING STATEMENTS ON THE COST OF TREATIES

On February 1, 1978, President Carter, in a nationally televised address to the American people, stated:

Are we paying Panama to take the canal? We are not. Under the new treaties payments to Panama will come from tolls paid by ships which use the canal.

On December 28, 1977, President Carter stated:

We wanted a treaty that did not put a financial burden on the American taxpayer, and we got it.

On September 26, 1977, Secretary of State Vance in testimony before the Senate Foreign Relations Committee stated concerning the cost of the treaties:

The treaties require no new appropriations, nor do they add to the burdens of the American taxpayer.

Later in his testimony before the Senate Foreign Relations Committee, Chairman SPARKMAN asked Secretary Vance concerning the so-called implementing legislation: Will there be a necessity for the usual appropriations action?

Secretary Vance answered: "No."

Then Chairman SPARKMAN asked: "What, if any, budgetary impact would this have?"

Secretary Vance answered: "No appropriations will be required." And Chairman SPARKMAN replied, "No appropriations will be required. I think those are two questions that have concerned people."

I believe these quotes from administration officials are representative of many statements made by treaty supporters concerning the cost of the treaties. I believe these statements are misleading, intentionally or not, concerning the cost of these treaties to the American taxpayer. It is small wonder that the American taxpayer believes these treaties will not cost him.

COST OF TREATIES TO AMERICAN TAXPAYER

Let me state, as clearly and emphatically as I can, that these treaties will cost the American taxpayer a bare minimum, a rock bottom, $758 million over the next 22 years, and in all likelihood considerably more than that.

Let me outline what constitutes this $758 million:

$440 MILLION FOREGONE INTEREST TO THE TREASURY

The Panama Canal Company has the statutory obligation to pay interest to the U.S. Treasury on the interest-bearing portion of the U.S. investment in the Canal Zone. At $20 million per year over 22 year, this will amount to a $440 million loss to the Treasury over the life of the treaty. I might note that Comptroller General Staats, in testimony before the Senate Armed Services Committee, stated that this $20 million estimated annual interest payment "could be substantially more" per year over the next 22 years, since the interest rate is based on the U.S. Treasury average rate for long-term issues and "as that portfolio turns over, these rates are bound to go up, and I do not believe that this has been fully taken into account in these projections." According to an Armed Services Committee staff study, Mr. Staats has estimated the total loss to the Treasury over the next 22 years at $505 million.

$165 MILLION EARLY RETIREMENT BENEFITS

Additional early retirement benefits to present Panama Canal Company employees are being negotiated. These payments would, of course, come from appropriated funds. Estimates of the annual costs of the various proposals being negotiated range from $6.5 to $8.5 million per year. If we take $7.5 million, which is the midpoint of the estimates, this would amount to $165 million over the next 22 years. I believe the Senate Budget Committee estimates these retirement costs at $196.2 million through 1999.

$100 MILLION IN DEPARTMENT OF DEFENSE COSTS

Certain support functions under the treaties, such as hospitals and schools, will be transferred to the Department of Defense. Most of these costs will be billed to the new commission directly. However, under present accounting methods, the Department of Defense will not be reimbursed for certain schooling costs which are estimated at $5 million per year, or $110 million over 22 years.

$43 MILLION IN BASE RELOCATION COSTS

There will be certain treaty-related costs having to do with relocation of certain U.S. military bases in the Canal Zone. This one-time cost is estimated to be $43 million.

Let me add up what these costs that I have just described are: $440 million in foregone interest to the U.S. Treasury; $165 million in early retirement costs; $110 million in certain Department of Defense costs; and $43 million in certain base relocation costs. The addition of these figures makes a grand total of $758 million—a direct cost to the U.S. taxpayer for these treaties, either in money that will not accrue to the U.S. Treasury or will be drawn from the U.S. Treasury through the appropriations process.

Mr. President, the Comptroller General of the United States, Elmer B. Staats pointed out in his testimony before the Senate Armed Services Committee that there will be other treaty-related costs that will be borne by other agencies of Government, but that "only sketchy details are available at this time." There is also the question of approximately $8.9 million currently owed by Panama to the Panama Canal Company for certain services which is still outstanding. Some of this debt has been outstanding since 1959.

PAYMENTS TO PANAMA UNDER TREATIES

Payments to Panama from tolls under the treaties are:

First. $0.30 per canal ton—estimated at $40 million per year—for a total of $880 million for 22 years.

Second. $10 million per year—fixed expense—$220 million for 22 years.

Third. $10 million per year for certain services such as police, fire protection—$220 million for 22 years.

Fourth. $10 million per year if revenues exceed expenditures—$220 million for 22 years.

This is a potential total of about $1.5 billion for the next 22 years, at a minimum, since some of those payments will be adjusted for inflation. This sizable sum will accrue to a country of 1.7 million people, or a total of $880 for every man, woman, and child in Panama.

Thus, in addition to the tremendous $758 million direct burden to the taxpayer, Panama will also receive from tolls over $1.5 billion over the next 22 years. While the $1.5 billion amount is anticipated to come from tolls, as treaty supporters would have us believe, there is a serious question whether or not revenues will be sufficient to meet expenditures including the payments to be made to Panama.

Let me quote from testimony of Comptroller General Staats in his testimony before the Armed Services Committee.

If the canal transits fall short of what is currently estimated, it is possible that toll revenues will be insufficient to cover the costs of the Commission, including the scheduled payments to Panama. In this eventuality, the U.S. Government is likely to be required to provide financial assistance either through the congressional appropriations or by allowing the Commission to borrow from the U.S. Treasury.

Looking at the possibilities of increased costs over the Company's initial estimates, Mr. Staats concluded:

It seems to me there are some very real concerns as to whether we can adjust tolls upward, assuming you do all these things that I have just listed, and still make it possible to operate the canal without serious deficits.

While one can make different assumptions on factors affecting future canal revenues and arrive at different conclusions as to whether the canal operation will be financially sound, there is a substantial possibility that the canal will suffer operating deficits during the life of the treaty, and if so, it will be our taxpayers who will make up the deficits. I might add that these payments from our Treasury to make up deficits would, in effect, amount to a payment from the U.S. taxpayer to Panama. I would remind my colleagues that under article XIII of the Panama Canal Treaty that the United States shall turn over the canal in 1999 "in operating condition and free of aliens and debts * * *."

On page 92 of the Foreign Relations Committee report, there is this statement:

The treaty provides that the new Panama Canal Commission will make three different annual payments to Panama. The revenue for these payments will come exclusively from canal tolls and not from the American Treasury.

This contrasts with Mr. Staats' testimony before the Armed Services Committee, which I will repeat, because I believe it is important, since he is the chief accountant for our Government:

If the canal transits fall short of what is currently estimated, it is possible that toll revenues will be insufficient to cover the costs of the Commission, including the scheduled payments to Panama. In this eventuality, the U.S. Government is likely to be required to provide financial assistance either through congressional appropriations or by allowing the Commission to borrow from the U.S. Treasury.

So, Mr. President, the Panama Canal Treaty currently before the Senate will result in a minimum, direct cost to the U.S. taxpayer of $758 million. In addition, the U.S. Treasury will be liable for additional, undetermined amounts, which could run into many millions of dollars, if the canal has deficits in the next 22 years.

There will also, of course, be increases in tolls under the treaty in order to make payments to Panama as required by the treaty. It is difficult, of course, to state precisely what would be the additional cost to U.S. taxpayers and consumers resulting from this treaty. I believe it is clear that this treaty will cost the U.S. consumer an additional amount. An Armed Services Committee staff study indicated that U.S. shippers and consumers would bear an additional cost for the next 22 years of $1.2 billion resulting from higher tolls.

There would have been toll increases even without this treaty, but no doubt tolls will have to be increased a greater amount to cover payments to Panama under the treaty and the U.S. consumers will bear a portion of these higher tolls.

I might say there, Mr. President, I believe the record shows that about 70 percent of the tonnage that goes through the canal either originates in the United States or is coming to the United States. So it can be readily seen that almost three-fourths of the increase in tolls will be borne by consumers in the United States.

OTHER LIABILITIES

The United States and Panama also have exchanged notes regarding a military and civilian aid package to Panama which is related to the treaties but not technically dependent upon them. These consist of foreign military assistance credits—$50 million, Agency for International Development Housing Guarantees—$75 million, Export-Import Bank credits—$200 million, and an Overseas Private Investment Corporation loan guarantee—$20 million. Should Panama, which already pays 37 percent of its total income to service large foreign debts, fail to repay these amounts, totaling $345 million, the United States could become liable to make good these losses.

CLOSING

Mr. President, I believe that close analysis of the Panama Canal Treaty will reveal significant financial implications for the U.S. taxpayer. If the treaty is ratified, the U.S. taxpayer will bear a minimum direct cost of $758 million; in addition, the U.S. Treasury may very well be liable potentially for many millions of dollars if the canal runs deficits, and this is certainly a possibility. The American consumer will also bear an additional cost of some $1 billion in the form of higher cost of goods if this treaty is ratified. And finally, the United States has apparently agreed to a military and civilian aid package of some $345 million which the United States will be liable for if Panama defaults, and given Panama's current posture this is at least a distinct possibility.

Mr. President, the American taxpayer will bear all of these direct and potential costs I have cited for the privilege, yes privilege, of giving up his $10 billion canal which the United States has run, at no profit, with great efficiency, for the benefit of the world community.

Mr. President, from the financial and economic viewpoint this treaty is of great disadvantage to the American taxpayer and ought to be rejected or, at least, significantly amended to correct this situation.

Mr. President, I ask unanimous consent that the attached tables and their explanations be printed in the RECORD

There being no objection, the material was ordered to be printed in the RECORD, as follows:

TABLE I.—Direct costs during life of treaty either as a loss of revenue to U.S. Treasury or to be met through appropriations

| | Millions |
|---|---|
| 1. Interest forgone to U.S. Treasury ($20 million×22 years) | $440 |
| 2. Early retirement costs ($7.5×22 years) | 165 |
| 3. DOD costs — primarily schooling costs ($5 million×22 years | 110 |
| 4. DOD costs—one-time base relocation costs | 43 |
| Total A | 758 |

TABLE II.—Payments to Panama to be supported by toll increases (under treaties)

| | Millions |
|---|---|
| 1. 30 Canal Ton—Estimated $40 million/year | $880 |
| 2. $10 million/year — Fixed Expense (×22 years) | 220 |
| 3. $10 million/year—Certain Services, Police, Fire Protection, etc. (×22 years) | 220 |
| 4. $10 million—If Revenues Exceed Expenditures (× 22 years) | 220 |
| Total B (billions) | 1.54 |
| Total A and B (billions) | 2.298=2.3 |

TABLE I—EXPLANATION

1. *Foregone Interest to the Treasury*—currently the Panama Canal Company has the statutory obligation to pay interest to the United States Treasury on the interest bearing portion of the U.S. investment there. Currently this amounts to about $20 million per year. The forthcoming implementing legislation will relieve the new Panama Canal Commission (under the treaty) of the obligation to pay this interest.

2. *Early Retirement Benefits*—additional early retirement benefits to present Panama Canal Company employees are being negotiated. These benefits would be paid by the Civil Service Commission and would not be charged to the new Panama Canal Commission accounts and, therefore, would be a cost to the taxpayers. Civil Service Commission estimates of the annual costs of the various proposals being negotiated range from $6.5 to 78.5 million a year.

The approximate mid-point in this range is used.

3. *Costs of Benefits for Dependents of Certain Personnel transferred to DOD*—certain support functions under the new treaties, such as hospitals and schools, will be transferred to DOD. Most of these costs will be billed to the Commission directly. However, under present accounting methods DOD will not be reimbursed for certain schooling costs. This would mean an additional cost to DOD of about $5 million per year unless DOD changed its billing rates to recover the additional costs.

4. *Base Relocation Costs*—Administration witnesses indicated that there would be certain treaty-related costs having to do primarily with relocations of certain U.S. military bases in the Canal Zone. These one-time costs were estimated to be $43 million.

TABLE II—EXPLANATION

1. Panama under the Treaties will be paid 30 cents on each Panama Canal net ton transiting the Canal. This will provide payments to Panama of about $40 million annually, based on current estimates. The 30 cents will be adjusted by the U.S. wholesale price index and may result in increased payments, depending on future tonnages.

2. Panama is to be paid $10 million annually to provide various services—fire, police, streets, etc. Estimates of these costs are only about $4.4 million, so Panama, in

effect, gets a $5.6 million subsidy. This amount will be adjusted every three years, depending on inflation, etc.

3. $10 million is a fixed annual annuity to be paid out of Canal operating revenues. This constitutes a fixed expense of the Panama Canal Commission.

4. Under the Treaties, Panama is to get $10 million annually to the extent revenues exceed expenditures. There is a dispute as to whether or not this payment would be made before any prior year deficits are paid.

Mr. THURMOND. Now, Mr. President, with regard to the amendment I am introducing here to paragraph 4 of article XIII of the Panama Canal Treaty, I wish to make a few additional remarks.

The purpose of this amendment is to insure that any payments to Panama under the treaty are not subsidized by the American taxpayer. It merely requires that all operating expenses of the Canal Commission be paid before any payments can be made to Panama. The Panama Canal Commission, under the treaty, should not suffer operating deficits resulting from payments having to be made to Panama prior to payment of its necessary operating expenses.

Mr. President, on February 1, 1978, President Carter in a nationally televised address to the American people stated:

Are we paying Panama to take the Canal? We are not. Under the new treaties payments to Panama will come from tolls paid by ships which use the Canal.

My admendment merely seeks to see to it that the President's statement remains the truth.

Mr. President, I realize that this matter could be handled in the implementing legislation. However, it should be clearly understood by Panama and the United States that the American taxpayer is not going to subsidize Panama if deficits occur in canal operations. The only way to do this is by treaty amendment. As a practical matter, once these treaties are ratified, Panama could care less what our implementing legislation says.

Mr. President, since the proponents of the treaty claim that transferring this canal is not going to cost anything, I do not see why there should be any objection to accepting this amendment. The President of the United States said it would not cost anything. The Secretary of State said it would not cost anything. Many of the proponents of the treaty, have said it would not cost anything. If that position is correct, then why not accept this amendment?

Mr. President, I reserve the remainder of my time.

Mr. MATSUNAGA addressed the Chair.

The PRESIDING OFFICER. The Senator from Hawaii.

Mr. MATSUNAGA. Mr. President, I rise in opposition to this amendment.

If we were to pay Panama what we pay Spain, for example, Turkey, as another example, Greece as another example, for the use of military bases, we would be paying Panama in excess of $100 million a year. We have not, in fact, paid one penny to Panama from the time the canal was built. If we were paying $100 million for the use of military bases for the past 75 years, we would have paid over $7.5 billion. Consider the savings we have made by not being required to pay for the use of military bases in Panama.

The Panama Canal Treaty changes the basic economic assumptions under which the canal has historically been operating. For the first time the new treaty gives long overdue recognition to the fact that the canal is Panama's primary economy resource. While Panama has benefited from the presence of the United States through salaries paid Panamanians who work in the operation of the canal and by direct purchases made by the Canal Company of Panamanian goods and by the establishment of private commercial enterprises by American business enterpreneurs, the fact remains that we have paid Panama as little as $250,000 initially for about a 16-year period and then $1.9 million for a while and presently only $2.5 million annually.

(Mr. MELCHER assumed the chair.)

Mr. MATSUNAGA. The total revenues collected from tolls last year amounted to $165 million; $2.3 million of this amount paid to Panama represents less than 1.4 percent. That is what we have been paying to Panama for the use not only of the canal but the Canal Zone, a strip of land 5 miles by 51 miles running smack in the middle of the country of the Republic of Panama—5 miles, extending 5 miles, on each side of the canal, that is.

Now, by increasing the cooperation between the United States and Panama, the new treaty will allow Panama to take full advantage of its major national asset. The treaty will encourage greater Panamanian assistance to insure that the canal will be run efficiently and effectively, and certainly we must make provision so that the canal, regardless of the transfer of control, will be run as efficiently as it has been run under U.S. control.

Unless we provide these incentives and unless we provide the necessary funding for the operation of the canal, we are definitely not going to have the canal being operated as it ought to be operated.

As it has been pointed out earlier, the trend of the amount of tolls collected has been on the increase in recent years, and we anticipate a continuing increase. It is estimated that by an increase of 25 or 30 percent of the toll charges we will collect ample sums to pay for all the costs of the operations of the canal.

If we consider the fact that we will not be paying until the year 2000 for the use of the military bases which, as I pointed out earlier, should amount to annual fees in excess of $100 million, we are, in fact, saving the American taxpayers millions of dollars annually.

The Panama Canal Treaty is intended to protect the major U.S. economic interests by insuring that the canal will remain open and operating efficiently. This is what the treaty intends to do. The United States will retain primary responsibility for operating the canal for the life of the treaty.

In addition, the treaty insures that Panama will be adequately prepared to assume full control of the canal by the year 2000, and unless we provide adequate financial means for Panama to do this, it will not be able to train the necessary personnel to take over the efficient operation of the canal.

The treaty and the additional supporting package will increase the economic cooperation between the United States and Panama. The financial arrangements designated in the treaty were designed to reflect this partnership arrangement in the operation of the canal.

Panama will assist the United States in the canal operation, and the annuity payments would give Panama a greater stake in its operation.

Mr. Speaker—I say Mr. Speaker because I see sitting in the chair a former colleague of mine in the House and it made me think for a moment there I was still in the House, but I know I am not in the House because had it been the House I would have been shouted down by now, having expended my limited 5 minutes—Mr. President, it is also important to note that with respect to payments to Panama the treaty does not call for any additional appropriation from the U.S. Treasury.

Ambassador Ellsworth Bunker testified before the Committee on Foreign Relations on September 26 and said:

The United States consistently maintained during the negotiations that payments to Panama for its contributions to the canal enterprise should be drawn entirely from canal revenues; that is, that the payments should reflect the canal's economic value as measured by its revenue-generating capacity.

Secretary of State Cyrus Vance made the same point, and I quote:

Under the treaties, Panama will receive payments which more fairly reflect the fact that it is making available its major national resource, its territory. But the treaties require no new appropriations nor do they add to the burdens of the American taxpayer.

In sum, the treaty will allow Panama to gain a fuller advantage of its major national resource, help in the efficient operation of the canal, protect the major U.S. economic interest by maintaining the open and free operation of the canal, and increase cooperation between the United States and Panama.

As I have on several occasions here on the floor stated, unless the Panama Canal can be kept open and free and available for use at all times by the United States, that canal is worthless to the United States.

The basic intent of the Panama Canal Treaty is to attain this objective of keeping the canal open and free for use by the United States and other countries. It is for the purpose of promoting this requirement that we have agreed to pay Panama the amounts designated in the Panama Canal Treaty.

We have consistently demonstrated here on the floor, by quoting facts and figures, that the treaty will not mean any additional assessment upon the American taxpayers; that we will be able to meet payments assured to Panama out of the revenue tolls collected from the operation of the canal.

Mr. President, the State Department comments on the proposed amendment, and I would like to recite for the record

the position of the State Department on the amendment offered by the Senator from South Carolina (Mr. THURMOND).

According to the State Department:

The proposed amendment would constitute a major substantive modification in the terms of the treaty respecting Panama's share of the economic benefits in the canal. It would seek to make the payments to Panama provided for in subparagraphs 4(A) and 4(B) of article XIII subject to the existence of operating surpluses.

The proposed amendment is unnecessary and would certainly be unacceptable to Panama. Under the terms of the treaty, the United States retains complete authority over the setting of tolls (and thus over the income to the Canal Commission) and over the management of the Commission (including the setting of wages, the making of capital improvements, et cetera.) Thus, the extent to which the Canal will generate an operating profit is a matter within the discretion of the United States. Accordingly, Panama cannot be expected to accept a formula which would make the bulk of their income from the Canal dependent upon decisions within the sole discretion of the United States. If we were to insist that the payments to Panama be derived from Canal profits, Panama could be expected to insist on an equal voice in the management decisions that would determine the amount of profit, if any.

To the extent that the amendment is designed to ensure that United States taxpayer funds will not be utilized to make payments to Panama, it is unnecessary. Economic projections demonstrate that there is no reason to believe that the Canal will not continue to be financially self-sustaining over the period of the treaty. Moreover, nothing in the treaty would permit the utilization of taxpayer funds without the authorization of the Congress of the United States.

Mr. President, it is then that the Senator from South Carolina can rise in defense of the statements he has made and in an attack upon the statements which he has attacked, the statements made by the proponents of the treaty.

The foregoing reasons, Mr. President, ought to indicate that the amendment offered by the Senator from South Carolina should definitely be soundly defeated.

I reserve the remainder of my time.

Mr. THURMOND. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 18 minutes remaining.

Mr. THURMOND. Mr. President, maybe I should not be surprised, but I was somewhat surprised, that the distinguished and able Senator from Hawaii did not answer the charge that I made.

I made the charge that there was going to be a direct cost to the taxpayers of America, and I made the further charge that there will be potential expenses that could fall upon the taxpayers of America.

The Senator from Hawaii says, "Oh, we have got bases in Turkey and this country and that country and the other country, and we have to pay them."

Maybe we do have to pay them, but we have not bought property there. We have not paid for property there. We have not expended billions of dollars on property there, as we have in the Panama Canal Zone.

We own the Panama Canal. We own it in perpetuity, and there is no comparison between Turkey and the other countries and the Panama Canal. The Panama Canal is our property. It belongs to the United States. We do not own anything in Turkey; we do not own anything in Greece and these other countries that the distinguished Senator made reference to, and it is perfectly ridiculous to try to compare Turkey and the other countries with the Panama Canal, which we do own.

Now, Mr. President, there was a statement there, I believe, that we paid only 1.4 percent of last year's tolls to Panama. I might say that for previous years we have had a deficit, and we will certainly have a deficit if we have to pay Panama $60 million a year. Who will make up this deficit? The taxpayers of America.

The distinguished Senator from Hawaii said:

Oh, this amendment here will not be acceptable to the other party, to Panama.

Why, sure, it is not acceptable to Panama, but whose interest are we looking after here, the interest of Panama or the interest of the people of the United States?

Mr. MATSUNAGA. Will the Senator yield?

Mr. THURMOND. I think the time has come in this country when we had better look after the interest of our own people for a while.

Mr. MATSUNAGA. Will the Senator yield?

Mr. THURMOND. I will yield a little later. Let me get through first.

The time has come when we need to look after the interests of the people of America. The United States has given away more than all the nations of the world put together. We certainly have not been cheesy. We have been the most generous people in the most generous nation that has ever existed on the face of the Earth. It is perfectly ridiculous to say we have mistreated Panama. We have not mistreated Panama.

Panama wanted to build this canal. They had a revolution, even separated from Colombia so that they could enter into a treaty to build this canal. They wanted to get ahead of other countries to build a canal. We paid them $10 million at that time, and we paid Colombia $25 million also for any interests they had, so they would not disturb Panama in entering into this arrangement. We paid $40 million to the French people, who had some interest there. We bought the land, and paid the landowners, even the squatters, who had no title, but were just squatting on this land; we paid them. The United States has paid everybody concerned.

We have no obligation to Panama. But because we built the Panama Canal, Panama has the highest per capita income of any country in Central America. It has the fourth highest income of any country in all of South America.

What have we done wrong toward Panama? We have done nothing but help them. We have poured money into that country every year. We have spent millions and millions of dollars down there buying goods. We have spent millions and millions of dollars down there paying employees of the United States. We have spent millions and millions of dollars down there paying non-U.S. citizens, chiefly Panamanians. Everything we have done has helped Panama.

The trouble is, they have got a dictator down there now, Torrijos, who has deprived his people of their rights, and now that country is classed along with Cuba and the Soviet Union in respect to the rights they give their people.

They have no human rights. They have no civil rights.

I wonder if President Carter has thought about that when he is talking so much now about human rights in different parts of the world. Yet he is dealing with this man. If these treaties go through, it will strengthen the hand of this dictator. It would just help to entrench this dictator in power and do it at the expense of the citizens of the United States.

Mr. President, this amendment to article XIII protects the American taxpayer from subsidizing Panama as a result of these treaties, and at the same time would help to insure proper financial management of the canal. Put simply, the amendment requires payment of all operating expenses of the Panama Canal Commission before allowing payments to Panama required under paragraph 4 of article XIII of the treaty. Then payments can be made to Panama only to the extent that operating revenues of the Canal Commission exceed operating expenses. Nothing in the proposed treaty specifies the priority of Canal Commission expenses. Therefore, the Commission can make all payments to Panama required under paragraph 4 of article XIII, except those mentioned under subparagraph (c), and use whatever is left over to pay its expenses.

Panama could conceivably profit or benefit from the treaty while the Canal Commission operates at a deficit.

My amendment is designed to prevent this occurrence. My amendment does not prohibit these payments being made to Panama. It merely says that the necessary expenses of the canal must be paid first.

I do not see that this can be anything but beneficial for the U.S. taxpayer who will be called upon to subsidize Panama when deficits occur unless this amendment is adopted. My amendment seeks to protect the American taxpayer.

I hope the Members of this body will see fit to adopt this amendment in the best interests of the American people.

Now I will be glad to yield to the distinguished Senator from Hawaii if he wishes to propound any questions.

Mr. MATSUNAGA. I thank the Senator from South Carolina for yielding.

Under the Panama Canal Treaty as proposed, as I pointed out through testimony submitted for the record, testimony of Secretary Vance and Ambassador Bunker, it is expected that no appropriations out of the general fund will be made for maintenance of the canal and in making payments to Panama. Does the Senator realize that today the situation is such that all except $500,000, which is paid to the Republic of Panama comes from appropriated funds of the U.S. Treasury?

Mr. THURMOND. Certain funds come from the Treasury, yes. But under this arrangement we will be providing——

Mr. MATSUNAGA. So that under the treaty as proposed, none of the payments being made to Panama will come out of appropriated funds. When the Senator from South Carolina speaks of our need to think about the American taxpayer, we are indeed thinking about the American taxpayer by proposing a treaty which would require no payments out of the U.S. Treasury, whereas today we are paying $1.8 million out of the taxpayer funds.

Mr. THURMOND. We get interest back, and that interest is foregone to the U.S. Treasury, of $20 million a year for 22 years, or $440 million. Then if these treaties go through, the early retirement cost is $7.5 million for 22 years, which is $165 million. The Department of Defense costs for the one-time base relocations will be $43 million. In addition, $110 million in certain support functions will be transferred to the Department of Defense. That makes a total of $758 million which will be lost to the Treasury.

In addition to that, of course, the payments to Panama are going to be supported by the toll increases which amount to as follows: Thirty cents per canal ton estimated to be $880 million, $40 million a year, pretty well agreed on; $10 million a year fixed expense, $220 million; $10 million in certain services, police and fire protection, 22 years, $220 million; $10 million if revenues exceed expenditures for 22 years, $220 million. That makes a total liability of $1.54 billion, plus the $758 million, making a grand total of $2.3 billion.

Mr. MATSUNAGA. If the Senator will yield again, I am deeply impressed by his recitation of dollar amounts, but what is the connection of the statement of expenses with regard to the amendment of the Senator?

Mr. THURMOND. My amendment will assure the taxpayers of America that there will be no additional expense over the previously mentioned $758 million if we turn over this canal. Why would the Senator object to that?

Mr. MATSUNAGA. That has nothing to do with the items of expense which the Senator was just quoting. As I understand the Senator's amendment, he is merely intending that the Republic of Panama may be paid only to the extent, to quote from the amendment, "that the operating revenues of the canal exceed all operating expenses of the Panama Canal Commission, not including payments made to Panama under this paragraph."

All the figures which the Senator has been quoting are very impressive indeed, but I see no relation of such amounts to his amendment.

Mr. THURMOND. Well, Mr. President, I am simply showing what it is going to cost the taxpayers of America if we turn this canal over under these treaties which are now before us.

I want to say that under the new treaty there is nothing in the treaty which specifies priority of expense payments. There is nothing in the treaty which limits payments to Panama except in paragraph 4(c) to whatever surplus exists after operating expenses are paid. There is nothing in the treaty which prevents use of taxpayer money to make payments to Panama.

My amendment would do this: It would require all expenses to be paid before any payments are to be made to Panama. It would limit all payments to Panama under paragraph 4 to the extent that operating revenues exceed expenses and prevent deficits because of payments to Panama. It will limit payments to Panama to the extent of surplus operating revenues, and thus prevent borrowing or appropriating tax dollars to pay Panama.

That is what my amendment does. It protects the American taxpayer, which the present treaties do not do.

Mr. MATSUNAGA. Does the Senator yield the floor?

Mr. THURMOND. Unless the Senator wishes to propound some questions.

Mr. MATSUNAGA. I want to take my own time now.

The PRESIDING OFFICER. The Senator from Hawaii.

Mr. MATSUNAGA. Mr. President, it is impressive to listen to all of the expenditures involved in the operation of the canal, but the point I was trying to make during colloquy with the Senator from South Carolina is that his amendment will not in any way alter or eliminate one item of the expenses involved.

His amendment would provide that to the extent the operating revenues of the canal exceed all operating expenses of the Panama Canal Commission, only then would payments be made to Panama.

But it would in no way alter the expenditures which would be required in the operation of the canal. Much has been made about saving the taxpayer, saving the taxpayer. Repeatedly, we have pointed out, those of us who support the Panama Canal Treaty, that under the new treaty, the American taxpayer will not be required to pay any additional funds because the United States will have actual control over the canal, over the operation of the canal, over the determination of the toll charges. So that, considering the trend of increasing revenues from tolls collected, we expect sufficient revenues to pay the expenses. If the opponents of the treaty wish to defeat the treaty, it would mean the retention of the status quo under which, today, only about $500,000 comes from the Panama Canal Company and the remainder of the $2.3 million which we pay to Panama comes from appropriated funds out of the U.S. Treasury, which means out of the taxpayers' pockets.

Therefore, if the opponents of this treaty and the proponents of the amendment being offered by the Senator from South Carolina really mean that they want to save the taxpayers some money, they will support the treaty as it has been proposed, for, in fact, the projections indicate and those of us who support the treaty are confident that the provisions of this treaty can be carried on without assessing the American taxpayer any additional funds.

I reserve the remainder of my time.

Mr. THURMOND. Will the Senator yield?

Mr. MATSUNAGA. I am happy to yield to the distinguished Senator from South Carolina.

Mr. THURMOND. If there is a deficit down there while operating the canal, where is the money coming from?

Mr. MATSUNAGA. The Senator from South Carolina has provided figures. We proponents of the treaty have provided figures. It is a matter of whether or not you care to believe the figures as they are presented. I am sure that the Senator from South Carolina has seen projections of the collections. I wish I had them handy to me.

Here we are.

Mr. THURMOND. Mr. President, I am not speaking of projections. I am asking a simple question.

Mr. MATSUNAGA. I am answering the question the Senator has put to me.

Mr. THURMOND. If there is a deficit down there, where is the money coming from?

Mr. MATSUNAGA. From the tolls.

Mr. THURMOND. Suppose they are not sufficient.

Mr. MATSUNAGA. Well, suppose. You know, just as you can suppose anything, you can suppose that the world will come to an end tomorrow. Projections are based on the experiences of the past. If experiences of the past mean anything, then we proponents of the treaty feel that the projections we have presented for the record can be relied upon.

I remind the Senator from South Carolina of projections such as the following: In fiscal year 1979, it is anticipated that with no toll rate increase, we shall have collections, in millions of dollars, of $194 million. This is in fiscal year 1979.

With a 15-percent increase, the anticipated toll collections will be $222.5 million; with a 5-percent increase, $240 million. It is expected that a 30-percent increase might be sufficient to meet all expenses and, in 1979, it would bring in $248 million; in 1980, $250 million; in 1985, $256 million; and in the year 1990, $273.2 million.

Now, compare this to what we collected last year. It was only $165 million. So, by 1990, with a 30-percent increase in toll rates, we shall increase the tolls by over $100 million. This is how we are going to be able to pay Panama the amounts agreed to in the treaty without requiring the taxpayer to pay any additional taxes.

Mr. GRIFFIN. Will the Senator from South Carolina yield?

Mr. THURMOND. I do not believe I have the floor.

The PRESIDING OFFICER. The Senator from Hawaii has the floor.

Mr. THURMOND. I was asking him a question. I asked the simple question that, if there is a deficit in operating the canal, where will the money come from? His answer, in effect, as I understand it, is that it is projected there will be enough funds from tolls to take care of it.

My point is if there are not enough funds, if there is a deficit, where is the money coming from?

Mr. MATSUNAGA. I shall respond to the Senator from South Carolina, as I

thought I had responded, by saying by increasing the toll rates so as to meet the necessary expenses. Of course, in the meantime, we could borrow from the Treasury. There is nothing to keep us from borrowing from the Treasury and then increasing the tolls, then make greater collections and pay back into the Treasury. When I say "we" I mean the Panama Canal Commission.

That is the way to do it, just as in the operation of any business. When a businessman goes into debt one year, he borrows from the bank and makes adjustments, either to cut down costs or increase income. In the case of the operation of the canal, it is simple to increase the toll rates, because, while we are charging only $1.29 per Panama ton, the Suez Canal is charging $2.56, I believe. So that a 30-percent increase would mean nothing at all and a projection with a 30-percent increase will mean that we will not go into deficit.

Mr. THURMOND. Governor Parfitt indicated that you can increase tolls to a certain point and after that, you have a diminishing return. If you do and if there is still an operating deficit, where is the money coming from?

Mr. MATSUNAGA. Well, I suppose with the Senator from South Carolina taking the position that he has taken, nothing the Senator from Hawaii says will appease him, much less convince him.

Mr. THURMOND. The Senator from Hawaii is familiar with Mr. Staats.

Mr. MATSUNAGA. I repeat, with a 30-percent increase, it is expected that we will have no deficit at all and we will not need to assess the taxpayer any additional tax dollars in order to carry out our bargain of the Panama Canal Treaty.

Mr. THURMOND. The Senator is familiar with Mr. Staats. Let us see what he says about it. Mr. Staats is Comptroller General of the United States, appointed by a Democratic President, a good man. Let us see what he says:

> If the canal transits fall short of what is currently estimated, it is possible that toll revenues will be insufficient to cover the cost of the Commission, including the scheduled payments to Panama. In this eventuality,

In this eventuality—

> the United States Government is likely to be required to provide financial assistance either through congressional appropriations or by allowing the Commission to borrow from the United States Treasury.

So, where is the money coming from except the U.S. Treasury if there is a deficit?

Mr. MATSUNAGA. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 2 minutes remaining.

Mr. MATSUNAGA. I reserve the remainder of my time. If the Senator from South Carolina wishes to continue, he might use the remainder of his time.

Mr. THURMOND. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator from South Carolina has 9 minutes remaining.

The Senator from South Carolina.

Mr. THURMOND. Mr. President, I am pleased to yield now to the able Senator from Michigan, if he has a question.

Mr. GRIFFIN. The Senator from South Carolina was seeking to get the Senator from Hawaii to answer a very simple question. Of course, I have not listened to the whole debate and maybe this has been referred to several times. But it seems to me the answer to his question is very simple. It is spelled out clearly in the treaty. There is not any question, legally speaking, under the treaty, if it should be ratified, of who is going to be responsible if there is a deficit. It is fine for the Senator from Hawaii to predict and presume, and everything else, that there will not be a deficit. Maybe he is right. But the question as I understand it, of the Senator from South Carolina is, who is going to pay for it if there is?

Under article XIII of the Panama Canal Treaty, it says very clearly that upon the termination of this treaty in the year 2000, the Panama Canal shall be turned over to Panama in operating condition and free of liens and debts.

Well, there is no way the United States can turn it over to Panama in the year 2000 free of liens and debts unless the United States pays all the bills.

So the answer to the Senator's question is that if there is a deficit, the U.S. taxpayers will have to pay it.

Mr. THURMOND. That is exactly right.

Mr. GRIFFIN. We have an obligation under the treaty to do it.

Mr. THURMOND. That is exactly right. That is the position I take with the Senator from Michigan.

I want to say this, there is no question the Treasury is going to have to pay these three items under any condition. No. 1, early retirement costs, $7.5 million for 22 years, $165 million.

I see the distinguished chairman of the Appropriations Committee here and I am glad he is here, because we think this is very important.

Two, Department of Defense costs, primarily schooling costs, $5 million for 22 years, $110 million.

DOD costs, one-time base relocation, $43 million.

So there is $165 million, $110 million, and $43 million that will definitely have to come out of the Treasury. There is no question about it. It cannot come from anywhere else.

Now, a fourth item is that we are going to lose, the Treasury is going to lose, interest of $20 million a year for 22 years, and that will cost the Treasury $440 million more.

Therefore, we have got a loss to the Treasury that we cannot dispute, I think anybody will acknowledge this, of $758 million, that is a direct loss to the Treasury. We cannot get around that.

What I am trying to do with this amendment is to prevent any further loss to the Treasury, to provide that if there is any operating deficit down there, that the first funds there will go to pay that, rather than to go to pay Panama.

The $758 million we cannot get around. We are going to lose that. That is definite. But I do not want to see us lose more than that. That is the reason I offered this amendment.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER (Mr. ZORINSKY). The Senator from Hawaii.

Mr. MATSUNAGA. Mr. President, in deciding whether or not to support the amendment offered by the Senator from South Carolina, we need to look at the situation as it exists now and the situation which will prevail after the new Panama Canal Treaty is adopted.

Nothing in the treaty—I repeat, nothing in the treaty—would permit the utilization of taxpayers funds without the prior authorization of the Congress of the United States.

Presently, as I pointed out to the Senator from South Carolina, we are paying $1.8 million out of the U.S. Treasury, out of appropriated funds, and only $500,000 of the $2.3 million paid annually to Panama comes from the Panama Canal Company.

So that what we are, in fact, doing by provisions of the Panama Canal Treaty is what the Senator from South Carolina himself is proposing, assuring that the American taxpayer will not be required to pay any additional taxes for payments to the Republic of Panama.

So talk about trying to do things which will mean additional taxes for the American taxpayer, it is clear on the face of the treaty, by the evidence presented by proponents of the treaty, that nothing in the treaty will require additional assessment of taxes on the American taxpayer for the purpose of carrying out the provisions of the treaty.

I yield back the remainder of my time.

Mr. THURMOND. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator from South Carolina has 4 minutes remaining.

Mr. THURMOND. Mr. President, I just want to state that a statement was made there about raising the tolls and it is projected the tolls will be sufficient.

Again, I want to quote Mr. Staats, the Comptroller General of the United States. He has expressed concern as to how high we can raise these tolls, just as Governor Parfitt has, a major general who is in charge down there, the Governor of the Panama Canal Zone. He has raised the same point.

Here is what Mr. Staats has had to say:

> It seems to me that there are some very real concerns as to whether we can adjust tolls upward, assuming you do all these things that I have just listed, and still make it possible to operate the canal without serious deficits.

So Mr. Staats has very serious concerns himself as to whether we can operate without deficits.

The point I am getting at, if we do operate with a deficit, where is it coming from? That is what I am asking.

My amendment does not prohibit these payments being made to Panama. It merely says that the necessary expenses

of the canal must be paid first. I do not see that this can be anything but beneficial for the U.S. taxpayer, who will be called on to subsidize Panama when deficits occur unless this amendment is adopted. My amendment seeks to protect the American taxpayer.

That is the reason I have offered it here, to provide that we will, in this case, first take care of the operating expenses before we pay money to Panama. Does that not make sense?

They claim they will have enough money for tolls, but suppose they do not have enough money from tolls, then where does it come from? It will have to come out of the Treasury, the same as the other points I mentioned a few moments ago are going to come out of the Treasury—$758 million that we all acknowledge will come out of the Treasury.

Then there will be more money to come out of the Treasury unless we pass this amendment or adopt something similar to take care of the situation.

That is what I have tried to do with this amendment.

Mr. GOLDWATER. Will the Senator yield for one point?

Mr. THURMOND. I am pleased to yield to the able Senator from Arizona.

Mr. GOLDWATER. Just one point in the testimony we heard before the Armed Services Committee.

The statement was made before the Armed Services Committee that regardless of who had control of the canal, the United States or Panama, that by the year 2000 the tolls would go up 100 percent to 105 percent.

Mr. THURMOND. I think that is the indication right there as to how high the tolls are going, and Governor Parfitt and Mr. Staats and others have expressed their concern, because when tolls reach a certain amount, then it will be unprofitable to go through the canal.

You have goods from the west coast coming to the east coast by way of truck or by train. When you have that, because it is cheaper, the income from the canal will be less; and when the income from the canal is less, who is going to make up the deficit?

I am trying to provide that Panama will not be paid first, that we pay the operating expenses of the canal before we pay Panama anything. To me, that makes sense.

Mr. President, I yield back the remainder of my time.

Mr. MATSUNAGA. Mr. President, I move to table the amendment, and I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to table the amendment of the Senator from South Carolina. On this question the yeas and nays are ordered, that the clerk will call the roll.

The second assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Michigan (Mr. RIEGLE), and the Senator from Alabama (Mr. SPARKMAN) are necessarily absent.

I further announce that, if present and voting, the Senator from Michigan (Mr. RIEGEL) would vote "yea."

Mr. STEVENS. I announce that the Senator from Oklahoma (Mr. BARTLETT) and the Senator from Oregon (Mr. PACKWOOD) are necessarily absent.

The result was announced—yeas 56, nays 39, as follows:

[Rollcall Vote No. 96 Exec.]

YEAS—56

| | | |
|---|---|---|
| Anderson | Hart | Matsunaga |
| Baker | Haskell | McGovern |
| Bayh | Hatfield, | McIntyre |
| Bellmon | Mark O. | Melcher |
| Bentsen | Hathaway | Metzenbaum |

NOT VOTING—5

| | | |
|---|---|---|
| Abourezk | Packwood | Sparkman |
| Bartlett | Riegle | |

So the motion to lay on the table Mr. THURMOND's amendment (UP No. 24) was agreed to.

Mr. CLARK. Mr. President, I move to reconsider the vote by which the motion to lay on the table was agreed to.

Mr. McGOVERN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. Under the previous order the Chair recognizes the Senator from Virginia (Mr. SCOTT).

Mr. CLARK. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. SCOTT. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

We will have order in the Senate Chamber. All Senators wishing to carry on personal conversations please retire to the cloakroom.

The Senator from Virginia (Mr. SCOTT).

Mr. SCOTT. Mr. President, it is understood that we will have a final vote on the canal treaty next Tuesday and I have been considering what additional factors could be presented to the Senate in order to persuade a few undecided Senators to vote against ratification. Attempts to amend the treaties appear to be fruitless and may even detract from Senators comprehending the full impact of ratification of these treaties upon our own country and the future of the free world. Even the alleged dissatisfaction with one reservation by Panama could divert us from concentrating on whether ratification of the canal treaty is in the national interest.

We have had more than 50 amendments offered to the treaties to date. Most of which have been defeated by motions to table. But in one way or another all but two, the so-called leadership amendments, have been defeated. Therefore, rather than offering an amendment at this time, I would like to address the basic question as to whether the canal treaty should be ratified by the Senate.

A few days ago a long time friend and constituent stopped by the office and the first thing he mentioned was that from our point of view this treaty just did not make sense. Frankly, I believe this is the opinion of the vast majority of the American people and since we are here in a representative capacity this factor should weigh very heavily upon our minds. Of course, I agree with statements made by a number of Senators that the people of our respective States elect us to the Senate to inform ourselves on the issues and to exercise our best judgment on how to vote. They do look to us for leadership and I make no suggestion that our judgment should be determined by computers. Nevertheless, in my judgment the weight of public opinion should be a major factor to be considered.

The Neutrality Treaty ratified by a close vote of the Senate a few weeks ago is entirely different from the canal treaty now before us. The word neutrality has a good ring to it and one might assume that if the canal was operated on a neutral basis, it might be for the benefit of all mankind. However, the canal treaty now before us would give away American property; property we obtained through the payment of $10 million to the Republic of Panama; property for which we paid private owners and squatters something over $4 million; property for which we paid the French company that had attempted to construct the canal, $40 million; and property for which we later paid Colombia, the nation from which Panama was created by secession, the sum of $25 million.

The Canal Zone is part of the unincorporated territory of the United States. It is an area in which we put the genius of America to work, succeeding in constructing a lock canal where the French had failed in constructing a sea level canal, an area within which we first conquered yellow fever, contained malaria, provided modern water and sewage systems, and healthy living conditions for a tropical jungle. Over the years we have increased the annual payment to Pan-

ama from $250,000 to approximately $2.3 million at the present time, this amount representing the payment that had been received by Colombia from the French company for the Panama Railroad which continues to parallel the canal across the Isthmus.

Over the years we have maintained the canal in proper operating condition and have permitted all nations of the world to utilize it at cost and without profit to the United States. So it is understandable, Mr. President, that the people of the United States do not consider it sensible to give away this valuable national asset, this vital artery of commerce with its strategic military importance, to a nation with a history of instability, presently headed by General Torrijos who overthrew a lawfully elected government to become chief of state.

I believe Senators should reflect upon the type of government we have in the United States and the part the people of our country should play in the decisionmaking process. I also believe we should consider conditions as they exist throughout the world, the proximity of Cuba, its activities in Africa, the Soviet buildup, and the possibility of Communist control of the canal in the future.

Virginians continue to indicate their strong opposition. A poll taken by our office indicates that 87 percent of the people are opposed to ratification and the ratio of our mail is even heavier against the treaty. Of course we know that the President, the State Department, and the Senate leadership all favor ratification of the treaty, and that efforts have been made to educate the American people, to the administration's point of view.

Nevertheless, the American Legion, the Veterans of Foreign Wars, various retired military associations and patriotic groups are opposed to ratification as well as citizens at large and it does seem that the ultimate decision in matters of such great national importance as this treaty should be made by the American people. This was the concept when our government was formed. Alexander Hamilton recognized it during the debates on the Constitution in 1778 when he said: "Here sir, the people govern." Thomas Jefferson, in various letters written after he left the White House, agreed with Hamilton's statement. He said in 1820:

> I know of no safe depository of the ultimate powers of the society but the people themselves.

Further on in the same letter he states:

> My personal interest in such questions is entirely extinct.

And I assume this is because he had left the White House more than 10 years previously and was living at Monticello, however, he added:

> But not my wishes for the longest possible continuance of our government on its pure principles.

Mr. President, I believe each Senator should be, and is concerned about the longest possible continuance of our Government on its pure principles, as Jefferson suggested.

In this connection, we can learn much from history and at a time when we are attempting to placate those agitating in Panama who covet the canal we constructed, we might look back to some of the events immediately prior to World War II and consider the parallel between efforts to appease Adolph Hitler when he was violating the Versailles Treaty, secretly building up Germany's armed forces, reoccupying the Rhineland, forming an alliance with the then dictatorship of Mussolini in Italy, coveting Czechoslovakia, Austria, and the Ukraine. You will recall Neville Chamberlain, then Prime Minister of Great Britain, going to Munich in 1938 with the head of the French Government, their meeting with Hitler and Mussolini and agreeing to German military occupation of the Sudetenland and a plebiscite to determine whether additional areas in Czechoslovakia should be annexed by Germany. This concession was made on September 30 and less than 6 months later, in March of 1939, the Germans occupied all of Czechoslovakia leading to World War II. This is history and, yet, we know that Chamberlain returned to England in triumph holding a piece of paper stating, "I believe it is peace for our time." Subsequent events proved him wrong and the fears of Winston Churchill regarding appeasement to be right. Somehow, Chamberlain and his umbrella, the concept of appeasement, seem to be relevant to the matter now under consideration by the Senate. I know it is contrary to Senate custom and decorum to carry canes on the floor of the Senate but perhaps it would be appropriate for those who favor appeasement to carry an umbrella. Because if we continue to weaken the United States by the actions we take, we may ultimately have cause to regret our actions.

In my judgment, we should think deeply about the various political and military activities present in the world today and the concessions being made from time to time by our Government to appease the appetite of aggressive nations whose philosophies are entirely foreign to our own.

In today's world we see Vietnam military forces in Cambodia, North Korean, and South Korean military forces facing one another at the 38th parallel, the obvious trouble in the Middle East, but perhaps the most disturbed continent in the world today is Africa with many thousands of Cuban troops acting as surrogates for the Soviet Union, along with a number of other Eastern European nations.

Of course a major part of our military forces abroad are in Western Europe forming part of the NATO forces facing the Warsaw Pact nations.

It is generally conceded that the Warsaw Pact nations have superior conventional forces in Europe, but that the tactical nuclear weapons of the United States and NATO nations are the major deterrent to the Communist forces overrunning Western Europe should they choose to do so. But our Nation is indecisive as to the manufacture and use of the neutron bomb, we have decided against the B-1 bomber, we are negotiating a SALT II treaty which supposedly would permit the Soviet Union to have unlimited numbers of Backfire bombers, no onsite inspection of the Soviet Union forces even though we are told of the advances they have made on a killer satellite that might end our satellite observations of their military activities.

We should remember that our own Defense Department, in testimony before the Armed Services Committee, has indicated that Soviet strategic offensive forces have increased drastically within the last decade:

Intercontinental ballistic missiles from 224 to over 1,400.

Sea-launched ballistic missiles from 120 to 900.

Strategic warheads from 390 to 4,000.

Since 1965 Soviet conventional forces have also expanded substantially:

Military personnel from 3.3 to 4.4 million.

Divisions from 147 to 168, with added tanks, artillery, and armored personnel carriers.

Two thousand additional tactical aircraft, combined with the introduction of more sophisticated aircraft.

Naval forces with greater missile firepower, more nuclear-powered attack submarines, greater fleet range, and the construction of three small aircraft carriers.

We cannot afford to ignore the Russian buildup of its military and naval forces; of its support for revolutionary movements throughout the world; Soviet pilots flying Mig aircraft in Cuba; or Russia supplying weapons and materials for Cuba to intervene in the internal affairs of other nations; of Egypt, Ghana, and Somalia finding it necessary to expel the Russians; of Canada expelling more than a dozen Russian diplomats for attempting to bribe Canadian citizens to obtain intelligence information.

All these happenings add credence to the warning of the former Chairman of our Joint Chiefs of Staff, Adm. Thomas H. Moorer, in testimony on January 31, before our Senate Armed Services Committee. He said:

> The defense and use of the Panama Canal is wrapped inextricably with the overall global strategy of the United States and the security of the free world. I submit that, if the United States opts to turn over full responsibility for the maintenance and operation of such an important waterway to a very small, resource poor and unstable country as Panama and then withdraws all U.S. presence, a vacuum will be created which will quickly be filled by proxy or directly by the Soviet Union as is their practice at every opportunity.
>
> So, Mr. Chairman, and members of the committee, do not be surprised if this treaty is ratified in its present form to see a Soviet and/or Cuban presence quickly established in Panama. In any event, any confrontation over the "neutrality" of the canal then becomes a confrontation with the Soviet Union rather than the Panamanian guerrillas or terrorists. With the Soviets already on the scene, as Senator Goldwater has pointed out, fighting our way in—with or without the help of the small 1,500 man Panamanian Army will not be without unnecessary loss of

U.S. men and material, not to mention loss of the use of the Canal.

I believe a permanent United States presence in the Panama Canal Zone to be the only feasible and safe posture for all of the nations of this hemisphere. In saying this I must also emphasize that the year 2000 is meaningless insofar as the requirements for the security of this hemisphere are concerned. The threat, the problems, the global balance will not change as if by magic in the year 2000, so why should we pass this dilemma down to our children and grandchildren?

Let us remember that this same Admiral Moorer, as Chairman of the Joint Chiefs of Staff, was our No. 1 military man from 1970 to 1974. Although he is presently retired, I believe his opinions are entitled to great weight.

There seems to be a strange logic that the United States would be in a better position if we reduced its present military installations in the Canal Zone from 17 to 4 after the treaties are ratified and entirely withdraw our military presence from the canal by the year 2000. The argument goes that, with a friendly Panama, the canal would more likely be available for the use of U.S. commercial and military ships.

Mr. President, on page 35 of part 3 of the hearings before the Committee on Foreign Relations, the distinguished Senator from Idaho (Mr. CHURCH) posed a number of questions to Admiral Moorer, the substance of which was why the leftists and Communist groups in Panama were so outspoken in opposition to the proposed treaties. And it has been mentioned on the floor a number of times during this debate that the Communist party oppose the treaties. However, the World Marxist Review; "Problems of Peace and Socialism," contains articles indicating Communist support for the treaties. According to the Library of Congress, this paper is the American edition of a Prague publication. It is a leading theoretical journal of the Communist movement from an international standpoint. It contains programs and party decisions, and articles on the parties of specific countries. In the February issue of the World Marxist Review, an article entitled "For Panama's Complete Independence," on page 89, it expresses these thoughts:

We live in an epoch in which imperialism is losing ground. Its positions are growing weaker and it has suffered one strategic defeat after another in many parts of the globe. The imperialist structure is being rent asunder at various levels, and one example is the distintegration of the colonial system.

Let us note that the difficulties now faced by imperialism stem not only from the fact that it has outlived itself, and is being eroded by its internal crisis. They are also the result of the crushing blows by the progressive forces, which are growing stronger all over the world and which are inspired above all by the socialist community, headed by the Soviet Union, which sprang from the great October Revolution and which has blazed for mankind the trail for triumphant national liberation and social emancipation. The potential accumulated by the world revolutionary movement and the active, mighty, sustained, systematic and vigorous struggle of all the anti-imperialist forces of the globe are the main reason for the weakening of the positions of imperialism. In the new historical conditions, it no longer has any firm ground anywhere. In all its possessions, far or near, which imperialism once found it easy to maintain, the firm ground everywhere has been converted into shifting sands.

The same publication contains an article, dated September 7, 1977, by the Political Bureau, Peoples Party of Panama, which concludes with the following paragraph:

We, Panamanian Communists, support the treaty signed by Torrijos and Carter inasmuch as it is a vehicle of our country's decolonization and point out the need for strengthening anti-imperialist national unity in order to advance toward complete liberation through the defeat of the imperialist oligarchy in all areas and consummate the structural transformations launched in preceding years.

We have taken a step forward. The struggle continues.

Mr. President, I would reiterate the statement, "We, Panamanian Communists, support the treaty signed by Torrijos and Carter.

I believe, Mr. President, that all Members of the Senate know that the Communist party operates in mysterious ways; but their publications, prepared for their own membership, would appear to me to be a good source of information of their real opinions.

What is ignored here is to whom we are giving the canal—today to General Torrijos and tomorrow to who knows what Government in Panama, given that country's political instability.

Let us recall for a moment who General Torrijos is. He is the dictator of Panama who took over that country from a lawfully elected government "at the point of a gun" in 1968. He is the same dictator who has increased the national debt of Panama from some $167 million to over $1.5 billion, the highest per capita national debt in the world. He is the dictator who has compiled a dismal record on human rights, according to Freedom House. He is the same dictator who has open admiration for Castro and who, on his return to Panama after signing the treaties in Washington last fall, sent the following message to Castro:

On my return trip to my country and flying above the sky of Cuba, I salute you with friendship always . . . In Latin America, your name is associated with feelings about dignity that have been channeled toward a shameful period of colonialism.

This is the same Fidel Castro who has thousands of Cubans in Angola, several thousand Cubans in Ethiopia and, apparently, sees a need to have Soviet pilots fly air defense missions for him in Cuba. Torrijos is the same dictator who has never met the American Governor of the Canal Zone. This according to testimony of the Governor. I asked Governor Parfitt, when he testified before the subcommittee on separation of powers of the Judiciary Committee, his personal opinion as to Communists within the structure of the Government of Panama.

Governor Parfitt, an active major general in our army, responded:

I believe the general consensus is that the Panamanian government itself is not communist-leaning, but advisers in various places within the government are in fact Communists.

I asked, "This would be advisers to General Torrijos? Some of his advisers are believed to be Communists?"

Governor Parfitt answered, "That is correct."

Let me add that Governor Parfitt also testified at this hearing that our Government did not ask him whether the proposed treaty should be negotiated. It seems untenable that the top U.S. official, the Governor of the Canal Zone, would not be asked his opinion before the treaties were signed.

So, it does not appear that we would be giving up our $10 billion canal to any great or reliable friend of the United States. This may in part account for the fact that the vast majority of Americans are opposed to ratification of the canal treaty.

Let us look at the attitude of Latin America toward these treaties Mr. President, one of the great myths surrounding these treaties is the view that the United States will alienate all of Latin America if we do not ratify these treaties. The administration would have us believe that all of Latin America strongly supports U.S. turnover of the canal to Panama.

Let us address this point. When former Deputy Secretary of Defense Clements testified before the Armed Services Committee, he indicated that Robert Hill, former Ambassador to several Central and South American countries, asked him to inform the committee that his contacts indicated most of these countries did not favor the treaties, because they were "convinced it would be an added cost to their economy" and because they were concerned "with respect to the security of the canal" since most of their trade depends upon efficient and economical operation of the canal.

At a meeting of the Organization of American States last year, the nations of Latin America passed a resolution by an overwhelming vote of 17 to 0 with three absentees to reaffirm:

The principle that the Panama Canal tolls should exclusively reflect the actual operating costs.

Panama abstained from this vote and apparently implicitly criticized the Organization of American States (OAS) for even considering the matter.

When Lt. Gen. Gordon Sumner, Chairman of the Inter-American Defense Board, testified before the Armed Services Committee he stated that the 19 countries of Latin America which comprise the Inter-American Defense Board:

Look at this canal as the "Canal of the Americas" and it is important to those countries."

When asked concerning the views of Inter-American Defense Board countries on the treaties, General Sumner stated that he had talked to:

The presidents, the ministers of defense and the high level military people of the 17 countries besides the United States and Pan-

ama, and that all express a very grave concern about the treaties.

He testified that—

They see the possibility here for conflict. They also see the possibility for mischief making by the Communists.

He went on to add that all of these countries have "some type of Communist subversion or terrorism going on within their countries." General Sumner indicated that all members of the Inter-American Defense Board have "expressed reservations about the fact that the United States will no longer be in Panama. Once we do not have the bases there, then the entire area becomes destabilized."

From my own visits to Latin America last year, I can confirm the views of both Ambassador Hill and General Sumner. There was considerable concern, particularly in countries on the west coast of South America, concerning possible toll increases. The countries of Latin America were also worried about the possible involvement of Communists in Panama once the U.S. presence there was reduced or eliminated.

It would appear that we should consider the effect of ratification on American citizens located in the Canal Zone. According to testimony of General McAuliffe before the Committee on Foreign Affairs, there are more than 30,000 Americans residing in the Canal Zone. Roughly 20,000 are military personnel and their dependents and approximately 10,000 civilian employees of the Canal Company with their dependents make-up the remainder of the 20,186 Americans. These American citizens have made their objections to the treaties known in a variety of ways. Of course, in the event the treaty is ratified, we would extinguish the U.S. jurisdiction in the Canal Zone. We would terminate its legal, its national presence there. We would terminate all of the inherent rights of our country under the 1903 convention and all subsequent agreements between the United States and Panama. We would place our citizens there, resident citizens, American citizens in Panama, including members of the Armed Forces and their dependents, under Panamanian jurisdiction.

Suggestions have been made by proponents of the treaty that we have in some manner been unfair to the Panamanian people. Yet, on checking with the State Department, we find that Panama receives one of the highest per capita levels of U.S. assistance among the nations of the world. During the 6 years between 1971 through 1976 for instance, our average annual assistance through the AID program was just over $27.6 million, or a grand total of $165.6 million to a nation with a population of approximately 1.7 million persons.

Panama has also participated extensively in loan activity with the Export-Import Bank during recent years. We continue to be Panama's principal trading partner, and private U.S. capital has invested heavily in the country.

The number of banks in Panama has increased from 21 in 1967 to 71 in 1977 with total assets of $9.7 billion. I note from the CONGRESSIONAL RECORD of October 25 of last year that the chairman of the Senate Banking Committee (Mr. PROXMIRE) state on page 34964 that the data supplied by the Bank Regulatory Agency show United States banks had total claims on Panama of $2.831 billion as of December 31, 1976. Individual Senators can form their own judgment as to what part, if any, the banking interest has in ratification of these treaties.

Mr. President, when we consider what the United States would lose, we should bear in mind that the Canal Zone is more than just a location for a big ditch that connects the Atlantic to the Pacific Oceans. There are military and civilian facilities located within the approximately 650 square mile Canal Zone area. According to a report prepared by the Panama Canal Company in September 1977, the improvements within the zone have a replacement value of $9.81 billion. This is the value of the American property that we would give away. This does not include the value of unused Canal Zone land estimated to have a value of $115 million. It is interesting to note also from the report of the Canal Company that the country of Panama has received gross payments and income from the Canal Zone from 1963 to the present of $1.8 billion. That is for a period of 17 to 18 years and includes the annuity, wages and salaries to Panamanians, direct purchases, retirement payments and resident expenditures. It does not include foreign aid rendered by the United States to Panama which I previously referred to.

You may recall last month I had a four-volume computer printout on the Senate desk weighing 47 pounds, more than 1 foot high, and used it as a podium from which to speak. The computer printout is still in the office if any Senator would care to examine it and it contains a breakdown of the current replacement value of U.S. improvements in the Canal Zone.

A General Services Administration report on the real estate owned by the United States indicates that our Canal Zone Government has a total of 266 buildings having a gross square foot area of 2,482,037 square feet. It includes buildings of various types, 10 which are used for offices, 32 for hospitals, 3 for prisons, 110 for schools, 22 for other institutions, 6 for housing, 6 for storage, 2 for services, 5 for research and development, and 70 for all other purposes.

A similar report of U.S.-owned real estate in the Canal Zone under the jurisdiction of the Panama Canal Company includes 2,647 buildings of various kinds having a total gross square foot area of 10,456,489; 34 of which are used for offices, 2 for schools, 1 for other institutional purposes, 2,005 for housing, 161 for storage, 29 for industrial purposes, 151 for services, and 264 for all other purposes.

This report, however, does not include the improvements on various military bases within the Canal Zone. You will remember, however, that I made a somewhat detailed report and had pictures on the floor of the Senate illustrating both the military installations and the civilian ones. I still have these pictures if any Senator would care to look at them.

Let us now turn briefly to some of the financial aspects of the canal treaties, to the loss of income to our Government or direct cost to our Government should the canal treaty be ratified between the date of ratification and the date of the termination on December 31, 1999. Without going into detail there will be a loss to the U.S. Treasury of $440 million in annual interest payment on the U.S. investment for the construction of the canal; early retirement costs of $165 million; Department of Defense costs of $110 million; one-time base relocation costs of $43 million. This totals the sum of $758 million as a minimum cost to our taxpayers for giving Panama a $10 billion Canal Zone.

As Senators know, Panama will also receive from canal tolls under the provisions of the treaty; first, 30 cents per ton for all cargo transiting the canal. This is estimated to be $40 million per year, or a total of $880 million during the term of the treaty. Second, a fixed annuity of $10 million per year, or $220 million for the 22-year term. Third, $10 million per year for certain services such as police and fire protection, or $220 million for the 22-year period; and fourth, $10 million per year from tolls if revenues exceed expenditures and should economic conditions permit. This is an additional $220 million, or a potential total of $1.5 billion as a minimum since some of these payments will be adjusted for inflation.

So, Mr. President, I can readily see why Panama has coveted the U.S. territory over the years, and most heartily agree with the visitor who stopped by the office earlier this week and said from the U.S. point of view, these treaties just do not make good sense.

My opposition, in a broad sense, is that the treaties are written in a way to meet the demands of Panama and to further the best interests of Panama rather than the best interests of the United States. At the present time the United States has possession and control of the canal. From the viewpoint of our own national interest there is no need to negotiate a new treaty. In my judgment, we do not obtain any benefits from these treaties but we lose substantially all of the interests we now have in the Canal Zone. It would appear that our negotiators have been willing to give Panama anything it wanted and that Panama has wanted everything it could get. This has resulted in a one-sided treaty. A treaty that, in my opinion, is not in the interest of the United States or in the interest of the free world.

Mr. President, I have a number of amendments that may possibly be offered at a later date, one of which would have the United States retain the ownership of the Canal Zone, but would provide for a multiple nation control of the Canal Zone.

I have hesitated to introduce that at this time because of seeing amendment

after amendment, regardless of its merits, being subjected to motions to table without the amendments being considered on their merits. But I do reserve the right and would advise the Senate that this amendment, together with others, may be offered at a later time.

I have an amendment that would provide that Panama would get an annuity of $10 million per year and then if the amendment should be adopted would move to strike the other provisions of the treaty.

That would mean we would continue the same conditions as we have today, except we would increase the annuity for Panama from $2.3 million to $10 million.

Certainly, to me, that would be a charitable act on behalf of the United States.

Mr. THURMOND. Mr. President, I compliment the able and distinguished Senator from Virginia for the address he has just delivered.

The Senator from Virginia has been to Panama. He has seen firsthand the situation down there. He has visited in the Panama Canal Zone. He has talked with employees down there. He has talked with the Governor of the canal. He has talked with the commanding general and the other prominent officials in the Canal Zone. He has talked with officials of the Panamanian Government.

So what the distinguished Senator from Virginia said today is firsthand information. He has proved to be a man of sound judgment, and he has been a valuable addition to the Senate.

I just wish to take this opportunity to congratulate the Senator from Virginia for bringing out these facts today, not only about the Panama Canal Zone and the Panama Canal, but also their relation to the way in which the United States is withdrawing from various parts of the world today, at the very time when the Soviets are increasing and expanding their influence throughout the world.

I hope the Members of the Senate will take time to read the splendid address of the Senator from Virginia and that people outside the Senate will have an opportunity to read it, as it is a very informative and helpful address.

Mr. SCOTT. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. GLENN). The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. SCOTT. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SCOTT. Mr. President, I yield to the distinguished Senator from Alabama (Mr. ALLEN).

Mr. ALLEN. Mr. President, if the distinguished Senator has concluded his remarks and if he would yield the floor, I would ask for the floor in my own right.

Mr. SCOTT. I yield the floor.

The PRESIDING OFFICER. The Senator from Alabama is recognized.

Mr. ALLEN. Mr. President, I, too, wish to commend the distinguished Senator from Virginia (Mr. SCOTT) for his very fine and eloquent speech and for his analysis of what the approval of these treaties would mean to the future of the United States, because he sees these treaties as a test of our very will to survive as a great nation, he sees this as a test of whether we are going to retreat around the world every time we meet resistance, and he sees this as a very crossroad in our future, our future as a great world power, and our future as a leader of democratic thought and democratic action.

So much more is involved, as the distinguished Senator points out, than the very important matter of whether or not we shall give the Panama Canal away. Important as that is, it is not the most important feature, and our retreat from responsibility and our retreat from our role as a world power is a greater issue than the giving up of the Panama Canal, the transfer of the property to Panama and the paying of Panama of hundreds of millions of dollars to take the canal. Great as that issue is, it is not as important as the overriding issue of our desire to remain as a great world power and our determination to remain as a great world power, and this giving up of the canal symbolizes a retreat.

I appreciate the fine remarks of the distinguished Senator from Virginia (Mr. SCOTT). I also appreciate the very fine remarks just a moment ago on another subject by the distinguished senior Senator from Virginia (Mr. HARRY F. BYRD, Jr.). Certainly the great State of Virginia is well represented here in the U.S. Senate by her two great U.S. Senators.

Mr. SCOTT. Mr. President, if the Senator will yield briefly, he is most gracious in his remarks about me and my senior colleague, and we thank him for it.

Mr. ALLEN. I say that in all sincerity, I assure the Senator, and assure the Members of the Senate.

Mr. President, this is a time for statesmanship on the part of the administration. It is a call for statesmanship, because we have before us treaties that quite obviously do not command the support of the people of either nation. It is quite obvious to the Senator from Alabama that the great majority of the people of the United States oppose giving the canal away and it is quite obvious that the people of Panama are opposed to having the canal given to them under the terms and conditions of the treaties as presently shaped here in the U.S. Senate.

I am hopeful that between now and the time that we are to vote on April 18, that the President will recall these treaties, both treaties. If one treaty is withdrawn, I would assume that both might be withdrawn, because neither can go into effect unless both are approved. I hope that the President will recall these treaties from the Senate, send them back to the negotiating table, with the implicit advice that the Senate has given with respect to these treaties from the debates that have taken place here on the floor—and with the unrest of the Panamanians, as a result of the wording of some of the reservations to the treaty.

The treaties apparently are not accomplishing one of the purposes for which they were designed. We had been assured here on the floor of the Senate before these uprisings and demonstrations took place that the treaties were needed and are needed to prevent uprisings, demonstrations, and the burning in effigy of the President of the United States. We were assured that if the treaties were not agreed to that sort of thing would happen. But now we see that, far from that being the case, if the treaties are agreed to it is going to cause great unrest, great protest, and great demonstrations in Panama.

Mr. President, who is responsible for this dilemma in which we find ourselves? Mr. Torrijos apparently has been maneuvered by action of the Senate into an untenable position, an impossible position. Even though he assured the administration that some of these reservations that have been agreed to were displeasing to him, nevertheless, contrary to the policy that had obtained throughout the proceedings on the treaties, we went ahead and agreed to these reservations that were displeasing to the dictator. Up to that time the procedure in the Senate had been to, in effect, clear everything with dictator Torrijos, see that everything that was done in the Senate was satisfactory with him, and so far as I know as I notice the distinguished Senator from Massachusetts (Mr. BROOKE) has pointed out no one here in the Senate stated that the DeConcini reservation would be unacceptable to Panama. The distinguished Senator from Massachusetts felt that in voting for the DeConcini reservation he was voting for something that the Panamanians would approve, that they did not object to. That seems to be far from the case.

Mr. President, the entire proceedings with respect to the treaty, the tabling of amendments, the acceptance of such reservations as the leadership is willing to take, the adding of the leadership amendments, all of these things had the approval of the administration, the approval of the leadership, the approval of the managers of the bill.

Not one single word has been added to either treaty that did not have the approval of the administration, the approval of the leadership, and the approval of the managers of the treaties, because they march at the head of a substantial majority of the Senators who are able to defeat any amendment they wish, who can accept any amendment they wish, so they have full control of every word that has gone into these treaties, every single word.

The negotiators agreed to it in the negotiations; the treaties were submitted to the Senate, and from that time on every bit of shaping of these treaties, every word that was turned down, every word that was accepted, had the approval of the administration or it would not have come to pass.

That being true, this impasse, this being on the horns of a dilemma, is not the responsibility of those who have opposed these treaties, those who have sought to strengthen these treaties. The impasse, the blame for the impasse, lies directly

at the feet of the administration and the leadership and the managers of the treaties.

Now, Mr. President, when these treaties were submitted to the Senate—let us go back to the very start—President Carter submitted them in the order, first, of the Panama Canal Treaty, the one we are on now; second in order was the neutrality treaty that, in fact, goes into effect starting with the next century—the main thrust of the treaty does.

It was thought, I assume, that by getting the Neutrality Treaty approved first—and who can object to neutrality—by getting the Neutrality Treaty with its elements of right of defense by the United States of the canal, by getting that approved they thought that would set in motion such momentum for the treaties that they would be approved very quickly.

I warned, Mr. President, that the leadership in insisting on taking up the Neutrality Treaty first was depriving many Senators of the right to vote for the Neutrality Treaty. Why? Well, if the Panama Canal Treaty had been approved first then there would have been very little objection to the Neutrality Treaty. It would just have been a question of how much defense was going to be allowed, and once the decision had been made to give the canal away Senators would have flocked to support the Neutrality Treaty.

Some 86 Senators joined the leadership amendment which was supposed to have provided greater defense rights for the United States in the canal.

But the leadership reversed that order of consideration of these treaties, and therein lies their fatal flaw. If they had continued with the order in which they were submitted, the Panama Canal Treaty first, this whole matter would have been disposed of, in my judgment, weeks ago.

I predicted, Mr. President, more than once here on the floor that this reversal of the order of consideration of these treaties would add at least 1 week to the time it would take to act on both treaties. I believe I was too low in my estimate. I believe it has added 2 or 3 weeks to the time taken to consider both treaties.

I firmly believe if we had not seen these treaties changed in the order of their consideration, and in putting the Neutrality Treaty first, which required Senators who opposed the Panama Canal Treaty also to vote against the Neutrality Treaty, whereas they would have voted for the Neutrality Treaty if that had been the second treaty to be considered—so the fatal mistake thus far with respect to the treaties was the order of consideration.

I tried, and 29 other Senators tried, to get that order reversed, to go back to the question of deciding the basic issue first, and everything else would then have been easy, decide whether they were going to give the canal away before we worried about defending it in the year 2000.

A motion was made—the Senator from Alabama made that motion—that we reverse the order and consider the Panama Canal Treaty first. That received 30 votes here in the Senate. If that side had prevailed, and we had considered the treaty we are now considering first, this whole matter would have been disposed of. It would not have been necessary to negotiate with the distinguished Senator from Arizona (Mr. DECONCINI) with respect to his reservation, because Senators would have been falling all over themselves to come forward and pledge their support to the Neutrality Treaty. I believe we would have disposed of the Neutrality Treaty in 2 days time if the basic issue had first been decided.

All these negotiations were out in the open. Nobody is disclosing any secrets. I know of no secrets with respect to the negotiations. It is all a matter of public record that it was necessary in order to pass the Neutrality Treaty to accept Mr. DECONCINI's reservation, and they did accept his reservation word for word.

Mr. DECONCINI voted for the treaty, along with at least two other Senators who based their vote, conditioned their vote, on accepting the DeConcini amendment, and the first treaty was ratified.

Now they are talking about, Mr. President, undercutting, diluting, changing the nature of the DeConcini reservation which had already been agreed to, the treaty with respect to which it had been added had been agreed to, and now they are talking about some sort of language in the Panama Canal Treaty that would supposedly say that we did not mean what the DeConcini amendment says when we agreed to it.

Well, everybody knew what was in the DeConcini amendment. They had been negotiating over it for days. It had been subjected to review by Senator DECONCINI's staff, the Senator himself, by the State Department, and the attorneys for the State Department, by the President himself. They all knew what was in it. It has not got any hidden meaning. It is all right there for anybody to see who bothers to read it.

Now, where the mixup has come is this: We recall that the two leaders stated they could not support the treaty as it was first presented to the Senate, because it did not give us the unilateral right to intervene for the defense of the canal, and the leadership amendment is supposed to have given us that right. But dictator Torrijos very wisely and cannily and shrewdly had inserted in the memorandum between the President and the dictator a paragraph that protected him and his regime, and that protection is absent in the DeConcini reservation, and that is what all the furor is about.

The leadership amendment, based word for word on the memorandum by the President and the dictator, had three items that gave protection to Panama in the event of U.S. intervention for the purpose of defending the canal. The leadership amendment was designed to give us the unilateral right to defend the canal. The DeConcini amendment gives us the unilateral right to keep the canal open—just one little step further, to keep it open—which would involve defense even if it requires, according to the DeConcini amendment, military action on our part. But the DeConcini amendment does not have these three saving clauses that the leadership amendment has: First, that in our intervention we should not interfere with the internal affairs of Panama; second, that in our intervention we should not interefere with the territorial sovereignty of Panama; and third, that we should not interfere with the independence of Panama. Those three savings clauses are in the leadership amendment, but they are not in the DeConcini amendment, and that is where the slip-up came.

The dictator was willing to take the leadership amendment, because there was as much in the leadership amendment for him as there was for the United States. But under the DeConcini amendment we are given a defensive right without any burden; so therein lies the basis of the Panamanian objection.

It did not come as a surprise to the administration that Torrijos objected to this amendment, and they exchanged letters on March 15, the dictator and the President, wherein the dictator raised objections to the reservations that he saw coming, but he was assured by the President that the reservations would not interfere with the spirit of the agreement that he and the dictator had reached.

So I feel that in the next few days, strange things are going to happen here on the floor of the Senate. They are going to try to placate the Panamanians. They are going to try to weaken the DeConcini amendment, even though it has already passed, and on the basis of the DeConcini amendment three votes were cast for the treaty. Having obtained the fruits of the agreement as to the DeConcini amendment, having gotten the benefits of that agreement—that is, the approval of the treaty—now they are going to want to put something in this treaty to placate the Panamanians. I do not know whether that is going to give offense to those who voted for the treaty on account of the addition of the DeConcini amendment. I rather imagine it will. But here we are going to be playing one side against the other, trying to make concessions here without losing support there, and I do not know whether that tightrope can be walked.

I would have hoped that the U.S. Senate would not be subjected to that ordeal. I do not know what the outcome is going to be on these treaties, but I say if they are agreed to it is not going to be any great credit to the United States of America. It is not going to fulfill the promises that were made with respect to what these treaties would do. They were supposed to be good neighbor gestures. They are supposed to allay hostility, anti-Americanism. Why, they just add fuel to the flames, Mr. President; and that is the reason why I say that the time has come for statesmanship in this regard.

I hope that the Senate will not be required to doctor up this second treaty to try to please the Panamanians, to try to please those Senators who rested their faith in the administration when they accepted the DeConcini amendment, and now see the prospect that in this instrument they are going to try to take back

what they said in the DeConcini amendment.

That is not going to look too good on the part of the United States, Mr. President, to accept an amendment that has undergone close and careful scrutiny, every word weighed, and then accepted by the leadership, accepted by the managers of the bill, and accepted by the President.

Now they say, "Oh, we must do something to clear up the questions over the DeConcini amendment." Well, if you do that, if you backtrack on that, you are certainly running the risk of losing both treaties.

Mr. President, rather than see the treaties defeated outright on next Tuesday, would it not be the better course of wisdom, the better course of diplomacy, and the better course of statesmanship to have these treaties recalled? It can be done. Have these treaties recalled, then have further negotiations take place in the light of this debate, in the light of the defects and ambiguities of both treaties, study these debates here in the Senate, feel the pulse of the Panamanians a little bit closer, and come up with a treaty that might well be as acceptable to a two-thirds majority here in the Senate, and that might be acceptable to the Panamanians.

Why add fuel to the flames of the unrest in Panama that exists now? All groups, with one possible exception, one political party there—or I do not think political parties are allowed to exist any more in Panama, but there are various factions in the country. I think all of them have come out against the treaty, according to the news accounts.

Mr. President, an article appeared in the Washington Star yesterday about these negotiations that are taking place between the Americans and Panamanians to try to placate them and at the same time not antagonize Senators who thought they had an agreement as to the first treaty. I ask unanimous consent that the article, entitled "Panama's Efforts Again Embarrass Treaty Backers," written by Walter Taylor, and published in the Washington Star of Tuesday, April 11, 1978, be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PANAMA'S EFFORTS AGAIN EMBARRASS TREATY BACKERS

(By Walter Taylor)

American supporters of new Panama Canal treaties again have been embarrassed by Panamanian machinations over Senate-approved changes in the agreements.

This time it involves the White House and the head of its congressional liaison staff, Frank Moore, one of the individuals President Carter credited for securing Senate passage last month of the first of the two canal pacts. Reports possibly traceable to Panamanian officials also have questioned the actions of Carter himself in accepting one controversial alteration in the treaties.

Administration officials already were concerned that Panama's vociferous protests about the so-called "DeConcini reservation"—a Senate-passed provision designed to permit unilateral U.S. action to maintain operation of the canal—might unravel the tenuous majority that supports the treaties in the Senate.

Senate Republican Leader Howard H. Baker of Tennessee, a key backer of the agreements, already has issued one stern warning to Panama about its behind-the-scene maneuvering to have the DeConcini measure softened, or at least portrayed in a light less grating on Panamanian sensibilities.

Panama has stopped short of rejecting the treaties, but it was revealed last week that its head of government, Brig. Gen. Omar Torrijos, had written the leaders of more than 100 member countries of the United Nations to protest the DeConcini change, and that Torrijos' ambassador to Washington, Gabriel Lewis, had telephoned a number of senators to strongly criticize Senate approval of the reservation.

With administration officials still trying to prevent a backlash in the Senate from those events, the White House yesterday found itself having to deny the authenticity of a purported transcript of a White House meeting between Lewis and Moore that was leaked to reporters by opponents of the treaties.

The original source of the transcript could only have been an official of Panama.

One flabbergasted administration official, asked about the accuracy of the transcript early yesterday afternoon, scoffed at the document. "There was nobody there but (White House officials) and the Panamanians. We didn't even make a transcript. And certainly it wouldn't be to the Panamanians advantage to let anything like that loose."

Later, however, it became evident that the "transcript," said by sources originally to have been written in Spanish, had been prepared from notes of one of the Panamanian participants in the meeting. The introduction to the documents is written in the first person, as if by either Lewis or the other Panamanian official in attendance, R. A. Bilonick Paredes.

"As scon as we entered the office of Mr. Frank Moore, he gave us the news . . ." the memo begins. The remainder of the three-page document is presented as a verbatim transcript of candid give-and-take between Lewis and Moore.

After a number of queries by reporters, the White House late yesterday issued a statement, attributed to Moore, saying the supposed transcript was "riddled with inaccuracies."

On top of the disputed transcript, reports circulated among some key treaty supporters that Carter had been warned by Panamanian officials that the DeConcini reservation was unacceptable even before the Senate vote on the provision, yet publicly embraced it in an 11th-hour scramble to line up the necessary 67 votes for treaty approval.

Sen. Dennis DeConcini, D-Ariz., the sponsor of the controversial provision, has said Carter indicated to him that the change would cause problems with the Panamanians, but never suggested that the language of his proposal might lead to outright rejection of the treaties.

The accuracy of the reports that Carter was flatly told that Panama might reject the agreements if the DeConcini reservation was adopted by the Senate could not be confirmed. But the scenario evidently was found plausible by two of the strongest treaty supporters in the Senate.

A senior aide to one of the senators, relaying the sentiments of his boss, said flatly that Carter twice had been warned by Panama, but had not passed the information along to treaty supporters. "All of this might have been avoided had any body known the consequences," said the Senate staffer.

A key Democratic supporter, asked whether Carter should have anticipated the harsh reaction of Panama to the measure, confirmed that the President's pre-vote knowledge "was a matter of question." It might be, he said, that the President "bungled."

The original source of the reports could not be pinpointed. The possibilities, however, seemed to include only the President and members of his administration or Panamanian officials.

The latest turn of events further clouded the outlook for Senate action on the treaties when less than a week ago adoption seemed assured. A final vote on the agreements, which would cede the canal to Panama in the year 2000, is scheduled next week.

Opponents, whose every effort to kill the treaties has been stymied, seemed to be basking in the predicament the administration and its forces in the Senate suddenly found themselves.

The Senate leadership endorsed the language causing the current controversy, Sen. James Allen, D-Ala., a leading opposition spokesman, reminded his colleagues yesterday.

Opponents' newest ammunition was the so-called transcript of the Moore-Lewis meeting, which depicts Lewis as demanding a new resolution to "neutralize the effect" of the DeConcini reservation.

The document includes this exchange:

Lewis: "Let's get to the point. The main objective of my visit is to know whether you have a rough draft of a resolution that might neutralize the effect of the DeConcini amendment and if so, when you could give it to me for my study, as the clock is now against us. It is necessary that I send this speech to Panama as the DeConcini amendment affects us directly and the speech should have the objective of resolving the problem that the DeConcini amendment put us into."

Moore: "I do not see any difficulty. (Deputy Secretary of State) Warren Christopher will have the text ready tomorrow for certain."

Later in the exchange, the document quotes Lewis as saying, "I think you have public officials with interventionish mentalities."

"Where?" Moore is said to have asked.

"Not here at the White House but in all your departments," Lewis is quoted as responding. "Many of them are not high-level officials but of the middle level."

At still another point in the conversation, Lewis suggests that senators "are not aware of the Panamanian reality" regarding hostility to the treaty changes. "You're right," Moore is quoted as responding, "But we cannot make the senators of the opposition face this."

In the statement released by the White House last night, Moore acknowledged that he had discussed the general political situation that the DeConcini reservation had created both in Panama and among supporters in the Senate.

Moore added, however, that he told the Panamanian officials "that in no way would an amendment undercutting the legality of the DeConcini amendment be adopted by the U.S. Senate."

Referring to a meeting the Panamanians were planning for the next day, last Thursday, with Assistant Democratic Leader Alan Cranston of California, Moore said he told the Panamanians he thought it "would be helpful in terms of expressing their concerns." But he said he "pointed out to them, however, that in no way should they become involved in proposing language for an amendment or reservation."

No such admonitions appear in the "transcript" that was circulated yesterday.

Despite the continued flap over the DeConcini amendment, administration officials and leading Senate supporters continued to be optimistic that the political tumult both in Panama and in the Senate can be overcome.

Sen. Frank Church, D-Idaho, one of the

floor managers of the treaties, said in a speech on the Senate floor yesterday that Panamanian objections to the DeConcini measure stem from a "simple misunderstanding" over the use of the word "intervention" to describe U.S. rights to protect the neutrality of the canal.

"Intervention to us may mean taking action for the limited and specific purpose of protecting our legitimate security interests in the canal," said Church. "But in Panama and throughout the rest of this hemisphere, the word 'intervention' conjures up all that was humiliating and distasteful in their relations with the United States 50 years ago."

Church proposed a clarifying statement, possibly one added to the treaties themselves, spelling out that the United States has no desire to intervene in the internal domestic affairs of Panama. "Let us make it unmistakably clear that we will not back away from or dilute in any fashion the essential and legitimate rights to protect the neutrality of the canal which we have so carefully defined in the treaty and in the action taken by the Senate."

But, he added, "let us find an appropriate way to reassure the people of Panama that our intention was not to nullify the specific pledge of non-intervention in the internal affairs of Panama (and) reaffirm the specific commitment to respect Panama's territorial integrity and political independence which we similarly voted to incorporate in the treaty."

In an interview, Church indicated that treaty supporters are likely to propose a new pact change that would fill his prescription for ending the current dispute. There also is the possibility that Carter may make a clarifying statement regarding U.S. and Panamanian rights under the proposed new treaties.

The precise language of another treaty provision is yet to be hammered out, Church added.

Meanwhile, 60 opponents of the treaties in the House said yesterday they would ask the Supreme Court to overturn a lower court decision and give the House a voice in the canal decision. The lawmakers, led by Rep. Mickey Edwards, R-Okla., also asked Chief Justice Warren T. Burger to order Carter to shift no property until after the high court has acted on a challenge to any such transfer.

Mr. ALLEN. Mr. President, on tomorrow—and I may have to do it right at the very last, after the time for debate has expired—I am going to offer an amendment calling for another plebiscite in Panama before these treaties go into effect.

We say, why have a stipulation like that in there? Let the Panamanians handle it the way they want to.

Well, it is important, Mr. President, that we have a compact with the people of Panama. Let us not have another 1903 treaty which the Panamanians will rail against for the next 22 years, just as they have said they have railed against the 1903 treaty since 1903.

Let it not be said that we just dealt with a dictator down there and after we put in amendments here in the Senate we did not ask the people of Panama if they approved of that action, we just asked the dictator.

Let us profit by the mistakes and lessons of the past. Let us not have another 1903 treaty that the people of Panama say they were not consulted about.

They had a plebiscite back in October of last year. Yes, everybody in Panama was praising the treaties then. But a different situation prevails now. The people of Panama are not praising these treaties. They are severely condemning them. In light of that, in light of our future dealings with the Panamanians, let us get approval of what we have done from the people of Panama. Otherwise, we will live to regret it.

That is the best way to put a stop to demonstrations, possible sabotage, marches, burnings. Let us submit this to the people of Panama, or require that before it goes into effect—and I have an amendment that will accomplish that—the issue again be submitted to the people of Panama in view of the change in the treaty.

Those are two alternatives I suggest as a means of extricating ourselves from this dilemma: First, have the President recall these treaties from consideration by the Senate, which I believe would be an act of statemanship. Otherwise, we will have a divided Senate; we are going to have a divided Panama; we are going to have a divided United States of America.

Recall these treaties from the Senate. Send them back to the negotiating table. Profit by the lessons of history. Profit by the debate which has taken place here. Profit by the knowledge of the feelings of the Panamanians. Eliminate the defects and the ambiguities that are now in the treaties, and which have been pointed out, well-recognized by all. Then our efforts thus far will not have been in vain. That would be the preferable course, to my way of thinking.

Failing in that, Mr. President, I anticipate the treaty can probably be rammed through the Senate. It is going to leave some bad feelings. If we undercut the DeConcini amendment, that is going to leave bad feelings throughout the Senate. If we ram more DeConcini reservations through to keep his vote and the vote of several others, that is going to anger some of those who have been voting for the treaties and against all amendments. I see nothing but chaos and confusion if we continue to press for a vote on this treaty on April 18.

I do believe the President can perform an act of statesmanship by withdrawing the treaties for further negotiation.

Failing in that, let us not repeat the mistakes of 1903. Then we were dealing with a revolutionary government of short tenure in office. Now we are dealing with a revolutionary government of long tenure in office, but still a revolutionary government not elected by the people. I would say that the dictator in Panama is no more representative of the people of Panama than was the revolutionary Government of Panama with which we dealt in 1903.

There is an analogy. In 1903 and in 1978 our dealings have been with nonelected, revolutionary governments, so we should beware.

The treaty in 1903 was not approved by the people of Panama, though it was quite obvious that it met with their approval. It was a quid pro quo situation as between the revolutionary leaders and the United States that we guaranteed Panama's independence and they guaranteed to let us build a canal. That is the long and short of it.

Whereas it met with the apparent approval of the people of Panama in 1903, it will not meet with the approval of the people of Panama in 1978. Why, Mr. President, should we submit to the Panamanian Government a treaty that is admittedly unpopular in Panama and admittedly unpopular in the United States?

One distinguished Senator reported this morning that he had asked for calls to his own State office with expressions of approval or disapproval of this treaty we are considering right now. He said over a 24-hour period the call-ins to his office—none of them conspired, as far as he knew—were 96 against the treaty and 2 in favor of the treaty.

I will not say that is the ratio throughout the country, but it is certainly heavy against the treaty in my State of Alabama.

Why should the U.S. Senate, deciding what is best for the people of Panama and the people of the United States, submit an unpopular treaty to Panama that has been changed to such an extent that it is causing demonstrations in Panama, and has caused the dictator there to extend the Easter recess for schools in Panama beyond the date of final action by the Senate? He knows the students are against this treaty so he has not allowed them to return to school where they might demonstrate. They have a long Easter recess for the schools in Panama.

Should we again make the mistake of 1903? We are getting very dangerously close to doing just that.

We say now, "Those fellows back in 1903, why did they not wait a little while and get this government functioning down there, get it set up to where they could have a plebiscite?"

Well, we did not do it, because it was quite obvious that this is what Panama wanted and it certainly was what the United States wanted. But we do not have that situation today.

The distinguished Senator from Alaska (Mr. GRAVEL) earlier this week, as a strong supporter of the treaty—right here on the Senate floor where I am pointing—said in his judgment the people in Panama would overwhelmingly defeat these treaties in a plebiscite.

If that is the case, why are we forcing this treaty on them? Is this creating a good neighborly feeling? I do not see that it is.

This is doing just the opposite, Mr. President, of what these treaties are supposed to do. They are supposed to show how big-hearted the United States is. We are going to give away a $10 billion property because we do not like the 1903 treaty; we took advantage of Panama; we are going to rectify that mistake, even though the Panama Canal has been a boon and a blessing to the people of Panama, allowing them to have the highest standard of living in all of Central America. Even though 80 percent of the employees of the canal are Panamanians, we did them wrong back in 1903 and we have to rectify that; we have to make amends; we have to give the canal to Panama.

That is supposed to be the reason for giving the canal away, to keep the Panamanians happy, to keep them from sabotaging the canal, to keep them from demonstrating and rioting. But it is not working out that way. Strange to say, it is my view, based on my observation of the facts, I believe there would be great rejoicing in Panama if these treaties, as presently written, were defeated by the U.S. Senate. That is what the tone of the people seems to be at this time.

Torrijos, in great dismay and confusion, does not know whether to submit the treaty, if approved by the Senate, to the people in Panama in a plebiscite and have it defeated and, possibly, have himself kicked out of office; or to approve the treaties as an act of the head of state and surely get toppled from his dictatorship. So he is going to be pressing the Senate and he or his representatives, his government, have had great control over the action in the Senate. They have turned down all amendments except the leadership amendment. When I speak of the DeConcini amendment, that is a reservation to the resolution of ratification, not the treaty. They are careful to say that nothing but the leadership amendment, that had protection for the dictator as one of its paragraphs—they split the memorandum and made two amendments out of it. Those are the only two amendments that have been agreed to here in the Senate.

Every single addition, every single word added to this treaty had the approval of the administration and the leadership. Their final draft, their final work, is before the Senate now, and I daresay no amendments will be allowed. I am hoping that they will—I know the leadership would not agree to it. I hope the Senate will agree to require a plebiscite down there so that we can have a compact with the people of Panama and not just a dictator and have shades of 1903 abound here in the Senate.

The treaty is the work, the shaping of the treaty is the work of the administration and the leadership, based on negotiations by our negotiators. So blame cannot be laid at the door of those of us who sought to strengthen these treaties if they are to be agreed to. I do not approve of the treaties, but if they are to be approved by the Senate, I want them to be as strong as possible in the interest of our defense rights on the canal and in the interest of the American taxpayer. Those are my two goals with respect to the amendments. If those amendments improving the treaties have the result of killing the treaties, I could not help that. But if they were to pass, I want the treaties to be just as strong in the interests of the people of the United States, in the interests of the taxpayers of our Nation, as we can possibly make them.

We have this situation of being caught on the horns of a dilemma. How are they going to keep the Panamanians happy and keep faith with those Senators who voted for the DeConcini amendment in good faith, and then who voted for the treaty on the condition of the DeConcini amendment having been adopted? Are we going to keep faith with them, those who wanted strong unilateral defense rights, a strong unilateral right to keep the the canal open—and the leadership agreement and the administration's agreement to that amendment carried with it the votes of three Senators who make that statement openly. They got the treaty passed by agreeing to the DeConcini amendment. Now they are talking about changing this treaty to change the impression gained by the Panamanians from the DeConcini amendment; in other words, water it down or dilute it.

Let us see if that can be done, even. Oh, I know it can be done from the standpoint of strength in numbers. I know that the leadership can put in any amendment they want to and say, "This is a good amendment; vote for it," and it would pass. But let us see what this handiwork would be after they have rammed such an amendment through the Senate.

(Mr. SASSER assumed the chair.)

Mr. ALLEN. I am hopeful, Mr. President, that if they plan—speaking of the leadership now—if the leadership plans to put some sort of language in the Panama Canal Treaty that would undercut or dilute or change—I shall use the word "change"—the meaning of the DeConcini amendment, I hope they will offer it in time for there to be some debate on the issue. I know they can wait until the end of the day tomorrow if they go the amendment route rather than the reservation route, and offer it after all time for debate has ended. At 6 o'clock tomorrow afternoon, we cannot debate on amendments any further. But anybody can offer an amendment that wants to and get a vote on it. So if the leadership offers an amendment, and I rather imagine they will follow the policy they have had heretofore of not allowing amendments to the treaty, they will probably offer it as a reservation.

But, reservation or amendment, I hope they will offer it at such time as there will be opportunity to debate that amendment, because I want the cards to be laid on the table as to just what they are going to do.

Are they going to try to placate the Panamanians or are they going to keep faith with those who voted for the DeConcini amendment and also voted for the treaty on the condition that the DeConcini amendment had been agreed to? It is going to be interesting to see the movement of the leadership to seek to resolve this impasse.

I suggested two routes out of the dilemma: One, withdrawal of the treaties by the President of the United States, which would be an act of statesmanship; second, agree to an amendment requiring a plebiscite by the people to the changed circumstances, the changed wording, the changed meaning of the treaty.

Let us see what the legal effect would be of an amendment or a reservation to the Panama Canal Treaty by the leadership. Suppose they put in an amendment or reservation saying that it has been our policy through the years not to intervene in another country's foreign affairs, in another nation's internal affairs, and we give assurance that is going to be our policy in the future and anything we may have said in the other treaty, if it conflicts with this, we really did not mean that.

If they have some sort of amendment or reservation of that sort and attach it to this treaty, let us see what would be the effect of that.

This treaty will be gone on January 1 in the year 2000. It will be dead. It will be dead as a doornail and we would go under the other treaty.

So, any language that is put in this treaty will expire at the very time of the Neutrality Treaty with the DeConcini amendment, which is directed directly at article V of the Neutrality Treaty, which makes reference to the start of the new treaty, which is at the expiration of the other treaty. So, anything that is said in this treaty will expire and would go under the Neutrality Treaty, because by then the canal will be wholly Panama's.

They will not have any Panama Canal Commission any more, or Panama Canal Company, and anything in the treaty will drop, including any amendment or understanding placed in this treaty seeking to dilute the DeConcini amendment.

It will have performed its function, the Panama Canal Treaty. Its provisions would be what might be called functus officio. It has performed its function and there is no further use for it. It is consigned to history.

But the new treaty, the Neutrality Treaty, would then come into effect with the DeConcini amendment in full force and effect stating that notwithstanding any other provision of the treaty, any other provision of article V, this shall be the rule, that the United States will have the right to keep the canal open, even if it takes military action.

As I say, the DeConcini amendment did not have these three saving clauses in it that the leadership amendment had. That was something the President and the dictator agreed on. While the dictator agreed to something, he is sure of getting something back. He got back a commitment that the United States would not interfere in the internal affairs of Panama, that the United States would not impinge upon their territory, their territorial jurisdiction, and that they would do nothing to interfere with the independence of Panama.

That is the reason the dictator was so agreeable to this memorandum that he and the President entered into, because there was more in it for him than there was for the United States.

But where the slip-up came, Mr. President, was that, apparently, that fact escaped the notice of, I imagine, the dozens of people that analyzed the DeConcini amendment, that poured over its every word, that weighed every word. They just did not relate it to the leadership amendment.

Some thought, this is just the leadership amendment all over again. Besides, it is just a reservation, anyhow. So what?

Well, it is worded, though, it is going to be part of the notes of ratification that both sides have got to agree on.

So there has been a slip-up here, Mr. President, a slip-up by the leadership in being so anxious to pick up these last three votes for the treaty that they agreed to an amendment that they knew displeased the Panamanians.

The very first time, Mr. President, in this whole 2 months of debate, the very first time that an amendment was agreed to that met the displeasure of the Panamanian dictator, just one time, one slip-up, and we are in this impasse today.

The question is going to be: Can we placate the Panamanians without doing damage to the Senators who placed their trust in the supporters of this treaty when they agreed to vote for the treaty if the DeConcini amendment were approved?

That is going to be the question. Are we going to placate the Panamanians at the expense of the feelings of the U.S. Senators?

That is the reason I say these treaties ought to be recalled by the President. They are not popular in Panama. They are not popular in the United States.

Those of us who oppose the treaties, or those of us who are trying to strengthen them, do not believe they are in the best interests of the people of the United States. Panama feels that the DeConcini amendment is an insult to their national dignity and a threat to their sovereignty. I personally do not feel that it is. They think so. A mistake has been made. Let us admit it.

Mr. President, if we are to have further negotiations, and we can have them if the President recalls now, or if the treaties are defeated, either way, there can be negotiations, why defeat the treaties and go back to negotiations when we can avoid that vote by having the treaties recalled by the President and have further negotiations?

I have no doubt that an acceptable treaty can be arrived at, one that would meet a consensus here.

I do not state I would support it. But I believe an acceptable treaty that would meet the approval of more than a two-thirds consensus here in the Senate could be agreed upon with further negotiations, but I feel that those negotiations would be hampered if the Senate first defeats the treaties.

If we gain the treaties, Mr. President, if we win on the treaties, what are we going to have? Panamanians unhappy. Dictator Torrijos, who has worked closely with the Government of the United States, at peril as to his position—and I would not regret to see dictator Torrijos overthrown. I think it would be good for Panama, good for the possibility of a democratic administration in Panama. But I would hate to see him deposed as a result of his able negogtiations for his country in concluding the negotiations on these treaties. I would hate to see him turned out because of the unpopularity of the treaties. I would not object. I would be glad to see the democratic forces in Panama take over the Government there. But I would hate to see the submission of these treaties, unpopular as they are in Panama, cause his overthrow.

That can be avoided, Mr. President, by either of the two routes I am suggesting: Either recall by the President or submission to a plebiscite in Panama.

Mr. President, from the very start it has been the policy of the leadership to stonewall against amendments; whereas, amendments were sought, legitimate amendments, that may possibly cause a new plebiscite in Panama. But it has not been our attitude—those who oppose the treaties—to freeze out the Panamanian people from having an opportunity to speak on this tremendous issue of such vital importance to the people of Panama—of greater importance, I dare say, to the people of Panama than to the people of the United States.

Should we send the treaty back to dictator Torrijos, with the danger that he, as head of state, might accept these treaties, causing great concern and consternation in Panama? Is that a good neighbor policy? Is that creating friends in Panama and in Central America and South America?

Panama already is trying to undercut this treaty. Dictator Torrijos has written the heads of state of more than a 100 nations. He has had his Ambassador to the U.N., Mr. Illueca, submit to the U.N. the DeConcini language and Senator DECONCINI's statement on the floor; Senator EDWARD KENNEDY's statement on the floor; a communique from the Minister of Foreign Affairs of Panama, issued the 27th of March 1978, and the Resolution of Ratification of the treaty. He has submitted all these things to the U.N. General Assembly as a predicate to making an effort to have this DeConcini reservation nullified by the U.N.

That is a pretty highhanded performance, to seek to nullify a treaty that has not even been sent down for approval. That is what we are running into. They do not like this amendment. Let us face it. They do not like this treaty with this amendment in it. Let us face that.

Mr. President, I ask unanimous consent to have printed in the RECORD the letter from Panama's Ambassador to the U.N., together with the enclosures he added to the letter.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

IMPLEMENTATION OF THE DECLARATION OF STRENGTHENING OF INTERNATIONAL SECURITY

(Letter dated 28 March 1978 from the Permanent Representative of Panama to the United Nations addressed to the Secretary-General.)

I have the honour to send you herewith the note verbale from this mission dated 28 March 1978, together with the following documents:

(a) Resolution of ratification of the Treaty concerning the permanent neutrality of the Panama Canal, adopted by the United States Senate on — March 1978 (see appendix I);

(b) Statement by Senator Dennis DeConcini (see appendix II);

(c) Statement by Senator Edward Kennedy (see appendix III);

(d) Communiqué from the Ministry of Foreign Affairs of Panama, issued on 27 March 1978 (see appendix IV).

In compliance with instructions from my Government, I request you to have the note verbale and the above-mentioned documents distributed as documents of the General Assembly under item 50 of the preliminary list.

JORGE E. ILLUECA,
*Ambassador, Permanent Representative.*

ANNEX

Note verbale dated 28 March 1978 from the Permanent Representative of Panama to the United Nations addressed to the Secretary-General.)

The Permanent Representative of the Republic of Panama to the United Nations presents his compliments to the Secretary-General of the United Nations and has the honour to inform him that His Excellency Brigadier General Omar Torrijos Herrera, Head of Government of the Republic of Panama, has addressed a letter to the Heads of State and Heads of Government of the States members of the international community.

General Torrijos's letter and the documents enclosed make reference to the vote which took place on 16 March 1978 at the United States Senate on the Resolution of Ratification of the Treaty concerning the Permanent Neutrality of the Panama Canal. In this resolution, approval to the ratification was granted subject to a number of amendments, conditions, reservations and understandings, inserting among them a pre-condition to American acceptance of the Neutrality Treaty, known as the "DeConcini Amendment" (see clause (b)(1) in the attached clipping of the United States CONGRESSIONAL RECORD, vol. 124, No. 38, pp. 7187–7188 (appendix I)).

According to its proponent, the "DeConcini Amendment" is intended to give to the United States of America the unilateral and perpetual right to "take military action on Panamanian soil without the consent of the Panamanian Government", pretending that said amendment must be construed to permit the United States to intervene in Panama in the event of labour unrest, strikes, a slow-down, or under any other pretext labeled as interference with Canal operations (see text of Senator Dennis DeConcini's statement before the United States Senate on 16 March 1978 inserted in the attached clipping of the United States CONGRESSIONAL RECORD, vol. 124, No. 38, pp. 7147–7148 (appendix II)).

Not only does the amendment make no reference to the regime of neutrality, but, as stated by Senator Edward Kennedy, who opposed the DeConcini Amendment, "Panama has waited 75 years since its independence to end American occupation of its heartland. It must wait another 22 years before it achieves full control over its national territory." Now Panama is asked, in Kennedy's words, "to accept an amendment which has the ring of military interventionism—not just during this century, but for all time" (see text of Senator Edward Kennedy's statement before the United States Senate on 16 March 1978 inserted in the attached clipping of the United States CONGRESSIONAL RECORD, vol. 124, No. 38, p. 7154 (appendix III) and the attached text of the communiqué of the Panamanian Ministry of Foreign Relations, dated 27 March 1978 (appendix IV)).

Since the Treaty provides for accession by all States to the Protocol whereby the signatories would adhere to the objectives of the Neutrality Treaty and agree to respect the régime of neutrality, the Panamanian Head of Government has considered it his duty to address this letter to the Heads of State or Heads of Government of the States members of the international community that in so many instances have offered their solidarity and support to the Panamanian nation in its long struggle to reach a peace-

ful solution to the Panama Canal question based on the recognition of her sovereignty over the totality of its national territory.

---

APPENDIX I

(Resolution of Ratification of the Treaty concerning the Permanent Neutrality of the Panama Canal adopted by the Senate of the United States of America on 16 March 1978.)

Resolved, (two-thirds of the Senators present concurring therein), that the Senate advise and consent to the ratification of the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal, together with the Annexes and Protocol relating thereto, done at Washington on September 7, 1977 (Executive N, Ninety-fifth Congress, first session), subject to the following—

(a) Amendments:

(1) At the end of Article IV, insert the following:

"A correct and authoritative statement of certain rights and duties of the Parties under the foregoing is contained in the Statement of Understanding issued by the Government of the United States of America on October 14, 1977, and by the Government of the Republic of Panama on October 18, 1977, which is hereby incorporated as an integral part of this Treaty, as follows:

" 'Under the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal (the Neutrality Treaty), Panama and the United States have the responsibility to assure that the Panama Canal will remain open and secure to ships of all nations. The correct interpretation of this principle is that each of the two countries shall, in accordance with their respective constitutional processes, defend the Canal against any threat to the regime of neutrality, and consequently shall have the right to act against any aggression or threat directed against the Canal or against the peaceful transit of vessels through the Canal.

" 'This does not mean, nor shall it be interpreted as, a right of intervention of the United States in the internal affairs of Panama. Any United States action will be directed at insuring that the Canal will remain open, secure, and accessible, and it shall never be directed against the territorial integrity or political independence of Panama.' "

(2) At the end of the first paragraph of Article VI, insert the following:

"In accordance with the Statement of Understanding mentioned in Article IV above: 'The Neutrality Treaty provides that the vessels of war and auxiliary vessels of the United States and Panama will be entitled to transit the Canal expeditiously. This is intended, and it shall so be interpreted, to assure the transit of such vessels through the Canal as quickly as possible, without any impediment, with expedited treatment, and in the case of need or emergency, to go to the head of the line of vessels in order to transit the Canal rapidly.' "

(b) Conditions:

(1) Notwithstanding the provisions of Article V or any other provision of the Treaty, if the Canal is closed, or its operations are interfered with, the United States of America shall have the right to take such steps as it deems necessary, in accordance with its constitutional processes, including the use of military force in Panama, to reopen the Canal or restore the operations of the Canal, as the case may be.

(2) The instruments of ratification of the Treaty shall be exchanged only upon the conclusion of a Protocol of Exchange, to be signed by authorized representatives of both Governments, which shall constitute an integral part of the Treaty documents and which shall include the following:

"Nothing in this Treaty shall preclude Panama and the United States from making, in accordance with their respective constitutional processes, any agreement or arrangement between the two countries to facilitate performance at any time after December 31, 1999, of their responsibilities to maintain the regime of neutrality established in the Treaty, including agreements or arrangements for the stationing of any United States military forces or maintenance of defense sites after that date in the Republic of Panama that Panama and the United States may deem necessary or appropriate."

(c) Reservations:

(1) Before the date of entry into force of the Treaty, the two Parties shall begin to negotiate for an agreement under which the American Battle Monuments Commission would, upon the date of entry into force of such agreement and thereafter, administer, free of all taxes and other charges and without compensation to the Republic of Panama and in accordance with the practices, privileges, and immunities associated with the administration of cemeteries outside the United States by the American Battle Monuments Commission, including the display of the flag of the United States, such part of Corozal Cemetery in the former Canal Zone as encompasses the remains of citizens of the United States.

(2) The flag of the United States may be displayed, pursuant to the provisions of paragraph 3 of Article VII of the Panama Canal Treaty, at such part of Corozal Cemetery in the former Canal Zone as encompasses the remains of citizens of the United States.

(3) The President—

(A) shall have announced, before the date of entry into force of the Treaty, his intention to transfer, consistent with an agreement with the Republic of Panama, and before the date of termination of the Panama Canal Treaty, to the American Battle Monuments Commission the administration of such part of Corozal Cemetery as encompasses the remains of citizens of the United States; and

(B) shall have announced, immediately after the date of exchange of the instruments of ratification, plans, to be carried out at the expense of the United States Government, for—

(i) removing, before the date of entry into force of the Treaty, the remains of citizens of the United States from Mount Hope Cemetery to such part of Corozal Cemetery as encompasses such remains, except that the remains of any citizen whose next of kin objects in writing to the Secretary of the Army not later than three months after the date of exchange of the instruments of ratification of the Treaty shall not be removed; and

(ii) transporting to the United States for reinterment, if the next of kin so requests, not later than thirty months after the date of entry into force of the Treaty, any such remains encompassed by Corozal Cemetery and, before the date of entry into force of the Treaty, any remains removed from Mount Hope Cemetery pursuant to subclause (i); and

(C) shall have fully advised, before the date of entry into force of the Treaty, the next of kin objecting under clause (B)(i) of all available options and their implications.

(4) To carry out the purposes of Article III of the Treaty of assuring the security, efficiency, and proper maintenance of the Panama Canal, the United States of America and the Republic of Panama, during their respective periods of responsibility for Canal operation and maintenance, shall, unless the amount of the operating revenues of the Canal exceeds the amount needed to carry out the purposes of such article, use such revenues of the Canal only for purposes consistent with the purposes of Article III.

(d) Understandings:

(1) Paragraph 1(c) of Article III of the Treaty shall be construed as requiring, before any adjustment in tolls for use of the Canal that the effects of any such toll adjustment on the trade patterns of the two Parties shall be given full consideration, including consideration of the following factors in a manner consistent with the regime of neutrality:

(1) the costs of operating and maintaining the Panama Canal;

(2) the competitive position of the use of the Canal in relation to other means of transportation;

(3) the interests of both Parties in maintaining their domestic fleets;

(4) the impact of such an adjustment on the various geographical areas of each of the two Parties; and

(5) the interest of both Parties in maximizing their international commerce.

The United States and the Republic of Panama shall cooperate in exchanging information necessary for the consideration of such factors.

(2) The agreement "to maintain the regime of neutrality established in this Treaty" in Article IV of the Treaty means that either of the two Parties to the Treaty may, in accordance with its constitutional processes take unilateral action to defend the Panama Canal against any threat, as determined by the Party taking such action.

(3) The determination of "need or emergency" for the purpose of any vessel of war or auxiliary vessel of the United States or Panama going to the head of the line of vessels in order to transit the Panama Canal rapidly shall be made by the nation operating such vessel.

(4) Nothing in the Treaty, in the annexes or the Protocol relating to the Treaty, or in any other agreement relating to the treaty obligates the United States to provide any economic assistance, military grant assistance, security supporting assistance, foreign military sales credits or international military education and training to the Republic of Panama.

(5) The President shall include all amendments, reservations, understandings, declarations, and other statements incorporated by the Senate in its resolution of ratification respecting this Treaty in the instrument of ratification exchanged with the Government of the Republic of Panama.

---

APPENDIX II

(Statement made by Senator Dennis DeConcini in the Senate of the United States of America on 16 March 1978.)

Mr. President, I thank the Chair for his indulgence in calling the Senate to order.

For the last three (3) months, I have argued that the treaties as drafted did not appear to contain sufficient safeguards for the United States. But I have also stated publicly that I believed a new treaty with Panama was essential; that history had bypassed the era of simple colonialism when large powers bullied the small. Until recently, I believed that it would be possible for the Senate to make some constructive amendments to the treaty that would satisfy the needs of Panama—but not at the sole expense of the American people. However, as every member of this Chamber knows, the administration was unwilling to accept the slightest changes in the text of the agreement.

Because of this recalcitrance, I suspect that a number of potential supporters of the treaty were lost. Together with Senator Ford, I offered a number of amendments to the treaty. When it became clear that no amendments except the so-called leadership amendments would be accepted, I began to search for alternatives that would accomplish the desired objectives.

After extensive consultations with experts from the executive, Congress, and the academic community, I became convinced that it would be possible to achieve a clearer un-

derstanding of American rights and responsibilities under the treaty through the device of an amendment to the resolution of ratification in the nature of a condition precedent to American acceptance of the treaty itself. Such a condition will be binding on the Republic of Panama.

Therefore, I have recast my amendments in this form. I have assured the President that if my amendment No. 83 to the resolution of ratification is accepted by the Senate that I will vote in favor of the Neutrality Treaty. In turn, the President assured me yesterday in a meeting we had at the White House that he would accept and support my amendment. To the best of my knowledge, that is how things stand as of this moment.

I would like to stress that I am offering this amendment in the name of the people of Arizona. Like Senator Ford, I too have crossed my State and spoken personally to hundreds, perhaps thousands of concerned citizens. As a whole, my constituents do not approve of the Panama Canal treaties. However, they are willing to accept their necessity if American rights to insure open and free access to the canal are clearly spelled out. That is all my amendment intends—but that much at least is essential.

---

AMENDMENT NO. 83, AS FURTHER MODIFIED

Mr. DECONCINI. Mr. President, I would like to call up my amendment No. 83, as modified. I would ask, Mr. President, to further modify such amendment. A few of these changes are purely technical and drafting changes.

The PRESIDING OFFICER. The Senator will suspend until the clerk states the amendment.

Mr. DECONCINI. Mr. President, I have the clarified drafted change amendment that I would ask the clerk to state.

The PRESIDING OFFICER. The clerk will state the amendment.

The second legislative clerk read as follows:

The Senator from Arizona (Mr. DECONCINI) and Mr. FORD propose amendment numbered 83, as further modified, as follows:

Before the period at the end of the resolution of ratification, insert the following: "subject to the condition, to be included in the instrument of ratification of the Treaty to be exchanged with the Republic of Panama that, notwithstanding the provisions of Article V or any other provision of the Treaty, if the Canal is closed, or its operations are interfered with, the United States of America and the Republic of Panama shall each independently have the right to take such steps as it deems necessary, in accordance with its constitutional processes, including the use of military force in Panama, to reopen the Canal or restore the operations of the Canal, as the case may be".

Mr. DECONCINI. Mr. President, the changes are technical and draft changes. The one substantive change is to include the phrase "according to its constitutional processes," after the words "to take such steps as it deems necessary" and before the words "including the use of military forces."

I send to the desk a clean copy and I thank the Chair and the clerk for reporting the same.

I also would like to ask that Senator CANNON, Senator CHILES, Senator NUNN, Senator LONG, Senator TALMADGE, Senator PAUL HATFIELD and Senator HAYAKAWA be added as consponsors.

The PRESIDING OFFICER. Without objection, it is so ordered.

The purpose of this amendment is quite simple. Mr. President. It is designed to establish a precondition to American acceptance of the Neutrality Treaty. That precondition states that regardless of the reason and regardless of what any other provision of the Neutrality Treaty might say or what interpretation it might be subject to, if the Panama Canal is closed, the United States has the right to enter Panama, using whatever means are necessary, to reopen the canal. There are no conditions, no exceptions, and no limitations on this right. By the terms of the amendment, the United States interprets when such a need exists, and exercises its own judgment as to the means necessary to insure that the canal remains open and accessible.

A good deal of the discussion involving the Panama Canal treaties has centered upon threats to the canal which might come from third parties—more specifically—the Communist countries. While this concern is certainly justified, I have been equally bothered by the possibility that internal Panamanian activities might also be a threat to the waterway, should we give it up. Labor unrest and strikes; the actions of an unfriendly government; political riots or upheavals—each of these alone or in combination might cause a closure of the canal. In February 1975, for example, there was a "sickout" which disrupted the efficient operation of the canal. Yet as I read the treaties, there does not appear to be any specific guarantee that a disruption of the canal arising out of internal Panamanian activities can be swiftly and adequately dealt with.

Although General Torrijos has brought a welcome degree of stability to Panama in recent years, it can be argued that the history of Panama is one of substantial political instability and turmoil. Under normal circumstances, the United States would not or should not contemplate intervening in the internal affairs of another nation. However, there are extremely unique and special circumstances surrounding the relationship between the United States and Panama. Since the beginning of this century, the United States has exercised de facto sovereignty over the Panama Canal Zone, and has been responsible for the defense and operation of the canal. We have maintained this control over the canal for one very simple reason: The Panama Canal is vital to the security, economic and military of the United States. This fact must be recognized in any treaty which contemplates a fundamental change in the American-Panamanian relationship.

The amendment contains a very specific reference to the use of military force in Panama. I believe these words are absolutely crucial because they establish the American right—which I am not convinced is adequately provided for either in the body of the treaty or the leadership amendment—to take military action if the case so warrants. It further makes it clear that the United States can take military action on Panamanian soil without the consent of the Panamanian Government.

The question of consent, is also crucial. Since the main thrust of this amendment is directed toward situations in which the canal is closed because of internal difficulties in Panama—difficulties like a general strike, a political uprising, or other similar events, the consent of the Panamanians to take action would not make sense. If America is to have any rights at all under this treaty, it must have the right to act independently to protect the canal and to keep it open.

I believe that the question of an attack on the canal by a third party aggressor is adequately dealt with in the treaty. There seems to be little question that under such circumstances the United States does have the right to act with the Panamanians to protect and defend the canal. Thus, my concerns have centered around two problems. The first is the one expressed in the amendment now on the floor. The other is the question of a continued military presence.

We have just adopted an amendment by Senator Nunn that I had the privilege of cosponsoring. It provides that the United States and Panama may conclude an agreement providing for a continued American military presence in Panama after the year 2000. This change is important because it may be vital to both countries to provide for such presence while at the same time not disrupting the regime of neutrality that is established.

It was my desire, and the desire of Senator Nunn, to allow for a continued presence without a new treaty that would, by its very nature, call into question the regime of neutrality. It is much more appealing to have that right embodied in the very document that creates the regime of neutrality. Therefore I complement the Senator from Georgia in his efforts to gain acceptance of the military presence reservation.

I hope the Senate will support the amendment I offer to the resolution of ratification providing for America's right to keep the canal open. I am also happy to announce that the President of the United States has endorsed this change, and has indicated that he believes it to be a constructive step in fulfilling the goals of the Neutrality Treaty.

I believe I speak for all Senators in stating that it is not our expectation that this change gives to the United States the right to interfere in the sovereign affairs of Panama. The United States will continue to respect the territorial integrity of that Nation. My amendment to the resolution of ratification is precautionary only; and it is based on the long history of American stewardship of the canal. It recognizes the very special relationship that the Panama Canal has to American security.

I certainly hope, Mr. President, that if this right is attached to the treaty it will never need to be exercised. Yet, it is important that the American people know that should the need arise, the United States has sufficient legal sanctions to act.

Mr. President, I commend this change to my colleagues and urge their support.

Mr. President, I ask for the yeas and nays on this amendment.

---

APPENDIX III

(Statement made by Senator Edward Kennedy in the Senate of the United States of America on 16 March 1978.)

MILITARY INTERVENTION IN PANAMA

Mr. President, we have before us an amendment to the resolution of ratification of the Panama Canal Neutrality Treaty which would permit the "use of military force in Panama" by either party, "if the canal is closed or its operations interfered with".

I am opposed to this amendment. It stirs up what is already an emotional issue in Panama, without adding to rights of the United States already recognized by the treaty.

From the outset, the people of Panama—and all of Latin America—have rightly opposed U.S. military intervention in their internal affairs. That is why the negotiators, the administration, and the Senate leadership have all carefully defined and limited the expression of our military rights to the defense of the neutrality of the Panama Canal. Even the reservation on defense arrangements, adopted by the Senate yesterday, provided that Panama and the United States could jointly—I emphasize jointly—agree to American military deployments, after the year 1999, which facilitate performance of "responsibilities to maintain the regime of neutrality" over the Panama Canal.

Now we have an amendment which starkly insists on our right to use military force in Panama—always the most sensitive issue from its standpoint as a small, proud, sovereign state.

Now we have an amendment which makes no reference to the regime of neutrality which it is our responsibility to defend.

Now we have an amendment which could—but must not—be construed, instead, to per-

mit the United States to intervene militarily on almost any pretext. A strike, a slowdown, even inefficient operation of the canal could—but must not—be used as a pretext to use force, in order to "restore the operations of the canal".

Mr. President, Panama has waited 75 years since its independence to end American occupation of its heartland. It must wait another 22 years before it achieves full control over its national territory. Now we are asking Panama to accept an amendment which has the ring of military interventionism—not just during this century, but for all time.

I recognize that acceptance of this amendment may facilitate ratification of the Panama Canal Treaties. If the amendment is accepted, I believe that our Nation is honorbound to strictly limit its interpretation and not, as General Torrijos warned in Washington last October, to allow the treaties to "become an instrument of permanent intervention" in Panama.

Fortunately, our right of military action continues to be defined by article IV of the Neutrality Treaty, as amended by the Senate.

This is our right "to act against any aggression or threat directed against the canal or against the peaceful transit of vessels through the canal".

This is our right to assure "that the canal will remain open, secure and accessible".

This is not a right to take action "against the territorial integrity or political independence of Panama", prohibited under article IV of the treaty.

This must not be a right to intervene in the Panama Canal on any pretext labeled as interference with canal operations.

With these understandings, Mr. President, we can hope to avoid continuing confrontation between Panama and the United States. Without them, we can look forward to a continuation of the unfairness and the resentment which has characterized our treaty relationship since 1903.

---

APPENDIX IV

(Communiqué from the Ministry of Foreign Affairs of Panama, issued on 27 March 1978.)

In our communiqué issued on 16 March, we expressed the decision of the Government not to issue any statement regarding what the Senate had agreed to in relation to the Treaty concerning the permanent neutrality and operation of the Panama Canal. We gave as the reason for such a decision the fact that the Panamanian people had approved two treaties, that is to say, the Neutrality Treaty and the Treaty on the Panama Canal. Until the Senate decides the fate of the latter, it will not have responded to the decolonization programme approved by the Panamanian people.

We also stated in the above-mentioned communiqué that the Government as a whole would study the conditions under which the Senate had given its advice and consent to the Neutrality Treaty and those that it might attach to a decision on the Treaty on the Panama Canal. We have begun that process. But inasmuch as the liberation process is a national undertaking and since, before taking any decision, each citizen must have full knowledge of all the understandings of the Senate regarding the treaties, the Ministry of Foreign Affairs has deemed it appropriate to publish the text of the Senate resolution concerning the Neutrality Treaty without waiting for the official text to be delivered to us through the usual channels.

We are living a crucial moment in our history. Now, more than ever, our country demands from its sons serenity, dignity and a sense of national unity.

Panama sees its future with the serenity of a country engaged in an irreversible process of decolonization.

We must remember that only the peoples that love freedom can be free. Panama has opted for its definitive freedom. In this process we have the decisive support of the peoples of the whole world, as was seen from the session of the Security Council held in Panama in March 1973. On that occasion the world, faced with the veto of the United States delegation, vetoes the United States for not removing the causes of the conflict engendered by the presence of a foreign Government within Panamanian territory.

We recommend to our fellow citizens to study objectively the documents published today in Spanish and English, so that they might assist the Government in taking the post patriotic decision which, as stated by General Omar Torrijos Herrera, Head of the Government of Panama, will be taken within the framework of a great national consensus.

Mr. ALLEN. Mr. President, we speak of the DeConcini amendment. As the DeConcini amendment, it would not have stood a chance on the floor of the Senate—not a chance. It was offered as an amendment to the treaty, and the managers of the bill had it turned down by the Senate. But then when it was offered as a reservation, carrying out their commitment to accept it in return for three votes, the supporters of the treaties had it adopted as a reservation or—I suppose to state it most accurately—as an amendment to the resolution of ratification, providing for a reservation.

That then became a leadership-approved amendment; else it would not gotten to first base. It would not have received approximately 37 votes. But with the leadership's stamp of approval, it received a vote of about 55 to 35. So much for the powers of the leadership over this treaty.

Mr. President, again I say that putting an amendment into a treaty that expires at the end of this century, an amendment seeking to dilute the provisions of an amendment to the treaty which already has been agreed to, which lasts in perpetuity, is just folly. It cannot be done.

So any language we put in the present treaty in an attempt to dilute the DeConcini amendment might look good on the surface, but it is something that cannot be done; nor can legislative history, at this late date, have anything to do with expressing the background and the reasons why at that particular time the DeConcini amendment was agreed to.

The legislative history with respect to that amendment, if it did not expire with the adoption of the amendment—and possibly it did not, because it could have been reconsidered, but it was not—expired when the motion to table the motion to reconsider was agreed to. That shut off all legislative history with respect to that amendment. Then when the treaty was adopted, that just bolted the door. There could be no more legislative history explaining why the Senate agreed to the DeConcini amendment and saying that we did not mean what we said back then. That is water over the dam. That cannot be done on this treaty.

We might say, 3 weeks after an amendment is adopted, "Gee, I just happened to think of a good reason why we adopted that amendment," and stand on the floor of the Senate and say, "This is part of the legislative history." That does not make it so. The legislative history ended with agreeing to the treaty.

So we will have to put in an amendment, they say, or a resolution or something, to get away from this DeConcini amendment that we approved, to which we gave our stamp of approval.

What kind of business is that, Mr. President? This is not a game here. The U.S. Senate has discharged its solemn duty to advise and consent, in this case, to the Neutrality Treaty.

A motion was made to reconsider that action. That was tabled. That treaty is gone. It is gone from consideration of the Senate except, I would assume, by unanimous consent. It is gone from consideration of the Senate unless resubmitted by the President as a new and revised treaty. This same treaty could not come back to us, but if it is sent back as a new treaty, even though it might have the very same provisions, it could be considered. But as to creating legislative history, the opportunity to do that is gone. And any effort to undercut the DeConcini amendment I assure the Senate will not meet with approval of a number of U.S. Senators.

So that leaves, it would seem to me, Mr. President, two courses that the Senator from Alabama suggested as the two best possibilities for extricating ourselves from the horns of this dilemma.

I believe that that will be best for Panama. I believe that it will be best for the United States. And I am hopeful that that will be done because if we go ahead and ram the treaty through, if we can, send it down to Dictator Torrijos as a hot potato, or a hot coal—I guess it would be hotter than a hot potato—it could well cause his removal from office either way he goes. If he submits it to the people it will be defeated in such a resounding fashion that it would be treated as a referendum on his tenure in office, and I believe it would be untenable for him to continue in office. If he accepts it without a referendum, without a plebiscite, it is going to cause a revolt in Panama because the Panamanians see this as an affront. They are happy to accept it now; of course they want the canal. But as has been said here on the floor of the Senate, and I am going to reiterate this because it has been indicated that the proponents of the treaties are the ones who are trying to shield the Panamanians from having their national dignity impugned, I say that the Panamanian people are a proud people and a sensitive people. They want the canal, yes. But they do not want their sovereignty assailed, and they do not want the United States to retain the right to come back into Panama any time they want to to keep the canal open. They say that is an affront to their national dignity.

And based on news accounts it seems they would be willing to give up the canal rather than have their dignity affronted. So I say that the people of Panama are a proud people. They are proud of their nation. They are proud of their nationality. They are proud of their sovereignty and they want to insist on their sovereignty. But I will say the proponents of the treaties have been concerned not

that the people would have an opportunity to vote on this treaty, but they have been concerned and have insisted that they not have a right to vote on the treaty.

Mr. President, who is interested, then, in the sensitivity of the Panamanian people? The opponents say, "Let us not have a treaty unless the Panamanian people approve of it." What is wrong with that principle to stand on? The administration does not stand on that. The administration and the leadership would be glad to accept a treaty approved by the dictator alone, not the Panamanian people in another plebiscite.

Now, is that a correct statement? The distinguished Senator from Idaho (Mr. CHURCH) time after time has stated here on the floor, "Do not amend this treaty, do not amend it at all, because if you do it is going to call for another plebiscite and it is going to kill the treaty."

Mr. President, I say if the Panamanian people do not approve of the treaty we ought to kill it, and if we are not willing to kill it, we ought to allow the Panamanian people speaking in a plebiscite to kill the treaty if that is the national will of the people of Panama.

So these things will have to be thrashed out. Are we going to try to placate Panama, or are we going to be willing to undercut the action of the Senate as expressed in the DeConcini amendment, approved by the leadership? This is not something that was just eased in at the last moment. Mr. President, this provision was studied word for word, each word weighed and analyzed, with the Panamanians saying they did not want it, they objected to it; and, as I say, for the first time that I know of the wishes of the Panamanians were discarded, and they were so desperate to pass these treaties that they agreed to something that they knew the Panamanians would reject. So they took their chances. The Panamanians do object.

The distinguished Senator from Massachusetts (Mr. BROOKE) has sharply criticized the administration for accepting this amendment and not divulging to the Senate the fact that the Panamanians objected to the amendment. The distinguished Senator from Massachusetts has grave doubts about approving this treaty, and he made a speech in which he finally agreed to support the first treaty. He said if he voted that day on the Panama Canal Treaty he would vote against it. I do not believe that this incident about the DeConcini amendment is going to improve his frame of mind as he looks at the question of whether he is going to support this treaty.

Mr. President, we also brought out here on the floor the exchange of correspondence between the dictator and the President, both letters dated March 15. It must be on the basis of cables. Otherwise, we need to call in the Panamanian Post Office if they are the ones that were able to do such a good job. But it looks like it would be the U.S. Post Office and Postal Service because the letter would have to have gone from the United States to the dictator in Panama.

That would have been the service of the U.S. Postal Service.

At any rate, both letters were dated the 15th. Torrijos raised a question about these coming reservations. He is worried about them. He is protesting against them, and the President answering, "Well, yes, we are going to take some reservations but they are not going to interfere with the spirit of the agreement we have reached."

Well, there was a mistake somewhere along the line because it has interfered with this agreement that they have.

So, Mr. President, the administration went heedlessly onward accepting the DeConcini reservation knowing the peril of accepting it, so anxious not to be turned down by the Senate on the treaty that they took a calculated risk of accepting the DeConcini reservation and getting the treaty approved. Now it has been stated that something must be done in this treaty to show that that is not our meaning.

I do not believe that is going to sell. I do not believe it is going to sell, first, to the Senate. I do not believe it is going to sell to the people of the United States. I do not believe it is going to sell to the people of Panama.

If that was our intent we would have the unilateral right to act. If that was our intent when we approved the DeConcini reservation and approved the first treaty it is our intent now no matter what is said in this treaty

So, Mr. President, I again turn to my suggestion of a solution of this impasse, a solution that will remove us from the horns of this dilemma, and that is for the President to ask for a withdrawal of these treaties and save everybody's face in this regard.

We have been on the treaties now, I guess, for over 2 months. Our negotiators worked for 13 years and came up with a treaty. The leadership has been in full control of it from the date it hit the desk of the Secretary. They are responsible for every word that was added to that treaty or to the resolution of ratification. They approved every single word. There is not a single word in there that did not have the blessing of the leadership.

So there is where the leadership has led us in this case, to a treaty that is not satisfactory, not acceptable, either in Panama or the United States, and I hope the President will withdraw these treaties from consideration by the Senate.

Mr. President, I thank the Chair and I yield the floor.

Mr. CHURCH. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

## ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be a brief period for the transaction of routine morning business, as in legislative session, not to extend beyond 30 minutes, and with statements limited therein to 5 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

## MESSAGES FROM THE PRESIDENT

A message from the President of the United States was communicated to the Senate by Mr. Chirdon, one of his secretaries.

## ANNUAL REPORTS OF THE RIVER BASIN COMMISSIONS—MESSAGE FROM THE PRESIDENT—PM 167

The Presiding Officer laid before the Senate the following message from the President of the United States, which, with accompanying reports, was referred to the Committee on Environment and Public Works:

*To the Congress of the United States:*

I am happy to transmit the annual reports of the six river basin commissions, as required under Section 204(2) of the Water Resources Planning Act of 1965.

The Act states that commissions may be established, comprised of state and federal members, at the request of the governors of the states within the proposed commission area. Each commission is responsible for planning the best use of water and related land resources in its area and for recommending priorities for implementation of such planning. The commissions, through efforts to increase public participation in the decision process, can and do provide a forum for all people within the commission area to voice their ideas, concerns and suggestions.

The commissions submitting reports are New England, Great Lakes, Pacific Northwest, Ohio, Missouri and Upper Mississippi. The territory these six cover include parts or all of 32 states.

The enclosed annual reports indicate the activities and accomplishments of the commissions during Fiscal Year 1976. A brief description of current and potential problems, studies and approaches to solutions are included in the reports.

JIMMY CARTER.

THE WHITE HOUSE, *April 12, 1978.*

## MESSAGES FROM THE HOUSE

At 3:25 p.m., a message from the House of Representatives, delivered by Mr. Berry, one of its reading clerks, announced that the House has passed the bill (S. 661) to restore Federal recognition of certain Indian tribes, and for other purposes, with amendments, in which it requests the concurrence of the Senate.

The message also announced that the House has passed the following bills, in which it requests the concurrence of the Senate:

H.R. 7101. An act to amend certain provisions of law relating to land claims by the United States in Riverside County, Calif., based upon the accretion or avulsion, and for other purposes;

H.R. 11092. An act to increase the authorization of appropriations under the act of December 22, 1974 (88 Stat. 1712);

H.R. 11445. An act to amend the Small Business Act and the Small Business Investment Act of 1958; and

H.R. 11662. An act to provide for the establishment of the Lowell National Historical Park in the Commonwealth of Massachusetts, and for other purposes.

## HOUSE BILLS REFERRED

The following bills were read twice by their titles and referred as indicated:

H.R. 7101. An act to amend certain provisions of law relating to land claims by the United States in Riverside County, Calif., based upon the accretion or avulsion, and for other purposes; to the Committee on Energy and Natural Resources.

H.R. 11092. An act to increase the authorization of appropriations under the act of December 22, 1974 (88 Stat. 1712); to the Select Committee on Indian Affairs.

H.R. 11445. An act to amend the Small Business Act and the Small Business Investment Act of 1958; to the Select Committee on Small Business.

H.R. 11662. An act to provide for the establishment of the Lowell National Historical Park in the Commonwealth of Massachusetts, and for other purposes; to the Committee on Energy and Natural Resources.

## ORDER FOR STAR PRINT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the committee report on H.R. 130 (No. 95–731), be star printed, and I send to the desk the necessary changes.

The PRESIDING OFFICER. Without objection, it is so ordered.

## REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. CULVER, from the Committee on the Judiciary:

1977 Juvenile Delinquency Annual Report (Rept. No. 95–735).

By Mr. PELL, from the Committee on Human Resources, without amendment:

H.J. Res. 649. A joint resolution to authorize the President to call a White House Conference on the Arts, and to authorize the President to call a White House Conference on the Humanities (Rept. No. 95–736).

## INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. HOLLINGS (for himself, Mr. CANNON, and Mr. FORD):

S. 2883. A bill to amend the Communications Act of 1934 to extend and improve the provisions of such Act relating to long-term financing for the Corporation for Public Broadcasting and relating to certain grant programs for public telecommunications, and for other purposes; to the Committee on Commerce, Science, and Transportation.

By Mr. HATHAWAY (for himself and McINTYRE):

S. 2884. A bill to amend the Bilingual Education Act to give priority in the funding of new applications for demonstration grants to geographical areas and groups which have historically been underserved by such programs; and to allocate funds appropriated in proportion to the geographical distribution of such children throughout the Nation; and for other purposes; to the Committee on Human Resources.

By Mr. HATHAWAY:

S. 2885. A bill to amend provisions of the Higher Education Act of 1965 relating to Teacher Centers to provide increased authorizations, to insure a State minimum allotment in certain circumstances, and to allow applications from local educational agencies to be submitted directly to the Commissioner in certain circumstances; to the Committee on Human Resources.

By Mr. RANDOLPH:

S. 2886. A bill for the relief of Fritz Blatti and Gabriele Blatti; to the Committee on the Judiciary.

By Mr. HOLLINGS (by request):

S. 2887. A bill to amend Section 305 of the Communications Act of 1934 to permit foreign embassies to operate fixed and mobile radio facilities in the VHF and UHF bands for the express purpose of providing protective security for Ambassadors and other designated personnel, with the right to operate such facilities in the United States thereof, being based upon reciprocity; to the Committee on Commerce, Science, and Transportation.

By Mr. MATHIAS:

S. 2888. A bill to establish a Potomac River Shoreline Area Commission for the purpose of developing a plan for the cooperative management by Federal, State, District of Columbia, and local authorities of certain areas along the Potomac River, and for other purposes; to the Committee on Energy and Natural Resources.

By Mr. MARK O. HATFIELD:

S. 2889. A bill to amend the Merchant Marine Act, 1936, to provide for the establishment of capital construction funds for fisheries facilities; to the Committee on Commerce, Science, and Transportation.

S. 2890. A bill to amend the Farm Credit Act of 1971 to provide that certain loans to farmers, ranchers, and producers or harvesters of aquatic products may be made for periods of 15 years; to the Committee on Agriculture, Nutrition, and Forestry.

S. 2891. A bill to provide loan guarantees to the commercial fisheries industry for the development of underutilized fisheries; to the Committee on Banking, Housing, and Urban Affairs.

By Mr. MOYNIHAN (for himself and Mr. JAVITS):

S. 2892. A bill to authorize the Secretary of the Treasury to provide loan guarantees for the assistance of the City of New York; to the Committee on Banking, Housing, and Urban Affairs.

By Mr. STENNIS (for himself, Mr. EASTLAND, Mr. SPARKMAN, Mr. ALLEN, Mr. BAKER, and Mr. SASSER):

S. 2893. A bill to provide the completion of the Natchez Trace Parkway from Natchez, Mississippi, to Nashville, Tennessee; to the Committee on Energy and Natural Resources.

By Mr. PELL (for himself, Mr. CLARK, and Mr. MATHIAS):

S. 2894. A bill to establish an Institute for Human Rights and Freedom to promote respect for and observation of human rights and fundamental freedoms in foreign countries; to the Committee on Foreign Relations.

By Mr. BENTSEN (for himself, Mr. CURTIS, Mr. DOLE, Mr. WALLOP, Mr. HANSEN, Mr. STONE, Mr. ZORINSKY, and Mr. McGOVERN):

S. 2895. A bill to impose quotas on the importation of beef in order to assure an adequate supply of quality beef at stable prices for the American consumer; to the Committee on Finance.

By Mr. GARN:

S. 2896. A bill to amend the Endangered Species Act; to the Committee on Environment and Public Works.

By Mr. LONG (by request):

S. 2897. A bill to amend the Federal Railroad Safety Act of 1970 to provide the Secretary of Transportation a longer period within which to assess civil penalties for certain violations, to extend authorizations of appropriations for fiscal year 1979 and 1980 for the rail safety program, and for other purposes; to the Committee on Commerce, Science, and Transportation.

S. 2898. A bill to amend the Federal Railroad Safety Act of 1970 to authorize additional appropriations, and for other purposes; to the Committee on Commerce, Science, and Transportation.

By Mr. CULVER (for himself, Mr. BAKER, Mr. RANDOLPH, Mr. WALLOP, Mr. GRAVEL, and Mr. HODGES):

S. 2899. A bill to amend the Endangered Species Act of 1973 to establish an Endangered Species Interagency Committee to review certain actions to determine whether exemptions from certain requirements of that Act should be granted for such actions; to the Committee on Environment and Public Works.

By Mr. MUSKIE (for himself, Mr. STAFFORD, and Mr. CHAFEE):

S. 2900. A bill to provide for compensation for damages and clean-up costs caused by discharges of oil and hazardous substances, to establish a liability fund, and for other purposes; to the Committee on Environment and Public Works.

By Mr. CANNON (for himself, Mr. HOLLINGS, and Mr. PEARSON) (by request):

S. 2901. A bill to amend the Communications Act of 1934 to extend and improve the provisions of such Act relating to long-term financing for the Corporation for Public Broadcasting and relating to certain grant programs for public telecommunications, and for other purposes; to the Committee on Commerce, Science, and Transportation.

By Mr. HATCH:

S. 2902. A bill entitled the "Fair Treatment for Skilled Trades Act of 1978"; to the Committee on Human Resources.

By Mr. RANDOLPH (for himself and Mr. STAFFORD):

S. 2903. A bill to amend the Rehabilitation Act of 1973 to establish programs for training interpreters and for providing interpreter services to deaf individuals, and for other purposes; to the Committee on Human Resources.

By Mr. RANDOLPH (for himself, Mr. CASE, Mr. HEINZ, Mr. BAYH, Mr. MAGNUSON, and Mr. STAFFORD):

S. 2904. A bill to expand and improve the quality and scope of reading services available to blind persons, and for other purposes; to the Committee on Human Resources.

## STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. HOLLINGS (for himself, Mr. CANNON, and Mr. FORD):

S. 2883. A bill to amend the Communications Act of 1934 to extend and improve the provisions of such act relating to long-term financing for the Corporation for Public Broadcasting and relating to certain grant programs for public telecommunications, and for other purposes; to the Committee on Commerce, Science, and Transportation.

PUBLIC TELECOMMUNICATIONS FINANCING ACT OF 1978

● Mr. HOLLINGS. Mr. President, I send to the desk a bill to amend the Communications Act of 1934, as amended, relating to noncommercial, educational radio and television broadcasting, and I am pleased that my chairman Senator

CANNON, has joined me as a cosponsor of the measure. This bill would revise the administration's proposed public broadcasting amendments, S. 2235, introduced by request of the administration on October 25, 1977, by Senators MAGNUSON, PEARSON, and myself. S. 2235 served as the basis for today's proposals to strengthen our national commitment to high quality, educational, and cultural broadcasting.

An identical bill to the one I am introducing is being introduced by Congressman VAN DEERLIN, chairman of the House Communications Subcommittee.

President Carter's legislative proposal represented a welcome initiative to improve our national system of noncommercial educational broadcasting. His efforts to focus national attention on the need for a recommitment to the goals of the Educational Broadcast Facilities Act of 1962 and the Public Broadcasting Act of 1967 are most praiseworthy. I applaud the hard work and dedication of the President and his staff.

The bill which Congressman VAN DEERLIN and I have introduced is designed to build upon the initiative of the President. It will enhance our commitment to a system of public broadcasting offering unique and innovative programing services. We have discussed our new bill with the administration and feel there is general agreement on the principles and objectives we all seek.

I ask unanimous consent that an analysis comparing the administration's bill and this bill be printed in the RECORD at this point.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

ANALYSIS OF HOLLINGS/VAN DEERLIN BILL AND THE ADMINISTRATION'S PUBLIC BROADCASTING BILL

The Hollings/Van Deerlin public broadcasting bill will be introduced concurrently by the Chairman of the Senate Communications Subcommittee (Sen. Ernest F. Hollings) and the Chairman of the House Communications Subcommittee (Rep. Lionel Van Deerlin). In most major respects, the bill does not deviate from the scope of the legislation introduced last year by the Administration. However, in several instances the Hollings/Van Deerlin bill strengthens, clarifies and supplements the Administration's proposal. In both bills two major areas are addressed: first, the telecommunications facilities program (i.e., federal support for purchase of broadcast and non-broadcast equipment and apparatus); and second, public broadcasting programming.

I. TELECOMMUNICATIONS FACILITIES PROGRAM

The Administration proposes to transfer the facilities program from HEW to the Corporation for Public Broadcasting (CPB). The facilities program was first established at a time when the major policy objective was to establish educational facilities; therefore, it seemed logical to locate the facilities program within the Office of Education of HEW.

Over the years the concept of "educational television" has changed to one of "public broadcasting." Both the Administration and the Hollings/Van Deerlin bills expand the concept of public broadcasting to encourage the use of whatever telecommunications technology (broadcast and/or nonbroadcast) is effective and efficient in delivering public television and radio programs and services. Consequently, the Hollings /Van Deerlin bill deviates from the Administration's bill in the following respects:

(a) The facilities program is transferred to the Commerce Department (not CPB) and would be administered by the newly created National Telecommunications and Information Administration. This agency has a broad range of expertise in various communications technologies and has the mandate for being the Administration's principal telecommunications advisor and spokesman as well as the repository for planning and developing a national telecommunications policy. Therefore, it is the appropriate place to locate the facilities program so that it could benefit from this expertise and prominence.

(b) The Administration proposes an authorization of $30 million. The Hollings/Van Deerlin bill will increase that authorization to $40 million and divide the program into two parts. No more than one-quarter of the funds could be spent for improving the service of an existing station. The remainder of the funds would go for expanded coverage and for new stations and other telecommunications entities. In this way we can further the primary objective of expanding public broadcasting services to as many people in this country as possible.

(c) The Hollings/Van Deerlin bill would establish an affrmative outreach program to encourage minority and women participation in and ownership of public telecommunications entities.

(d) The program would be authorized for 3 fiscal years (1979, 1980, 1981).

II. PUBLIC BROADCAST PROGRAMMING FUND—CORPORATION FOR PUBLIC BROADCASTING

Both the Administration's bill and the Hollings/Van Deerlin bill increase the authorization for public broadcasting and refine the various functions of CPB in distributing federal funds for program production, acquisition and distribution. This bill differs from the Administration's proposal in the following respects:

(a) The Administration proposes an authorization for 5 years, which when combined with the present system of forward funding public broadcasting by 2 years, would authorize the program through fiscal year 1985. The Hollings/Van Deerlin bill would authorize the program through fiscal year 1983—5 years from the effective date of the bill. The Hollings/Van Deerlin bill would not change the forward funding principal and would not change the authorization amounts contained in the Administration's bill, but would allow Congress to reexamine the role of federal support of public broadcasting at an earlier date than proposed by the Administration.

(b) As with the facilities program at the Commerce Department, the Hollings/Van Deerlin bill would expand the concept of "public telecommunications" in order to encourage, to the maximum extent practicable, the use of whatever technology is appropriate in providing public television and radio services to the public.

(c) The Administration proposes that 25 percent of the public broadcasting funds should be set aside for national programming. The Hollings/Van Deerlin bill would drop this set aside as being inappropriate and unnecessary, since in practice at least this level of "national" programming will be reached by voluntary action of public telecommunications entities.

(d) Both the Administration and the Hollings/Van Deerlin bill contain strong provisions on EEO. However, the Hollings/Van Deerlin bill would clarify those employment standards. Further, this bill would strengthen the enforcement procedures proposed by the Administration to require that stations certify in advance of receiving funds that they are in compliance with the principals of equal employment and nondiscrimination. CPB would monitor the employment practices of all its grantees and contractors. HEW would enforce EEO standards, with the power to direct CPB to suspend or reduce grants to recipients in violation of EEO.

(e) To strengthen responsible financial management of federal and non-federal support of public telecommunications, the proposed bill would allow the General Accounting Office and the Corporation for Public Broadcasting to establish a uniform system of accounts for all stations which receive public broadcasting funds. In addition, the bill would allow GAO and CPB to audit all public telecommunications entities receiving federal funds. The current law provides for audit responsibility and for recordkeeping. This bill would strengthen those provisions and clarify the role and responsibilities of GAO in determining that all funds available to public broadcast stations have been spent and accounted for properly.

(f) Further, in the spirit of sound financial management, this bill provides that the Corporation for Public Broadcasting may spend no more than 5 percent of the funds received from the public broadcasting fund for its own overhead. This provision expresses the view that the Corporation should act as a foundation or other endowment, involving itself not in day-to-day programming decisions, but rather in setting only overall priorities. Performing this more circumscribed role, CPB staff need not engage in activities which duplicate or overlap functions of other parties engaged in programming.

(g) The Administration's bill proposes that all licensees must hold open meetings. The Hollings/Van Deerlin bill would clarify and expand this open meetings provision to provide that all meetings (of CPB as well as licensees) which deal with the public broadcasting issues shall be open unless they relate to personnel matters. In the case of an educational, institutional organization or university whose board may well take up matters unrelated to public broadcasting, only that portion of the meeting which relates to the public broadcasting matters would have to be open to the public.

(h) The Hollings/Van Deerlin bill adds a provision guaranteeing access to public broadcasting satellites to parties other than stations, their membership organizations and major program producers. These other parties would have only secondary priority to the regular satellite users, but access would be free of charge. The intent of this additional provision is to facilitate the participation of independent program producers to solicit financial backing for program projects and to sell final programs directly to public broadcasting stations.

(i) Two items not contained in this bill which were proposed by the Administration are: (1) removal of the ban on editorializing for public stations not licensed to governmental entities; and (2) phasing out of four presidentially appointed members of the 15-member CPB Board and replacement with members chosen by the public television and radio licensees (two each). ●

---

By Mr. HATHAWAY (for himself and Mr. MCINTYRE):

S. 2884. A bill to amend the Bilingual Education Act to give priority in the funding of new applications for demonstration grants to geographical areas and groups which have historically been underserved by such programs; and to allocate funds appropriated in proportion to the geographical distribution of such children throughout the Nation; and for other purposes; to the Committee on Human Resources.

BILINGUAL EDUCATION AND EQUITABLE DISTRIBUTION ACT OF 1978

● Mr. HATHAWAY. Mr. President, I am pleased to introduce today along with the Senator from New Hampshire (Mr. McINTYRE) the Bilingual Education Equitable Distribution Act of 1978.

This legislation has one fundamental goal—to promote the equitable distribution of title VII Bilingual Education Funds to all regions of the Nation and to all groups in need of such assistance.

It accomplishes this goal by amending section 721 of the Bilingual Education Act by inserting the following new paragraph in subsection (b):

(3) In the consideration of initial applications from local educational agencies to carry out programs of bilingual education under clause (1) of section 721, the Commissioner shall give priority to applications from local educational agencies (A) which are located in geographical regions of the Nation and (B) which propose to assist children of limited English language proficiency that have historically been underserved by programs of bilingual education. In approving such applications, the Commissioner shall, to the extent feasible, allocate funds appropriated in proportion to the geographical distribution of children of limited English language proficiency throughout the Nation, with due regard for the relative ability of particular local educational agencies to carry out such programs and the relative numbers of persons from low-income families sought to be benefitted by such programs.

Such language is necessary in this statute lest underserved geographical areas and groups continue to be neglected. Currently 255,000 children nationwide benefit from federally funded bilingual demonstration grants. This is far short of the need, however, since the estimates of children who could benefit range from 800,000 to 3.6 million, depending on the information source. Thus the shortfall in program resources to program need is somewhere between 1 to 3 and 1 to 10.

It is critically important that these limited resources be allocated fairly and with a view toward remedying prior overconcentration or particular groups or regions.

The administration proposal in S. 2675 contained a provision apparently intended to achieve this goal—namely, to limit funding of current projects to only 5 years. This approach seems to be unlikely to succeed in Congress due to its rejection by the House Committee on Education and Labor.

Rather, it makes more sense to give priority in the funding of new grants to those not yet served, to avoid dismantling and disruption of existing programs.

In introducing this bill I have a particular region and group in mind—namely the Franco-Americans in the State of Maine and elsewhere in northern New England.

There has been very limited utilization of Federal bilingual funds by Franco-Americans despite a positive record of success where programs have been established.

To my knowledge there are two grants funded in the State of Maine for Franco-Americans, both in Aroostook County, Maine—one in Van Buren and one in Madawaska.

In these programs bilingual approaches have been coordinated with other parallel programs, to great advantage. These approaches are coordinated with follow-through and other programs to advance the goals of student achievement by promoting student interest and the interest of their parents.

I was privileged recently to participate in hearings of the Subcommittee on Employment, Poverty, and Migratory Labor at which Mr. Orrison Moody, follow-through coordinator for SAD 24, and Mr. Carlton Dubois, superintendent testified.

These educators pointed out in great detail the accomplishments of the follow-through program by using a bilingual approach, to the extent that the State of Maine, with its own resources, has determined to incorporate a number of these concepts into its statewide programs.

These gentlemen pointed out that in the county as recently as 10 years ago children were punished for speaking French on the school grounds—in a region where over 80 percent of the people are Franco-Americans, and in whose families the dominant language has been French for over 3 centuries.

The adverse impact of such an inhumane and anti-intellectual approach on young children was clear, but until the advent of bilingual education unfortunately remained uncorrected.

Since that time, the gains have been significant to the point that it is now obvious that the children learn more, faster, in all areas through reliance on bilingual concepts. The integrity of this approach is particularly sound in the area of history and cultural background—so essential to providing our young people with a sense of identity and self worth.

In this regard, in order that my colleagues might be aware of the kinds of learning functions and activities which are fostered through bilingual education, I ask unanimous consent that an excerpt from an address I delivered at the Acadian Village Festival on July 10, 1977, in Van Buren, Maine, be printed in the RECORD at this point.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR WILLIAM D. HATHAWAY

It is a pleasure to be here this evening. I congratulate everyone connected with arranging the Acadian Village Festival and I'm sorry I missed the first two days.

Special congratulations are owed to Mrs. Frances Levasseur, who has worked continuously to bring the idea of the Acadian Village to life.

A few short years ago, Mrs. Levassuer, with the help of her friends and neighbors, began the long, hard job which has resulted in the unique historical and cultural asset of the Acadian Village.

She realized that there was a new generation which needed to know where they came from and how their ancestors lived.

The Village, with its homes, general store, chapel, black-smith shop, post office, barns, and community center will show the people of Van Buren, Madawaska, and the entire St. John Valley what it was like to live here two and three centuries ago.

It will stand as a symbol of the community which has existed here for over three centuries, and as a living monument for all who have lived and worked here and have raised their families here. It also stands as a monument to the indomitable spirit of the Acadian people, of which many in this room are proud representatives. In fact, I understand over 80% of the residents of this area can trace their ancestry to the original inhabitants.

Long before our popular culture became interested once again in its Roots, and centuries before Alex Haley was born, the Acadian people have understood the importance of staying in touch with one's past, of maintaining common goals and pursuits, and of preserving a rich cultural heritage.

You have succeeded in these difficult tasks against extreme odds and extraordinary adversity.

In fact, without this strong commitment to each other, you would not have been able to survive the shocks and turmoil which history has inflicted on your people.

The word "Acadia", or more properly Acadie (Ah-kah-dee') derives from a Mic Mac Indian word (akade) meaning a place where fish, birds, fur bearing animals and forests of valuable trees abound.

In 1524, the explorer Jean Verrazano described "a land called Acadie because of the beauty of its trees."

With this sort of advertising, Henry the IV of France issued a patent to Pierre du Gast to exploit this potentially rich area. In 1604, an expedition of 79 men set out for Acadie.

In the summer of 1604, this expedition settled on St. Croix Island in Passamaquoddy Bay.

Samuel Champlain was among that group of 79 men who were ravaged by severe storms and scurvy during that first hard winter, which must have made all of them wonder about the appropriateness of the name of the region.

In the summer of 1605, they sought a more hospitable climate, and went as far south as Cape Cod, but ended up returning to Port Royal.

A short time after this, Henry revoked the du Gast patent and the settlers went back to France.

But others returned to take their place, and by 1701 there were 2,450 Acadians, 466 inhabitants of Port Royal and the rest spread over the large interior—including 50 at the River St. John.

Until 1713, when the Treaty of Utrecht gave the English sovereignty over this area, control had seesawed between the French and the English.

In 1755 after 200 Acadians were caught fighting for the French, the scurrilous English Governor, Charles Lawrence of Novia Scotia, demanded that the Acadians swear loyalty to the English government.

On July 3, 1755, in a preview of events to take place 21 years later, the Acadians presented their memorandum of objections to the Governor's Council at Halifax.

This led to his order exiling them. In a human tragedy of epic proportions, later immortalized by Longfellow's Evangeline, families were split up. They were subjected to the cruelest conditions of captivity, disease and death.

Of the 10,000 or so first put under arrest, 2,000 escaped into the forest, and many of these began a journey which led them to this valley.

Those who suffered exile endured deplorable conditions. They were sent to the English colonies from Massachusetts to Georgia, and most were treated like slaves or worse.

For example, 750 were sent to Philadelphia, where this human cargo waited three months in the harbor. Small pox killed over 230 of them. 650 went to a watery grave in the icy Atlantic. Others went to England, for a time. A group found their way to Louisiana.

But despite these hardships, the survivors stayed together and helped each other through these trying times. They have stood as a powerful symbol of the unconquerable nature of the human spirit and will, and as an example for oppressed peoples everywhere.

So, the Acadian Village you have constructed, and the antiques and artifacts contained in it, are much more than historical curiosities.

They are reminders of the strength and self sufficiency of the Acadian people, reminders of your ancestors' refusal to bow down to a distant monarch; and reminders of a small settlement refusing to be dominated by a large empire.

It is quite clear that Acadians still possess all these qualities in large measure, but reminders are helpful lest future generations forget.

Thank you.

Mr. HATHAWAY. Mr. President, there are other, unmet needs of Franco-Americans in the State of Maine and in other States throughout the Nation. For example, as of the 1970 census, there were in the State of Maine, over 141,000 individuals whose mother tongue was French, over 200,000 in California, over 367,000 in Massachusetts, over 208,000 in New York, over 101,000 in Rhode Island, over 112,00 in New Hampshire, over 44,000 in New Jersey, and over 42,000 in Vermont.

I shall be looking forward to working for the inclusion of the provisions of this bill in the amendments to the Bilingual Education Act and the omnibus Elementary and Secondary Education Act of which it is a part. Deliberations on these matters shall continue over the next few weeks before the Subcommittee on Education, Arts and Humanities, and the full Human Resources Committee. I am hopeful that with the cooperation of my colleagues on this committee that these provisions will be adopted.

Mr. President, I ask unanimous consent that the text of this bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2884

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may be cited as the "Bilingual Education Equitable Distribution Act of 1978".

SEC. 2. Section 721(b) of the Bilingual Education Act is amended by redesignating paragraph (3) as paragraph (4) and by inserting immediately after paragraph (2) the following new paragraph:

"(3) In the consideration of initial applications from local educational agencies to carry out programs of bilingual education under clause (1) of section 721, the Commissioner shall give priority to applications from local educational agencies (A) which are located in geographical regions of the Nation and (B) which propose to assist children of limited English language proficiency that have historically been underserved by programs of bilingual education. In approving such applications, the Commissioner shall, to the extent feasible, allocate funds appropriated in proportion to the geographical distribution of children of limited English language proficiency throughout the Nation, with due regard for the relative ability of particular local educational agencies to carry out such programs and the relative numbers of persons from low-income families sought to be benefitted by such programs.".●

By Mr. HATHAWAY:

S. 2885. A bill to amend provisions of the Higher Education Act of 1965 relating to teacher centers to provide increased authorizations, to insure a State minimum allotment in certain circumstances, and to allow applications from local educational agencies to be submitted directly to the Commissioner in certain circumstances; to the Committee on Human Resources.

TEACHER TRAINING PROGRAMS AND TEACHER CENTERS AMENDMENTS OF 1978

● Mr. HATHAWAY. Mr. President, I am pleased today to introduce the Teacher Training Programs and Teacher Centers Amendments of 1978.

This measure would modify and clarify the existing law in a number of significant respects.

First, it would increase the level of authorizations for the upcoming fiscal year for these programs from $75,000,000 to $100,000,000. Such an increase in the authorization ceiling would appear to be desirable in order to provide the Senate and the Committee on Appropriations with additional flexibility in appropriating sums for this important purpose.

Teacher centers can, and I am confident will, fulfill a very important function in the increasingly complex world of education today. In this regard, I would like to refer to the purpose of teacher centers, as delineated in section 532(a)(2) of the Higher Education Act of 1965:

(2) For the purpose of this section, the term "teacher center" means any site operated by a local educational agency (or a combination of such agencies) which serve teachers, from public and non-public schools of a State, or an area or community within a State, in which teachers, with the assistance of such consultants and experts as may be necessary, may—

(A) develop and produce curricula designed to meet the educational needs of the persons in the community, area, or State being served, including the use of educational research findings or new or improved methods, practices, and techniques in the development of such curricula; and

(B) provide training to improve the skills of teachers to enable such teachers to meet better the special educational needs of persons such teachers serve, and to familiarize such teachers with developments in curriculum development and educational research, including the manner in which the research can be used to improve their teaching skills.

Thus these centers allow our Nation's teachers the opportunity to meet with each other to tailor educational programs and curricula to the particular needs of their own students. I know these professionals are most willing and very able to accomplish this goal, given opportunity and some assistance.

While the sums authorized are significant, they can only be properly evaluated in the context of society's overall level of expenditures for education, and with Federal educational expenditure. In the upcoming fiscal year it is estimatd that $125 billion will be spent by local, State, and Federal Governments at the elementary, secondary, and postsecondary levels. Of the Federal commitment of $22.7 billion, $10.1 billion is for elementary and secondary programs.

Teacher centers therefore offer the means, at a relatively small percentage of the total funds, to allow our teachers to integrate and rationalize all of the educational programs and policies which converge on today's classrooms.

Further, because these are Federal funds, with no match required, they would not lead to increased property taxes for already over-burdened homeowners. It has long been my view that increased reliance for financing education programs ought to be placed on our Federal revenue system.

Because the Federal tax structure is progressive—taxing those with higher incomes at higher brackets, an increasing burden for our public expenditures is placed on those who can best afford it.

Unfortunately this is not true of many States and local taxes, which often are not based on income. Property taxes, and sales taxes are generally regressive—taking a higher proportion of income from those with less to begin with.

Furthermore, our Federal educational expenditures ought to be viewed as an investment in our children's future, and in the future of their country. With judicious investment, the returns for both can be most promising.

One study of which I am aware measured the increase tax revenues directly attributable to the education received under the GI bill against its cost. By 1970, this study estimated that the Federal Government had received back over $100 billion resulting directly from its $12 billion investment.

Today we ought to pay renewed attention to this lesson. With the staggering costs of unemployment compensation, welfare assistance, and public jobs programs, it is clear that we ought to be giving increased priority to providing our Nation's youth with greater skills and education. It is on this basis that I was pleased to introduce and work for enactment of the Career Education Incentive Act, which the President signed into law on December 7, 1978.

But at the same time it is clear to me that if our educational system is going to work as well as it can, primary reliance and trust must be placed in the professional classroom teacher. I know from discussions with my daughter, who is an elementary schoolteacher, that various competing programs, curricula, and priorities can impose a crushing and counterproductive burden on them in terms of paperwork and frustration. Further, many well-intentioned efforts emanating from Federal, State, and local policymaking bodies can fail in their purpose unless teachers are involved in the planning and implementation.

In this regard I shall be looking forward to working with the distinguished senior Senator from Rhode Island (Mr. PELL), who so ably serves as chairman of the Subcommittee on Education, Arts and Humanities in the upcoming deliberations of the Human Resources Committee on renewal of the Elementary and Secondary Education Act. It is my understanding that a vigorous effort will

be made to limit unnecessary paperwork and to involve classroom teachers in the planning elements to the extent feasible.

But expansion of the teacher center program would also serve to foster substantially these goals.

Currently there are pending in the Office of Education over 1,500 applications for teacher centers. At the level of funds included in the President's budget of slightly more than $10 million, not more than 50 programs will likely be funded. Even at full funding, only about 400 could be funded.

Mr. James Green of the National Education Association testified on these matters on March 14 before the Subcommittee on Labor-HEW of the Committee on Appropriations. In the course of his testimony, Mr. Green was questioned by the distinguished chairman of the Appropriations Committee, Senator MAGNUSON, about the potential for an expanded program and also about the possible need for an increased program authorization. This bill provides that opportunity.

Further, it clarifies other matters contained in existing law. It makes clear that two or more local educational agencies may form a consortium for purposes of applying for a teacher center grant, and that statewide programs are permissible. In small States these should particularly be encouraged.

Also, the bill makes clear that the Commissioner may consider an application submitted to a State educational agency notwithstanding a State's refusal to approve such application. Under the language of this bill, such applications would be forwarded to the Commissioner, along with the comments and evaluation of the State agency.

While I would hope that there would be a maximum degree of cooperation among State and local educational agencies on these matters, it is conceivable to envision a situation where a State might reject an otherwise meritorious application for reasons unrelated to the substance of the application. This bill would allow the Commissioner to consider such a matter, while at the same time fully protecting the State's right to comment on its reasons for not recommending the application. Such a provision seems appropriate in this situation, because, unlike many other provisions of law, no State or local matching funds are required.

I look forward to working toward enactment of this bill, and am hopeful that it can be enacted in the near future in order to provide full benefit in the funding of fiscal year 1979 applications.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2885

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may be cited as the Teacher Training Programs and Teacher Centers Amendments of 1978.

SEC. 2. Section 531 of the Higher Education Act of 1965 is amended—

(1) by striking out "and for each of the fiscal years ending prior to October 1, 1979," and inserting in lieu thereof the following: "and the fiscal year 1978, and $100,000,000 for the fiscal year 1979,"; and

(2) by inserting at the end thereof the following new sentence: "In the event that sums exceeding $50,000,000 are appropriated in any fiscal year for purposes of carrying out this part, programs in each State shall receive grants totaling not less than $250,000 for such fiscal year.".

SEC. 3. Section 532(c) of the Higher Education Act of 1965 is amended—

(1) in paragraph (1), by inserting immediately after "local educational agency" the following: "or any consortium of local educational agencies (including statewide programs)";

(2) in paragraph (2), by inserting at the end thereof the following new sentence: "The Commissioner shall, upon the receipt of such petition, request further consideration by the State educational agency."; and

(3) by inserting at the end thereof the following new sentence: "If, subsequent to the expiration of thirty days after the Commissioner's petitioning the State educational agency, such agency has not transmitted such application, then such application shall be transmitted to the Commissioner along with the comments and evaluation of the State educational agency.".●

---

By Mr. MATHIAS:

S. 2888. A bill to establish a Potomac River Shoreline Area Commission for the purpose of developing a plan for the cooperative management by Federal, State, District of Columbia, and local authorities of certain areas along the Potomac River, and for other purposes; to the Committee on Energy and Natural Resources.

POTOMAC RIVER SHORELINE AREA COMMISSION

● Mr. MATHIAS. Mr. President, we have in our mist a great natural and historic resource—the Potomac River.

The bill I am introducing today will focus attention on the wide range of forces that threaten it daily.

Among those forces is the booming population of the Washington metropolitan region. It is estimated that by the year 2000, 4 million people will live in greater Washington. This population growth will make great demands on the States of Maryland, Virginia, and West Virginia and the Potomac River for more water and increased opportunity for recreational uses. Such growth will also pose a growing threat to Maryland's beauty and the Potomac's purity.

Added to the pressure man places on the river are the forces of nature. Storms, floods, droughts, and even ice floes all have taken their toll on the Potomac as well as on the rich agricultural land of Maryland, Virginia, and West Virginia that borders it.

Fortunately, I can report that the Potomac is comparatively healthy. Heavy industry has not yet contaminated its waters and its banks have not yet been despoiled by an unbroken line of apartments or highways. Other American rivers have not been spared this sad fate. We should learn from the mistakes we made on those other rivers and take cooperative action now to insure the preservation of this truly natural treasure.

In the past, the residents of Maryland towns on the upper reaches of the Potomac have taken for granted the green farmland, trees, mountains, clean water, fish, and wildlife which abound in the basin. I want to assure that these conditions will prevail in the future.

The bill I am introducing today, and which is being introduced in the other body by Representative FISHER of Virginia, establishes a forum for the citizens of the Potomac basin to think through common problems and to reason together over common goals and policies for the future growth and management of the Upper Potomac and its shoreline. I do not want to commit the future of the Potomac and its Maryland shores to arbitrary decisions by the Army Corps of Engineers, the Department of the Interior or by any other Federal agency whose interests may not comprehend the welfare of the people most closely concerned.

My bill will establish therefore a 30-member Commission composed of five representatives from each of the three States bordering the river from the District of Columbia north to Cumberland, Md. Other representatives include:

(1) one State representative each from Maryland, Virginia, and West Virginia;

(2) one representative of the District of Columbia government and one citizen representative from the District of Columbia;

(3) five at-large citizen representatives with interests in such things as fish and wildlife, recreation, and conservation;

(4) one representative each from the Environmental Protection Agency, Corps of Engineers, and National Park Service;

(5) one representative of the Chesapeake and Ohio Canal Commission; and

(6) one representative of the Interstate Commission on the Potomac River Basin.

The Commission is to prepare a plan of recommended actions for managing the resources of the upper river basin. Among these are:

A statement of public values to be protected and enhanced.

A map delineating the prospective boundaries of the shoreline area.

A local participation element.

A comprehensive land use and conservation element which considers areas of ecological, historic, recreational, or fish and wildlife significance; insures reasonable access to the river by the public; differentiates the needs for shoreline protection based on location and existing local land use control; recognizes existing economic activities within the prospective area; and provides for the protection and enhancement of farming, forestry, proprietary recreational activities, and commercial, residential, and industrial activities that do not conflict with the public values identified for the area.

Consistency with local, State, and Federal programs and policies.

A public use element.

A financial element.

A continuing management element.

Representative Fisher and I have emphasized in this legislation that the Potomac River Shoreline Commission is to consult closely with local and State governments and to coordinate its recommended policies and actions with local plans, zoning, and other land-use controls.

Public hearings are mandated in each of the States in the course of the plan's development. Once the proposed actions are in final written form, they must be reviewed once more by local jurisdictions to insure that their point of view has been taken into account. The plan is then to be presented to the Congress which has 36 months to act on it.

We believe this bill is a beginning for citizen planning and coordination of the Potomac River Shoreline. It brings together a broad range of interest groups to consider common problems related to the river and to fashion some common solutions.

A citizens' advisory commission such as the Potomac River Shoreline Commission could become a model for grassroots citizen participation for other natural resource areas similarly threatened. We believe the Commission established by this bill will be broadly representative and is an innovative means for addressing common regional problems.●

---

By Mr. MARK O. HATFIELD:

S. 2889. A bill to amend the Merchant Marine Act, 1936, to provide for the establishment of capital construction funds for fisheries facilities; to the Committee on Commerce, Science, and Transportation.

S. 2890. A bill to amend the Farm Credit Act of 1971 to provide that certain loans to farmers, ranchers, and producers or harvesters of aquatic products may be made for periods of 15 years; to the Committee on Agriculture, Nutrition, and Forestry.

S. 2891. A bill to provide loan guarantees to the commercial fisheries industry for the development of underutilized fisheries; to the Committee on Banking, Housing, and Urban Affairs.

● Mr. MARK O. HATFIELD. Mr. President, today I am introducing three bills to provide financial incentives for fishermen to help develop underutilized fish species. Federal legislators and fishermen celebrated, with mixed reactions, the 1-year anniversary of the Fishery Conservation and Management Act of 1976. This act was thought to be landmark legislation which would establish a 200-mile limit and free domestic fishermen from competition with foreigners. In the past year, however, fishery management plans, continued adverse affects of dam construction and court decisions extending Indian fishing rights have severely restricted the income of domestic salmon fishermen. In addition to heavy regulation, economic conditions have not provided adequate incentives to divert fishermen from overcrowded fisheries such as salmon, to underutilized species like hake, cod, pollack, and haddock. In all, these circumstances have not only imposed severe economic limitations on the salmon industry, but have jeopardized the supply and stability of traditional seafood products and have stymied efforts to fully realize the potential of our fisheries resources. We must update our commercial fishing fleet, not only to fullfill requirements necessary to displace foreign fishermen, but we must begin to establish a favorable balance of trade on the world fish food market. It is estimated that if imports of foreign fish products were replaced by domestic production, the additional economic impact would approach $3 billion with an increase in 200,000 man-years in employment.

S. 2889 would amend the Merchant Marine Act of 1936 to allow any citizen owning or leasing a fishing vessel to defer up to 50 percent their taxable income and establish with the Secretary of Commerce a capital construction fund for the purpose of providing replacement vessels, additional vessels or reconstructed vessels for the purpose of harvesting and processing underutilized fish species.

S. 2890 intends to amend the Farm Credit Act of 1971 to extend from 7 to 15 years the authorization for loans under this act. This amendment will provide harvesters and processors of aquatic products greater opportunity in seeking financial assistance for their investments.

S. 2891, the Commercial Fisheries Financial Assistance Act of 1978 authorizes the Secretary of Commerce to guarantee the payment of interest on the unpaid balance of the principal of any loan made by a bank or lending institution for the construction, rehabilitation, purchase or operation of a new or used vessel or facility for the production of underutilized fisheries. Any loan guaranteed under this act, shall not exceed 90 percent per annum of the actual depreciated cost; shall have a maturity date not to exceed 25 years for fishery facilities and 15 years for fishing vessels and shall bear interest at a rate not to exceed such percent per annum of the unpaid principal as the Secretary determines to be reasonable. This act also authorizes to be appropriated $1 million to be deposited in the Treasury or invested in bonds to be used as credit against the principal and interest guaranteed by the above mentioned program.

It is important that we provide adequate financial assistance in order that commercial fisheries interests are provided adequate opportunities to fully utilize the resources within the 200-mile fishing zone. These bills. I believe, will help increase the potential of the commercial fishing industry and strengthen the competitive position with respect to foreign harvesters and processors.

Mr. President, I ask unanimous consent that the text of these bills be printed in the RECORD.

There being no objection, the bills were ordered to be printed in the RECORD, as follows:

S. 2889

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That subsection (a) of section 607 of the Merchant Marine Act, 1936 (46 U.S.C. 1177), is amended to read as follows:

"SEC. 607. (a) Agreement Rules.—Any citizen of the United States owning or leasing one or more eligible vessels (as defined in subsection (k)(1)), or one or more fisheries facilities (as defined in subsection (k)(9)), may enter into an agreement with the Secretary of Commerce under, and as provided in, this section to establish a capital construction fund (hereinafter in this section referred to as the 'fund') with respect to any or all of such vessels or facilities. Any agreement entered into under this section shall be for the purpose of providing—

"(1) replacement vessels, additional vessels, or reconstructed vessels, built in the United States and documented under the laws of the United States for operation in the United States foreign, Great Lakes, or noncontiguous domestic trade or in the fisheries of the United States, or

"(2) replacement, additional, or reconstructed fisheries facilities in the United States,

and shall provide for the deposit in the fund of the amounts agreed upon as necessary or appropriate to provide for qualified withdrawals under subsection (f). The deposits in the fund, and all withdrawals from the fund, whether qualified or nonqualified, shall be subject to such conditions and requirements as the Secretary of Commerce may by regulations prescribe or are set forth in such agreement; except that the Secretary of Commerce may not require any person to deposit in the fund for any taxable year more than 50 percent of that portion of such person's taxable income for such year (computed in the manner provided in subsection (b)(1)(A)) which is attributable to the operation of the agreement vessels or facilities or from the sale or marketing of fish or fish products.".

SEC. 2. Subsection (b) of section 607 of such Act is amended—

(1) in subparagraph (A) of paragraph (1) by inserting "or which is attributable to the operation of the agreement facilities, or from the sale or marketing of fish or fish products" at the end thereof;

(2) in subparagraph (B) of paragraph (1) by inserting "or facilities" after "vessels"; and

(3) in subparagraph (C) of paragraph (1) and in paragraph (2) by inserting "or facility" after "vessel" each place it appears.

SEC. 3. Subsection (f) of section 607 of such Act is amended—

(1) in subparagraph (A) of paragraph (1) by inserting "or a fisheries facility," after "vessel," and

(2) in subparagraph (C) by inserting ", a fisheries facility," after "reconstruction of a qualified vessel".

SEC. 4. Subsection (g) of section 607 of such Act is amended—

(1) in paragraphs (2) and (3) by inserting "facility," after "vessel," each place it appears; and

(2) in paragraph (4) by inserting "facilities," after "vessels,".

SEC. 5. Subsection (k) of section 607 of such Act is amended by adding at the end thereof the following new paragraphs:

"(9) The term 'fisheries facility' or 'facility' means a new or used facility in the United States, including but not limited to, docks, equipment and buildings, for the receiving, preparing, processing refrigerating, storaging, and distribution of fish or fish products.

"(10) The term 'agreement facility' means any fisheries facility which is subject to an agreement entered into under this section.

"(11) The term 'fish' means fin fish, mollusks, crustaceans, and all other forms of marine animals and plant life (other than marine mammals and birds) which have been harvested by a commercial fishing vessel of the United States.

"(12) The term 'fish products' means any article which is produced from or composed of (in whole or in part) any fish.".

S. 2890

*Be it enacted by the Senate and House of Representatives of the United States of*

*America in Congress assembled,* That the first sentence of section 2.4 of the Farm Credit Act of 1971 (12 U.S.C. 2075) is amended by striking out "seven years" and inserting in lieu thereof "15 years".

SEC. 2. The first sentence of section 2.15(b) of the Farm Credit Act of 1971 (12 U.S.C. 2096 (b)) is amended by inserting "may be made for a period not to exceed 15 years and" after "Loans authorized in subsection (a) hereof".

---

S. 2891

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act be cited as the "Commercial Fisheries Financial Assistance Act of 1978".

SEC. 2. The purposes of this Act are—

(1) to increase the potential of the commercial fisheries industry to harvest, process, and market a greater percentage of the fish, shellfish, and other marine resources sold in this country;

(2) to strengthen the competitive position of the commercial fisheries industry with respect to foreign harvesters and processors, thereby resulting in increased economic stability in the domestic industry and full utilization of the resources within the extended fisheries zone by the domestic fisheries industry;

(3) to provide increased commercial fisheries opportunities for access to developmental capital; and

(4) to provide financial assistance to the commercial fisheries industry.

SEC. 3. As used in this Act, the term—

(1) "commercial fisheries industry" means all segments of such industry in the United States from harvesting to processing to distribution;

(2) "fishery" means a species or group of species forming a segment of the harvesting sector of the fisheries industry;

(3) "underutilized fishery" means such a species or group of species which are not harvested to their full optimum sustainable yield by the domestic commercial fisheries industry;

(4) "fisheries shoreside facilities" includes, but is not limited to, such new or used facilities, as docks, receiving facilities, processing facilities, processing plants, and storage and distribution facilities, together with all necessary equipment;

(5) "processing facilities" means production equipment and facilities (including land) needed to receive the catch of fishing vessels, and prepare, hold, or distribute such catch for market;

(6) "citizen or national of the United States" means any individual who is a citizen or national of the United States or any corporation, partnership, or other entity organized under the laws of any State of the United States or the District of Columbia, however, no such corporation, partnership, or other entity shall be deemed to be a citizen of the United States unless it is a citizen within the meaning of section 2 of the Shipping Act, 1916 (46 U.S.C. 802);

(7) "fishing vessel" means any new or used vessel, boat, ship, or other type of craft, regardless of size, and all necessary gear and equipment, or the acquisition of such gear and equipment separately, which is used for, equipped to be used for, or of a type which is normally used for—

(A) commercial fishing; and

(B) aiding or assisting in the performance of any activity relating to commercial fishing, including, but not limited to, preparation, supply, storage, refrigeration, transportation, or processing of Fish, and

(8) "Secretary" means the Secretary of Commerce.

SEC. 4. The Secretary shall promulgate rules and regulations to carry out this Act.

SEC. 5. (a) The Secretary is authorized to guarantee and to enter into commitments to guarantee the payment of the interest on, and the unpaid balance of the principal of, any loan made by a bank or other lending institution for—

(1) the construction, rehabilitation, purchase, or operation of new or used fisheries shoreside facilities for underutilized fisheries, and

(2) the construction, rehabilitation, purchase, or operation of new or used fishing vessels for underutilized fisheries.

(b) Any loan guaranteed under this section—

(1) shall have the borrower approved by the Secretary as responsible and possessing the ability, experience, resources, and other qualifications necessary for the adequate operation and maintenance of the fishing vessel or fisheries shoreside facility which serve as security for the guarantee of the Secretary;

(2) shall be in an aggregate principal amount which does not exceed 90 per centum of the actual cost or depreciated actual cost, as determined by the Secretary, of the vessel or facility which is used as security for the guarantee of the Secretary;

(3) shall have a maturity date satisfactory to the Secretary, but, not to exceed twenty-five years in the case of a loan referred to in subsection (a)(1) or fifteen years in the case of a loan referred to in subsection (a)(2);

(4) shall provide for payments by the borrower satisfactory to the Secretary;

(5) shall bear interest at a rate not to exceed such per centum per annum on the unpaid principal as the Secretary determines to be reasonable, taking into account the range of interest rates prevailing in the private market for similar loans and the risks assumed by the Secretary;

(6) may only be made to a borrower who is a citizen or national of the United States; and

(7) shall be approved by the Secretary only upon the furnishing of such security or other reasonable assurance of repayment as the Secretary shall require considering the objectives of this Act; and the proposed collateral for any such loan shall be of such a nature that, when considered with the integrity, ability, and prospective earnings of the borrower, repayment of the loan will be reasonably assured.

SEC. 6. There is hereby created a Commercial Fisheries Loan Guarantee Fund (hereinafter referred to in this title as the "Fund") which shall be used by the Secretary as a revolving fund for the purpose of carrying out this Act. There is authorized to be appropriated to the Fund $1,000,000. Moneys in the Fund shall be deposited in the Treasury of the United States to the credit of the Fund or invested in bonds or other obligations of, or guaranteed as to principal and interest by, the United States.

SEC. 7. (a) In the case of any loan guaranteed by the Secretary under this Act, the Secretary shall not guarantee the principal of such loan in an amount in excess of 90 per centum of the face amount of the loan.

(b) The full faith and credit of the United States is pledged to the payment of all such guarantees with respect to both principal and interest as may be provided for in the guarantee, accruing between the date of default under a guaranteed loan and the payment in full of the guarantee.

(c) Any guarantee, or commitment to guarantee, made by the Secretary under this Act shall be conclusive evidence of the eligibility of the loan for such guarantee, and the validity of any guarantee, or commitment to guarantee, so made shall be incontestable.

(d) The aggregate unpaid principal amount of the loans guaranteed under this Act and outstanding at any one time shall not exceed $250,000,000.

(e) The Secretary shall endeavor to promptly process all loan guarantee applications, and in no event shall the Secretary fail to approve or deny an application within ninety days after the date of receipt of the application.

(f) The Secretary shall charge and collect from the borrower such amounts as he may deem reasonable for the investigation of applications for a guarantee, for the appraisal of properties offered as security for a guarantee, for the issuance of commitments, and for the inspection of such properties during construction, expansion, or rehabilitation: *Provided,* That such charges shall not aggregate more than one-half of 1 percentum of the original principal amount of the loan to be guaranteed.

(g) All moneys received by the Secretary under this Act shall be deposited in the Fund.

SEC. 8. Loans guaranteed under this Act and agreements relating thereto shall contain such other provisions with respect to the protection of the security interests of the United States (including acceleration and subrogation provisions and the issuance of notes by the obligor to the Secretary), liens and releases of liens, payments of taxes, and such other matters as the Secretary may prescribe.

SEC. 9. (a) In the event of a default which has continued for thirty days in any payment by the borrower of principal or interest due under a loan guaranteed under this Act, the lender or his agent shall have the right to demand, at or before the expiration of such period as may be specified in the guarantee or related agreements, but not later than ninety days from the date of such default, payment by the Secretary of the unpaid principal amount of the loan and of the unpaid interest thereon to the date of payment. Within such period as may be specified in the guarantee or related agreements, but not later than thirty days from the date of such demand, the Secretary shall promptly pay to the lender or his agent the unpaid principal amount of the obligation and unpaid interest thereon to the date of payment: *Provided,* That the Secretary shall not be required to make such payment if prior to the expiration of said period he shall find that there was no default by the borrower in the payment of principal or interest or that such default has been remedied prior to any such demand.

(b) In the event of any payment by the Secretary under subsection (a), the Secretary shall have all rights in any security held by him relating to his guarantee of such loans as are conferred upon him under any security agreement with the borrower. Notwithstanding any other provision of law relating to the acquisition, handling, or disposal of property by the United States, the Secretary shall have the right, in his discretion, to complete, recondition, reconstruct, renovate, repair, maintain, operate, charter, or sell any property acquired by him pursuant to a security agreement with the obligor or may place a vessel in the national defense reserve.

(c) Any amount required to be paid by the Secretary pursuant to subsection (a) shall be paid in cash. If at any time the moneys in the Fund are not sufficient to pay any amount the Secretary is required to pay, the Secretary is authorized to issue to the Secretary of the Treasury notes or other obligations in such forms and denominations, bearing such maturities, and subject to such terms and conditions as may be prescribed by the Secretary, with the approval of the Secretary of the Treasury. Such notes or other obligations shall bear interest at a rate determined by the Secretary of the Treasury, taking into consideration the current average market yield on outstanding marketable obligations of the United States of comparable maturities during the month preceding the issuance of such notes or other

obligations. The Secretary of the Treasury is authorized and directed to purchase any notes and other obligations to be issued hereunder and for such purpose he is authorized to use as a public debt transaction the proceeds from the sale of any securities issued under the Second Liberty Bond Act, as amended, and the purposes for which securities may be issued under such Act, as amended, are extended to include any purchases of such notes and obligations. The Secretary of the Treasury at any time may sell any of the notes or other obligations acquired by him under this section. All redemptions, purchases, and sales by the Secretary of the Treasury of such notes or other obligations shall be treated as public debt transactions of the United States. Funds borrowed under this section shall be deposited in the Fund and redemptions of such notes and obligations shall be made by the Secretary from such Fund.

(d) In the event of a default under any guaranteed loan or any related agreement, the Secretary shall take such action against the borrower or any other parties liable thereunder that, in his discretion, may be required to protect the interests of the United States. Any suit may be brought in the name of the United States or in the name of the lender and the lender shall make available to the United States all records and evidence necessary to prosecute any such suit. The Secretary shall have the right, in his discretion, to accept a conveyance of title to and possession of property from the borrower or other parties liable to the Secretary, and may purchase the property for an amount not greater than the unpaid principal amount of such obligation and interest thereon. In the event the Secretary shall receive through the sale of property an amount of cash in excess of any payment made to a lender under subsection (a) and the expenses of collection of such amounts, he shall pay such excess to the borrower.●

---

By Mr. MOYNIHAN (for himself and Mr. JAVITS):

S. 2892. A bill to authorize the Secretary of the Treasury to provide loan guarantees for the assistance of the city of New York; to the Committee on Banking, Housing, and Urban Affairs.

NEW YORK CITY LOAN GUARANTEE

● Mr. MOYNIHAN. Mr. President, today Senator JAVITS and I are introducing the administration's New York City Loan Guarantee Act of 1978. This bill was drafted by the Carter administration to implement the President's pledge of support for the city of New York.

As Secretary of the Treasury Blumenthal stated in his letter of April 6 transmitting the text of the bill to the Senate, "The administration believes that the consequences of a New York City bankruptcy would be serious for residents of the city, New York State and the Nation. Although the city has made substantial progress since 1975 toward restoring its fiscal soundness, it is uncertain whether the city would be able to meet its financing needs after June 30, 1978—when the present Seasonal Financing Act expires —without Federal assistance. Therefore, some continued Federal assistance is appropriate to assure the city's solvency."

The bill authorizes the Secretary to guarantee up to $2 billion in debt obligations of the city of New York. Such guarantees would extend only to the original purchasers of city debt, and would last no more than 15 years. The bill provides that the State of New York must maintain a fiscal control mechanism in existence, and provides that the revenue sharing funds payable to the city and State may be withheld by the Secretary to recover amounts paid on any guarantee. The bonds guaranteed under this bill would be subject to federal income tax.

The Subcommittee on Economic Stabilization of the House Banking Committee is currently considering a New York City loan guarantee bill introduced by Representative MOORHEAD, who chairs that subcommittee. When that bill emerges from the House Banking Committee, we will introduce it in the Senate so that the Senate may have before it that proposal as well as the President's.

In our view, the proposal of this legislation by the President is a vital step forward in New York City's struggle to regain fiscal stability. Of course, very much more remains to be done. A reasonable settlement of the city's negotiations with municipal employees will be a crucial factor and will greatly affect the view which Congress takes of this legislation.

We wish to express our appreciation to the President, to Secretary of the Treasury, Michael Blumenthal, and to Assistant to the President for Domestic Affairs, Stuart Eizenstat. The passage of legislation authorizing loan guarantees for New York City, an event which comes much closer today, will be the culmination of the efforts of many public officials and private citizens in New York City and State and here in Washington.

Mr. President, I ask unanimous consent that a section-by-section analysis of the proposal by the administration, and the text of the bill be printed in the RECORD.

There being no objection, the bill and analysis were ordered to be printed in the RECORD, as follows:

S. 2892

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

SHORT TITLE

SEC. 101. This Act may be cited as the "New York City Loan Guarantee Act of 1978."

TITLE I—LOAN GUARANTEES

DEFINITIONS

SEC. 201. As used in this Act:

(a) "City" means the City of New York.

(b) "State" means the State of New York.

(c) "Financing agent" means any agency or instrumentality of the State duly authorized by the State to act on behalf of or in the interest of the City, and no other subdivision of the State, with respect to the City's financial affairs.

(d) "Secretary" means the Secretary of the Treasury of the United States of America.

(e) "City indebtedness" means indebtedness for borrowed money with a stated maturity more than one year from the date of issuance thereof of (i) a Financing agent, but only if the proceeds thereof are advanced to or applied for the benefit of the City or (ii) the City. For purposes of any calculation pursuant to section 202(a) or section 204, references to "City indebtedness guaranteed hereunder" and "City indebtedness committed to be guaranteed hereunder" shall, if less than all of the principal amount thereof is guaranteed, mean only that portion that is guaranteed or committed to be guaranteed.

SEC. 202. (a) The Secretary may guarantee, and enter into commitments to guarantee, the payment of the principal of and interest on any City indebtedness. Such guarantees may be of all of any portion of the principal of and interest on such City indebtedness and, subject to the limitation set forth in section 202(b)(ii), may be for all or any portion of the term of such City indebtedness: *Provided*, That the Secretary shall not guarantee, or commit to guarantee, any City indebtedness if, after giving effect to such guarantee or commitment, any repayment or cancellation of any City indebtedness previously guaranteed and any lapse of any guarantee previously made, the sum of the aggregate principal amount of (i) City indebtedness guaranteed hereunder then outstanding and (ii) City indebtedness committed to be guaranteed hereunder would exceed $2,000,000,000.

(b) Any guarantee of any City indebtedness hereunder shall lapse and be of no further effect on the earliest of:

(i) any date specified in the guarantee;

(ii) the fifteenth anniversary of the date of the issuance of such City indebtedness; and

(iii) the date of any sale, transfer or other disposition (other than to a successor in interest or any disposition not involving a change in beneficial ownership) of such City indebtedness by the person who initially acquired it upon issuance: *Provided* That for the purposes of this section 202(b)(iii) any acquisition of City indebtedness by any person for purposes of resale as part of a distribution shall be disregarded with respect to any City indebtedness that is sold, transferred or otherwise disposed of by such person within ninety days of his acquisition,

except with respect to claims and other rights that have accrued thereunder prior to such date.

CONDITIONS

SEC. 203. The Secretary shall not guarantee or commit to guarantee any City indebtedness unless he shall have determined at the time such guarantee or commitment to guarantee is made that:

(a) there is a reasonable prospect of repayment of such City indebtedness in accordance with its terms and conditions;

(b) an instrumentality of the State has been established and is acting that has authority and has been directed, which authority and direction the State has covenanted will not be repealed, invalidated or otherwise substantially impaired during any period during which the Secretary may guarantee or commit to guarantee City indebtedness hereunder or during which any City indebtedness guaranteed hereunder is outstanding, to require the City to adopt and adhere to budgets covering all expenditures other than capital items, the results of which would not, for fiscal years of the city beginning after June 30, 1981, show a deficit when reported in accordance with generally accepted accounting principles applicable to governmental bodies and, for fiscal years of the City beginning on or prior thereto but after June 30, 1978, make substantial progress towards that goal;

(c) credit is not otherwise available to the City or a Financing agent on reasonable terms; and

(d) the interest rate on such City indebtedness is reasonable, taking into consideration current average market yields for other obligations guaranteed by the United States.

Any determination by the Secretary that the conditions set forth in this section 203 have been met shall be conclusive, such determination to be evidenced by the making of such guarantee or commitment to guarantee, and the validity of any guarantee so made shall be incontestable in the hands of the holder of such guaranteed City indebtedness, except for fraud or material misrepresentation on the part of such holder. The

Secretary is authorized to determine the manner in which such guarantees and commitments will be issued and, in addition to the terms and conditions required by this section 203, to require from, or agree to with, the City, a Financing agent, the holders of the City indebtedness guaranteed or committed to be guaranteed and any other party in interest such other terms and conditions as he may deem appropriate, including provision of security for the repayment of amounts paid pursuant to any guarantee under this Act. Any such other term or condition may be modified, amended or waived in the discretion of the Secretary.

GUARANTEE FEE

SEC. 204. The Secretary shall assess and collect from the issuer of any City indebtedness guaranteed hereunder, no less frequently than annually, a guarantee fee computed daily at a rate of no less than one-half of 1 percent per annum on the outstanding principal amount of City indebtedness guaranteed hereunder. All funds received by the Secretary in payment of such fees shall be paid into the general fund of the Treasury.

SECURITY

SEC. 205. (a) Any other provision of law to the contrary notwithstanding, the Secretary shall withhold from any payments from the United States to the City or the State of the character described in clauses (i), (ii) and (iii) of this section 205(a) that may become due pursuant to any law, and shall, in the case of payments of the character described in clauses (i) and (ii), deposit in the general fund of the Treasury, an amount, calculated on the date such payment is otherwise payable, equal to the aggregate of all outstanding claims that the Secretary has against issuers of City indebtedness hereunder. The Secretary shall withhold from such payments in the following order of priority:

(i) First, payments to the City under the State and Local Fiscal Assistance Act of 1972, as presently or in the future amended, or any other enactment providing for general purpose financial assistance;

(ii) Second, payments to the State under the State and Local Fiscal Assistance Act of 1972, as presently or in the future amended, or any other enactment providing for general purpose financial assistance: *Provided* That the Secretary shall not withhold any amount from any payment to the State to the extent he reasonably expects that within the next ninety days a payment of an equal or greater amount subject to withholding under clause (i) of section 205(a) will be payable to the City; and

(iii) Third, any other payments to the City.

(b) The Secretary shall be entitled to recover from the issuer of any City indebtedness, or any other person liable therefore, the amount of any payments made with respect to such City indebtedness pursuant to any guarantee hereunder, and upon making any such payment the Secretary shall be subrogated to all the rights of the recipient thereof.

(c) The remedies of the Secretary prescribed in this Act shall be cumulative and not in limitation of, or in substitution for, any other remedies available to the Secretary or the United States, and the Secretary may take all such action as may be appropriate to enforce his rights or the rights of the United States arising hereunder, under any guarantee or any agreement with respect thereto.

(d) With respect to any debt to the United States arising under this Act, for the purposes of section 3466 of the Revised Statutes (31 U.S.C. 191) the term "person" includes the City and any Financing agent. The provisions of such section to the contrary notwithstanding, the Secretary is authorized to waive, wholly or partially, the priority for the United States established thereunder with respect to any such debt if, in his judgment, such waiver is necessary to facilitate the ability of the City to meet its financing needs: *Provided* That no such waiver by its terms shall subordinate the claim of the United States to those of any other creditor of the City or any Financing agent.

TERMINATION

SEC. 206. The authority of the Secretary to guarantee City indebtedness under this Act terminates on June 30, 1982. Such termination shall not affect the carrying out of any contract, guarantee or other obligation entered into pursuant to this Act, or the taking of any action necessary to preserve or protect the interests of the United States arising hereunder, except that no commitment to guarantee any City indebtedness shall be effective after such date.

AUDITS

SEC. 207. The General Accounting Office shall make such audits as may be deemed appropriate by the Secretary or the General Accounting Office of all accounts, books, records and transactions of the issuer of any City indebtedness guaranteed hereunder. The General Accounting Office shall report the results of any such audit to the Secretary and the Congress.

AUTHORIZATIONS

SEC. 208. There are authorized to be appropriated to remain available without fiscal year limitation such sums as may be necessary to carry out the provisions of this title.

TITLE II—AMENDMENTS TO THE INTERNAL REVENUE CODE OF 1954

SEC. 301. TAX TREATMENT OF CERTAIN FEDERALLY GUARANTEED OBLIGATIONS

(a) Certain Federally Guaranteed Obligations.—Section 103 of the Internal Revenue Code of 1954 (interest on certain governmental obligations) is amended by redesignating subsection (f) as subsection (g) and by inserting after subsection (e) the following new subsection:

"(f) Certain Federally Guaranteed Obligations.—If payment of any principal or interest on an obligation is guaranteed by the United States under the New York City Loan Guarantee Act of 1978, then the obligation shall be treated as not described in subsection (a)."

(b) Lapse of Guarantee.—Section 1058 (cross references) is redesignated as section 1059, and the following new section is inserted immediately after section 1057:

"SEC. 1058. LAPSE OF CERTAIN FEDERAL GUARANTEES.—

The following rules apply on the lapse of a guarantee under the New York City Loan Guarantee Act of 1978:

"(a) For all purposes of this subtitle, the guaranteed obligation shall be treated as surrendered in exchange for a newly issued obligation described in section 103(a).

"(b) For purposes of determining the amount of gain or loss recognized on such exchange, the fair market value of obligation (immediately after the guarantee lapses) shall be determined by the Secretary."

(c) Character of Certain Federally Guaranteed Obligations.—Section 1221 (capital asset defined) is amended by striking "or" at the end of paragraph (5), by striking the period at the end of paragraph (6) and inserting "; or" in lieu thereof, and by inserting after paragraph (6) the following new paragraph:

"(7) Obligations guaranteed under the New York City Guarantee Loan Act of 1978."

(d) Conforming Amendment.—The table of sections for Part IV of Subchapter O of Chapter 1 is amended by deleting the last item and inserting in lieu thereof the following new items:

"SEC. 1058. LAPSE OF CERTAIN FEDERAL GUARANTEES.—

SEC. 1059. CROSS REFERENCES."

(e) Effective Date.—The amendments made by subsections (a), (b), (c), and (d) shall apply to taxable years ending after the date of the enactment of this Act.

SECTION-BY-SECTION ANALYSIS OF A BILL TO AUTHORIZE LOAN GUARANTEES FOR THE CITY OF NEW YORK

SECTION 101

This section provides that the bill shall be titled the "New York City Loan Guarantee Act of 1978."

Title I—LOAN GUARANTEES

SECTION 201

This section sets forth the definitions of various terms used throughout the bill. The definition of "City indebtedness" makes clear that the guarantee authority of the Secretary of the Treasury is limited to long-term financing, and does not include seasonal financing.

SECTION 202

Subsection (a) provides that the Secretary may guarantee all or any portion of the principal of and interest on any City indebtedness and that the guarantee may be for all or any portion of the term of that indebtedness, subject to a maximum guarantee term of 15 years. No guarantee could be made if the principal amount of guaranteed City indebtedness outstanding would exceed $2,000,000,000.

Subsection (b) provides that any guarantee will lapse on the earlier of the date agreed to in the guarantee, the fifteenth anniversary of the issuance of the guaranteed City indebtedness and the date of any disposition of that indebtedness by the initial purchaser. Certain exceptions to these provisions are also set forth.

SECTION 203

This section sets forth conditions that must be satisfied before a guarantee is issued. Subsection (a) requires the Secretary to determine that there is a reasonable prospect of repayment. Subsection (b) requires the Secretary to determine that a fiscal control mechanism has been established that will require the City to adopt and maintain expense budgets that, for City fiscal years 1982 and thereafter, are balanced in accordance with generally accepted accounting principles and, for City fiscal years 1979, 1980, and 1981, make substantial progress towards that goal. The State must covenant to keep the control mechanism effective for the life of any Federal guarantees. Subsection (c) requires the Secretary to determine that credit is otherwise not available on reasonable terms, and Subsection (d) requires the Secretary to determine that the interest rate on any guaranteed City indebtedness is reasonable. Any determinations made by the Secretary will be conclusive. The Secretary may also negotiate the other terms of any guarantee arrangement.

SECTION 204

This section requires the Secretary to assess a guarantee fee on any guaranteed City indebtedness. The fee must be assessed at least annually and can be no less than one-half of 1% per annum.

SECTION 205

Subsection (a) would authorize the Secretary to withhold Federal transfer payments to the City and the State to recover amounts paid on any guarantee. It also specifies the order of priority in which such payments are to be withheld.

Subsection (b) gives the Secretary the authority to recover from the issuer of any City indebtedness any amount paid pursuant to a guarantee, and provides that the Secretary shall be subrogated to all the rights of the recipient of those payments.

Subsection (c) provides that the remedies

set forth in the bill are cumulative and not in limitation of, or in substitution for, any other remedies available to the Secretary or the United States. It also authorizes the Secretary to take such actions as may be appropriate to enforce his rights under the bill or any guarantee.

Subsection (d) makes clear that the priority afforded the United States by Section 3466 of the Revised Statutes (31 U.S.C. 191) is applicable, and also gives the Secretary discretion to waive that priority if necessary to facilitate the City's ability to meet its financing needs. However, no waiver by its terms could subordinate the claims of the United States to the claims of other creditors.

SECTION 206

This section provides that the authority of the Secretary to guarantee City indebtedness terminates on June 30, 1982.

SECTION 207

This section provides for audits by the General Accounting Office.

SECTION 208

This section provides an authorization for the appropriation of such sums as may be necessary to carry out the provisions of the bill.

SECTION 209

This section provides that the authority of the Secretary to make guarantees is limited to the amounts provided in advance by appropriations acts.

TITLE II—AMENDMENTS TO THE INTERNAL REVENUE CODE OF 1954

This title amends certain provisions of the Internal Revenue Code of 1954, including Section 103, to provide that interest on obligations guaranteed under the bill is taxable while the guarantee is outstanding.●

---

By Mr. STENNIS (for himself, Mr. EASTLAND, Mr. SPARKMAN, Mr. ALLEN, Mr. BAKER, and Mr. SASSER):

S. 2893. A bill to provide for the completion of the Natchez Trace Parkway from Natchez, Miss., to Nashville, Tenn.; to the Committee on Energy and Natural Resources.

NATCHEZ TRACE PARKWAY

● Mr. STENNIS. Mr. President, I am introducing today a bill which will authorize and require the Secretary of Interior to complete the construction of the Natchez Trace Parkway in 5 years.

I am very pleased to announce that cosponsoring the bill with me are Senators EASTLAND, SPARKMAN, ALLEN, BAKER and SASSER, and I thank them for joining in this legislative endeavor to correct a situation which has resisted solution through administrative means.

Construction by the Federal Government of this National Parkway began in 1937. The Parkway extends from Nashville to Natchez, passing through portions of Tennessee, Alabama and Mississippi. Now, over 40 years later, it is still only 74 percent complete, being usable in intermittent stretches over its length.

Early progress on the project was excellent. Of the total length of 444 miles, 120 miles were placed under contract in the first 5 years of construction. Progress since then, however, has been extremely slow. Although the States of Mississippi, Alabama and Tennessee have cooperated fully, successive administrations have declined to budget funds to maintain a consistent rate of construction, and 114 miles remain to be completed. Inflation continues to escalate the projected costs of construction.

In the early days of our Nation the Natchez Trace was the historic road between the East and what was then the Southwest. It had its origin as an Indian trail. Beginning about 1785 it was used as a return trail by the flatboatmen, returning from New Orleans after selling their products. In 1800 Congress extended mail service from Nashville to Natchez, using the Trace. Congress appropriated money in 1806 for the Postmaster General to improve the Trace, and what had been an Indian trail became a frontier road that played a key part in the expansion of our country, the growth of its trade, and the defense of its territory. Andrew Jackson earned the name "Old Hickory" by his stamina in leading the Tennessee militia over the Trace in the War of 1812, and used the road to bring his army north after the Battle of New Orleans.

The historic sites, the Indian mounds, and the artifacts have been carefully protected and are there to see. The problem is that the parkway itself has not been completed. There are 114 miles of the Natchez Trace yet to be built, and 330 miles are now in use. It is not sensible to prolong this project year after year, leaving it as an incomplete facility. The citizens who attempt to use this parkway for the intended purposes must inevitably receive a very unsatisfactory impression of the consistency of Federal policies.

As a matter of fact, from 1969 to last year the project was literally abandoned by the Department of Interior, which persistently declined to request construction funds. This amounted to unilateral voiding of a contract or at least a firm commitment.

A long time ago the Federal Government and the three States concerned made an agreement about the Natchez Trace Parkway. The States would provide the project lands and rights of way; the parkway would be dedicated to recreational use with restricted driving speeds, and forbidden to trucks; and the Federal Government would build the parkway. The States have lived up to their share. The Federal Government has been intolerably slow in its part. This bill will authorize the expenditure of $180 million, over a 5-year period, a figure which allows for the current annual rate of inflation of construction costs.

Mr. President, the Natchez Trace Parkway has reached a stage where it would be a sound investment for the Government to complete it in a timely way. I believe that it is not sensible to prolong this project year after year, leaving it as a facility that is three-quarters built and is usable only in intermittent stretches. It is inefficient and uneconomical to do so, while construction costs rise on the uncompleted quarters of the project. It should be completed and start to realize the benefits to the citizens of the three-State area and to the many other citizens who as tourists visit that area in increasing numbers each year.

I strongly urge the early consideration and passage of this bill to complete the Natchez Trace in 5 years.●

● Mr. SPARKMAN. Mr. President, I am very glad to join with my colleague from Mississippi in introducing a bill to provide for the completion of the Natchez Trace Parkway from Natchez, Miss. to Nashville, Tenn.

I do so because, in my opinion, it would be folly to further delay completion of this historic highway which was authorized in 1938, 40 years ago. Of the total length of the highway, 444 miles, only 114 miles remain to be completed. We ought to move now to put an end to the sporadic construction which has taken place over those 40 years, and act to complete the remaining miles within a 5-year period.

To do so, in my opinion, simply makes good sense, and I am happy to be a cosponsor.●

● Mr. SASSER. Mr. President, I am very pleased to offer my support to the Senator from Mississippi, Senator STENNIS, for his bill which will bring about completion of the Natchez Trace Parkway within 5 years.

The parkway's primary purpose when it was first conceived in 1936 was to memorialize the historic importance of the old Natchez Trace. The roadway was designed to mark and preserve the remaining sections of that historic pathway, first used by our Indian forerunners, now connecting the cities of Natchez, Miss., and Nashville, Tenn. At the same time, it was laid out to serve today's citizens of the area and provide a focus for visitors to our region.

The expanding development and increasing interest in tourism in the South add emphasis to the need for the Natchez Trace Parkway. When complete, it will connect the attractions of its terminus cities with a corridor of recreation opportunities. We are undertaking few projects today which possess the scenic and relaxing characteristics which the Natchez Trace Parkway will offer when completed.

The parkway envisioned by our predecessors in the 76th Congress extended 444 miles and passed through three States—Mississippi, Alabama, and Tennessee. Now, some 40 years later, we are looking back on the progress of the project to note that it is still only 74 percent complete. The 114 miles of unfinished segments are spread intermittently throughout the length of the parkway. As my colleague, Senator STENNIS, points out, this must present a disappointing impression in the minds of visitors on the consistency of Federal policies which undertake a project and then seem to lose the momentum for completion, three-quarters of the way through.

I share the feeling of all those whose names appear on the bill being introduced today, that the Natchez Trace Parkway has reached a state where it represents a sound investment for the Federal Government to complete it in a timely way. It is inefficient to leave a project in this partial state of completion and uneconomical to prolong the process of construction. Mr. President, I

believe we should move now to commit ourselves to the goal of completion of the Natchez Trace Parkway within 5 years so that the citizens of the region and increasing numbers of tourists visiting the area can begin to realize the full benefits which the planners of the project envisioned in this parkway.●

---

By Mr. PELL (for himself, Mr. CLARK, and Mr. MATHIAS):

S. 2894. A bill to establish as Institute for Human Rights and Freedom to promote respect for and observation of human rights and fundamental freedoms in foreign countries; to the Committee on Foreign Relations.

INSTITUTE FOR HUMAN RIGHTS AND FREEDOM

● Mr. PELL. Mr. President, today I and the senior Senators from Iowa and Maryland are introducing a bill to establish and authorize funding for an Institute for Human Rights and Freedom, to promote respect for and observance of human rights and fundamental freedoms in foreign countries. Congressmen FASCELL and FRASER have introduced an identical bill in the House of Representatives, and I believe that the Senate should consider simultaneously the establishment of such an Institute.

The Institute which we are proposing would serve as a further manifestation of the deep commitment of the United States to human rights and fundamental an independent body openly facilitating freedoms around the world. It would be programs to promote international respect for and observance of human rights.

It is not the intention to create another bureaucracy or to duplicate the work of either the Department of State or the Commission on Security and Cooperation in Europe, of which I am the cochairman. Rather, this Institute would serve essentially as a means for providing financial and other assistance to private organizations—both in the United States and abroad—which are engaged in promoting respect for human rights. The institute would be small, having no more than 25 employees, and the funding proposed is modest—only $5 million. It is my earnest hope that the Senate will support the creation of this Institute.

Mr. President, I ask unanimous consent that the text of this bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2894

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

STATEMENT OF PURPOSE

SECTION 1. It is the purpose of this Act to establish, as a manifestation of the commitment of the United States to human rights and fundamental freedoms, an independent institute which will openly carry out programs to promote international respect for and observance of human rights and fundamental freedoms.

ESTABLISHMENT OF INSTITUTE

SEC. 2. There is created as an agency of the United States a body corporate to be known as the Institute for Human Rights and Freedom (hereafter in this Act referred to as the "Institute").

FUNCTIONS OF THE INSTITUTE

SEC. 3. (a) In order to promote international respect for and observance of human rights and fundamental freedoms, the Institute is authorized to—

(1) provide assistance to nongovernmental organizations and individuals that promote human rights and fundamental freedoms in foreign countries by means consistent with the United States Charter and other international obligations of the United States;

(2) sponsor, conduct, and provide assistance for conferences, seminars, and other meetings on human rights and fundamental freedoms in foreign countries;

(3) provide assistance for the publication and dissemination in foreign countries of books and other written works, and for the display or other presentation in foreign countries of artistic works, which have been suppressed for political reasons;

(4) provide assistance for research, fellowships, internships, and studies on human rights and fundamental freedoms in foreign countries;

(5) provide assistance to nongovernmental organizations which support victims (and the families of victims) of political persecution by foreign governments;

(6) provide financial support for nongovernmental organizations in the United States that furnish assistance for the legal defense of human rights and fundamental freedoms in foreign countries; and

(7) carry out other programs which the Institute determines will promote respect for and observance of human rights and fundamental freedoms in foreign countries.

(b)(1) Assistance may be provided under this Act only to nongovernmental organizations and individuals.

(2) Financial assistance under this Act may be provided in the form of grants, loans, or guarantees, on such terms and conditions as the Institute may determine.

(3) Financial or other assistance may be provided under this Act only with the consent of the recipient and shall be provided openly.

(4) Assistance provided under this Act for use in a foreign country must be provided consistent with the laws of that country.

PUBLIC INFORMATION

SEC. 4. In addition to complying with the requirements of section 552 (relating to public information) and section 552b (relating to open meetings) of title 5 of the United States Code, the Institute shall publish in the Federal Register, and otherwise make available to the public and to interested persons, a statement with regard to each decision of the Institute to provide financial or other assistance under this Act. Any such statement shall be published and otherwise made public as soon as practicable after the decision to provide assistance is made and shall include, in addition to such other information as the Institute deems appropriate, the identity of the recipient of the assistance, the amount and nature of the assistance, and the purpose for which the assistance is to be used.

RELATIONSHIP TO UNITED STATES FOREIGN POLICY

SEC. 5. The Secretary of State shall keep the Institute fully informed on United States foreign policy as it relates to the activities of the Institute. The Institute shall give consideraion to the foreign policy of the United States in carrying out this Act, but shall not be subject to the direction of the Secretary of State in carrying out its responsibilities under this Act.

MANAGEMENT OF THE INSTITUTE

SEC. 6. (a) The management of the Institute shall be vested in a board of directors (hereafter in this Act referred to as the "Board") which shall direct the exercise of all the powers of the Institute.

(b)(1) The Board shall be composed of seven members (hereafter in this Act referred to as "directors") appointed by the President, by and with the advice and consent of the Senate, from among individuals in private life with a demonstrated concern for, and experience in matters pertaining to human rights and fundamental freedoms. No more than four directors may be of the same political party.

(2) One director shall be designated by the President to serve as Chairman of the Board and one director shall be designated by the President to serve as Vice Chairman of the Board.

(3) Directors shall be appointed for terms of six years, except that of the directors first appointed two shall be appointed for terms of two years and two shall be appointed for terms of four years, as designated by the President at the time of their appointment. A director appointed to fill a vacancy occurring prior to the expiration of the term for which his or her predecessor was appointed shall be appointed only for the remainder of such term. Upon the expiration of his or her term of office a director shall continue to serve until a successor is appointed and has qualified. Directors shall be eligible for reappointment.

(c) Directors shall each be entitled to receive not to exceed the daily equivalent of the annual rate of basic pay in effect for level IV of the Executive Schedule (5 U.S.C. 5315) for each day, including travel time, during which they are engaged in the actual performance of their duties as dirtctors, and shall be reimbursed for actual and necessary expenses (including transportation expenses) incurred while engaged in the actual performance of their duties as directors.

(d) The Board may prescribe, amend, and repeal bylaws, rules, and regulations governing the manner in which the business of the Institute may be conducted and in which the powers granted to it by this Act may be exercised and enjoyed.

(e) A majority of the directors shall constitute a quorum of the Board for purposes of conducting business.

(f) The Board may appoint such committees as the Board finds to be in the best interests of the Institute, each such committee to consist of at least two directors. Such committees, together with officers and agents duly authorized by the Board, may, to the extent provided by the Board, exercise the powers of the Board in the management of the affairs of the Institute.

(g) The chief executive officer of the Institute shall be an Executive Director who shall be appointed by the Board on such terms as the Board may determine. The Executive Director shall receive compensation at a rate not to exceed the rate provided for level IV of the Executive Schedule (5 U.S.C. 5315).

POWERS OF THE INSTITUTE

SEC. 7. (a) The Institute—

(1) shall have perpetual succession unless sooner dissolved by an Act of Congress;

(2) may adopt, alter, and use a corporate seal which shall be judicially noticed;

(3) may, subject to the availability of appropriations therefor, make and perform contract and other agreements with any nongovernmental person however designated, whether within or without the United States;

(4) shall determine and prescribe the manner in which its obligations shall be incurred and its expenses allowed and paid;

(5) may employ and fix the compensation of not to exceed 25 individuals at any one time;

(6) may use the United States mail in the same manner and on the same conditions as the executive departments of the Government;

(7) may, with the consent of any board, corporation, commission, independent establishment, agency, or executive department of the Government, avail itself of the use of information, services, facilities, officers, and employees thereof in carrying out this Act;

(8) may employ experts or consultants, or organizations thereof, in accordance with section 3109 of title 5, United States Code;

(9) may accept money, property, and services of any kind by gift, devise, bequest, grant, or otherwise, and make advances, grants, and loans to any nongovernmental person, whether within or without the United States, when deemed advisable by the Institute in carrying out this Act;

(10) may sue and be sued, complain, and defend, in its corporate name any court of competent jurisdiction; and

(11) shall have such other powers as may be necessary and incident to carrying out this Act.

(b) The Institute shall establish a principal office. The Institute may establish agencies, branch offices, or other offices in any place or places within the United States or elsewhere in any of which locations the Institute may carry on all or any of its operations and business.

MISCELLANEOUS PROVISIONS

SEC. 8. (a) The Institute shall be a nonprofit corporation and shall have no capital stock. Except as provided in sections 6(c), 6(g), and 7(a)(5), no part of the income or assets of the Institute shall inure to the benefit of its directors, officers, and employees, and such income and assets shall be used solely for the carrying out this Act. No director, officer, or employee of the Institute shall in any manner directly or indirectly participate in the deliberation upon or the determination of any question affecting his or her personal interests or the interests of any corporation, partnership, or organization in which he or she is directly or indirectly interested.

(b) The Institute shall be subject to the provisions of the Government Corporation Control Act (31 U.S.C. 841 et seq.) relating to wholly owned Government corporations.

(c) Upon termination of the corporate life of the Institute all of its assets shall be liquidated and, unless otherwise provided by Congress, shall be transferred to the United States Treasury as the property of the United States.

ANNUAL REPORT

SEC. 9. The Institute shall submit to the President and the Congress each year a detailed report on its activities in carrying out this Act during the preceding year.

AUTHORIZATION OF APPROPRIATIONS

SEC. 10. There is authorized to be appropriated to the Institute to carry out this Act $5,000,000 for the fiscal year 1979. Amounts appropriated under this section are authorized to remain available until expended.●

---

By Mr. BENTSEN (for himself, Mr. CURTIS, Mr. DOLE, Mr. WALLOP, Mr. HANSEN, Mr. STONE, Mr. ZORINSKY, and Mr. McGOVERN):

S. 2895. A bill to impose quotas on the importation of beef in order to assure an adequate supply of quality beef at stable prices for the American consumer; to the Committee on Finance.

BEEF IMPORT ACT OF 1978

● Mr. BENTSEN. Mr. President, I am today introducing legislation to amend the Meat Import Act in order to add stability to the domestic cattle market and assure the U.S. consumer high quality beef at reasonable prices. My proposal has been formulated as a result of extensive testimony received at the January 27 Senate Finance Committee hearings on this issue.

Under present law, beef imports are increased as domestic cattle production increases and beef imports are decreased as domestic production decreases. This is a completely counterproductive approach which contributes to an extremely unstable cattle market with consumers periodically paying very high beef prices. The existing formula is detrimental to both cattlemen and consumers.

My bill will reverse the boom and bust cycle in the cattle industry by allowing increased imports during periods of high prices and reducing imports during periods of depressed prices. This countercyclical control of imports will add stability to cattle prices and will help prevent inflationary beef prices during periods of domestic beef shortages.

I do not believe that anyone can question the fact that the domestic beef industry as a whole has been seriously hurt in the past several years. Imported frozen boneless beef has been allowed to capture 15 to 20 percent of the total U.S. processed beef supply during a period of chronic liquidation in our domestic market. This is not fair to our domestic producers and it is not fair to our consumers who will pay for the chronic liquidation of our U.S. cattle in skyrocketing prices in future months.

We must reduce the historical cyclical fluctuations in cattle production and prices. A countercyclical formula will stabilize profits to ranchers at levels that are reasonable for consumers. In particular, this approach will help moderate beef prices for the American housewife at times of domestic beef shortages.

Mr. President, even a small increase in imports can have a very negative effect on cattlemen during periods of overproduction. This is particularly true for smaller cattlemen. Added stability in the cattle industry would be particularly beneficial to smaller, family-owned farms and ranches, which are less able to withstand the upswings and downswings of the cattle cycle than larger corporate operations with ready access to financial markets. Many cattlemen have been caught in a cost-price squeeze and have been victimized by serious drought. This has led to bankruptcy for smaller ranchers.

Added stability in the cattle sector would provide an economic climate to encourage investment in cost-reducing technology, improvements in productivity, better breeding stock, pasture improvements, better machinery and equipment, and better veterinary programs.

Under this legislation, all forms of beef and veal would be subject to a countercyclical beef import formula which is based on per capita supplies of domestic cow beef. The new quotas would be computed as follows:

A×B/C=New Proposed Quota.

A=Adjusted Base Quota as calculated under the 1964 Meat Import Law.

B=Base period average. This is a ten-year moving average of per capita domestic commercial cow beef production. The base period is the 10 years prior to the year under consideration.

C=Average of two-year per capita supply of commercial cow production. It includes the year previous to and an estimate of the year under consideration.

This formula is adjusted to increase the protection of our domestic cattle market during periods of extreme distress.

The legislation also modifies the Presidential authority to suspend quotas under existing law and will prevent disproportionate shipments of imports into any one port.

Mr. President, I urge Congress to enact this legislation, and I ask unanimous consent that a factsheet summarizing the bill be printed in the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

FACT SHEET—BEEF IMPORT ACT OF 1978

1. Countercyclical formula—Beef imports will increase during periods of domestic shortage and decrease during periods of domestic overproduction. This will help stabilize the cattle market and prevent sharp upswings in consumer prices.

This will be achieved by adjusting the quota in the 1964 Meat Import Act according to per capita domestic commercial cow beef production. The existing quota would be multiplied by a new fraction. The numerator is a ten year average of per capita domestic commercial cow beef production for the ten years prior to the year in consideration. The denominator is the average of two-year per capita supply of commercial cow production. The denominator includes the year previous to and an estimate of the year under consideration.

In addition, during periods of severe overproduction (when the new fraction is .8 or less), imports will be restricted to 2 percent of domestic production.

2. Including all forms of beef—In order to close a loophole in existing law, processed beef and veal will be subject to the quota as well as fresh, chilled and frozen beef and veal.

3. Quarterly Limitations—Quotas will be computed on a quarterly basis in order to be more responsive to the domestic cattle cycle. (Under existing law, computations are made on an annual basis.)

4. Modification of Presidential Authority to Suspend Quotas—Existing law will be modified to make sure that quotas will not be suspended except during periods of real National emergencies or disasters.

5. Port of Entry—The President will be given authority to prevent disproportionate shipments or imports into any one port.●

Mr. DOLE. Mr. President, the American livestock industry is unique among other commodities in that there is a law on the books dealing with the amount of fresh, chilled and frozen meat that is imported, known as the Meat Import Quota Act. This law passed in 1964. The purpose of this unique law is not only to provide a degree of reasonable protection for the domestic livestock industry, but also provides guaranteed access to the United States on the part of exporting nations.

BENEFITS TO CONSUMER AND FARMER

In the past 2 years it has become obvious that a rather major flaw exists in this legislation which needs correction, along with several clarifying amendments, in order to make the law more equitable and workable. Currently, the law provides that when the supply of meat is plentiful and prices

low to consumers, that this will allow an increased amount of meat imports, adding to the supply and further lowering prices.

This situation has financially ruined many farmers in recent years. The provisions of the bill I cosponsor today with the distinguished Senator from Texas (Mr. BENTSEN) would change that quota formula to allow more meat imports in times of short supply, thereby stabilizing the tendency toward higher prices to the benefit of the consumer, and reduce meat imports in times of ample supply to prevent the disastrous drops in prices which disrupted our meat production. The bill, therefore, benefits both consumers and producers, and still allows cooperating nations ready access to sell meat to the United States.

In addition to this major provision, the bill contains the following provisions:

The bill will broaden the types of meat imported to include prepared, preserved, cooked, canned, and cured beef and veal, to eliminate similar supply and pricing disparities in these types of meat.

The bill provides quarterly limitations based on annual estimates on imports to assure a continuous supply of meat year around instead of seasonal peaks and valleys we have seen in the past.

The bill clarifies the authority of the President to invoke or suspend quotas, as in the past we have seen hesitancy by the administration to act due to the ambiguity of the present law.

The bill provides authority to prevent disproportionate shipments of imports through any one port of entry (generally) and/or specified ports of entry. This clarifies the situation brought about several years ago by transshipments of meat through Puerto Rico.

Mr. President, I want to emphasize that considerable thought has gone into the drafting of this legislation. I introduced an earlier bill, S. 2492, which contains the change in quota system, but this legislation has been refined following hearings by the Senate Finance Committee and this is definitely an improved bill.

It enjoys the support of the major producer organizations in the Nation and deserves the support of all Senators, because of its sincere approach to providing a more stable, adequate, reasonably priced supply of meat in the future.

Mr. President, I ask unanimous consent that a short history of the Meat Import Quota Act of 1964 be printed in the RECORD at this point, together with Executive Order No. 11539, delegating certain authorities under the act to the Secretary of State, Secretary of Agriculture, and the special trade representative. Both documents provide valuable background information for the proper consideration of this legislation.

There being no objection, the documents were ordered to be printed in the RECORD, as follows:

HISTORY OF THE MEAT IMPORT LAW (PUBLIC LAW 88-482) AND PROGRAM FOR 1977

Following a ten-year rise in imports and a sharp decline in U.S. cattle prices, Congress passed an Act on August 22, 1964 (PL 88-482), herein-after referred to as "the Law" to maintain control over the growth of imports so as not to place undue stress on domestic cattle prices. Under the Law, imports of fresh, chilled or frozen beef, veal, mutton and goat meats are allowed to grow, from a base of 725.4 million pounds, at the same rate as domestic commercial production of these meats in the 1959-63 base period compared to the most recent three-year average (including an estimate of production in that year). A 10 percent overage is allowed, so that only when imports are expected to exceed the adjusted base quota level by 10 percent are those quotas triggered. Each year the Secretary of Agriculture is required to publish in the Federal Register the estimated quantity that would trigger the imposition of quotas under the Law, and quarterly, the quantity of meat that, but for the Law, would enter the United States in such calendar year.

If the Secretary's estimate of imports exceeds the trigger level, the President is required by law to invoke quotas on imports of meats subject to the law. Quotas may be suspended or the total quantity increased if the President determines and proclaims that,

"(1) such action is required by overriding economic or national security interests of the United States, giving special weight to the importance to the nation of the economic well-being of the domestic livestock industry;

"(2) the supply of articles of the kind described . . . will be inadequate to meet domestic demand at reasonable prices; or

"(3) trade agreements entered into after the date of the enactment of this Act ensure that policy set forth will be carried out."

In the first three years after the Law was passed, imports were below the trigger point for quota imposition. But by mid-1968 it was apparent that the year's imports would exceed the trigger quantity, and in August Australia and New Zealand were asked to restrain shipments voluntarily in order to avoid quotas. The other 11 supplying countries (eligible because they also were certified to be free of foot-and-mouth disease and met U.S. meat inspection standards) were asked to hold to shipments already scheduled. Imports in 1968 were above the quota level but below the trigger point.

For 1969 all supplying countries, except Canada and the United Kingdom, agreed to a restraint level below the trigger quantity. The program worked fairly well, although imports exceeded the restraint level somewhat and imports from one country—Honduras—has to be embargoed. The authority to negotiate "voluntary" agreements and restrict imports to the agreed quantity is provided by Section 204 of the Agricultural Act of 1956.

For 1970 a restraint program was negotiated with a target below the trigger point as was the case in previous restraint programs. Imports were extremely heavy, however, and at mid-year two actions were taken:

(1) The President proclaimed and then suspended quotas, and a new restraint level was authorized at a higher level than the trigger quantity, and (2) Section 204 was used to embargo transshipments through Canada, thus closing a serious loophole in the program. Section 204 also was used to hold five supplying countries to their restraint agreements.

For 1971 the restraint program continued at the level established in late 1970. This was higher than the trigger quantity for 1971 and required Presidential action to proclaim and suspend quotas as was done the year before. Actual 1971 imports were 48 million pounds below the restraint level, largely because of U.S. dock strikes.

For 1972 a restraint program 7 percent higher than the 1971 program was agreed to by the principal supplying countries. At mid-year the voluntary restraint program was suspended by the President in order to encourage greater shipments of beef to the United States at a time when retail prices were high and other major importing countries had removed import duties and levies or issued larger quotas to compete for limited world supplies.

Quotas under the Law were invoked by the President in both 1973 and 1974 but simultaneously suspended because of overriding economic interests. As the year 1974 progressed, domestic cattle slaughter increased significantly with a large part of the increase coming from greater slaughter of culled cows and non-fed steers and heifers. Imported beef competes principally with this type of domestic production. As a consequence of this larger domestic production, prices for manufacturing grade beef fell and imports slowed so that by year's end they were below the point which would permit the imposition of quotas:

In 1975 and 1976 the Department of State negotiated programs of export restraint with supplying countries to keep imports below the trigger level. In 1976, larger than anticipated imports from Canada who was not a participant in the voluntary restraint program caused the Secretary of Agriculture to estimate in October that imports would exceed the trigger level.

This estimate caused the President to invoke formal quotas under the Meat Import Law. The Secretary of Agriculture in setting the individual country allocations took into consideration the voluntary restraint program that had been previously negotiated with 11 of the 15 supplying countries.

For 1977, a similar program of voluntary restraints is in place. Imports from Canada who has not formally participated in earlier programs will be covered by the 1977 arrangements and entries of meats processed in foreign-trade zones, trust territories, or possessions after January 1, 1977 will be counted against the individual country limitations.

*Actual imports subject to meat import law of 1964*

DELEGATIONS OF AUTHORITY TO NEGOTIATE AGREEMENTS AND ISSUE REGULATIONS LIMITING IMPORTS OF CERTAIN MEATS

By virtue of the authority vested in me by section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854), and section 301 of title 3 of the United States Code, and as President of the United States, it is ordered as follows:

SECTION 1. The Secretary of State, with the concurrence of the Secretary of Agriculture and the Special Representative for Trade Negotiations, is authorized to negotiate bilateral agreements with representatives of governments of foreign countries limiting the export from the respective countries and the importation into the United States of fresh, chilled, or frozen cattle meat (item 106.10 of the Tariff Schedules of the United States) and fresh, chilled, or frozen meat of goats and sheep, except lambs (item 106.20 of the Tariff Schedules of the United States) which are the products of such countries.

SEC. 2. The Secretary of Agriculture, with the concurrence of the Secretary of State and the Special Representative for Trade Negotiations, is authorized to issue regulations governing the entry or withdrawal from warehouse for consumption in the United States of any such meats to carry out any such agreement.

SEC. 3. The Commissioner of Customs shall take such actions and supply such information to the Secretary of Agriculture with respect to entry or withdrawal from warehouse for consumption in the United States of such meats as the Secretary of Agriculture, with the concurrence of the Secretary of State and the Special Representative for Trade Negotiations, may request to carry out any such agreements or regulations.

SEC. 4. Heads of departments and heads of agencies are hereby authorized to redelegate within their respective departments or agencies the functions herein assigned to them, except that the function of negotiating agreements delegated to the Secretary of State by section 1 and the function of issuing regulations delegated to the Secretary of Agriculture by section 2 of this order may be redelegated only to officials required to be appointed by and with the advice and consent of the Senate, as provided by 3 U.S.C. 301.

RICHARD NIXON.

THE WHITE HOUSE, *June 30, 1970.*

[F.R. Doc. 70-8539; Filed, July 1, 1970; 11:23 a.m.]

By Mr. LONG (by request):

S. 2897. A bill to amend the Federal Railroad Safety Act of 1970 to provide the Secretary of Transportation a longer period within which to assess civil penalties for certain violations, to extend authorizations of appropriations for fiscal year 1979 and 1980 for the rail safety program, and for other purposes; to the Committee on Commerce, Science, and Transportation.

S. 2898. A bill to amend the Federal Railroad Safety Act of 1970 to authorize additional appropriations, and for other purposes; to the Committee on Commerce, Science, and Transportation.

FEDERAL RAILROAD SAFETY ACT

● Mr. LONG. Mr. President, I am introducing today, two bills providing for authorization of appropriations under the Federal Railroad Safety Act of 1970, for fiscal year 1979. One bill is being introduced, by request, for the Department of Transportation and provides for extensions of authorization in the amount of $35 million under the Federal Railroad Safety Act of 1970, for fiscal years 1979 and 1980. In addition, the Department's bill coordinates activities between State and Federal inspectors by permitting State agencies to enforce safety rules in U.S. district courts under certain circumstances. The Department's bill also makes it clear that the Federal Tort Claims Act does apply to the outside, contract employees who operate sophisticated automated rail inspection vehicles. Finally, the Department's bill makes it clear the Hours of Service Act is to apply to any common carrier engaged in interstate or foreign commerce by railroad, relieving the Federal railroad inspectors from having to prove, in each case in which a violation is processed, that one or two cars on that train were in fact moving in interstate commerce.

The other bill I am introducing at the request of railway labor. It is a combination bill containing the authorization for fiscal year 1979 for the Federal Railroad Safety Act, as well as a number of suggested rail safety amendments.

The first portion of this bill authorizes the sum of $37,725,000 for FRA's budget for fiscal year 1979 broken down as follows:

First, for the Office of Safety, 600 safety inspectors (including 100 track inspectors and 45 signal and train control inspectors) and 125 clerical personnel not to exceed $20,725. Such funds shall be available for travel expenses of safety inspectors for not less than 20 days per month.

Second, $3,500,000 is authorized for the State program under the Rail Safety Act which is the same amount as has been authorized in previous years.

Third, $3,500,000 for salaries and expenses not otherwise provided for, which is the same as authorized in prior years.

Fourth, $10 million for conducting safety research and development activities.

There are limitations on funding contained in the proposed bill requiring that at least 50 percent of the funds for railroad research and development shall be for safety research, improved track inspection and data acquisition technology, improved rail freight service, and improved passenger systems. In addition, funds for any railroad research and development program shall not exceed the funds allotted for railroad safety research.

The bill also clears up confusion created by two opposite court decisions in defining the term "designated terminal" under the Hours of Service Act. Designated terminal is defined as the home terminal and the away from home terminal for the assignment of a particular crew. In addition, the hours of service for a railroad worker is reduced to 10 hours per day starting 2 years from the effective date of this law.

Section 6 of the bill limits the length of a freight train to 4,300 feet, exclusive of the caboose. Studies have shown that the length of the train has direct correlation between accidents and efficiency. At present, the average length of a freight car is approximately 56½ feet, which would mean that a train could contain up to 75 cars. At present, the average number of cars in a train is 67.

Section 7 is designed to protect a railroad employee who is discharged, harassed, or discriminated against where he notifies the Secretary of an alleged violation or danger; has filed or instituted any proceeding resulting from any alleged violations of the safety laws; has testified in any safety proceeding; has refused to operate defective equipment or refused to work in an area or surroundings where he reasonably believes there is present an imminent danger to his safety and health.

The final section creates an Office of Occupational Safety and Health to administer the occupational safety and health functions of the FRA. The sum of $9 million for salaries and expenses for up to 200 inspectors, and 40 clerical personnel are authorized. In addition, funds shall be available for travel expenses for such inspectors for not less than 20 days per month.

Mr. President, I take no position at this time on the merits of either of these two bills. They are being introduced in order to get them before the Committee on Commerce, Science, and Transportation in connection with our Surface Transportation Subcommittee hearings on April 21, 1978, on railroad safety.●

---

By Mr. CULVER (for himself, Mr. BAKER, Mr. RANDOLPH, Mr. WALLOP, Mr. GRAVEL, and Mr. HODGES):

S. 2899. A bill to amend the Endangered Species Act of 1973 to establish an Endangered Species Interagency Committee to review certain actions to determine whether exemptions from certain requirements of that act should be granted for such actions; to the Committee on Environment and Public Works.

ENDANGERED SPECIES ACT AMENDMENTS OF 1978

● Mr. CULVER. Mr. President, the authorization for the Endangered Species Act of 1973 expires at the end of fiscal year 1978 and reauthorization legislation must be reported by the Committee on Environment and Public Works by May 15. Accordingly the Subcommittee on Resource Protection has scheduled hearings for this Thursday and Friday to consider the need for extending this program.

There is another matter which the subcommittee should address during these hearings—whether flexibility should be added to section 7 of the act. Section 7 requires each Federal agency to assure that it neither conducts nor assists any action which adversely affects an endangered or threatened species or habitat that is critical to the existence of such species. Over the last year this provision has come under considerable public discussion as construction of at least one major project—the Tellico Dam in Tennessee—has been stopped because of a conflict with the act.

In order to provide a vehicle for these discussions, I am cosponsoring today with Senator RANDOLPH, Senator BAKER, and other colleagues from the Committee on Environment and Public Works an amendment to the 1973 act which would designate a mechanism whereby such conflicts could be resolved. Our amendment would set up a seven-member Endangered Species Interagency Board composed of the Secretaries of the Interior, Agriculture, the Army, Transportation, the Administrator of the Environmental Protection Agency, and the Chairman of the Council on Environmental Quality, and the Secretary of the Smithsonian. When a Federal agency believes it has a conflict with the act which cannot be resolved through consultation with the Fish and Wildlife Service (FWS) under provisions of section 7, it would petition the Board for relief. The FWS would have 30 days to respond to this petition. After reviewing the petition and providing an opportunity for a formal public hearing, the Board would decide whether the project should be permitted to proceed as planned with modifications or terminated.

In order to exempt an activity from the requirements of the Endangered Species Act, five of the seven agency heads under this provision would have to

determine: First, that the project is of regional or natural significance; second, that there is no reasonable or prudent alternative; and third, that the benefit of completing the project clearly outweighs the benefits of conserving the species. In addition, the Board must have the assurance that the project agency has taken all reasonable steps to mitigate damage to the species and its habitat.

Mr. President, the assumption behind this proposal is that the interagency consultation process developed by the Fish and Wildlife Service and the National Marine Fisheries Service should remain strong and that it will, in the vast majority of cases, be successful in resolving these conflicts. In those few instances where consultation cannot resolve the problems, however, I believe that this proposal provides a reasonable mechanism of balance.

The amendment would also extend the authorization for appropriations for the Endangered Species Act for fiscal years 1979, 1980, and 1981 at a level of $23 million, $25 million, and $27 million for the Secretary of Interior and $2.5 million, $3 million, and $3.5 million for the Secretary of Commerce, respectively.

Mr. President, let me emphasize that this proposal is by no means cut in stone, but is merely meant to serve as a focus of discussion during this week's hearings.●

● Mr. BAKER. Mr. President, I am today cosponsoring along with a number of my colleagues a bill that reauthorizes the Endangered Species Act. This act and the protection it provides for certain species of fish, wildlife, and plants has added a very important and heretofore ignored perspective to our national conservation efforts. At the time of the act's original passage the Congress had begun to recognize the tremendous pressures which a growing society imposes on our dwindling wildlife resources. In my opinion, the Congress by approving the Endangered Species Act, expressed the intent that whenever reasonably possible in accomplishing development activities we should avoid deleterious impacts to endangered species or their critical habitats. I do not believe, however, that Congress intended that the protection or management of an endangered species should in all instances override other legitimate national goals or objectives with which they might conflict. The present interpretation of the act, however, has and will continue to lead to just such results. The bill before you today addresses this problem. I hope my colleagues will find that the provision directed at this issue is both balanced and reasonable.

This new provision is intended to provide a format for discussion of this important issue in hearings before the Senate Environment and Public Works Committee's Subcommittee on Resource Protection. These hearings will be held on April 13 and 14.

Let me briefly explain the problem being experienced under the present implementation of the act and what the proposal in our amendment does to resolve it. Under the current interpretation of the act the Fish and Wildlife Service is charged with the care and protection of an extremely broad and continually expanding number of endangered species. As part of the mandate the Service under section 7 of the act must review all Federal or federally assisted programs to assure that no deleterious impacts to endangered species or their critical habitats occur as a result of these programs. In carrying out this mandate the Service has created a consultation process designed to help other agencies seek modifications to projects and thus help avoid conflict with the act. This consultation process has, in many instances, been effective in helping Federal agencies find approaches to carrying out their developmental responsibilities in a manner that avoids destructive impacts on endangered species or their critical habitat. There are, however, instances in which a Federal activity, if it is to achieve its stated purpose, simply cannot avoid a direct impact to a species or its critical habitat. Because the objective of the Endangered Species Act and that of the other Federal program are in direct conflict, even consultation cannot resolve the impasse. The present interpretation of the law provides no flexibility to balance other legitimate national goals and priorities with the need to protect and manage a particular species. Our amendment would allow such a balancing of interests and if it is decided that the Federal activity is of more importance than the protection of a particular species, the action may proceed.

This decision on whether a particular Federal action should be exempted from the requirements of section 7 would be made by a Federal interagency committee. This committee would have the authority to examine only those Federal actions which had completed the consultation process and were still found to be in irresolvable conflict with the act.

I believe this is a useful and needed addition to the Endangered Species Act and hope that in the next few weeks as the Endangered Species Act is considered in committee it will receive constructive criticism and support. The discussions in committee should address the concept and the structure of the interagency committee and what the best criteria for resolution of conflicts under the act should be. It is only through a thorough discussion of these and other issues that the committee can design a process that fully addresses the problems that have arisen under the act. Hopefully the bill we introduce today will stimulate and provide a vehicle for these discussions.●

● Mr. RANDOLPH. Mr. President, when the Endangered Species Act was passed by Congress in 1973, it was hailed as landmark environmental legislation. It established the United States as a world leader in the international effort to bring back from the brink of extinction hundreds of unique plant and animal species.

One of the most important provisions of that statute is section 7 which requires each Federal agency to assure that it neither conducts nor assists any action which adversely affects an endangered species or its critical habitat. This provision declares a national policy that the Federal Government is committed to the conservation of these fish, wildlife, and plants and will not knowingly contribute to their demise.

Over the last year this provision has become the subject of controversy as a result of the U.S. 6th Circuit Court of Appeals opinion in Hill versus TVA. In its decision, the court enjoined TVA from completing construction of the $116 million Tellico Dam on the Little Tennessee River, because the impoundment would destroy the critical habitat of the snail darter, an endangered species of fish.

This situation has caused considerable concern among some who fear that some environmentalists, armed with section 7, will be able to literally shut down Federal construction programs by finding a remote species of mussel, snail, or fish at any project site.

This appears to be an over-reaction based on information developed during oversight hearings on the act by the Environment and Public Works Subcommittee on Resource Protection last July. I feel that section 7 as presently drafted may be too inflexible. Conflicts between the Endangered Species Act and Federal activities should be resolved in favor of the species when possible. There may be, however, instances where the project is of such national importance that it should be permitted to continue.

This bill would provide needed flexibility for the endangered species law by enacting an exemption mechanism allowing a balancing judgment where conflicts develop between two Federal objectives. I stress that this is not a final proposal. It is an important step in resolving problems which have arisen. Committee members will seek a broad public discussion of the provisions contained in this measure. However, as a concept it is a reasonable approach which will serve as a well reasoned basis for further consideration.●

● Mr. WALLOP. Mr. President, I would like to add some remarks to those of my distinguished colleagues about the amendment to the Endangered Species Act which I am cosponsoring today.

My office and a number of other offices have recently received many letters from constituents who truly want to protect wildlife, especially endangered or threatened species, and who are asking me to fight any amendments to the Endangered Species Act. In the past I have asked them if they want me to fight any amendments which might strengthen the act, which usually draws a surprised look. I do not mean to be facetious, but what I would like to do is ask everyone concerned about this important conservation law to consider the merits of this particular approach. I personally believe that it is a carefully thought out and sensitive solution to a problem we should recognize and deal with positively. There are those who will say it is too tough an amendment, and who may attempt to weaken it. I would prefer to fight for the present law than weaken it as some have suggested. While this amendment may not be perfect, I do believe it offers a reasonable vehicle for discussion, and I for one will be willing to consider other strong alternatives which address some of the problems we are facing but do not gut the act.

I am proud to be from a State where abundant wildlife is one of our finest and most cherished treasures. Few States in our union contain the diversity of wild animals which Wyoming boasts, from the delicate trumpeter swan to the wide-roaming grizzly bear. I have the deepest respect and appreciation for every creature, for we share this earth and a common quality of life. Every species, be it a snail darter, woundfin, whooping crane, or grizzly bear, is important in the chain of life and an indicator of the health of our planet. What former National Park Service Director George Hartzog said of our national parks can be easily applied to our wildlife; the species of this world, like our parks, are comparable to the canary in the miner's cap; a stilled voice signaling the presence of death in the mine shaft air. Wildlife are our early warning system. The pressures on them are the same pressures that threaten our overall environment. Species perform essential biological services to maintain a balance of nature in the total environment, and enhance the esthetic and scientific world as well. We are obliged to preserve them and their habitats or we will in short order lose more than we can afford.

The Endangered Species Act of 1973 went beyond the acts of 1966 and 1969 to provide the kind of management tools needed to act early enough to save vanishing species. One of its most important provisions directed Federal agencies to consult with the U.S. Fish and Wildlife Service whenever a major Federal action might threaten any endangered or threatened species or its critical habitat. Because the U.S. Fish and Wildlife Service has worked hard to insure compliance, and because most agencies have cooperated in the full spirit of the law, we have been able to modify projects in many ways and proceed with orderly development and preservation of species. Everyone who has worked to fulfill the law should be commended. For consultation is the key to early detection of wildlife-project conflicts, and with cooperation and consultation in the future we can hopefully learn to avoid future project-species conflicts like the one at Tellico Dam. In the meantime the Resources Protection Subcommittee of the Senate Environment and Public Works Committee is considering other ways to address this problem. At present we are considering a bill which will enable States to inventory elements of natural diversity in the natural world in a comprehensive fashion. This information on wildlife habitat and other biological features should enable Federal and State Government, communities, and private interests to identify and plan for significant wildlife habitats and other elements of the natural world in a way not now possible in many States. I hope the committee can address this legislation shortly.

The Endangered Species Act is a strong law, but because it is so strong it is ripe for attack and, unfortunately, for misuse. To my mind the greatest threat to it all along has not been that it so strongly supports wildlife over every other national priority, but that its provisions can be used by well-intentioned individuals to stop Federal projects as a primary goal and in a way never intended by Congress. The potential for abuse of the law exists, and that potential has aroused considerable consternation in Congress and elsewhere. In order to understand the problem, one must understand the complexity of speciation to some extent. While I am no expert on the topic, I was most interested to hear some of the country's finest scientific experts discuss speciation during oversight hearings on this law last year. Speciation is a complex issue over which even the finest minds disagree. However, one fact which seems clear is that species and their subspecies (which the act protects) exist by the millions the world over. We have barely begun to identify all species, and species and subspecies appear and disappear naturally constantly. Extinction, like the appearance of new species, is a normal life process; man has unfortunately accelerated it to a dangerous and irresponsible level.

However, the terms of the Endangered Species Act provide that no Federal agency may take any action which would adversely impact an endangered species or its habitat. With new species unique to a particular locality coming and going naturally all the time, this is a considerable mandate. What it provides is a good opportunity for an individual or group opposed to a particular Federal project to find one of those millions of species and have its critical habitat protected not for the sake of the species, but to prevent the project. Certainly discovering an endangered species is not the easiest thing to do, but it is very possible that a good scientist with enough desire may be able to find an endangered species or subspecies on the vast areas often impacted by a Federal project. I do not deny many of the projects are poor, and probably should not be constructed. However, I do say that the temptation to misuse the Endangered Species Act to stop them remains great.

Major projects throughout this Nation already are being affected by this law. Environmental advocates feel that the stringent provisions of section 7 will force agencies to find a way to modify the projects, and any balancing mechanism will provide a "chink in the armor" of the act and a way for agencies to maneuver for their projects to the possible detriment of species. However, I think we are being blind if we do not recognize the number of potentially irresolveable project-species conflicts which will probably greet Congress in the near future. It seems inevitable to me that congressionally authorized projects undertaken in the name of national and regional interests must and will be stopped by the Endangered Species Act. One example I have seen is the proposed listing of the Virgin River in southern Utah as critical habitat for a fish called the woundfin. This listing could well stop the proposed LaVerkin Springs desalter and one other desalinization project in the Colorado River Basin, designed to implement salinity levels mandated by the Water Pollution Act of 1972. I am not familiar enough with the merits of the LaVerkin Springs plan or the entire salinity control project to judge its merits, and there may be better ways to control salinity. However, this is one example which points out the possibility of having two national goals in conflict.

The Endangered Species Act makes Congress the final arbiter in such cases. I submit that Members of Congress have neither the time nor the expertise to resolve many of these issues. If we do not consider other ways to address this problem which will inevitably arise, I fear that we may lose the entire act and the protection for species and their habitats. I suspect there are indeed Members of Congress who would like to permit development to the detriment of species, who might want to "gut" the act in order to permit other national goals to proceed. By taking this initiative and proposing a stringent examination process in clear cases of project-species conflict, I believe we can keep the teeth in the law and provide a fair arena for flexibility when confronted by no other alternatives.

This amendment, as has been described, creates an Endangered Species Commission of the secretaries from seven agencies. Those agencies have been carefully chosen and include the Departments of Agriculture, Interior, Transportation, along with the Council on Environmental Quality, the Environmental Protection Agency, Smithsonian Institution, and Army. Federal agency heads would be allowed to petition the Commission for exemptions from the act for projects. If the Commission found that the consultation process has occurred and an irresolvable conflict exists, it may grant a project exemption if it determines that there is no reasonable and prudent alternative to such action, and the benefits of such action clearly outweigh the benefits of conserving the species. The exemption would have to be approved by a vote of five or more agencies.

I have agreed to cosponsor this proposal, because I believe we need to act now to avert a wave of future amendments designed to weaken the act and which are not carefully thought out. This is a tough amendment, with tough criteria for any exemption. I am not inflexible in this matter, and hope everyone will recognize this proposal as only a vehicle for discussion and not an ironclad solution impossible to change. If others can suggest better ways to solve the problems we will encounter with this law, I will study them carefully. As I have noted before, the Endangered Species Act is one of this Nation's finest conservation laws, but only if we manage it sensibly, guard it from misuse, and let biological facts and reason guide our perspective.●

---

By Mr. MUSKIE (for himself, Mr. STAFFORD, and Mr. CHAFEE):

S. 2900. A bill to provide for compensation for damages and clean-up costs caused by discharges of oil and hazardous substances, to establish a liability fund, and for other purposes; to the Committee on Environment and Public Works.

OIL SPILL LIABILITY FUND AND COMPENSATION ACT OF 1978

● Mr. MUSKIE. Mr. President, the Subcommittee on Environmental Pollution has scheduled hearings on April 17 and 18 to consider pending legislation to establish a comprehensive oil spill liability regime. The House of Representatives and the Senate Commerce Committee, with whom we share some jurisdiction on this matter, have already completed action on this legislation. It is the intent of the Environment and Public Works Committee now to complete the process so that final action can be taken.

In reviewing the "superfund" legislation, we want to take a concentrated look at four questions. First, should Federal law preempt tougher State laws? Second, should the legislation address the problem of hazardous spills in a way similar to our approach in the Clean Water Act? Third, what is the appropriate level of liability for oil spills, and what defenses should be available to the party responsible for the spill? And fourth, what incentives does the bill contain for tanker and oil handling facility operators to adopt tough measures to guard against oil spills?

The *Amoco Cadiz* disaster off the coast of Brittany has brought home to the world the frightening dangers of oil spills, especially from huge oil-carrying vessels. In addition, the Law of the Sea Conference has a mandate to address ocean pollution at its conference now underway in Geneva.

So it is an especially appropriate time for the Congress to review our sometimes confusing oil spill legislation, to establish a consistent policy which offers real protection for the American coastline and the people who live along it.

In order to have the full range of issues associated with the "superfund" legislation before us, I am today introducing a bill which is in some respects similar to the bills already pending before the Senate Environment and Public Works Committee. However, there are a few areas of significant difference which I would like to touch on briefly.

This bill is a major streamlining of other pending legislation in that it builds around an existing body of law, section 311 of the Clean Water Act which has been tested in the courts. It does not propose any radical changes in the existing statutory structures. Instead, it fills the gaps, makes uniform the liability structure, and streamlines procedures.

This bill includes spills of hazardous substances in addition to oil as part of the comprehensive liability schemes. Some will argue that it is not appropriate to include hazardous substances in the "superfund" structure since there will be no fee imposed for contribution to the fund. However, more than half the designated hazardous substances are petroleum-based products, thereby making the oil fee-based fund a legitimate source for liability coverage for hazardous materials. Further, the penalties assessed for spills of nonremovable hazardous substances will be deposited in the fund and will more than cover any costs associated with hazardous materials spills.

Certainly spills of chemical substances can be as damaging, if not more so, than spills of oil. And because, in most cases, such spills are impossible to clean up, the potential for damages is significantly increased. It is essential that this aspect of pollution be included within this comprehensive scheme to assure full protection of our natural resources.

This bill restricts the available defenses to liability to assure that only spills caused solely by an act of God, act of war, third party negligence, or U.S. Government negligence would relieve the spiller of liability. In the other measures pending before the committee, the spiller can avoid liability by showing that the spill was caused primarily by these other actions, thereby opening up a gaping and litigable loophole.

In the area of relationship to State law, this bill deals with the preemption issue in what I believe is a defensible way. Certain States rights are preserved while the multiplicity of State funds is reduced.

In most other areas, this bill is substantially similar to those already reviewed by the House and Senate.

Mr. President, I ask unanimous consent that an outline and the text of this bill be included in the RECORD.

There being no objection, the bill and analysis were ordered to be printed in the RECORD, as follows:

S. 2900

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this bill may be cited as the "Oil Spill Liability Fund and Compensation Act of 1978".

DEFINITIONS

SEC. 2. For the purposes of this Act—

(1) the terms "oil", "discharge", "vessel", "public vessel", "United States", "owner or operator", "remove" or "removal", "contiguous zone", "onshore facility", "offshore facility", "barrel", and "hazardous substance" shall have the meaning provided in section 311(a) of the Federal Water Pollution Control Act;

(2) the terms "State", "person", "navigable waters", and "territorial seas" shall have the meaning provided in section 502 of the Federal Water Pollution Control Act;

(3) the term "act of God" means an unanticipated grave natural disaster or other natural phenomenon of an exceptional, inevitable, and irresistable character the effects of which could not have been prevented or avoided by the exercise of due care or foresight;

(4) the term "claim" means a request, made in writing for a sum certain, for compensatiton for damages or removal costs resulting from a discharge of oil or a hazardous substance;

(5) the term "claimant" means any person who presents a claim for compensation under this Act;

(6) the term "damages" means damages for economic loss or the loss of natural resources as specified in section 3(a)(2) of this Act;

(7) the term "Fund" means the Oil Spill Liability Fund established under section 4.

(8) the term "guarantor" means any person, other than the owner or operator, who provides evidence of financial responsibility for an owner or operator under this Act or section 311(p) of the Federal Water Pollution Control Act;

(9) the term "refinery" means a terminal which receives oil for the purpose of refinement; and

(10) the term "terminal" means any permanently situated onshore or offshore facility which receives oil in bulk directly from any vessel, offshore production facility, offshore port facility, or any pipeline including the pipeline constructed under the Trans-Alaska Pipeline Authorization Act.

LIABILITY FOR DAMAGES AND REMOVAL COSTS

SEC. 3. (a) Except where an owner or operator of a vessel or an onshore or offshore facility can prove that a discharge was caused solely by (i) an act of God, (ii) an act of war, (iii) negligence on the part of the United States Government, or (iv) an act or omission of a third party without regard to whether any such act or omission was or was not negligent, and notwithstanding any other provision or rule of law, such owner or operator of a vessel or an onshore or offshore facility from which oil or a hazardous substance is discharged in violation of section 311(b)(3) of the Federal Water Pollution Control Act shall be jointly, severally, and strictly liable for—

(1)(A) all costs of removal incurred by the United States Government or a State under subsections (c), (d), (e), (b)(2)(B)(v), or (f)(4) of section 311 of the Federal Water Pollution Control Act or under the Intervention on the High Seas Act or section 18 of the Deepwater Port Act of 1974, and

(B) any other costs or expenses incurred by any person to remove oil or a hazardous substance as the terms "remove" or "removal" are defined in section 311(a)(8) of the Federal Water Pollution Control Act; and

(2) all damages for economic loss or loss of natural resources resulting from such a discharge, including:

(A) any injury to, destruction of, or loss of any real or personal property;

(B) any loss of use of real or personal property;

(C) any injury to, destruction of, or loss of natural resources;

(D) any loss of use of any natural resources, without regard to the ownership or management of such resources;

(E) any loss of income or profits or impairment of earning capacity resulting from injury to or destruction of real or personal property or natural resources, without regard to the ownership of such property or resources; and

(F) any direct or indirect loss of tax, royalty, rental, or net profits share revenue by the Federal Government or any State or political subdivision thereof, for a period of not to exceed one year.

(b) In the case of an injury to, destruction of, or loss of natural resources under subsection (a)(2)(C) of this section, liability shall be to the United States Government and to any State for natural resources within the State or belonging to, managed by, controlled by, or appertaining to such State. The President, or the authorized representative of any State, shall act on behalf of the public as trustee of such natural resources to recover for such damages. Sums shall be available for use to restore, rehabilitate, or acquire the equivalent of such natural resources by the appropriate agencies of the Federal Government or the State government, but the measure of such damages shall not be limited by the sums which can be used to restore or replace such resources.

(c)(1) The liability of an owner or operator of a vessel or an onshore or offshore facility for damages and removal costs under this section, and inclusive of the limits of liability established under section 311(a) of the Federal Water Pollution Control Act, for each discharge or incident shall not exceed—

(A) $300 per gross ton or $500,000, whichever is greater, of any vessel carrying oil or hazardous substances in bulk as cargo;

(B) $300 per gross ton of any other vessel;

(C) the total of all costs of removal under subsection (a)(1) of this section plus $50,000,000 for any offshore facility operated under the authority of or subject to the Outer Continental Shelf Lands Act;

(D) $50,000,000 for any deepwater port subject to the Deepwater Port Act of 1974 (including any vessel moored at such port, in any case where $50,000,000 exceeds $300 per gross ton of such vessel); or

(E) $50,000,000 for any other onshore or offshore facility.

(2) Notwithstanding the limitations of paragraph (1) of this subsection, the liability of the owner or operator of a vessel or an onshore or offshore facility under subsection (a) of this section shall be the full and total damages and removal costs not offset by any removal costs incurred on benalf of such owner or operator, if (A) the discharge of oil or a hazardous substance was the result of willful misconduct or gross negligence within the privity and knowledge of the owner or operator or of a gross or willful violation (within the privity and knowledge of the owner or operator) of applicable safety, construction, or operating standards or regulations; or (B) the owner or operator fails or refuses to provide all reasonable cooperation and assistance requested by a responsible official in connection with removal activities under the contingency plan established under section 311(c) of the Federal Water Pollution Control Act.

(d) In any case where the owner or operator of a vessel or an onshore or offshore facility can prove that a discharge was caused solely by an act or omission of a third party (or solely by such an act or omission in combination with an act of God, an act of war, or negligence on the part of the United States Government), such third party shall be liable under this section as if such third party were the owner or operator of the vessel or onshore or offshore facility from which the discharge actually occurred.

(e) The President is authorized to establish by regulation, with respect to any class or category of onshore or offshore facility subject to subsection (c)(1)(E) of this section, a maximum limit of liability under this section of less than $50,000,000 but not less than $8,000,000.

LIABILITY FUND ESTABLISHMENT

SEC. 4. (a) There is hereby established in the Treasury of the United States an Oil Spill Liability Fund, not to exceed $200,000,000, except that such limitation shall be increased to the extent necessary to permit any moneys recovered or collected which are referred to in subsection (b) (2) and (3) of this section being paid into such Fund. The fund shall be administered by the President and the Secretary of the Treasury, as specified in this section. The Fund may sue and be sued in its own name.

(b) The Fund shall be constituted from—

(1) all fees collected pursuant to subsection (c);

(2) all moneys recovered on behalf of the Fund under section 5;

(3) all moneys recovered or collected under section 311(b)(2)(B) of the Federal Water Pollution Control Act.

(c)(1) The Secretary of the Treasury shall collect from the owners of refineries receiving crude oil, and from the owners of terminals receiving any oil for export from or entry into the United States whether for import or transfer to a foreign country, a fee, not to exceed three cents per barrel of oil received. Oil upon which a fee has been levied under this paragraph shall not be subject to subsequent levy hereunder.

(2) The Secretary of the Treasury, after consulting with appropriate Federal agencies, may promulgate rules and regulations relating to the collection of the fees authorized by paragraph (1) and, from time to time, the modification thereof. Modifications shall become effective on the date specified therein, but no earlier than the ninetieth day following the date the modifying regulation is published in the Federal Register. Any modification of the fee shall be designed to assure that the Fund is maintained at a level not less than $150,000,000 and not more than $200,000,000. No regulation that modifies fees, nor any modification of such a regulation, whether or not in effect, may be stayed by any court pending completion of judicial review of that regulation or modification.

(3)(A) Any person who fails to collect or pay fees as required by the regulations promulgated under paragraph (2) shall be liable for a civil penalty not to exceed $10,000, to be assessed by the Secretary of the Treasury, in addition to the fees required to be collected or paid and the interest on those fees at the rate the fees would have earned if collected or paid when due and invested in special obligations of the United States in accordance with subsection (d)(2). Upon the failure of any person so liable to pay any penalty, fee, or interest upon demand, the Attorney General shall, at the request of the Secretary of the Treasury, bring an action in the name of the fund against that person for such amount. (B) Any person who falsifies records or documents required to be maintained under any regulation promulgated under this subsection shall be subject to prosecution for a violation of section 1001 of title 18, United States Code.

(4) The Secretary of the Treasury may, by regulation, designate the reasonably necessary records and documents to be kept by persons from whom fees are to be collected pursuant to paragraph (1) of this subsection, and the Secretary of the Treasury and the Comptroller General of the United States shall have access to such required material for the purpose of audit and examination.

(d)(1) The President shall determine the level of funding required for immediate access in order to meet potential obligations of the Fund.

(2) The Secretary of the Treasury may invest any excess in the Fund, above the level determined under paragraph (1), in interest-bearing special obligations of the United States. Such special obligations may be redeemed at any time in accordance with the terms of the special issue and pursuant to regulations promulgated by the Secretary of the Treasury. The interest on, and the proceeds from the sale of, any obligations held in the Fund shall be credited to and form a part of the Fund.

(e) If at any time the moneys available in the Fund are insufficient to meet the obligations of the Fund, the President shall issue to the Secretary of the Treasury notes or other obligations in the forms and denominations, bearing the interest rates and maturities and subject to such terms and conditions as may be prescribed by the Secretary of the Treasury. Redemption of these notes or obligations shall be made by the President from moneys in the Fund. These notes or other obligations shall bear interest at a rate determined by the Secretary of the Treasury, taking into consideration the average market yield on outstanding marketable obligations of comparable maturity. The Secretary of the Treasury shall purchase any notes or other obligations issued hereunder and, for that purpose, is authorized to use as a public debt transaction the proceeds from the sale of any securities issued under the Second Liberty Bond Act. The purpose for which securities may be issued under that Act are extended to include any purchase of these notes or obligations. The Secretary of the Treasury may at any time sell any of the notes or other obligations acquired by him under this subsection. All redemptions, purchases, and sales by the Secretary of the Treasury of these notes or other obligations shall be treated as public debt transactions of the United States.

USE OF LIABILITY FUND

SEC. 5. (a) The President shall use the money in the Fund for the following purposes:

(1) payment of any claim for costs of removal or damages in excess of the amount for which the owner or operator of the vessel or onshore or offshore facility from which oil or a hazardous substance is discharged is liable under section 3(c) of this Act;

(2) payment of any claim for costs of removal or damages where the source of the discharge of oil or a hazardous substance is not known or cannot be identified;

(3) payment of any claim for costs of removal or damages in any case where the claim has not been satisfied in accordance with subsection (b) of this section;

(4) all removal costs or expenses or other costs of carrying out the National Contingency Plan established under section 311(c) of the Federal Water Pollution Control Act, including removal costs incurred by any person and approved under such National Contingency Plan;

(5) the costs of providing equipment and similar overhead, including research related to the purposes of this Act and section 311 or, if appropriate, section 504 of the Federal Water Pollution Control Act, for any Federal agency involved in strike forces, emergency task forces, or other response teams under such National Contingency Plan;

(6) the costs of assessing both short-term and long-term injury to, destruction of, or loss of any natural resources resulting from a discharge of oil or a hazardous substance;

(7) the costs of Federal or State efforts in the restoration, rehabilitation, or replacement or acquiring the equivalent of any natural resources injured, destroyed, or lost as a result of any discharge of oil or a hazardous substance;

(8) reimbursement to any State for the payment of any claims for costs of removal or damages payable under this Act which such State has paid with funds under the control of such State; and

(9) subject to such amounts as are provided in appropriation Acts, the administrative and personnel costs of administering the Fund and this Act;

(b)(1) The President is authorized to promulgate regulations designating one or more Federal officials who may obligate money in the Fund in accordance with subsection (a) of this section or portions thereof.

(2) The President is authorized to delegate the administration of his duties and authorities under this Act to the heads of those Federal departments, agencies, and instrumentalities which the President determines appropriate.

(3)(A) The President shall promulgate, and may from time to time amend regulations for the presentation, filing, processing, settlement, and adjudication of claims for costs of removal or damages resulting from the discharge of oil or a hazardous substance under this Act.

(B) Whenever the President receives information from any person alleging they have incurred costs of removal or damages resulting from the discharge of oil or a hazardous substance for which the owner or operator of a vessel or onshore or offshore facility is liable under section 3 of this Act, he shall notify the owner, operator, and guarantor of such vessel or onshore or offshore facility of such allegation. Such owner or operator or guarantor, may, within five days after receiving such notification or presentation of any claim by a claimant, deny such allegations, or deny liability for damages for any of the reasons set forth in subsection (a) of section 3 of this Act.

(C) (1) Payment of any claim by the Fund under this section shall be subject to the United States Government acquiring by subrogation all rights of the claimant to recover the costs of removal or damages from the person responsible for such discharge.

(2) Any person, including the Fund, who pays compensation pursuant to this Act to any claimant for damages or costs of removal resulting from a discharge of oil or a hazardous substance shall be subrogated to all rights, claims, and causes of action for such damages and costs of removal such claimant has under this Act or any other law.

(3) Upon request of the President, the Attorney General shall commence an action on behalf of the Fund to recover any compensation paid by the fund to any claimant pursuant to this Act, and, without regard to the limitation of liability provided for in section 3(c), all costs incurred by the Fund by reason of the claim, including interest, administrative and adjudicative costs, and attorney's fees. Such an action may be commenced against any owner, operator, or guarantor, or against any other person who is liable, pursuant to any law, to the compensated claimant or to the Fund, for the damages or costs of removal for which the compensation was paid.

(d) The Fund shall not be available to pay any claim for costs of removal or damages to the extent the discharge or the damages had been caused by the gross negligence or willful misconduct of the particular claimant.

(e) No indemnification, hold harmless, or similar agreement shall be effective to transfer from the owner or operator of a vessel or onshore or offshore facility, to any other person, the liability provided for under this Act, other than as specified under the provisions of this Act.

FINANCIAL RESPONSIBILITY

SEC. 6. (a) (1) The owner or operator of any vessel over three hundred gross tons (except a non-self-propelled barge that does not carry oil or hazardous substances as cargo) using any port or place in the United States or the navigable waters or any offshore facility shall establish and maintain in accordance with section 311(p) of the Federal Water Pollution Control Act evidence of financial responsibility sufficient to meet the liability to which the owner or operator of such vessel could be subjected under section 3 of this Act. The provisions of paragraphs (3), (4), (5), and (6) of such section 311 (p) shall apply to any vessel, or the owner or operator thereof, subject to this section. This subsection shall take effect October 1, 1978.

(2) Any vessel subject to the requirements of this subsection which is found in the navigable waters without the necessary evidence of financial responsibility shall be subject to seizure by the United States of any oil or hazardous substances carried as cargo.

(b) (1) The owner or operator of any onshore or offshore facility (except a storage or transportation facility of less than 1,000 barrels of oil or equivalent capacity at any one time) shall establish and maintain evidence of financial responsibility sufficient to meet the liability to which the owner or operator of such facility could be subjected under setcion 3 of this Act. Such evidence of financial responsibility shall be established according to regulations prescribed by the President and comparable to that required under section 311(p) of the Federal Water Pollution Control Act. This subsection shall take effect 180 days after enactment of this Act.

(2) The owner or operator of any onshore or offshore facility subject to this subsection who fails to comply with this subsection or the regulations prescribed thereunder shall be subject to a fine of not more than $10,000.

STATE LAWS AND PROGRAMS

SEC. 7. (a) Nothing in this Act shall be construed or interpreted as preempting any State from imposing any additional liability or requirements with respect to the discharge of oil or hazardous substances within such State.

(b) (1) Except as provided in this Act, no person may be required to contribute to any public fund, the purpose of which is to pay compensation for loss or damages resulting from discharge of oil or hazardous substances.

(2) State programs for supporting—

(A) The purchase and prepositioning of cleanup and removal equipment, and training of personnel;

(B) Removal costs and cleanup costs caused by discharges of oil or hazardous substances;

(C) Payment of claims for damage and losses resutling from discharge of oil or hazardous substances;

(D) Research into the problems and effects of oil pollution and methods and techniques for control and cleanup of oil pollution; and

(E) Administrative costs for such programs;

which are in effect on the date of enactment of this subsection shall be permitted to continue in effect and operating under the same terms and conditions under which they have operated in the year immediately preceding enactment of this subsection.

(3) Such state programs may be reimbursed from the Fund for all costs arising after the data of enactment of this Act and incident to operation of such programs, including expenditures for—

(A) The purchase and prepositioning of cleanup and removal equipment;

(B) The training of personnel in cleanup and removal techniques;

(C) The payment of cleanup costs and removal costs arising from discharges of oil and hazardous substances; and

(D) The payment of claims for cost of removal, damages or losses resulting from such discharges, to the same extent and under the same terms and conditions as such claims could be paid under state law as it existed immediately prior to enactment of this subsection.

CONFORMING AMENDMENTS

SEC. 8. (a) TRANS-ALASKA PIPELINE ACT.—(1) Section 204(b) of the Trans-Alaska Pipeline Authorization Act (87 Stat. 586) is amended, in the first sentence—

(A) by inserting after the words "any area" the words "in the State of Alaska";

(B) by inserting after the words "any activities" the words "related to the Trans-Alaska Oil Pipeline"; and

(C) by inserting at the end of the subsection the following new sentence: "This subsection shall not apply to removal costs covered by the Oil Spill Liability Fund and Compensation Act of 1978".

(2) (A) Section 204(c) of the Trans-Alaska Pipeline Authorization Act (43 U.S.C. 1653(c)) is hereby repealed. The Trans-Alaska Pipeline Liability Fund is hereby abolished. All assets of that fund, as of the effective date of this section, shall be transferred to the Oil Spill Liability Fund established by section 4 of this Act. The Oil Spill Liability Fund shall assume any and all liability incurred by the Trans-Alaska Pipeline Liability Fund under the terms of section 204(c) of the Trans-Alaska Pipeline Authorization Act (43 U.S.C. 1653(c)).

(B) The Secretary of the Interior shall certify to the Secretary of the Treasury the total amount of the claims outstanding against the Trans-Alaska Pipeline Liability Fund at the time the transfer of assets required under paragraph (A) is made. If the Secretary finds that—

(i) the total amount of the assets so transferred is greater than the total amount of the outstanding claims so certified, the Secretary shall distribute any such excess funds to those persons who paid fees into that fund in the proportion that their representative payments bear to the total payments into the fund; or

(ii) the total amount of the assets so transferred is less than the total amount of the outstanding claims so certified, the Secretary of the Treasury shall increase by 2 cents per barrel the fee imposed under section 4 on barrels of oil until such time as the total amount of the 2-cent-per-barrel increase so collected equals the difference between the amount of the certified outstanding claims and the amount of the transferred assets.

(C) In the event that the total amount of the actual claims settled is less than the total amount of the outstanding claims certified, the difference between these amounts shall be rebated by the Secretary of the Treasury directly to the operator of the trans-Alaska oil pipeline for payment, on a pro rata basis, to the owners of the oil at the time it was loaded on the vessel.

(D) For purposes of paragraph (A), the term "barrels of oil" means only barrels of oil which would, but for the repeal made by paragraph (1), be subject to the fee imposed under section 204(c)(5) of the Trans-Alaska Pipeline Authorization Act. The term "Secretary" means the Secretary of the Treasury.

(b) INTERVENTION OF THE HIGH SEAS ACT.—Section 17 of the Intervention on the High Seas Act (88 Stat. 10) is amended to read as follows:

"SEC. 17. The fund established under section 4 of the Oil Spill Liability Fund and Compensation Act of 1978 shall be available to the Secretary for actions taken under section 5 of this Act.".

(c) FEDERAL WATER POLLUTION CONTROL ACT.—Section 311 of the Federal Water Pollution Control Act is amended as follows:

(1) Clause (H) of paragraph (2) of subsection (c) is amended by inserting after the words "of this section" the words "or the fund established under section 4 of the Oil Spill Liability Fund and Compensation Act of 1978, as appropriate,".

(2) Subsection (f) is amended, in the last sentence of paragraph (1), by inserting a comma after the word "vessel" and by adding immediately thereafter "or against any guarantor of an owner's or operator's liability under the Oil Spill Liability and Compensation Fund Act of 1978,".

(3) Subsection (g) is amended, by inserting in the last sentence, after the word "party" the words "or against any guarantor of an owner's or operator's liability under the Oil Spill Liability and Compensation's Fund Act of 1978".

(4) Any sums appropriated prior to the enactment of this Act under subsection (k) of such section 311 shall be transferred to the Fund established under section 4 of this Act.

(d) DEEPWATER PORT ACT.—The Deepwater Port Act of 1974 (88 Stat. 2126) is amended as follows:

(1) In section 4(c)(1) strike "section 18 (1) of this Act;"; and insert in lieu thereof "section 5 of the Oil Spill Liability and Compensation Fund Act of 1978.".

(2) Subsections (b), (d), (e), (f), (g), (h), (i), (j), (l), (n), and clause (1) of subsection (m) of section 18 are deleted.

(3) Clause (3) of subsection (c) of section 18 is amended by striking "Deepwater Port Liability Fund established pursuant to subsection (f) of this section.", and inserting in lieu thereof "fund established under section 4 of the Oil Spill Liability and Compensation Fund Act of 1978".'.

(4) Subsections (c), (k), and (m) of section 18 are redesignated (b), (c), and (d),

respectively, and clauses (2), (3), and (4) of subsection (m) are redesignated (1), (2), and (3), respectively.

---

OIL SPILL LIABILITY FUND AND COMPENSATION ACT OF 1978

I. Basic approach:

A. Leave section 311 of the Clean Water Act in place as basic law providing clean-up authority, penalties for spills and failure to notify, and liability of discharge for clean-up costs for discharges of oil and hazardous substances.

B. Establish liability of discharger for compensation for economic loss and create fund with oil revenues to assure payment without limit of both clean-up costs and compensation for economic loss.

II. The Act would cover all waters and resources covered by section 311, that is, all discharges:

(1) Into or on the navigable waters of the contiguous zone,

(2) In connection with activities under the Outer Continental Shelf Lands Act or Deepwater Port Act of 1974, or

(3) Which may affect natural resources belonging to, appertaining to, or under the exclusive management authority of the United States (including resources under the Fishery Conservation and Management Act of 1976);

plus certain discharges into the territorial sea of a foreign country such as Canada when reciprocal rights to recover damages have been established.

III. The standard for discharge would be that under section 311, that is discharges of harmful quantities of oil or hazardous substances would be prohibited, except that the discharge standard for vessels beyond the territorial seas of the United States would be that provided under the International Convention for the Prevention of Pollution of the Sea by Oil, 1954, as amended.

IV. Terms would be defined by reference to the definitions in section 311, plus definitions derived from H.R. 6803 for certain new terms.

V. The Act would establish strict liability by the owner or operator of any vessel or facility discharging oil or a hazardous substance for:

A. all clean-up and mitigation costs or expenses incurred under section 311(c), (d) or (e) of the Clean Water Act or the Intervention of the High Seas Act, and any other costs or expenses incurred by any person to remove oil or hazardous substances as "removal" is defined in section 311(a)(8) of the Clean Water Act.

B. damages for economic loss resulting from a discharge, of the following types:

(1) Injury to, or destruction of, real or personal property;

(2) Loss of use of real or personal property;

(3) Injury to, or destruction of, natural resources;

(4) Loss of use of natural resources;

(5) Loss of profits or income or impairment of earning capacity due to injury or destruction of real or personal property or natural resources;

(6) Loss of tax royalty, rental or net profits revenue by Federal, State or local government for a period of one year due to injury to real or personal property.

VII. Defenses to a discharger's liability would be those under section 311, that is, there is no liability where an owner or operator can prove a discharge was caused solely by an act of war, an act of God, or an act or omission of a third party.

VII. The liability of an owner or operator would be limited, for any one discharge or incident, as follows:

A. $300 per gross ton or $500,000 whichever is greater, for vessels carrying oil or hazardous substances in bulk as cargo;

B. $300 per gross ton for other vessels;

C. all removal costs plus $50,000,000 for facilities under OSC Act;

D. $50,000,0000 for deepwater ports (including discharges from vessels moored at such ports);

E. $50,000,000 for other facilities unless a lower limit is established by the President for a particular class or category of facility.

This bill includes the existing limits of liability for clean-up costs under section 311, without actually changing those recently established limits.

Liability is unlimited if caused by willful misconduct or gross negligence within the privity or knowledge of the owner or operator, or by a gross or willful violation of applicable safety, construction, or operating standards or regulations. Failure or refusal to cooperate in clean-up activities also invokes unlimited liability.

VIII. The Act would direct the Secretary of the Treasury to establish a liability fund with fees of up to $.03 per barrel of crude oil received by refineries or terminals. This would include all offshore, domestic, and imported oil. The fund would be maintained at level of $200,000,000 with levy reinstated when fund depleted below that level, and authority to borrow from U.S. Treasury to cover claims whenever amount in fund is exceeded. Also deposited in the Fund would be sums recovered from dischargers and penalties. This fund would replace those funds created under the Trans-Alaska Pipeline Act and the Deepwater Port Act of 1974 and that proposed under the pending Outer Continental Shelf Lands Act amendments. It would also supersede the contingency fund established under section 311.

IX. The Fund would be available to be disbursed, according to regulations issued by the President, for—

A. Any claim for clean-up costs or damages in excess of the limits of liability of the discharger;

B. Any such claim where the discharger cannot be identified;

C. Any such claim where there is delay in satisfying the claim. (Claimants must first assert claims for clean-up costs or damages against the discharger, if known, unless certain defenses or denials of liability are raised. If the claims are not satisfied within 60 days, they may be presented to the Fund for payment. When paid, the Fund is subrogated to all rights against the discharge source.);

D. Clean-up costs and expenses incurred by Federal or State governments or any other party under the National Contingency Plan;

E. Overhead and equipment costs including research of Federal agencies involved in response teams;

F. Costs of assessing injury to or destruction of natural resources;

G. Costs of restoration or replacement by the Federal Government or a State of natural resources damaged or destroyed as a result of a discharge (or acquisition of resources to offset loss of irreplaceable resources);

H. Reimbursement of States for payments of claims made with State liability funds; and

I. Administrative costs of the Fund, subject to such amounts as are appropriated in appropriation Acts.

The Fund would be liable without limit for all clean-up costs and compensable damages, except to the extent caused by gross negligence or willful misconduct of a claimant. The bill would establish a simplified claims procedure based on that in H.R. 6803, leaving it to the President to specify the claims procedure through regulation.

X:

A. The penalties for unlawful discharge, for failure to notify and for discharge of non-renewable hazardous substances under section 311 would continue to apply.

B. Vessels and facilities would be required to provide evidence of financial responsibility under section 311(p) at least in the amount of potential liability under this new Act. Facilities under the Act (except storage or transportation facilities of less than 1000 barrels capacity) would have to provide such evidence within 6 months after enactment. Vessels using the navigable waters would be required to have evidence of increased financial responsibility by October 1, 1978 (the date provided in the 1977 amendments to section 311).

C. These requirements may be enforced through denial of entry or clearance of ports, or by confiscation of cargo of any vessel found in the navigable waters without adequate evidence of financial responsibility. Facilities would be subject to substantial penalties for violations of these requirements.

XI:

A. The Act would substantially modify, with conforming amendments, the Trans-Alaska Pipeline Authorization Act and the Deepwater Port Act of 1974. Amendments to section 311, the Clean Water Act, would be minimal.

B. The Act would expressly allow States to impose more stringent requirements or liability on discharges of oil or hazardous substances. States would be prohibited from collecting further revenues on oil for compensation, but could continue funds for clean-up. States would be allowed to pay clean-up liaibility and compensation claims out of existing funds and to receive reimbursement for those payments from Federal fund.●

---

By Mr. CANNON (for himself, Mr. HOLLINGS, and Mr. PEARSON) (by request):

S. 2901. A bill to amend the Communications Act of 1934 to extend and improve the provisions of such act relating to long-term financing for the Corporation for Public Broadcasting and relating to certain grant programs for public telecommunications, and for other purposes; to the Committee on Commerce, Science, and Transportation.

PUBLIC BROADCASTING FINANCING ACT OF 1978

● Mr. CANNON. Mr. President, I introduce today, at the request of the White House, and on behalf of myself, Mr. HOLLINGS, and Mr. PEARSON, a bill to amend the Communications Act of 1934 to extend and improve the provisions of such act relating to long-term financing for the Corporation for Public Broadcasting and relating to certain grant programs for public telecommunications, and for other purposes.

I ask unanimous consent that the text of the bill and the letter of transmittal be printed in the RECORD.

There being no objection, the bill and letter were ordered to be printed in the RECORD, as follows:

S. 2901

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That this Act may be cited as the "Public Broadcasting Financing Act of 1978".

TITLE I—CONSTRUCTION AND PLANNING OF FACILITIES

PURPOSE

SEC. 101. (a) The heading for part IV of title III of the Communications Act of 1934 is amended to read as follows:

"PART IV—ASSISTANCE FOR PUBLIC TELECOMMUNICATIONS FACILITIES; TELECOMMUNICATIONS DEMONSTRATIONS; CORPORATION FOR PUBLIC BROADCASTING".

(b) The heading for subpart A of part IV of title III of the Communications Act of 1934 is amended to read as follows:

"Subpart A—Assistance for Public Telecommunications Facilities".

(c) Section 390 of the Communications Act of 1934 is amended to read as follows:

"DECLARATION OF PURPOSE

"SEC. 390. The purpose of this subpart is to assist in the planning and construction of public telecommunications facilities in order to achieve the following objectives: (1) extend delivery of public television and radio services to as many citizens of the United States as possible by the most efficient and economical means, including the use of non-broadcast technologies; (2) significantly increase public television and radio services for minorities; and (3) strengthen the capability of existing public television and radio stations to provide educational or cultural services.".

AUTHORIZATION OF APPROPRIATIONS

SEC. 102. Section 391 of the Communications Act of 1934 is amended to read as follows:

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 391. (a) There are authorized to be appropriated to the Public Broadcasting Fund established pursuant to section 396(k) $30,000,000 for the fiscal year ending September 30, 1979, and $30,000,000 for the fiscal year ending September 30, 1980, to be used by the Corporation for Public Broadcasting to assist in the planning and construction of public telecommunications facilities as provided in this subpart. Sums appropriated under this subpart of any fiscal year shall remain available until expended for payment of grants for projects for which applications approved by the Corporation pursuant to this subpart have been submitted within one year after the last day of such fiscal year.

"(b) Payments to the Corporation from appropriations under this subpart shall be used to cover the Corporation's costs of administering this subpart.".

GRANTS FOR CONSTRUCTION AND PLANNING

SEC. 103. Section 392 of the Communications Act of 1934 is amended to read as follows:

"GRANTS FOR CONSTRUCTION AND PLANNING

"SEC. 392. (a) For each project for the construction of public telecommunications facilities there shall be submitted to the Corporation an application for a grant containing such information with respect to such project as the Corporation may require, including the total cost of such project, the amount of the grant requested for such project, and a five-year plan outlining the applicant's projected facilities requirements and the projected costs of such facilities requirements. Each applicant shall also provide assurance satisfactory to the Corporation that—

"(1) the applicant is (A) an entity which is eligible to be licensed or is licensed by the Federal Communications Commission as a noncommercial educational television or radio station; (B) a system of public broadcast stations; (C) a nonprofit foundation, corporation, institution, or association organized primarily for educational purposes; or (D) a State or local government agency, or a political subdivision of a State;

"(2) the operation of such public telecommunications facilities will be under the control of the applicant:

"(3) necessary funds to construct, operate, and maintain such public telecommunications facilities will be available when needed;

"(4) such telecommunications facilities will be used only for educational or cultural purposes; and

"(5) there has been comprehensive planning for public telecommunications facilities in the area the applicant proposes to serve, including coordination with State educational television and radio agencies as appropriate, and the applicant has participated in such planning, and will make the most efficient use of the facilities grant.

"(b) Upon approving any application under this section with respect to the construction of any project, the Corporation shall make a grant to the applicant in the amount determined by it, but not exceeding 75 percent of the amount determined by the Corporation to be the reasonable and necessary cost of such project.

"(c) To obtain assistance for the planning of any project for which construction funds could be obtained under this section, there shall be submitted to the Corporation an application for a grant containing such information as the Corporation may require and providing assurance satisfactory to the Corporation that the applicant would be eligible to receive assistance under subsection (a).

"(d) Upon approving any application under this section with respect to the planning of any project, the Corporation shall make a grant to the applicant in any amount it determines.

"(e) Any studies financed under this section shall be provided to the Corporation.".

FACILITIES GRANTS MADE BEFORE OCTOBER 1, 1978

SEC. 104. Section 392A of the Communications Act of 1934 is amended to read as follows:

"FACILITIES GRANTS MADE BEFORE OCTOBER 1, 1978

"SEC. 392A. (a) The Secretary is authorized to administer grants made under this subpart before October 1, 1978.

"(b) If, within 10 years after completion of any project for construction of public telecommunications facilities with respect to which a grant was made before October 1, 1978, under this subpart—

"(1) the applicant or other owner of such facilities ceases to be an agency, institution, foundation, corporation, or association described in section 392(a)(1); or

"(2) such facilities cease to be used for public television purposes or public radio purposes, as the case may be (unless the Secretary determines, in accordance with regulations, that there is good cause for releasing the applicant or other owner from the obligations to do so), the United States shall be entitled to recover from the applicant or other owner of such facilities the amount bearing the same ratio to the value of such facilities at the time of such determination (as determined by agreement of the parties or by action brought in the United States district court for the district in which such facilities are situated), as the amount of the Federal participation bears to the cost of construction of such facilities.".

ESTABLISHMENT OF CRITERIA

SEC. 105. Section 393 of the Communications Act of 1934 is amended to read as follows:

"ESTABLISHMENT OF CRITERIA

"SEC. 393. The Corporation, in consultation with the national membership organizations representing public television and radio licensees, with national educational organizations, minority group representatives, and as appropriate with others, shall establish criteria for making construction and planning grants made pursuant to this subpart. Such criteria shall be consistent with the objectives set forth in section 390 and shall be made available to interested parties upon request.".

LONG-RANGE PLANNING FOR FACILITIES

SEC. 106. Section 394 of the Communications Act of 1934 is amended to read as follows:

"LONG-RANGE PLANNING FOR FACILITIES

"SEC. 394. (a) The Corporation in consultation with the national membership organizations representing public television and radio licensees, with national educational organizations, minority group representatives, and as appropriate with others, shall create a long-range plan to accomplish the objectives set forth in section 390. Such plan shall include a detailed 5-year projection of broadcast and non-broadcast telecommunications facilities requirements of public broadcasting, and a projection of expenditures necessary to meet such requirements.

"(b) The long-range plan required in subsection (a), updated annually, and a summary of the Corporation's activities implementing the plan, shall be submitted to the President as part of the report required in section 396(1) of this part.".

PUBLIC TELECOMMUNICATIONS FACILITIES

SEC. 107. Section 397(2) of the Communications Act of 1934 is amended to read as follows:

"(2) The term 'public telecommunications facilities' means apparatus necessary for production, interconnection, captioning, broadcast, or other distribution of programing, including, without limitation, studio equipment, cameras, microphones, audio and video storage or reproduction equipment, or both, signal processors and switchers, towers, antennas, transmitters, microwave equipment, mobile equipment, satellite communications equipment, instructional television fixed service equipment, subsidiary communications authorization transmitting and receiving equipment, cable television equipment, video and audio cassettes and discs, optical fiber communications equipment, and other means of transmitting, emitting, storing, and receiving images and sounds, or intelligence, except that such term shall not include the buildings to house such apparatus, with the exception of small equipment shelters which are part of satellite earth stations, translators, microwave interconnection facilities, and similar facilities.".

CONSTRUCTION

SEC. 108. Section 397(3) of the Communications Act of 1934 is amended to read as follows:

"(3) The term 'construction', as applied to public telecommunications facilities, means acquisition (including acquisition by lease), installation, and modernization, and planning incidental thereto.".

TITLE II—TELECOMMUNICATIONS DEMONSTRATIONS

AUTHORIZATION OF APPROPRIATIONS

SEC. 201. Section 395(h) of the Communications Act of 1934, as so redesignated in section 202(1), is amended by striking out "September 30, 1977, and $250,000 for the period July 1, 1976, through September 30, 1976," and inserting in lieu thereof "September 30, 1978, and $1,000,000 for the fiscal year ending September 30, 1979,".

TECHNICAL AMENDMENTS

SEC. 202. Part IV of title III of the Communications Act of 1934 is amended—

(1) by redesignating section 392A as section 395 and inserting above the heading for such section the following new heading:

"Subpart B—Telecommunications Demonstration";

(2) by inserting above section 395(b), as so redesignated in paragraph (1), the following new heading:

"Application Approval";

(3) by inserting above section 395(c), as so redesignated in paragraph (1), the following new heading:

"Amount of Grant or Contract; Payment";

(4) by inserting above section 305(d), as so redesignated in paragraph (1), the following new heading:

"Uses of Funds";

(5) by inserting above section 395(e), as so redesignated in paragraph (1), the following new heading:

"Nonbroadcast Telecommunications Facilities";

(6) by inserting above section 395(f), as so redesignated in paragraph (1), the following new heading:

"Duration of Funding of Demonstrations";

(7) by inserting above section 395(g), as so redesignated in paragraph (1), the following new heading:

"Summary and Evaluation";

(8) by inserting above section 395(h), as so redesignated in paragraph (1), the following new heading:

"Authorization of Appropriations";

(9) in section 393, by striking out the heading for such section and by striking out "SEC. 393.";

(10) by redesignating section 393(a) as section 395(i)(1) and inserting above it the following new heading:

"Records, Access by Secretary and Comptroller General";

(11) by redesignating section 393(b) as section 395(i)(2);

(12) in section 394, by striking out the heading for such section;

(13) by redesignating section 394 as section 395(j) and inserting above it the following new heading:

"Rules and Regulations";

(14) in section 395 thereof, by striking out the heading for such section;

(15) by redesignating section 395 as section 395(k) and inserting above it the following new heading:

"Assistance by Commission; Coordination with Commission and Corporation"; and

(16) by redesignating subpart B as subpart C, and by amending the heading for subpart C, as so redesignated, to read as follows:

"Subpart C—Corporation for Public Broadcasting".

TITLE III—CORPORATION FOR PUBLIC BROADCASTING

CONGRESSIONAL DECLARATION OF POLICY

SEC. 301. Section 396(a) of the Communications Act of 1934 is amended—

(1) by striking out "noncommercial educational" each place it appears therein and inserting in lieu thereof "public";

(2) in paragraph (6) thereof, by striking out "educational" and inserting in lieu thereof "public"; and

(3) by amending the heading above each subsection to read as follows:

"Congressional Declaration of Policy".

ESTABLISHMENT OF CORPORATION

SEC. 302. Section 396(b) of the Communications Act of 1934 is amended to read as follows:

"Establishment of Corporation

"(b)(1) There is authorized to be established a non-profit corporation to be known as the 'Corporation for Public Broadcasting', which will not be an agency or establishment of the United States Government. The Corporation shall be subject to the provisions of this section, and, to the extent consistent with this section, to the District of Columbia Nonprofit Corporation Act.

"(2) The Corporation, its grantees, subgrantees, contractors, and subcontractors shall be subject to the requirements of title VI of the Civil Rights Act of 1964 and title IX of the Education Amendments of 1972.".

BOARD OF DIRECTORS OF CORPORATION

SEC. 303. Section 396(c) of the Communications Act of 1934 is amended to read as follows:

"Board of Directors

"(c)(1) Except as provided in paragraph (2) of this subsection, the Corporation shall have a Board of Directors (hereinafter in this section referred to as the 'Board'), consisting of 19 members, 15 of whom shall be appointed by the President, by and with the advice and consent of the Senate (hereinafter in this section referred to as 'Presidential appointees'), two of whom shall be appointed by the national membership organization representing public television licensees, and two of whom shall be appointed by the national membership organization representing public radio licensees (hereinafter in this section referred to as "licensee appointees'). Not more than eight of the Presidential appointees may be members of the same political party. Licensee appointees may not serve concurrently on the Board and on the board of directors of their respective national membership organization, nor may they be regular full-time employees of such organization.

"(2) Beginning January 1, 1979, as vacancies occur among Presidential appointees, the membership of the Board shall be reduced until it consists of 15 members, 11 of whom shall be Presidential appointees and four of whom shall be licensee appointees. After December 31, 1982, not more than six of the Presidential appointees may be members of the same political party.

"(3) The members of the Board—

"(A) shall be selected from among citizens of the United States who are not regular full-time employees of the United States, and who are eminent in such fields as education, cultural and civil affairs, or the arts, including radio and television; and

"(B) shall be selected so as to provide as nearly as practicable a broad representation of various regions of the Nation, various professions and occupations, and various kinds of talent and experience appropriate to the functions and responsibilities of the Corporation.

"(4)(A) The term of office of each member of the Board shall be six years, except that—

"(i) any member appointed to fill a vacancy occurring before the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term; and

"(ii) the terms of office of the licensee appointees first taking office shall begin 90 days after the date of the enactment of the Public Broadcasting Financing Act of 1978.

"(B) The term of office of one television licensee appointee and one radio licensee appointee shall expire, as designated at the time of their appointment, at the end of four years, and the term of office of one other television licensee appointee and radio licensee appointee shall expire, as designated at the time of their appointment, at the end of six years. No members shall be eligible to serve in excess of two consecutive terms of six years each. Notwithstanding the preceding provisions of this paragraph, a member whose term has expired may serve until his successor has qualified.

"(5) Any vacancy in the Board shall not affect its powers. Vacancies shall be filled in the manner in which the original appointments were made, except as provided in paragraph (2) of this subsection.".

CHAIRMAN OF BOARD

SEC. 304. Section 396(d)(1) of the Communications Act of 1934 is amended by striking out "President shall designate one of the members first appointed to the Board as Chairman; thereafter the".

OFFICERS AND EMPLOYEES

SEC. 305. Section 396(e)(2) of the Communications Act of 1934 is amended by striking out "the second sentence of", and by striking out "subsection (c)(1)" and inserting in lieu thereof "subsections (c)(1) and (c)(2)".

PURPOSE AND ACTIVITIES OF CORPORATION

SEC. 306. (a) Section 396(g)(2)(B) of the Communications Act of 1934 is amended to read as follows:

"(B) make grants to national, regional, and other systems of public broadcast stations, other public broadcasting entities, and independent production entities for the production or acquisition of public television or radio programs for national or regional noncommercial distribution;".

(b) Section 396(g)(2)(D) of the Communications Act of 1934 is amended by striking out "broadcasting".

(c) Section 396(g)(2)(H) of the Communications Act of 1934 is amended by striking out "and the use of nonbroadcast" and all that follows through "or radio programs".

(d) Section 396(g)(2) of the Communications Act of 1934 is amended—

(1) in subparagraph (H) thereof, by striking out the period at the end thereof and inserting in lieu thereof "; and"; and

(2) by adding at the end thereof the following new subparagraph:

"(I) to make grants or contracts for the use of nonbroadcast telecommunications technologies for the dissemination of public television or radio programs.".

(e) Section 396(g)(3) of the Communications Act of 1934 is amended to read as follows:

"(3) To carry out the foregoing purposes and engage in the foregoing activities, the Corporation shall, to the extent consistent with the provisions of this subpart, have the usual powers conferred upon a nonprofit corporation by the District of Columbia Nonprofit Corporation Act. The Corporation is prohibited from—

"(A) owning or operating any television or radio broadcast station, interconnection system or facility, network, community antenna television system or program production facility; and

"(B) producing, acquiring, scheduling, or distributing programs, or selecting individual programs or series of programs for production, acquisition, distribution, or broadcast.".

(f) Section 396(g) of the Communications Act of 1934 is amended by adding at the end thereof the following new paragraph:

"(4) In performing its functions, the Corporation shall minimize its administrative costs. This shall be accomplished by carrying out its functions, wherever practicable, through grants to national, regional, and other systems of public broadcast stations, and other public broadcasting entities, and otherwise through outside experts and consultants.".

ANNUAL REPORT TO CONGRESS

SEC. 307. Section 396(i) of the Communications Act of 1934 is amended to read as follows:

"Report to Congress

"(i)(1) The Corporation shall submit an annual report for the preceding fiscal year ending September 30 to the President for transmittal to the Congress on or before the 31st day of December of each year. The report shall include—

"(A) a comprehensive and detailed report of the Corporation's operations, activities, financial condition, and accomplishments under this subpart and such recommendations as the Corporation deems appropriate;

"(B) the plan on public broadcasting development required in paragraph (2);

"(C) the report on public telecommunications facilities required in section 394; and

"(D) a comprehensive and detailed inventory of funds distributed by Federal agencies to public broadcasting entities during the preceding fiscal year.

"(2)(A) The Corporation, in cooperation with the national membership organizations representing public television and radio licenses, and in consultation as appropriate with others, shall create a five-year plan for the development of public broadcasting. Such plan shall include programing priorities and procedures for distribution of funds

pursuant to subsection (g)(2)(B) and (k)(3). Such plan, updated annually, and a summary of activities implementing the plan shall be included in the report required by paragraph (1).

"(B) The cooperation between the Corporation and the national membership organizations representing public television and radio licensees which is required in subparagraph (A) shall involve a process intended to result in an agreement among the parties. Such process shall include provisions for seeking to resolve differences, with ultimate decisionmaking authority vested in the Board.

"(3) The officers and directors of the Corporation shall be available to testify before appropriate committees of the Congress with respect to such report, the report of any audit made by the Comptroller General pursuant to section 396(1), or any other matter which such committees may determine.".

FINANCING; NATIONAL PROGRAMING FUND; OPEN MEETINGS AND FINANCIAL RECORDS

SEC. 308. Section 396(k) of the Communications Act of 1934 is amended to read as follows:

"Financing

"(k)(1)(A) There is hereby established in the Treasury a fund which shall be known as the 'Public Broadcasting Fund', administered by the Secretary of the Treasury.

"(B) In addition to such funds authorized to be appropriated under section 391, there is authorized to be appropriated to such fund, for each of the fiscal years during the period beginning October 1, 1977, and ending September 30, 1980, an amount equal to 40 percent of the total amount of non-Federal financial support received by public broadcasting entities during the fiscal year second preceding each such fiscal year, except that the amount so appropriated shall not exceed $121,000,000 for the fiscal year ending September 30, 1978; $140,000,000 for the fiscal year ending September 30, 1979; and $160,000,000 for the fiscal year ending September 30, 1980.

"(C) For each of the fiscal years during the period beginning October 1, 1980, and ending September 30, 1985, there is authorized to be appropriated to such fund an amount equal to four-ninths of the total amount of non-Federal financial support received by public broadcasting entities during the fiscal year second preceding each such fiscal year, except that the amount so appropriated shall not exceed $180,000,000 for the fiscal year ending September 30, 1981, and $200,000,000 for each fiscal year during the period beginning October 1, 1981, and ending September 30, 1985.

"(2) The funds authorized to be appropriated by this subsection shall be used solely for the expenses of the Corporation. The Corporation shall determine the amount of non-Federal financial support received by public broadcasting entities during each of the fiscal years indicated in paragraph (1) for the purpose of determining the amount of each authorization, and shall certify such amount to the Secretary of the Treasury, except that the Corporation may include in its certification non-Federal financial support received by a public broadcasting entity during its most recent fiscal year ending before September 30 of the year for which certification is made. Upon receipt of such certification, the Secretary of the Treasury shall disburse to the Corporation, from such funds as may be appropriated to the Public Broadcasting Fund, the amount authorized for each of the fiscal years pursuant to the provisions of this subsection.

"(3) The Corporation shall establish a National Programing Fund from which it shall make grants in accordance with the plan developed pursuant to subsection (1)(2) to national, regional, and other systems of public broadcasting entities, and independent production entities for the production or acquisition of public television or radio programs intended for nationwide distribution. During each fiscal year during the period beginning October 1, 1980, and ending September 30, 1985,the Corporation shall deposit in the National Programing Fund an amount equal to not less than 25 percent of the funds paid to the Corporation from the Public Broadcasting Fund under this section.

"(4) The Corporation shall reserve for distribution among the licensees and permittees of public television and radio stations that are on-the-air an amount equal to not less than 40 percent of the funds disbursed to the Corporation from the Public Broadcasting Fund under this section in each fiscal year in which the amount disbursed is $88,000,000 or more, but less than $121,000,000; not less than 45 percent in each fiscal year in which the amount disbursed is $121,000,000 or more, but less than $160,000,000; and not less than 50 percent in each fiscal year in which the amount disbursed is $160,000,000 or more.

"(5)(A) The Corporation, in cooperation with the national membership organizations representing public television and radio licensees, shall establish and review annually the percentage of funds reserved pursuant to paragraph (4), and criteria and conditions regarding the division of such funds between public television and radio stations, and regarding the distribution of such funds among public television and radio stations respectively. Such cooperation shall be carried out in a manner which complies with the requirements of subsection (1)(2)(B).

"(B) The total amount of funds shall be divided into two portions, one to be distributed among radio stations, and one to be distributed among television stations. The Corporation shall make a basic grant from the portion reserved for television stations to each licensee and permittee of a public television station that is on-the-air. The balance of the portion reserved for television stations and the total portion reserved for radio stations shall be distributed to licensees and permittees of such stations in accordance with eligibility criteria that promote the public interest in public broadcasting, and on the basis of a formula designed to—

"(i) provide for the financial need and requirements of stations in relation to the communities and audiences such stations undertake to serve;

"(ii) maintain existing, and stimulate new, sources of non-Federal financial support for stations by providing incentives for increases in such support; and

"(iii) assure that each eligible licensee and permittee of a public radio station receives a basic grant.

"(C) No distribution of funds pursuant to this subsection shall exceed, in any fiscal year, one-half of a licensee's or permittee's total non-Federal financial support during the fiscal year second preceding the fiscal year in which such distribution is made.

"(6) Funds may not be distributed pursuant to this subsection to the licensee or permittee of any public broadcast station whose governing board does not hold open meetings under such reasonable terms and conditions as the Corporation shall establish.

"(7) Funds may not be distributed pursuant to this subsection to the licensee or permittee of any public broadcast station that does not maintain for public examination copies of annual financial reports such station submits to the Corporation.

"(8) Funds distributed pursuant to this subsection may be used at the discretion of stations for purposes relating to the provision of public television and radio programing, including—

"(A) producing, acquiring, broadcasting, or otherwise disseminating public television or radio programs;

"(B) procuring national or regional program distribution services that make public television or radio programs available for broadcast or other dissemination at times chosen by stations;

"(C) acquiring, replacing, or maintaining facilities, and real property used with facilities, for the production, broadcast, or other dissemination of public television and radio programs; and

"(D) developing and using nonbroadcast communications technologies for public television or radio programing purposes.".

RECORDS AND AUDITS

SEC. 309. (a) Section 396(1)(3)(A) of the Communications Act of 1934 is amended by striking out "section" and inserting in lieu thereof "part".

(b) Section 396(1)(3)(B) of the Communications Act of 1934 is amended by striking out "section" and inserting in lieu thereof "part".

CIVIL RIGHTS ENFORCEMENT

SEC. 310. Section 398 of the Communications Act of 1934 is amended to read as follows:

"CIVIL RIGHTS ENFORCEMENT

"SEC. 398. (a) Except to the extent authorized by subsection (b) hereof, nothing contained in sections 390 to 399 of this part shall be deemed (1) to amend any other provision of, or requirement under this chapter; or (2) to authorize any department, agency, officer, or employee of the United States to exercise any direction, supervision or control over public broadcasting, or over the Corporation or any of its grantees or contractors, or over the charter or bylaws of the Corporation, or over the curriculum, program of instruction, or personnel of any educational institution, school system, or public broadcasting station or system.

(b)(1) No person in the United States shall on the ground or race, color, religion, national origin or sex be excluded from participation in, be denied the benefits of, or be subjected to employment-related or any other discrimination in connection with any activity funded in whole or in part with funds made available under this part.

(2) The Secretary of Health, Education and Welfare is authorized and directed to enforce this subsection (subsection (b)) and to make such rules and regulations as may be necessary to carry out his functions hereunder.

(3) The Corporation shall provide an annual report for the preceding fiscal year ending September 30 to the Secretary on or before the 31st day of December of each year. The report shall contain information in the form required by the Secretary in order to determine whether recipients of funds under this part are in compliance with subsection (b)(1). The Corporation shall submit a summary of this report to the President as part of the report required in subsection 396(i). The Corporation shall provide other information in the form and with any analysis which the Secretary may require in order to carry out his functions under subsection (b).

(4) Whenever the Secretary (i) makes a final determination that a recipient of funds under this part is not in compliance with subsection (b)(1), or (ii) receives a notice of finding, after notice and opportunity for a hearing by a Federal or State court, or by a Federal or State administrative agency other than the Department of Health, Education and Welfare, to the effect that there has been a violation of subsection (b)(1), the Secretary shall within 10 days after such occurrence, notify the affected recipient that such activity has been so found not to be in compliance with subsection (b)(1), and shall request each recipient notified under this paragraph with respect to such violation to secure compliance. Unless the recipient shall demonstrate to the Secretary within

90 days that the violation has been fully corrected or that the recipient is in compliance with all remedial provisions of such finding, the Secretary shall direct the Corporation to suspend further payments of any funds under this part to the recipient and the Corporation shall comply with such directive. Resumption of payments shall take place only when the Secretary certifies to the Corporation that the recipient has entered into a compliance agreement approved by the Secretary. A recipient whose payments have been suspended may apply at any time to the Secretary for such certification."

TITLE IV—GENERAL PROVISIONS

PUBLIC BROADCAST STATION

SEC. 401. Section 397(7) of the Communications Act of 1934 is amended to read as follows:

"(7) The terms 'noncommercial educational broadcast station' and 'public broadcast station' mean a television or radio broadcast station which (A) under the rules and regulations of the Federal Communications Commission in effect on the date of the enactment of the Public Broadcasting Financing Act of 1978, is eligible to be licensed by the Commission as a noncommercial educational radio or television broadcast station and which is owned and operated by a public agency or nonprofit private foundation, corporation, or association; or (B) is owned and operated by a municipality and which transmits only noncommercial programs for educational purposes.".

INTERCONNECTION

SEC. 402. Section 397(8) of the Communications Act of 1934 is amended to read as follows:

"(8) The terms 'interconnection' and 'interconnection facility' mean the use of microwave equipment boosters, translators, repeaters, communications space satellites, video or audio tape recorders, or other apparatus or equipment for the transmission and distribution of television and radio programs to public television or radio broadcast stations.".

INTERCONNECTION SYSTEM; SYSTEM OF PUBLIC STATIONS; NATIONAL MEMBERSHIP ORGANIZATION

SEC. 403. Section 397 of the Communications Act of 1934 is amended by adding at the end thereof the following new paragraphs:

"(12) The term 'interconnection system' means the use of interconnection facilities for the distribution of programs to public television or radio stations, which may include the selection and scheduling of programs for such distribution.

"(13) The term 'system of public broadcast stations' means any two or more public television or radio stations acting cooperatively, either on a formal or informal basis, to produce, acquire, or distribute (by means of interconnection or otherwise) programs, or for other mutual programming and related activities.

"(14) The term 'national membership organization' means a nonprofit corporation or organization designated to represent public television or radio licenses for purposes of this part by a majority of such licensees eligible to receive grants from the Corporation under section 396(k)(5).

"(15) The term 'Secretary' means the Secretary of Health, Education, and Welfare.

"(16) The term 'public television or radio program intended for nationwide distribution' means programs, including but not limited to children's programs, arts and cultural programs, educational and instructional programs, and current affairs programs, designed to serve audiences throughout the United States and made available to all public television or radio licensees, as appropriate. Nothing in this subpart shall be construed to exclude from such term those programs which may not be broadcast by all licensees, or to require broadcast of any programs by any licensee.

"(17) The term 'meeting' means the deliberations of at least the number of members of a governing body required to take action on behalf of such body where such deliberations determine or result in the joint conduct or disposition of the governing body's business, but only to the extent that such deliberations relate to station matters.".

EDITORIALIZING

SEC. 404. (a) Section 399(a) of the Communications Act of 1934 is amended by inserting "licensed to any governmental agency or instrumentality" after "station".

(b) Section 399(b)(5) of the Communications Act of 1934 is amended by striking out "Secretary" and inserting in lieu thereof "Corporation".

TECHNICAL AMENDMENTS

SEC. 405. (a)(1) Part IV of title III of the Communications Act of 1934 is amended by redesignating subpart C as subpart D.

(2) The heading for subpart D of part IV of title III of the Communications Act of 1934, as so redesignated in paragraph (1), is amended to read as follows:

"Subpart D—General".

(b)(1) Sections 397(10)(A), 397(10)(B), 397(11), and 399 of the Communications Act of 1934 are amended by striking out "noncommercial educational" each place it appears therein and inserting in lieu thereof "public".

(2) Sections 397(9), 397(10)(A), and 397(11) of the Communications Act of 1934 are amended by striking out "educational" each place it appears therein and inserting in lieu thereof "public".

(3) Section 397(10)(B) of the Communications Act of 1934 is amended by striking out "educational" the second, third, and fourth places it appears therein and inserting in lieu thereof "public".

(4) Section 398 of the Communications Act of 1934 is amended by striking out "educational" the first and third places it appears therein and inserting in lieu thereof "public".

(c) Section 397(6) of the Communications Act of 1934 is amended by striking out "subpart B" and inserting in lieu thereof "subpart C".

EFFECTIVE DATES

SEC. 406. The provisions of this Act shall take effect on October 1, 1978, except that the provisions of sections 102, 201, and 303, and the provisions of section 396(k)(1) of the Communications Act of 1934 (as amended by section 308), shall take effect on the date of the enactment of this Act.

---

OFFICE OF
TELECOMMUNICATIONS POLICY,
*Washington, D.C., March 22, 1978.*

The VICE PRESIDENT,
*President of the Senate, U.S. Senate.*

DEAR MR. VICE PRESIDENT: Enclosed for the consideration of the Congress is a draft bill entitled the "Public Broadcasting Financing Act of 1978." This bill is designed to continue and increase long-range funding for public television and radio while making statutory changes to improve the overall effectiveness of the system.

This bill is essentially the same as S. 2235, which was introduced by Senators Magnuson, Hollings and Pearson last October at the Administration's request. It does, however, contain several amendments in response to reactions received by the Administration and in fulfillment of commitments made by the President. The most important of these amendments assigns civil rights enforcement responsibilities for public broadcasting to the Department of Health, Education and Welfare. An explanation of the amendments and a section-by-section analysis of the legislation is enclosed.

The statutory changes proposed in the legislation are discussed in detail in the message which the President sent to Congress last October, a copy of which is enclosed. The amendments now being proposed do not represent any changes in the policies the President proposed last fall. Rather, most of them are technical in nature or are simply intended to further clarify the intentions underlying the bill.

In addition to continuing and increasing long-range funding for public broadcasting, the bill would amend the Educational Broadcast Facilities Act of 1962 and the Public Broadcasting Act of 1967, which are incorporated into the Communications Act of 1934.

The 1962 Act first provided Federal funds for the construction and improvement of public broadcasting stations. The 1967 Act created the Corporation for Public Broadcasting (CPB) and provided the first Federal funds for a national interconnection system for such stations and for programming produced by and for them. The Public Broadcasting Financing Act of 1975 provided a method of long-range funding for CPB through five-year advance authorizations to provide insulation from political manipulation and to facilitate forward planning. Under this Act, appropriations have been made on a two-year advance funding cycle.

Fiscal year 1980 is the last year covered by the existing authorization bill, so enactment of new authorizing legislation by this Congress is necessary to assure continuation of advanced-year funding.

In summary, the statutory changes the President has proposed are designed to:

Clarify the mission of the Corporation for Public Broadcasting and to reduce overlap with other public broadcasting organizations.

Increase cooperation between CPB and other public broadcasting organizations.

Increase public broadcasting's journalistic independence and insulation.

Increase the proportion of federal funds allocated by CPB for national programming.

Transfer the responsibility for administering facilities funds from HEW to CPB.

Set priorities for use of facilities funds to extend public television and radio service to the entire population and to assist minorities in starting public stations.

Make facilities funds available for non-broadcast technologies.

Requires long-range planning by CPB in cooperation with other public broadcasting organizations.

Require greater public accountability by public stations.

Increase the participation of minorities and women in public broadcasting.

Require CPB to inventory annually grants from federal agencies to public broadcasting.

The bill includes a five-year authorization for CPB at $180 million for fiscal year 1981 and $200 million in each of the four succeeding years. Level authorizations after two years are necessary, we believe, to provide the President and Congress with an opportunity to review public broadcasting's financial needs, the effects of these amendments, and the recommendations of the Carnegie Commission on the Future of Public Broadcasting. The bill would also reduce the ratio of non-Federal funds public broadcasting must raise to match future appropriations from $2.50 to 1 to $2.25 to 1.

The bill also includes a separate authorization for the facilities program at $30 million annually for fiscal years 1979 and 1980. The bill proposes that the telecommunications demonstration program started under the 1975 Public Broadcasting Financing Act remain at HEW, with $1 million authorized for this purpose in fiscal year 1979.

The Office of Management and Budget advises that the enactment of the proposed legislation would be consistent with the program of the President.

Sincerely,

WILLIAM J. THALER,
*Acting.*●

---

By Mr. HATCH:

S. 2902. A bill entitled the "Fair Treatment for Skilled Trades Act of 1978"; to the Committee on Human Resources.

● Mr. HATCH. Mr. President, today I am pleased to introduce the Fair Treatment for Skilled Trades Act of 1978.

There is a great need for this bill in our society. Throughout our Nation are several million skilled tradesmen who are trapped in industrial unions for the purposes of collective bargaining and held captive by NLRB administrative case law. Most of these people are unwillingly immersed in plantwide bargaining units where the bargaining rights are held by industrial unions or other major independent unions which these employees feel cannot represent their best interests in bargaining. This situation must be put to a stop and these millions of skilled craftsmen be permitted to have the greatest freedom of association among themselves and the right to choose which unions can best represent their interest, if any.

Because this is a highly complex provision in the National Labor Relations Act, I think a good deal of background information is necessary to inform my colleagues as to what this bill seeks to do. Under existing law, section 9(b) of the National Labor Relations Act confers on the Board the discretion to establish the unit appropriate for collective bargaining and to decide whether such units shall be the employer unit, craft unit, plant unit, or a subdivision thereof. With respect to craft units, section 9(b)(2) of the act prohibits the Board from deciding "that any craft unit is inappropriate for 'collective bargaining' purposes on the ground that a different unit has been established by a prior Board determination, unless a majority of the employees in the proposed craft unit vote against separate representation."

The interpretation of this section of the act by the Board has reflected its decisional policy, and changes in interpretation have resulted in policy changes. The most recent such major change was announced in Mallinckrodt Chemical Works, 162 NLRB 387. In that case, the Board majority described their decision as demonstrating an intention to free itself "from the restrictive effect of rigid and inflexable rules" in determining bargaining units. I believe an analysis of the Board's decisions following Mallinckrodt reveals just the opposite. It is my contention that the Board has seldom found crafts severance appropriate following Mallinckrodt because of the restrictive nature of the criteria developed in that case, permitting severance, which I shall discuss herein.

Before Mallinckrodt, the Board held in American Potash Co., 107 NLRB 1418, that the mandate of section 9(b)(2) was best effectuated when the employees sought to be severed from a broader unit where a true craft or traditional departmental group and the union which sought to represent them was the one which traditionally represented that group. The only exceptions made were in four industries: Basic steel, basic aluminum, lumber, and wet milling. The rationale for these exceptions, in the nature of a grandfather clause was to preserve firmly established bargaining patterns in the industries where the Board had at the time of American Potash already denied a severance because of the degree of integration of the production process.

The American Potash case seems to be in harmony with the legislative history behind the enactment of section 9(b)(2) which shows that prior to 1947 the Board allowed craftsmen to vote in a separate election, in an initial organization, and thus had separate representation of their own (Globe Machine and Stamping Company, 3 NLRB 294). Following this so-called Globe doctrine, in American Can, 13 NLRB 1252, the Board refused to allow craft units to be "carved out" of a broader bargaining unit which had already been established. The Senate Report No. 105 on the then Taft-Hartley Act of 1947 stated in relevant part—

> . . . The Board except under unusual circumstances, has virtually compelled skilled artisans to remain part of a comprehensive plant unit. The committee regards the application of this doctrine as inequitable. Our bill still leaves to the Board discretion to review all the facts in determining the appropriate unit, but it may not decide that any craft unit is inappropriate on the ground that a different unit has been established by a higher Board determination.

The report further indicated that the new section, 9(b)(2), would overrule the American Can case.

The thrust of the Senate's language survived the conference committee deciding the fate of the Taft-Hartley Act and was included in a final conference report. In considering the Senate version, Senator Taft on April 23, 1947, explained:

> . . . We have provided further protection for craft unions. Today the situation is that when a new plan is organized the Board ordinarily permits the craft members of that plant to vote as to whether they will have a special craft union or join a general plant union. The Board has followed the desires of the craft unit on that question. But if at the time of the first certification a craft unit is not organized, or if no action is taken, and if by default they are included in a plant unit which is certified to the Board, the Board has taken the position that after one year of such bargaining no craft union will be recognized or given an opportunity to be heard in connection with establishing a craft unit.
>
> All this bill does is to provide that such a previous finding shall not have that effect, and that if a year later the craft people want to form a separate union they shall have the same consideration at that time as they would have had if they had taken that action when the plant was first organized. In effect, I think it gives greater power to the craft units to organize separately. It does not go the full way of giving them an absolute right in every case; it simply provides that the Board shall have discretion and shall not bind itself by previous decision, but that the subject shall always be open for further consideration by the Board. (93 CONGRESSIONAL RECORD, pages 3950–3952.)

Thus, the American Can case was effectively overruled by the Congress, but the Board was left with discretion to review all the facts in any given craft severance case.

Thus, the legislative history was made quite clear in regard to the effect of section 9(b)(2). But in Mallinckrodt the Board widened its inquiry beyond the two tests previously used in the American Potash decision and would thereafter permit "evaluation of all consideration relevant to an informed decision" and set forth six factors as illustrative of what the Board deemed relevant. They are:

> (1) Whether or not the proposed unit consists of a distinct and homogeneous group of skilled journeymen craftsmen performing the function of their craft on a nonrepetitive basis . . .
>
> (2) The history of collective bargaining, of the employees sought, and the plant involved . . . with emphasis on whether the existing patterns of bargaining are productive of stability in labor relations, and whether such stability will be unduly disreputed . . .
>
> (3) The extent to which the employees in the proposed unit have established and maintained their separate identity . . . and the extent of the participation or lack of participation in . . . the existing pattern of representation . . .
>
> (4) The history and pattern of collective bargaining in the industry involved . . .
>
> (5) The degree of integration of the employer's production process . . .
>
> (6) The qualifications of the union seeking to "carve out" a separate unit . . .

The problem arises that since Mallinckrodt, the Board has seldom found craft severance appropriate because of the restrictive nature of the criteria set forth above. The Chairman of the National Labor Relations Board, Mr. John H. Fanning, has recently written me regarding the data which has been collected by the Board on the craft severance cases. Such data are based on an analysis of severance cases in "reported" Board decisions; that is, those cases which have made their way to the Board in Washington by one process or another and appear in the Board's bound volumes of its published decisions.

These data show that since the issuance of Mallinckrodt in December of 1966, the question of whether to permit severance on a craft or departmental basis has been before the Board on 71 occasions, with the Board denying severance in 63 cases while granting the request for severance for 8, and only 8, instances. Interestingly enough, a check of the results of these eight cases discloses that employees voted to sever from the existing unit on six occasions, while voting against severance on two other occasions. I submit that this is hard evidence of the fact that when these skilled tradesmen are presented with the opportunity to establish a separate unit, they take it in their best interest.

The purpose of my bill is, therefore, to return to the original intent of the Taft-Hartley Act in fashioning section 9(b)(2) and to overrule the restrictive criteria fashioned by the Board in its Mal-

linckrodt doctrine and its progeny. It appears to me that the criteria the Board has developed to make decisions on a craft severance circumvent the congressional history underlying the creation of the relevant section of the law and prevent craft severance. While I know that it was the Board's desire to bring stability to labor relations in America by preventing the proliferation of bargaining units, a principle with which I generally agree, it is not justified as a method which creates outright slavery for skilled tradesmen by depriving them of a method of free choice as to which unions and units are best suited for the purposes of collective bargaining.

Accordingly, my bill is designed to see to it that skilled tradesmen receive the fairest treatment possible, comparable with the treatment of other employees under the act in the area of unit determinations, to provide them with the maximum opportunity to join together as an appropriate unit for collective bargaining. Equity and fairness in our labor law dictates no less.

Mr. President, I ask unanimous consent that the text of my bill be printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2902

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That section 9(b) of the National Labor Relations Act is amended by striking out clause (2) and inserting in lieu thereof the following: "(2) decide that any craft unit is inappropriate for such purposes, in any case where a different unit has been established by a prior Board determination, or collective bargaining history, unless the determination of the Board is based upon the same factors, given the same weight, as would be applied to such a decision in the case of initial establishment of such a unit, unless a majority of the employees in the proposed craft unit votes against separate representation; or".●

## ADDITIONAL COSPONSORS

S. 418

At the request of Mr. BAYH, the Senator from Colorado (Mr. HASKELL) was added as a cosponsor of S. 418, the Displaced Homemakers Act of 1977.

S. 551

At the request of Mr. GRIFFIN, he was added as a cosponsor of S. 551, the Victims of Crime Act of 1977.

S. 2400

At the request of Mr. BAYH, the Senator from Minnesota (Mr. ANDERSON) was added as a cosponsor of S. 2400, to establish a National Alcohol Fuels Commission.

S. 2565

At the request of Mr. MATHIAS, the Senator from West Virginia (Mr. RANDOLPH) was added as a cosponsor of S. 2565, a bill to provide for further research and services with regard to victims of rape.

S. 2612

At the request of Mrs. HUMPHREY, the Senator from Minnesota (Mr. ANDERSON) was added as a cosponsor of S. 2612, the Biomedical Sciences High School Enrichment Programs Act.

S. 2707

At the request of Mr. LEAHY, the Senator from Indiana (Mr. LUGAR) was added as a cosponsor of S. 2707, the Federal Disclosure and Accountability Act of 1977.

S. 2744

At the request of Mr. SCHWEIKER, the Senator from Nevada (Mr. CANNON) was added as a cosponsor of S. 2744, the Rural Health Services Act of 1978.

S. 2780

At the request of Mr. HATHAWAY, the Senator from Vermont (Mr. LEAHY) was added as a cosponsor of S. 2780, a bill to amend the Public Health Service Act to provide for grants and contracts for projects to provide health and dental care to medically underserved rural populations, and for other purposes.

S. 2598

At the request of Mr. JAVITS, the Senator from New York (Mr. MOYNIHAN) and the Senator from Hawaii (Mr. MATSUNAGA) were added as cosponsors of S. 2598, a bill to amend title XI of the Public Health Service Act.

SENATE JOINT RESOLUTION 29

At the request of Mr. BURDICK, the Senator from Nevada (Mr. LAXALT) was added as a cosponsor of Senate Joint Resolution 29, to authorize the President to annually proclaim National Family Week during the week in November which includes Thanksgiving Day.

SENATE JOINT RESOLUTION 121

At the request of Mr. PELL, the Senator from Arizona (Mr. GOLDWATER) was added as a cosponsor of Senate Joint Resolution 121, authorizing the President to proclaim the second full week in October 1978, as National Legal Secretaries' Court Observance Week.

SENATE CONCURRENT RESOLUTION 74

At the request of Mr. MATHIAS, the Senator from Ohio (Mr. GLENN) was added as a cosponsor of Senate Concurrent Resolution 74, recognizing April as Fair Housing Month.

AMENDMENT NO. 1678

At the request of Mr. BAYH, the Senator from Colorado (Mr. HASKELL) was added as a cosponsor of amendment No. 1678, intended to be proposed to S. 418, the Displaced Homemakers Act of 1977.

## SENATE CONCURRENT RESOLUTION 78—SUBMISSION OF A CONCURRENT RESOLUTION RELATING TO FAIR TRADE IN THE STEEL INDUSTRY

Mr. BAKER (for himself and Mr. HEINZ) submitted the following concurrent resolution, which was referred to the Committee on Finance:

SENATE CONCURRENT RESOLUTION 78

Whereas, the American steel industry is facing an unprecedented crisis, in the last several months having suffered layoffs of more than 20,000 workers;

Whereas, a contributing factor to the problems facing the American steel industry is the dumping of imports subsidized by foreign governments into this country;

Whereas, such imports have adversely affected the United States balance of payments and have been a factor in reduced employment opportunities in the American steel industry; and

Whereas, the Department of the Treasury has failed to be sufficiently aggressive in investigating the unfair trade practices of foreign steel manufacturers, thus permitting the continued sale of imported products below cost: Now, therefore, be it

*Resolved by the Senate (the House of Representatives concurring)*, That the Congress reaffirms its support for existing laws restricting unfair or subsidized competition from imports, particularly the Antidumping Act of 1921 and the Trade Act of 1974, and urges the President to direct Federal agencies, particularly the Department of the Treasury and the Office of the Special Trade Representative to enforce vigorously and aggressively existing laws to prevent cases of dumping, trade discrimination, and other forms of unfair competition that have an adverse impact on the American steel industry.

FAIR TRADE IN THE STEEL INDUSTRY

● Mr. BAKER. Mr. President, I send to the desk a concurrent resolution and ask that it be appropriately referred.

Mr. President, last October the distinguished junior Senator from Pennsylvania (Mr. HEINZ) offered a sense-of-the-Senate resolution regarding the damaging effect of foreign imports on certain domestic industries. I was pleased to cosponsor that resolution, and it passed the Senate on October 12.

Specifically, the resolution reaffirmed the Senate's support for vigorous enforcement of existing statutes which seek to protect American industries from unfair competition. Although many industries recently have suffered from an influx of cheaper priced imports, no one has suffered as much as the steel producers. Numerous plants have been closed and thousands of steelworkers have been laid off. The steel industry's problems are not totally attributable to increased imports. Nevertheless, imports constitute a large part of their problem and a part that can be dealt with under existing law.

The administration's response to this crisis has been to propose a very complex "trigger-pricing" system. Although it is too early to tell how effective the "trigger-pricing" system will be, I believe that it should be pursued in conjunction with, rather than in lieu of, enforcement of the Anti-Dumping Act.

It is for that reason that Senator HEINZ and I today reintroduce in the form of a concurrent resolution the resolution which passed last fall. We do so in an effort to make our point on enforcement of the Anti-Dumping Act more forcefully. I am pleased to join in this endeavor with Senator HEINZ who has been instrumental in assisting the domestic steel industry.●

● Mr. HEINZ. Mr. President, last October I submitted a resolution relating to the proper enforcement of our laws against unfair competition in the steel industry by our foreign trading partners. That resolution was cosponsored by 14 other Senators, and it was adopted by the Senate on October 12.

With that resolution we attempted to send a message to the administration that its trade policy with respect to steel

was sadly deficient. Thousands of workers had been laid off and major plants closed as steel imports approached the 20-percent level. At that point no action had been forthcoming from the administration.

Following the adoption of that resolution, however, and subsequent meetings with the President and other administration officials, some policy initiatives began to develop. President Carter announced his intention to fully enforce our antidumping and unfair trade laws, but he subsequently retreated from that commitment in his approval of the "trigger price" mechanism developed by Treasury Under Secretary Anthony Solomon.

In effect this system is a price floor which will raise some prices and essentially legalize dumping in some cases. It will also create an administrative nightmare similar to that which occurred several years ago when we experienced wage and price controls. Some of the inherent inequities in this kind of system have already come to light, particularly with regard to the wire rod manufacturers. In the latter case, a temporary injunction has been granted against the application of the trigger price system to wire rod.

Although it will be some months before the full effect of this system is known, it is worth noting that steel imports for January and February rose sharply to 3.79 million tons from 2.12 million tons in the previous year. This is hardly a sign of restraint on the part of our trading partners and does not bode well for the future of the industry, or the future of the trigger price system, for that matter.

Under these circumstances, I think it is appropriate to repeat our message of last October loud and clear. The President must understand the determination of Congress that laws already on the books be aggressively and competently enforced, and that unfair or subsidized competition be thereby restricted. This resolution reaffirms that message, and I urge its rapid consideration.●

## AMENDMENTS SUBMITTED FOR PRINTING

### MILITARY CONSTRUCTION AUTHORIZATIONS—S. 2636

AMENDMENT NO. 1772

(Ordered to be printed and referred to the committee on Armed Services.)

Mr. HATHAWAY submitted an amendment intended to be proposed by him to the bill (S. 2636) to authorize certain construction at military instailations, and for other purposes.

● Mr. HATHAWAY. Mr. President, I am pleased that President Carter, in his recent visit to Bangor, Maine, pledged to reevaluate the economic impact of closing Loring Air Force Base. I am confident that this review will lead to a more realistic appraisal of the economic consequences of closing Loring.

However, within a matter of weeks, the Defense Department is expected to announce plans to close or reduce 50 or more military installations in the United States. Given the imminence and the reported size of the next series of closings, I am submitting legislation that will insure that Congress has a reliable source of analysis for determining the cost savings to be realized from any base closure, and the economic impact on any community affected by a base closure.

In addition, this amendment to the military construction authorization measure will guarantee that communities experiencing base closings or reductions will not suffer serious and irreparable economic disclocation.

This legislation requires the General Accounting Office to conduct an independent study to determine cost and savings estimates to be realized from proposed or actual closing or reduction of any military installation. The GAO also is required to assess the local economic impact and consequences of any base closing or reduction. This assessment shall include economic impact on unemployment, income, small business, State and local tax revenues, State and local governmental expenditures for unemployment compensation, welfare, general assistance, medical costs, and other related social services expenditures, and the multiplier effects of such proposed closing or realinement on the community concerned.

This legislation also requires that upon a determination by the General Accounting Office that the closure or reduction of a military installaton would result in an increase in direct or indirect unemployment greater than one quarter of 1 percent quarterly over the existing unemployment rate. Then such base closure or reduction would be suspended until a special task force developed a detail plan of economic assistance to the communities affected by the closing or reduction. The plan will have to be developed and implemented in such a manner that the revitalization of the economic base will result in an increase in the local unemployment rate of less than one quarter of 1 percent quarterly, in the communities affected by the base closure or reduction.

The Defense Department is now required by law to determine the cost savings that would be realized from any base closure. It also has the responsibility to assess the economic impact on the affected community. But the Defense Department's estimates should be viewed with some skepticism by Congress. It is clear that they have a vested interest in showing that substantial savings and minimal economic dislocation will result from any base closure or realinement.

Recently, the Northeast-Midwest Institute and the Coalition of Northeast Governors issued a joint study entitled "The Aftermath: The Problems Communities Face After a Military Installation Closes." The study reviews the experiences of six communities which recently have suffered a base closing and found the current framework for assessing the economic impact and coordinating revitalization efforts to be inadequate.

In the six communities studied, significant disparities existed between the Defense Department's and the communities' estimates of the economic dislocation that would result from the base closure. Each of these communities felt obligated to prepare their own estimate of the economic consequences of the base closure because the Defense Department's analysis was so woefully inadequate.

In my own State, the Defense Department claims that it can "save" $17 million in military expenditures over 5 years by reducing Loring Air Force Base. Yet independent studies by the Save Loring Committee indicate that such a "saving" could generate total costs to the Federal Government of more than $133 million dollars over the same 5-year period.

This legislation that I am introducing today will insure that Congress has an independent, accurate, and reliable estimate of the economic savings and the local economic dislocation to be realized from any base closure or realinement.

As this legislation amends what was formerly known as section 612 of the 1977 and 1978 military construction authorization measure, I believe it would be useful to briefly summarize some of the legislative history of section 612.

In this regard, I ask unanimous consent that previous remarks I have made about section 612, along with the text of the amendment, and excerpts from the Northeast-Midwest Study, be printed in the RECORD.

There being no objection, the material and amendment were ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR HATHAWAY

Mr. President, I appreciate very much the work of the Committee on Armed Services with regard to the 1978 military construction authorization measure, the conference report which is now pending.

I particularly appreciate the efforts of the Subcommittee on Military Construction and Stockpiles ably chaired by the Senator from Colorado (Mr. HART) with respect to the provisions contained in section 612 of the pending measure.

That section establishes as permanent Federal law a sound procedure of congressional participation and review of any proposed base closure or significant realinement. Under these provisions, the Secretary of Defense or the Secretary of the military department involved is required to publicly announce, and notify the Senate and House Committees on Armed Services in writing of any proposed closure or realinement. The Secretary is then required to comply with all of the requirements of the National Environmental Policy Act of 1969 with respect to the proposal. The Secretary must submit his final decision to implement such a proposal to the committees acompanied by a detailed justification for the decision including statements of "estimated fiscal, local economic, budgetary, environmental, strategic, and operational consequences of the proposed closure or realinement."

Most importantly the Secretary is barred from taking any final irrevocable action with respect to the proposal until the expiration of 60 days subsequent to the submission of the final decision to the committees. In this way Congress is assured of having an ample opportunity to review the proposed closing or realinement from the standpoint of our national interest in its broadest sense.

If Congress does not agree with the reasons cited in the submissions to the committee, or if it feels that, notwithstanding those

reasons, a particular base ought to be kept open due to an overriding national interest, it can nullify the decision of the Secretary by enacting legislation.

I commend the Senator from Colorado for including these procedures in his bill S. 1474, and for successfully steering them through the Senate on May 13, 1977.

I commend him also for convincing the conference committee to retain these important provisions, since they were not included in the House-passed version.

I was particularly pleased to see that the final conference report version of section 612 contains drafting changes which represent further improvement and refinement of the version which passed the Senate on May 13, 1977.

In particular, these changes should clarify the relationship between section 612 of the pending measure and section 612 of the Military Construction Authorization Act, 1977, (Public Law 94–431), and will, I believe, serve to underline the integrity and continuing applicability of the provisions already in existing law.

In this regard I was particularly concerned about the potential interpretation of a portion of the Senate passed version of May 13 which stated:

"(d) This section shall not apply to any closure or realignment . . . if such closure or realignment was publicly announced prior to October 1, 1977."

This subsection was apparently required because the bill itself, the 1978 authorization, was intended to govern the authorization of funds beginning in the 1978 fiscal year, which did not begin until October 1, 1977.

The language of the subsection at the same time called into some question the status of proposed base closures and reductions which were publicly announced prior to October 1, 1977.

The language of the 1977 Authorization Act states, in the relevant subsection, the following:

"(c) This section shall not apply to any closure or realignment . . . if such closure of realignment was publicly announced prior to January 1, 1976."

Thus the language in the 1977 act, now law, was intended to apply to any and all base closures or reductions announced subsequent to January 1, 1976. During the Senate floor debate on that measure, which occurred on September 15, 1976, it was made clear by me and a number of other Senators, including my colleague from Maine, that that provision was intended to be applicable, or capture, all proposed closures and major realinements made public subsequent to that date.

Specifically mentioned in the course of this debate by me and others as being captured by these provisions was the proposed reduction at Loring Air Force Base located in Limestone, Maine, which was announced publicly in March of 1976.

The legislative history therefore made it clear at that time that the Senate intended these provisions to apply prospectively to the proposed Loring AFB realinement, for as long as the proposal was pending.

The language in the bill before the Senate on May 13, 1977, however, cast some doubt as to whether this version of section 612 was intended to supersede the provisions of existing law, and whether, with its different trigger date, it might somehow take Loring AFB out from under the sound and rational review procedures in existing law.

To remedy this situation, I offered an amendment cosponsored by my colleague from Maine and the Senator from Massachusetts (Mr. KENNEDY) on June 29 of this year to H.R. 7589, the military construction appropriation bill that stipulated that no funds appropriated in that bill could be used to implement a closure or realinement until all of the provisions of both section 612 of the 1977 authorization in existing law and section 612 of the 1978 authorization legislation were complied with. I was pleased that the Senate approved this amendment and that it was incorporated into the appropriations legislation as it passed this body. I would urge the conferees to retain this language to plug any potential loophole and to make crystal clear that the principles of section 612 apply to any and all closures or reductions announced subsequent to January 1, 1976.

This thus removes any potential for the Air Force, or any other department, to engage in artful dodging of these vital provisions.

At the same time, I am greatly appreciative of the adjustments made in the pending measure since it was last before the Senate. These changes are responsive to the concerns I raised on the floor on June 29 and should further underline the continuing applicability of the original version of section 612 to those proposed reductions announced prior to the effectiveness of the pending measure.

In this regard, Mr. President, I ask unanimous consent that section 612 of the conference report be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

BASE CLOSURES AND REALIGNMENTS

SEC. 612. (a) Chapter 159 of title 10, United States Code, as amended by section 504 of this Act, is amended by adding at the end thereof a new section as follows:

"§ 2387. Base closures and realignments

"(a) Notwithstanding any other provision of law, no action may be taken to effect or implement—

"(1) the closure of any military installation;

"(2) any realignment with respect to any military installation involving a reduction by more than one thousand, or by more than 50 percent, in the number of civilian personnel authorized to be employed at such military installation at the time the Secretary of Defense or the Secretary of the military department concerned notifies the Congress under subsection (b)(1) that such installation is a candidate for closure or realignment; or

"(3) any construction, conversion, or rehabilitation at any military facility other than a military installation referred to in clause (1) or (2) (regardless of whether such facility is a military installation as defined in subsection (d)) which will or may be required as a result of the relocation of civilian personnel to such facility by reason of any closure or realignment to which clause (1) or (2) applies, unless and until the provisions of subsection (b) are complied with.

"(b) No action described in subsection (a) with respect to the closure of, or a realignment with respect to, any military installation may be taken unless and until—

"(1) the Secretary of Defense or the Secretary of the military department concerned publicly announces, and notifies the Committees on Armed Services of the Senate and the House of Representatives in writing, that such military installation is a candidate for closure or realignment;

"(2) the Secretary of Defense or the Secretary of the military department concerned complies with the requirements of the National Environmental Policy Act of 1969 with respect to the proposed closure or realignment;

"(3) the Secretary of Defense or the Secretary of the military department concerned submits to the Committees on Armed Services of the Senate and House of Representatives his final decision to carry out the proposed closure or realignment and a detailed justification for such decision, including statements of the estimated fiscal, local economic, budgetary, environmental, strategic, and operational consequences of the proposed closure or realignment; and

"(4) a period of sixty days expires following the date on which the justification referred to in clause (3) has been submitted to such committees, during which period no irrevocable action may be taken to effect or implement the decision.

"(c) This section shall not apply to the closure of a military installation, or a realignment with respect to a military installation, if the President certifies to the Congress that such closure or realignment must be implemented for reasons of national security or a military emergency.

"(d) As used in this section:

"(1) 'Military installation' means any camp, post, station, base, yard, or other facility under the authority of the Department of Defense—

"(A) which is located within any of the several States, the District of Columbia, the Commonwealth of Puerto Rico, or Guam; and

"(B) at which not less than five hundred civilian personnel are authorized to be employed. Such term does not include any facility used primarily for civil works, rivers and harbors projects, or flood control projects.

"(2) 'Civilian personnel' means direct-hire permanent civilian employees of the Department of Defense.

"(3) 'Realignment' includes any action which both reduces and relocates functions and civilian personnel positions, but does not include a reduction in force resulting from workload adjustments, reduced personnel or funding levels, skill-imbalances, or other similar causes.

"(e) Except as provided in subsection (c), this section shall apply to any closure of a military installation, and any realignment with respect to a military installation, which is first publicly announced after the September 30, 1977.".

(b) The table of sections at the beginning of chapter 159 of such title is amended by adding at the end thereof a new item as follows:

"2687. BASE CLOSURES AND REALIGNMENT.".

(c) Section 611 of the Military Construction Authorization Act, 1966 (Public Law 89–188; 10 U.S.C. 2662 note), and section 612 of the Military Construction Authorization Act, 1977 (Public Law 94–431; 90 Stat. 1366), shall be inapplicable in the case of any closure of a military installation and any realignment with respect to a military installation, which is first publicly announced after September 30, 1977.

Mr. HATHAWAY. Mr. President, first, the language contained in this section acts to insert a new section into positive law of the United States Code, thus insuring that it will be interpreted as permanent law. But at the same time, it cleans up the potential difficulties in the prior draft.

This language cannot be seen as superseding the provisions of section 612 of Public Law 94–431 with respect to reductions proposed prior to October 1, 1977 since in subsection (c) of section 612 of the pending measure it states the following:

"(c) Section 611 of the Military Construction Authorization Act, 1966 (Public Law 89–188; 10 U.S.C. 2662 note), and section 612 of the Military Construction Authorization Act 1977 (Public Law 94–431; 90 Stat. 1366), shall be inapplicable in the case of any closure of a military installation and any realignment with respect to a military installation, which is first publicly announced after September 30, 1977."

Thus the existing law continues to be valid and fully applicable to all major reductions

announced subsequent to January 1, 1976 and prior to October 1, 1977, including Loring Air Force Base.

This conclusion flows directly from the language which stipulates that the existing law does not apply to closures announced after September 30, 1977 and at that point 10 U.S.C. 2687 takes over.

The potential problem of the new language superseding the old is avoided, and section 612 of Public Law 94–431 continues to stand as valid law now and in the future.

Mr. President, in order to make entirely certain that this is the case and that there is no possibility for ambiguity, I would like to ask the distinguished floor manager, who also was the manager of the conference in behalf of the Senate if this is the proper interpretation of the measure before us.

Mr. HART. I am pleased to respond to the inquiry of the Senator from Maine on behalf of the Senate conferees.

The Senator's interpretation is entirely correct. The changes made in conference referred to by the Senator do make absolutely clear that any base closure or realinement which is announced from January 1, 1976 to September 30, 1977, will continue to be captured and governed by section 612 of Public Law 94–431.

Section 612 of Public Law 94–431 is in no way superseded by the language in section 612 of the bill before us which will add section 2687 to title 10 of the United States Code.

As the Senator mentioned, the proposed reduction at Loring Air Force Base was specifically and repeatedly discussed during the floor debate on last year's bill, and it clearly continues to be governed by section 612 of that bill.

Mr. HATHAWAY. I thank the Senator from Colorado and appreciate his participating in this colloquy with me.

---

## THE AFTERMATH: THE PROBLEMS COMMUNITIES FACE AFTER A MILITARY INSTALLATION CLOSES

### I. BACKGROUND

An earlier Center and Institute paper demonstrated that the sixteen-state Northeast-Midwest area has suffered disproportionately from base closings. In preparing that study, the authors found that communities which were affected by base closings felt that they had suffered severe economic dislocation and that the federal response had been inadequate. Given the imminence of another round of base closing announcements,[1] it is critical to explore what assistance is available for affected communities, what is lacing, and what is needed.

This paper is not a conclusive examination of those issues involved in the base closings, and does not consider the rationale used by the Defense Department in justifying these closings. Instead, it focuses on what happens after a base is closed. Two areas of concern are identified:

1. Impact of Closings—The amount of impact which is estimated is critical in judging the amount of assistance required for revitalization. Are there differences between the estimates provided by the Office of Economic Adjustment within the Department of Defense and the estimates prepared by state and local communities?

2. Revitalization—What steps are now being taken to assist affected communities in their revitalization efforts? Are these steps sufficient? What assistance should be given for longer term problems of conversion from military to civilian uses?

In order to examine these questions, we analyzed six case studies of communities affected by base closings. The case studies were selected according to two requirements: that they be graphically distributed across the country; and that reports had been prepared about the base closing by both the Department of Defense and community officials. Community studies were used not only to find evidence of inaccuracies by the Department of Defense, but also to compare assumptions, methods and concerns.

### II. CASE STUDIES

#### *A. Boston/Chelsea*

In April, 1973, the Department of Defense announced the closing of the historic Boston Naval Shipyard at Charlestown and South Boston, and the Chelsea Naval Hospital in Massachusetts. These closure announcements not only shutdown these bases, but coupled with the simultaneous naval base closing in Rhode Island, all but eliminated the entire 1st Naval District.

In response to these closures, state and local officials, in conjunction with the Congressional delegation from Massachusetts, requested assistance from the President's Economic Adjustment Committee to alleviate the anticipated economic loss to affected communities.

The Commonwealth of Massachusetts, with a grant from the U.S. Department of Commerce (Economic Development Administration), formed the Joint Commission on Federal Base Conversion. This Commission, made up of representatives from the public and private sectors, undertook a study to determine the impact of the base closings on Massachusetts and to develop tentative plans for the re-use of the excess land and existing facilities at the closed bases.

In 1975, the Joint Commission evolved into the Government Land Bank. This state agency is mandated to aid in the "speedy and orderly conversion" of the South Boston Naval Annex, Chelsea Naval Hospital, the Charlestown Shipyard and Westover Air Force Base to civilian uses.

To achieve this goal, the Land Bank is empowered by the Commonwealth to "spend up to $40 million" in state funds to purchase property at the closed military bases and has the power to arrange long term financing for local economic development.

In 1977, the Land Bank purchased from the federal government 138 acres comprising the former South Boston Naval Annex for $4.7 million. At present, the Charlestown Shipyard and the Chelsea Naval Hospital are still held by the General Services Administration.

#### *B. Rhode Island (Newport/Quonset Point/Davisville)*

On the same day as the announced closings in Boston, the Department of Defense closed the Quonset Point Naval Air Station located in Rhode Island and instituted a drastic reduction in personnel at the Newport Naval Base by transferring destroyers to other naval bases throughout the country. In October of 1973, the Defense Department also announced that the Construction Battalion Center at Davisville, Rhode Island, would be reduced to a "caretaker status". These actions constituted the largest single military cutback ever sustained in one state.

The Defense Department's Office of Economic Adjustment initiated its program in Rhode Island in April of 1973. At the same time, the Governor's office launched an aggressive effort with the formation of the Economic Coordinating Council (ERCC). ERCC, through grants provided by the U.S. Department of Housing and Urban Development and the Economic Development Administration, prepared an economic impact study for the affected areas and developed plans for land re-use (to enhance the economic revitalization) in Rhode Island.

The Economic Renewal Coordinating Council was later absorbed into Rhode Island's Department of Economic Development. The Department of Economic Development has continued efforts toward economic revitalization and obtaining land excessed by the Department of the Navy.

As of February 1978, Rhode Island still does not own land at Quonset-Davisville or Newport. The present arrangement consists of a series of short-term leases (1 year). Rhode Island has concentrated its re-use efforts at the Quonset-Davisville area. Final dispcsition of this area is contingent upon an Environmental Impact Statement currently being prepared by the General Services Administration.

#### *C. Frankford*

The Frankford Arsenal was one of the 111 base realignment actions announced by the Secretary of Defense in November of 1974. These proposed realignment actions were part of a continuing Department of Defense effort to shift resources from support and overhead activities to combat capability. They were scheduled for completion in 1977.

The Frankford Arsenal was established in Philadelphia, Pennsylvania, in 1816. Originally a storage, repair and test center for ammunition and artillery, the Arsenal performed research, development, engineering and production of small caliber ammunitions in the years following World War II.

The proposed closing of the Arsenal brought a sustained effort by the City of Philadelphia to prevent the facility from being closed. The City of Philadelphia contested the Department of the Army's estimates concerning costs and savings that would result from shutting down the arsenal and presented their own monetary projections concerning the action.

In 1975, the General Accounting Office was requested to conduct an independent study of costs and savings. The General Accounting Office found that the Department of the Army had overestimated annual savings by $1.3 million, and did not include the affect of unemployment compensation in calculating one time costs. These two considerations aside, the General Accounting Office verified the Department of the Army's findings. In September of 1977, the Frankford Arsenal was permanently closed.

Presently, the Philadelphia Industrial Development Corporation is actively pursuing alternative uses for those areas in Philadelphia affected by the closing.

#### *D. Sauk County (Badger Army Ammunitions Plant)*

The Badger Army Ammunitions Plant, located in Sauk County, Wisconsin, was built by the Army in 1941 for the expressed purpose of providing munitions for World War II. Its history has been one of cyclical employment reaching peak levels during war time. The plant has been de-activated in 1946, 1951 and most recently in August of 1975. A skeletal crew of 288 employees is maintained, and the plant is under the designation of a "caretaker status."

The community did not contest the closing of the plant in 1975 because it has accepted the cyclical routine of the business conducted at Badger. In October of 1975, the Office of Economic Adjustment prepared a report which evaluated economic development efforts in the region, and assessed the region's economic development potential.

OEA's report recommended the establishment of a Sauk County Development Council to deal with economic development on an areawide basis.

The community has been eligible for only technical assistance grants from the Economic Development Administration, and has not been able to obtain funds for its major priorities—land acquisition and utility construction. A grant for an Overall Economic Development Plan has been pending with

---

[1] "Four Virginia Bases Among 20 Army May Close or Come Back." *The Washington Post*, July 21, 1977.

the Economic Development Administration since 1976. The approval of this grant would enable the County to expedite the process of obtaining funds necessary to build water and sewage facilities to develop industrial sites.

*E. Fort Wolters*

Situated between the cities of Mineral Wells and Weatherford in North Central Texas, Fort Wolters was designated in 1963 as the Army's primary helicopter pilot training base in the United States.

The Department of the Army continually maintained that Fort Wolters was to be a "permanent military installation." To accommodate the anticipated needs created by this status, the communities committed substantial amounts of money to improving educational and municipal facilities in the area.

However, in 1971, the Army announced plans to close Fort Wolters. The communities fought this decision and won a temporary reprieve, but in 1973 the Fort was deactivated and placed on a permanent caretaker basis. This designation prevented the community from obtaining any potential surplus land at Fort Wolters. Again, the communities attacked the action, and in August 1973, the land was declared in excess.

In 1974, 4,531 acres were turned over as surplus to the General Services Administration. Four hundred acres have been devoted to educational and health facilities for HEW; over 2,200 acres have been designated as a wildlife preserve. The City of Mineral Wells purchased 206 acres for the purpose of developing light industry. Of the 4.500 acres, only 800 acres has not been disposed of and has been retained by the General Services Administration.

*F. Fort MacArthur*

Located in San Pedro, California, Fort MacArthur was closed by the Department of the Army in a planned reduction of the Army's Air Defense NIKE HERCULES Missile Batteries in February, 1974. Fort MacArthur, the only active Army installation in Southern California, was officially placed in a "caretaker status" in June of 1975.

Community reaction to the closing was immediate. Leaders of the local movement to "keep Fort MacArthur open" included Mayor Tom Bradley of Los Angeles, Congressman Glenn Anderson, Assemblyman Vincent Thomas and the San Pedro Chamber of Commerce. Community estimates and Department of the Army figures on the economic impact of the closing were far apart.

The Office of Economic Adjustment became involved as a result of a fact-finding mission to San Pedro. OEA found the most serious long term concern to the community to be in the successful disposition of the Fort MacArthur property.

The Office of the Mayor's Economic Development Office in Los Angeles, through a Title IX grant provided by EDA, conducted a base re-use plan for the excess land at Fort MacArthur in March of 1976.

As of February, 1978, only a small parcel of land has been turned over to the City of San Pedro for the pupose of building a school. The remainder of the land is still retained by the Federal Government.

Existing federal programs to assist communities affected by base closings are coordinated by the Office of Economic Adjustment (OEA) in the Department of Defense (Manpower, Reserve Affairs, and Logistics), which is responsible to an interagency committee called the Economic Adjustment Committee (EAC).

The OEA was created in 1961 by administrative order by Secretary of Defense McNamara. In 1970, the EAC was established through a White House Memorandum by President Richard Nixon, and given authority over OEA, in order to bolster economic adjustment efforts. A 1973 report submitted to Congress by the EAC, which is chaired by the Secretary of Defense, stated—

"The EAC's primary task is to persuade community leaders to undertake a vigorous effort to diversify the community's economy by prudent and quick utilization of any surplus property in a manner that enhances the overall development effort of the entire area." [2]

The OEA's function is to assist the communities affected adversely by the withdrawal of military bases and contracts. Its principal tasks are to plan for the transition process, and help local leaders obtain assistance from other branches of the federal government. The Office of Economic Adjustment assists communities which request aid and have ". . . suffered significant economic impact as a consequence of Department of Defense decisions and actions . . .". The guidelines for the impact which must be sustained by a community because of a base closure (or loss of contract), before the OEA will help, are flexible. The OEA considers the local unemployment rate, the percentage of employed who will lose their jobs, and other items indicating distress. No firm minimum exists. The OEA sees its job as "helping the community to help itself".

The preparation of plans for economic conversion, while an OEA function, is often contracted out to consulting firms, most notably the firm of Booz-Allen and Hamilton. The plans typically recommend filling the economic gap with industry, recreational facilities, schools, housing, hospitals, and airports. Tourism is a frequently mentioned option. Using the representation of federal agencies on EAC, OEA is supposed to be able to help localities obtain the resources necessary for economic development. This includes grants from federal agencies for manpower training, capital needs (up to several million dollars), and business development loans (averaging about $200,000 per plant). This aid is to be provided through the federal agencies represented on the EAC, such as the Department of Labor; Health, Education and Welfare; Small Business Administration; and Community Services Administration.

Approximately thirty people work for the OEA. Twenty-two are based in Washington, D.C. and each of five regions has a single person and secretary based in it. It is difficult to estimate the annual budget, since work is chargeable to particular federal domestic agencies. Direct costs are as follows: [3]

| | |
|---|---|
| Payroll | $850,000 |
| Travel | 50,000 |
| Contracts | 645,000 |
| Total | 1,545,000 |

Direct funding by the OEA to communities was authorized for the first time under Section 610 of Public Law Number 94-431, the Military Construction Authorization Act of 1977. Six million dollars can be spent for preparation of technical feasibility studies and environmental impact statements; additional funds may go towards planning. At present, three projects have been approved for the expenditure of the funds. Two will be the examination of the feasibility of various types of base conversion in specific areas; the third examines the environmental impact a new proposal for a base closed in Rhode Island. However, none are beyond the most rudimentary stages of implementation.

[2] *The Impact of Defense Cutbacks on American Communities*, Report of the President's Economic Adjustment Committee, Report to the Congress, July 1973; p. 8.

[3] Data from telephone interview with Comptroller office of the Assistant Secretary of Defense.

IV. IMPACT

Assessing the impact of a base closing on a community is the first important step after a closing is announced. It is at this point that the Office of Economic Adjustment becomes involved and it is the first chance for the community to organize itself and consider the steps necessary to overcome the negative economic impact which has been incurred.

It is important to look at the assessment of impact for a second reason. The severity of impact which is estimated is critical in judging the amount of assistance and effort for revitalization. If the impact is estimated to be slight, minimal assistance will be seen as necessary; if the impact is estimated to be much greater, then the need will become evident for greater assistance.

In five of the six case studies, the Office of Economic Adjustment and local communities both prepared analyses of the impact of base closings.[4] These were Boston/Chelsea, Rhode Island, Sauk County, Fort MacArthur, and Fort Wolters. As would be expected, estimates were minimized or maximized according to their source. The Office of Economic Adjustment is in the Department of Defense and its estimates reflect a best case approach; local communities wish to obtain as much assistance as possible, and their estimates often reflect a worst case approach.

This report has not examined the accuracy of the numerical estimates contained in each side's reports. Instead, we have focused on the methods and assumptions used in deriving these estimates.

In the case studies, we found that the most attention was given to four indicators: employment, income, multiplier estimates, and state and local tax revenues and facilities.

*A. Employment*

Employment estimates reflect how divergent the estimates of impact will be when different assumptions are used. In each of the five studies, the Office of Economic Adjustment uses the same method: First, it calculates actual employment at the time of the closing according to the residence of those employed. Second, it calculates how many of these are military personnel, who can be expected to move, and how many are the more stationary civilian personnel. Third, it re-estimates these figures, generally a year later, to reflect retirements, relocations, and unfilled positions. Impact is seen as occurring only when a civilian laborer remains in the labor force and resides in the immediately adjacent communities. Three examples of the estimates produced by this methodology are:

Rhode Island, where OEA's original estimate of 17,280 military positions and 4,984 civilian jobs lost, was re-estimated according to the following table:

*Residual unemployment estimates*

| | |
|---|---|
| Civilian employees as of Nov. 1973 | 3,042 |
| Number of employees to be placed | 1,646 |
| Employees to be retired | 330 |
| Civilian remaining as of July 1975 | 200 |
| Total reduction in force | 1,246 |

In Boston/Chelsea, OEA first estimated in 1973, that 6,099 civilian and 1,015 military jobs would be lost as a consequence of the closing of the Boston Naval Shipyard and Chelsea Naval Hospital. A year later, OEA revised its estimate due to retirements, relocations, and unfilled positions, and estimated a loss of 5,848 civilian positions.

In Sauk County, the Office of Economic Adjustment examined the unemployment at the base in its final phasedown, when employment had been reduced from 5,390 to 688 personnel. This final employment was used

[4] At the Frankford Arsenal in Philadelphia, the community did not request an impact assessment.

in the estimate of a total direct impact of 2,500 workers in the county.

Communities use different assumptions and methods than OEA, and therefore have different estimates of employment impact. The communities look at much larger geographic areas, ranging from counties to an entire state. They consider all jobs lost to have an economic impact, whether or not the person retired or relocated. The communities also look at jobs lost since the initial phasedowns, not just the final closure action. The estimates in two case studies are quite different:

In Rhode Island, the Economic Renewal Coordinating Council felt that the impact of the base closings had to be measured statewide. By examining the seasonally adjusted unemployment and average annual increase in the state work force, ERCC estimated that 12,220 jobs had been lost to Rhode Island as compared to OEA's estimate of 1,246 jobs lost.[5]

In Sauk County, estimates of employment focused on the phases of the shutdown, the location of employees, and the skills of the workers. The cutbacks since peak production in 1969 cause a direct job loss of 5,390 workers, a difference in the two estimates of 3,137 workers. The analysis also examined the employee's residences and found that 44% of the facilities' workers came from the five outlaying counties, and had significant impact on these counties. Olin Corporation, the civilian contractor at Badger, stated that 50% of the workers were unskilled and 15% semi-skilled, and that jobs and retraining available for these sectors were minimal.

*B. Income*

Analysis of income in the case studies again reflects differences in assumptions and measures. However, in the income area, OEA uses different methods in each case study and our discussion will be on a case by case basis.

In Rhode Island, OEA found the estimate of losses to be $71.8 million, based on personnel, dependents, and Navy procurements.

ERCC does not draw up a dollar estimate in this manner. Instead, ERCC examined local communities and statewide impact. On a local level, ERCC measured the annual rate of growth in sales tax collections as compared to the rate of growth in national retail sales, and inferred that any change between the two was the result of the base closures. ERCC found that retail sales in North Kingston were 11.2% below what would have occurred if the bases had remained open; Aquidneck Island retail sales had fallen by 10%. On a statewide basis, ERCC noted change in personal income, and found that it had fallen to $4,780 per capita, or $138 below the national average of $4,918. The estimated Navy-related income losses to the state were totaled to be $291.2 million, more than four times OEA's estimate.

Boston/Chelsea estimates by the two groups—Office of Economic Adjustment and Joint Commission on Federal/Base Conversion—also differed widely. The Office of Economic Adjustment estimated the loss of the Metropolitan area to be $187.9 million. The Joint Commission used different categories and derived $462 million in losses.

| | *Millions* |
|---|---|
| Gross regional income | $90.5 |
| Impact on income expended | 74.5 |
| Naval procedures | 22.9 |
| Total income lost | 187.9 |

[5] A third study by Randolph Shen of the University of Rhode Island estimated a loss of 4,239 civilian jobs; less than ERCC's and more than OEA's estimates. (See *Estimating the Economic Impact of the 1973 Base Closings in Rhode Island*, Randolph Shen, October 1977.)

| | *Millions* |
|---|---|
| Wages and salaries | 150 |
| Gross business volume | 270 |
| Retail sales | 42 |
| Total income lost | 462 |

*C. Multiplier estimates*

A comparison of multiplier estimates[6] used by the Office of Economic Adjustment and the communities also shows different assumptions and methods. First, as stated previously, the Office of Economic Adjustment reduces the jobs affected by considering retirements, relocations, and earlier phasedowns not to have an economic impact.

It also focuses on the immediately adjacent communities. Finally, the Office of Economic Adjustment uses an employment multiplier since it considers this to be the most important impact. The communities, such as Rhode Island, use an income multiplier. An income multiplier produces a significantly higher estimate since it measures other impacts beyond just employment.

Fort MacArthur in San Pedro, California, is a good example of how different assumptions can produce very different estimates. OEA used the method described above, and estimated total lost revenue to be $56 million. The local community estimated the number of jobs lost, analyzed their impact on the entire metropolitan area, and used an income multiplier. This resulted in the much higher estimate of $87 million or more in income lost.

*D. Tax revenues and facilities*

State and local tax revenues and facilities are the fourth area reviewed in the impact assessment of case studies. This is not an area commonly thought of as being related to base closings, but a loss of state and local tax revenues, particularly in communities already experiencing economic difficulties, can mean cutbacks in services and higher taxes, and therefore compound the economic problems caused by the closure.

The Office of Economic Adjustment only considered tax revenues in the Fort McArthur and Badger Army cases. As could be expected, local communities also review these estimates. Community leaders emphasize the impact of loss of tax revenue, particularly when OEA omits it:

In Boston/Chelsea, the Joint Commission on Federal Base Conversion cited the loss of $1 million annually in sales taxes and $4.5 million in income tax to the Commonwealth of Massachusetts.

In Rhode Island, the Economic Renewal Coordinating Council used the decline in sales tax revenues for its estimates of loss of retail sales.

Facilities are important because communities often build facilities to accommodate the military base and its personnel and have to amortize these facilities after the base has closed. In the case studies, this included water and sewage facilities, schools, hospitals, and fire and police protection. OEA feels that these facilities will, in most cases, be utilized through population expansion and new economic activity generated by revitalization efforts.

The communities, however, tend to highlight the burden which these facilities create. For example, at Fort Wolters in Mineral Wells, Texas, a community report—entitled "Economic Rape—Army Style" found that Mineral Wells had expanded $15 million to accommodate personnel and activities at Fort Wolters. The community felt that the debt service would become a significant burden once the base was closed.

Recently, the Department of Health, Education, and Welfare, has recognized this problem with provision for fiscal relief in the form of a hold-harmless clause in Public Law 81-874 for educational facilities' bonds for three years following a base closing.

[6] A multiplier is defined as the number by which a change in defense employment or income must be multiplied in order to present us with the resulting change in total employment.

*E. Summary*

In summary, the case studies demonstrate that the assumptions and methods used by the Office of Economic Adjustment and local communities differed greatly. For each of four indicators, we found:

Employment: OEA examines the geographically adjacent communities, the employees affected by the final closing, and regards retirements and relocations as not having an economic impact. The communities incorporate a broader perspective by looking at metropolitan or even statewide impact, all positions lost since the first phasedown, and regard all positions eliminated as important to the economy.

Income: OEA and the local communities use different methods in each case study. OEA's figures are always lower than the community estimates.

Multiplier Estimates: The different assumptions used for employment and income produce very different multiplier estimates. In addition, OEA invariably uses an employment multiplier, while local communities prefer an income multiplier.

Tax Revenues and Facilities: Local studies emphasize the impact of closings on loss of tax revenues and support for facilities. OEA is inconsistent in its treatment of this factor.

These different methods and assumptions are important because they lead to very different assessments of severity of impact. The Office of Economic Adjustment's reports are upbeat and minimize the impact; local communities feel the impact is much greater. Given this disparity it is obvious that there is not a reliable source for analysis of impact from which to build a solid economic revitalization plan.

V. REVITALIZATION

A crucial task facing communities affected by a base closing is the revitalization of the area's economic base. Although a substantial portion of this effort can and should be developed and implemented by the local communities, a partnership between local governments and the federal government is required to achieve optimum success.

Revitalization efforts must necessarily be preceded by the assessment of the economic impact resulting from the base closings. This step often requires the assistance of the federal government, as many communities do not have the technical knowledge or the funds to compute the economic consequences of a base closing.

Similarly, local communities often find the bureaucratic red tape encountered when applying for assistance and grants to be a major stumbling block. Top level federal assistance in facilitating this process is often a critical need.

Finally, federal assistance in expeditiously obtaining base property is critical to a community. This is especially true during the initial efforts at revitalization.

Therefore, a close partnership between affected communities and the federal government maximizes a community's ability to recover from the economic dislocation which can result from a base closing. Without this cooperation, a community may suffer chronically high unemployment, stagnant economic growth, and loss of tax revenues needed to support income maintenance costs.

This section examines the three most important elements in a successful revitalization effort: planning, obtaining grants, and obtaining title to the land. In discussing each element, the report analyzes whether or not a cooperative effort has taken place, focusing on the role of the Office of Economic Adjustment.

*A. Planning*

A major function of the Office of Economic Adjustment is the prepartion of plans which can serve as a guide to communities in their revitalization efforts. Communities frequently lack the technical expertise and the available funds to develop a plan for economic development of the area, and therefore need assistance from the federal government.

In the case studies analyzed in this report, OEA contracted with the consulting firm of Booz-Allen and Hamilton for the planning studies. Many of the people we interviewed expressed the opinion that these reports suffered from "typical consultants' use of jargon and standard formulas." They did not feel that the OEA plans were needed.

Our analysis of the planning reports revealed that the same recommendations continually emerged. These were that industrial development should take place on the site, that the area had great potential for tourism and recreational activities, and that coordination and formation of committees were necessary for areawide economic development. Given the general nature of these reports, it is not surprising that in the four case studies we examined,[7] the planning reports produced for OEA were not used by the community.

Seymour Melman of Columbia University, who has studied conversion efforts, summarized the community perspective succinctly when he stated that "nearly every report takes $50,000 and eight months, decides there is an economic problem, and recommends the formation of committees to work on the problem." [8]

*B. Obtaining grants*

Grants can play a significant role as a community converts its economic base from a defense-related to a civilian-related structure. Communities adversely affected by a base closing may require a variety of grants from the federal government, from planning to retraining to capital grants.

A review of the case studies indicates that the majority of federal grants awarded to affected communities were Economic Development Administration (EDA) Title IX planning and technical assistance grants. In only one case study, Boston/Chelsea, were capital funds made available. Other than EDA-Title IX grants, only HUD conversion planning grants and labor department retraining grants were awarded to more than one of the communities analyzed.

The case studies demonstrate that communities affected by base closings have only been eligible for a few, limited, short-term grants. Revitalization efforts—attracting new industry, creating jobs, obtaining land, constructing facilities—became a long and tedious process.

The problems Sauk County has encountered are typical. After Badger Army Ammunitions Plant was closed, the county received an EDA Title IX technical assistance grant and a Labor Department training grant. Once these short-term grants expired, the community had to apply and compete for further federal funding in order to continue their efforts. Sauk County applied in 1976 for an Overall Economic Development Program (OEDP) grant because the county needed to construct water and sewage facilities in order to develop its industrial park. This grant, however, was only for the purpose of developing a plan so that they could apply for construction funds. The OEDP grant was approved in the spring of 1977 and as of February 1978 was pending in Washington.

The community maintains that without new water and sewage facilities it will be unable to attract a significant amount of new industry to fill the void created by the closing of Badger. The officials point to the continually rising unemployment in the area since the closing as evidence of their problems.

The Office of Economic Adjustment, according to the community leaders we spoke to, was helpful in cutting through bureaucratic red tape and facilitating the provision of the short term grants which communities need. In fact, it appears that OEA's role is strongest and most successful in this area. However, as the Sauk County case indicates, long term funding is a major problem, and a problem for which OEA is unable to provide assistance.

The following are the grants received in the six case studies:

Rhode Island

Economic Development Administration—Title IX planning assistance Housing and Urban Development—Conversion Planning Department of Labor—Manpower Retraining Health, Education, and Welfare—PL 874 Education Hold Harmless Small Business Administration—Assistance for Workshops

Boston, Massachusetts

South Boston Annex—Economic Development Administration—Title IX planning assistance Site Clearance

Chelsea—Housing and Urban Development—Conversion Planning Department of Labor—Manpower Retraining

Philadelphia (Frankford Arsenal)

Economic Development Administration—Title IX planning assistance (for re-use of an adjacent parcel)

San Pedro, California (Fort Mac Arthur)

Economic Development Administration—Title IX planning assistance

Mineral Wells, Texas

Economic Development Administration—Title IX planning assistance

Sauk County (Badger)

Economic Development Administration—Title IX planning assistance Department of Labor—Manpower Retraining

*C. Acquiring the land*

As officials of the Economic Adjustment Committee have stated, the quick utilization of base property is essential to a successful revitalization effort. The case studies were analyzed, therefore, to determine [9] the communities' success in acquiring the land occupied by closed bases. It is important for the transfer of land to happen quickly so that communities can implement their long term economic development plans.

In our research, we found that communities have faced severe problems in acquiring base property. This is particularly true in Boston and Rhode Island.

In Boston, the naval facilities at the South Boston Naval Complex, Charlestown Naval Shipyard, and the Chelsea Naval Hospital, were closed in April of 1973. As of February 1978, however, only one of the land parcels had been purchased from the United States General Services Administration—and that had been purchased at a high price and only through creation of a special governmental agency.

In June of 1977, the City of Boston represented by the Economic Development Industrial Corporation (EDIC) obtained title to the 138 acres of land in the South Boston Naval Annex. The land was purchased for $4.7 million ($34,000 per acre). The site has been renamed the Boston Marine Industrial Park, and it will emphasize ship repair and marine related industry. At present, approximately 800 people are employed in various businesses which operate in the park.

Title to the 88 acres at Chelsea Naval Hospital and the 130 acres at Charlestown is still retained by the Department of the Navy. Development plans for Chelsea, under the aegis of the Chelsea Community Development Center, include a public waterfront park and housing. The Boston Redevelopment Authority has similar plans for the development of the land area at Charlestown with the priorities being the establishment of an historical park and condominiums. However, they still have not gained title to the land.

In Rhode Island, the naval facilities at Quonset Point-Davisville and at Newport were officially closed in April of 1973. However, the State of Rhode Island still does not own the land at these facilities. Title to the land has been retained by the Department of the Navy.

The bulk of the land being used and considered for future use is located in the Quonset-Davisville area. There are fifty-two active leases at the facility. The majority of the leases are contracted with private concerns which range from catering services to printing outfits. The state has its own Ocean Training Agency located here and this also serves as a site for the CETA program.

The transfer of the title to the land has become a long and involved process. Most recently, GSA has completed its draft of an environmental impact statement which will be released in March of 1978. If the finalized version is approved at public hearings, tentatively scheduled for the spring of 1978, the process toward state acquisition of the land will resume—five years after the bases were closed.

*D. Summary*

In summary, in the case studies we find that there are inherent problems at the federal level in the current structure for revitalization. We identified three critical areas:

Planning: The planning reports prepared for the Office of Economic Adjustment were too general in their recommendations and were not used by the communities surveyed for the report. Communities find it necessary to apply for special funding to prepare their own economic development plans.

Obtaining Grants: OEA was found by the surveyed communities to be most effective in helping communities obtain short-term grants. Major problems are the absence of long-term capital grants and the time and effort required to obtain other funds.

Acquiring the Land: The report's survey found that leasing and transfer of land is a long and arduous process for communities, and that leases are only available on a short term basis.

The gaps in federal assistance for revitalization are important given the technical assistance, funding, and high-level federal coordination, communities often need to develop and implement their own redevelopment plans. The report's analysis raises questions about whether it serves these purposes. Its planning is inadequate, grants are available only on a short-term basis, and acquiring land takes years and stalls renewal efforts. It seems that OEA's location within the Department of Defense limits its effectiveness when dealing with other agencies and allows for only a short-term involvement.

VI. CONCLUSIONS

In analyzing the case studies, we found:

The Office of Economic Adjustment's estimates of the economic impact of a base closing on a community vary markedly from estimates prepared by community officials. The disparity makes it clear that a reliable source of analysis for determining the economic impact of base closings does not exist.

OEA does not have adequate resources for assisting communities in efforts to revitalize their economic base as evidenced by inadequate plans, lack of long-term grants, and an inability to facilitate land transfer transactions.

[7] MacArthur and Frankford communities did not request studies.

[8] Telephone interview, January 23, 1978.

[9] Report, "The President's Economic Adjustment Committee," *op. cit.*

The current framework for assessing the economic impact of a base closing on a community, state, or region, and assisting these areas in recovering from the effects of the closing does not work. A new beginning must be made.

The following alternative structure is recommended:

First, the efforts involved in base closings—assessing the cost and savings, analyzing the impact, and providing needed assistance for revitalization efforts—should be directed by a White House level coordinator. This coordinator would provide the stature necessary to facilitate prompt action on grants, planning, leasing, and other problems which may develop. The coordinator could serve as staff director for a strengthened Economic Adjustment Committee, which has been the most successful part of the existing programs.

Second, the functions of assessing impact must be removed from the Defense Department. Asking the Defense Department to assess its own actions is analogous to asking the fox to guard the chickens—and is unfair to both. An alternative location for the assessment function may be an independent agency such as the General Accounting Office.

Third, planning assistance under EDA's Title IX program should be automatically triggered by the loss or transfer of a fixed number or percentage of jobs, and should not be dependent on an outsider's perception of appropriate community reaction. Planning efforts should be monitored by the White House coordinator.

Fourth, a policy of reimbursing communities for a percentage of the savings estimated by the Defense Department as a result of closing a base, would provide a sound fiscal basis for assistance to affected communities. Congressman Philip Ruppe has introduced a bill—HR 8472—which seeks the reimbursement of ten percent of the savings for use by the affected communities for job training and overall economic revitalization. A similar bill—S. 1901—has been introduced by Senators Griffin and Riegle. It is possible that a higher percentage of the savings may be necessary for the tasks faced in a successful conversion effort.

Base closings, like contracts, and the defense budget as a whole, also involves a more basic question; how can a community convert to a non-military based economy? A national policy which requires the development of alternative use plans to be developed for each military base and defense plant in the country may facilitate the reallocation of resources released by gradual conversion steps. Senators McGovern and Mathias have recently submitted a bill which introduces such planning, S. 2279. Similar bills have also been introduced by Representatives Bingham, HR 205, and Weiss, HR 10648.

This mechanism would alleviate the crippling unemployment problems which frequently follow the closing of a military base. Furthermore, many critical civilian needs, such as schools, hospitals, mass transit, and other needs, can be met by converting the technological capabilities of defense-related facilities and plants which have been closed to a civilian orientation. Long range concerns of conversion would receive the serious attention which they merit under such a plan.

If these changes to assist communities in coping with the impact of base closings are not made, future closings will continue to have a negative impact upon the affected communities. Strengthening of the Office of Economic Adjustment would merely be minor tinkering with a system that does not work. Communities will continue to face a fragmented and chaotic situation, where the federal agency which caused their economic distress, the Department of Defense, is still in charge.

---

AMENDMENT No. 1772

At the appropriate place in the bill, insert a new section as follows:

BASE CLOSURES AND REALIGNMENTS

SEC. . (a) Section 2687 of title 10, United States Code, is amended by—

(1) striking out "sixty days" in subsection (b)(4) and inserting in lieu thereof "180 days";

(2) redesignating subsections (c) through (e) as subsections (d) through (f), respectively, and adding after subsection (b) a new subsection (c) as follows:

"(c)(1) Whenever the Secretary of Defense or the Secretary of the military department concerned has publicly announced that any military installation is a candidate for closure or realignment, the Comptroller General of the United States shall conduct a study to determine the cost and savings estimates to be realized from such closing or realignment. In conducting such study, the Comptroller General shall assess the economic impact and consequences of the proposed closing or realignment on the community concerned. Such assessment shall include the impact on unemployment, income, small business concerns, State and local tax revenues, State and local governmental expenditures for unemployment compensation, welfare, general assistance, medical costs, and other related social service expenditures, and the multiplier effects of such proposed closing or realignment on the community concerned.

"(2) The Comptroller General of the United States shall submit the results of any study made in the case of the proposed closing or realignment of any military installation to the Committee on Government Operations, Education and Labor, and Small Business of the House of Representatives and the Committee on Governmental Affairs, Human Resources, and the Select Committee on Small Business of the Senate within 120 days after the day on which the proposed closing or realignment of such installation is publicly announced. In any case in which the proposed closing or realignment of any military installation was publicly announced after February 1976, and prior to the date of enactment of this paragraph, the Comptroller General shall submit the results of such study to such Committees within 180 days after such date of enactment.

"(3)(A) On any case in which the Comptroller General of the United States determines, as the result of any such study, that the proposed closing or realignment of any military installation will likely result in an increase in unemployment in the community concerned in an amount greater than one quarter of one percent quarterly over a period of 4 quarters following the date of the proposed closing or realignment, no further action may be taken to implement the proposed closing or realignment of such installation until a special task force has been established as provided in subparagraph (B), such task force has developed a detailed plan of economic assistance to the community or communities affected by the proposed closing or realignment, and such plan has been put in operation. In developing the plan of assistance for any community, the task force shall consult with and seek the advice of the Secretary of Health, Education, and Welfare and the heads of other appropriate departments and agencies.

"(B) The special task force established under subparagraph (A) in any case shall be composed of the following representatives:

"(i) a representative from the Council on Economic Advisors, designated by the chairman of such council;

"(ii) a representative from the Department of Commerce, designated by the Secretary of Commerce;

"(iii) a representative from the Department of Labor, designated by the Secretary of Labor;

"(iv) a representative from the Department of Defense, designated by the Secretary of Defense; and

"(v) a representative from the Small Business Administration, designated by the Administrator of such administration.

The representative designated from the Council of Economic Advisors shall serve as chairman of any such task force.

"(4) The plan of assistance developed by the special task force provided for under paragraph (3) for any community shall be developed in a manner which will provide for the revitalization of the economic base of such community and result in an unemployment decline in such community of one quarter of one percent or less quarterly over a period of 4 quarters following the date of the actual closure or realignment of the military installation concerned."; and

(3) striking out "(c)" in subsection (f) (as redesignated by clause (2) of this section) and inserting in lieu thereof "(d)", and by striking out "September 30, 1977" in such subsection and inserting in lieu thereof "February 28, 1976".

(b) The amendments made by subsection (a) of this section shall not apply in the case of the closure of any military installation (as defined in section 2687 of title 10, United States Code), or the realignment with respect to any such installation, which was first announced after February 28, 1976, and prior to the date of enactment of this section if such installation has already been closed or the announced realignment has already been accomplished prior to such date of enactment.●

## COMMODITY EXCHANGE ACT AMENDMENTS—S. 2391

AMENDMENT NO. 1773

(Ordered to be printed and referred to the Committee on Agriculture, Nutrition, and Forestry.)

Mr. HUDDLESTON submitted an amendment intended to be proposed by him to the bill (S. 2391) to extend the Commodity Exchange Act, and for other purposes.

● Mr. HUDDLESTON. Mr. President, Congress this year must reauthorize the Commodity Futures Trading Commission, which was established in 1974. Appropriately, Congress provided a sunset in the CFTC Act at the time of passage in order to provide thorough oversight of the Commission's performance and implementation of congressional intent.

Last January, in an attempt to focus attention and stimulate discussion within the Congress, the CFTC, the futures industry, and with other interested parties, I introduced a reauthorization bill, S. 2391. Since that time, Senate hearings have been held on CFTC reauthorization and testimony has been received from several dozen interested parties.

Today I am submitting an amendment in the nature of a substitute to S. 2391. This updated version of the bill reflects the thinking and the testimony of many of the witnesses who appeared before the Senate Agriculture Committee.

This measure is a refined version of my original bill. I am introducing this substitute so that a legislatively more complete package may be considered during the committee markup.

Mr. President, I ask unanimous consent that the amendment, including the section-by-section analysis be printed in the RECORD.

There being no objection, the amendment and summary were ordered to be printed in the RECORD, as follows:

AMENDMENT No. 1773

Strike all after the enacting clause and insert in lieu thereof the following:

SECTION 1. Section 2(a) of the Commodity Exchange Act is amended by—

(1) striking out "section 217 of the Commodity Futures Trading Commission Act of 1974" in the first sentence of paragraph (1) (7 U.S.C. 2) and inserting in lieu thereof "section 19 of this Act";

(2) inserting "(A)" immediately after the designation of paragraph (2) (7 U.S.C. 4a (a));

(3) striking out in the second sentence of paragraph (2) "a Chairman and four other Commissioners" and inserting in lieu thereof "five Commissioners";

(4) adding at the end of paragraph (2) a new subparagraph as follows:

"(B) The President shall appoint, by and with the advice and consent of the Senate, a member of the Commission as Chairman. An individual may be appointed as Chairman at the same time that that person is appointed as a Commissioner. The Chairman shall be the chief administrative officer of the Commission and shall preside at hearings before the Commission. The President may, at his pleasure, designate a different Chairman, and the Commissioner previously designated as Chairman shall complete his term as a Commissioner.";

(5) striking out in paragraph (5) (7 U.S.C. 4a(d)) ", by and with the advice and consent of the Senate,";

(6) striking out in subparagraph (6)(A) (7 U.S.C. 4a(e)(1)) "the Chairman" and inserting in lieu thereof "a Chairman who shall be chosen from the Commissioners by the President";

(7) inserting "(A)" immediately after the designation of paragraph (7) (7 U.S.C. 4a (f));

(8) adding at the end of paragraph (7) a new subparagraph as follows:

"(B) No Commissioner or employee of the Commission classified as a GS–16 or higher, shall, for a period of one year beginning on the last day of service as such Commissioner or employee—

"(1) make any appearance before; or

"(2) make any written or oral communication to the Commission, or any Commissioner or employee of the Commission, on behalf of any person (other than the United States) on any particular matter that is before the Commission: *Provided*, That this restriction shall not apply to an appearance or response pursuant to a subpoena issued by the Commission, or any matter of an exclusively personal and individual nature.".

(9) striking out in the first sentence of paragraph (8) 7 (U.S.C. 4a(g)) "establish a separate office within the Department of Agriculture to be staffed with employees of the Commission for the purpose of maintaining" and inserting in lieu thereof "maintain";

(10) striking out in subparagraph (9)(A) (7 U.S.C. 4a(h)(1)) "Senate Committee on Agriculture and Forestry" and inserting in lieu thereof "Senate Committee on Agriculture and Forestry" and inserting in lieu thereof "Senate Committee on Agriculture, Nutrition, and Forestry"; and

(11) striking out in subparagraph (9)(B) (7 U.S.C. 4a(h)(2)) "Senate Committee on Agriculture and Forestry" and inserting in lieu thereof "Senate Committee on Agriculture, Nutrition, and Forestry".

SEC. 2. Section 4c of the Commodity Exchange Act (7 U.S.C. 6c) is amended by—

(1) striking out in the last sentence of subsection (a) "not have been disapproved" and inserting in lieu thereof "have been approved";

(2) striking out in subsection (b) "Senate Committee on Agriculture and Forestry" and inserting in lieu thereof "Senate Committee on Agriculture, Nutrition, and Forestry"; and

(3) adding at the end thereof the following new subsections: (c) Notwithstanding the provisions of subsection (b) of this section, it shall be unlawful for any person to offer to enter into, enter into, or confirm the execution of any transaction subject to the provisions of subsection (b) of this section, except where both parties to each such transaction are either a producer, processor, or commercial user of, or a merchant handling, the commodity involved in the transaction, or the products or byproducts thereof, and offer to enter into, or enter into, such transactions solely for the purposes of their business as such, until (1) the Commission transmits to the House Committee on Agriculture and the Senate Committee on Agriculture, Nutrition, and Forestry documentation of its ability successfully to regulate such transactions, and (2) the expiration of thirty calendar days of continuous session of Congress after the date of such transmittal without either House of Congress adopting a resolution disapproving of such regulation: *Provided*, That the Commission is not precluded from transmitting documentation relating to its ability to regulate such transactions regarding individual commodities, classes of commodities, or regulation of such transactions on specific boards of trade, at such time as the Commission deems appropriate. Nothing in the preceding sentence shall affect any rights or obligations arising out of any transactions subject to the provisions of this subsection entered into, or the execution of which was confirmed, prior to October 1, 1978.

(d) Notwithstanding the provisions of subsection (c) of this section a registered futures commission merchant may offer to enter into, enter into, or confirm the execution of, any transaction subject to the provisions of subsection (b) of this section if—

(1) the grantor in the transaction is a person who: (A) is in the business of buying, selling, producing, or otherwise utilizing the underlying commodity; (B) at all times has a net worth of at least $10,000,000 certified annually by an independent public accountant using generally accepted accounting principles; (C) agrees to notify such futures commission merchant if he has reason to believe his net worth has fallen below $10,000,000; (D) segregates daily, exclusively for the benefit of purchasers, money, 'exempted securities' (within the meaning of section 3(a)(12) of the Securities Exchange Act of 1934 (15 U.S.C. 78c(a)(12)), commercial paper, bankers' acceptances, commercial bills, of unencumbered warehouse receipts, equal to an amount by which the value of each transaction exceeds the amount received or to be received by the grantor for such transaction; (E) provides an identification number for each transaction; and (F) provides confirmation of all orders for such transactions executed, including execution price and a transaction identification number;

"(2) the futures commission merchant has evidence that the grantor meets the requirements set forth in clause (1) of this subsection; and

"(3) the futures commission merchant treats and deals with an amount of money, 'exempted securities' (within the meaning of section 3(a)(12) of the Securities Exchange Act of 1934 (15 U.S.C. 78(c)(12)), commercial paper, bankers' acceptances, commercial bills, or unencumbered warehouse receipts, equal in value to the value received from its customers as payment of the purchase price in connection with such transactions, as security for performance of the transactions until the expiration or liquidation of those transactions, records each transaction in its customer's name by a transaction identification number provided by the grantor, and provides a disclosure statement to its customers, pursuant to regulations of the Commission, that discloses, among other things, all costs, including any mark-ups or commissions involved in such transaction.

"(e) The provisions of subsection (c) and (d) of this section shall expire on September 30, 1984."

SEC. 3. Section 4d(2) of the Commodity Exchange Act (7 U.S.C. 6d(2)) is amended by inserting after *"Provided, further,"* in the first paragraph the following:

"That in accordance with such terms and conditions as the Commission may prescribe by rule, regulation, or order, such money, securities, and property of the customers of such futures commission merchant may be commingled and deposited as provided in this section with any other money, securities, and property received by such futures commission merchant and required by the Commission to be separately accounted for and treated and dealt with as belonging to the customers of such futures commission merchant: *And provided further,"*.

SEC. 4. Section 4g(3) of the Commodity Exchange Act (7 U.S.C. 6g(3)) is amended by striking out "Brokers" and inserting in lieu thereof "Floor brokers".

SEC. 5. Section 4f(1) of the Commodity Exchange Act (7 U.S.C. 6f(1)) is amended by—

(1) striking out "All regulations" in the third sentence and inserting in lieu thereof "Each registration"; and

(2) inserting in the third sentence "or at such other time, not to be less than one year from the issuance thereof, as the Commission may by rule regulation or order prescribe," after "issued,".

SEC. 6. The third sentence of section 4k(2) of the Commodity Exchange Act (7 U.S.C. 6k(2)) is amended to read as follows:

"Such registration shall expire two years after the effective date thereof or at such other time, not less than one year from the issuance thereof, as the Commission may by rule, regulation, or order prescribe, and shall be renewed upon application therefor unless the registration has been suspended (and the period of such suspension has not expired) or revoked after notice and hearing as prescribed in section 6(b) of this Act: *Provided*, That upon initial registration, unless the Commission otherwise prescribes by rule, regulation, or order, the effective period of such registration shall be not more than two years nor less than one year from the effective date thereof.".

SEC. 7. Section 4n of the Commodity Exchange Act (7 U.S.C. 6n) is amended by—

(1) striking out subsection (2) and redesignating subsections (3), (4), (5), (6), and (7) as subsections (2), (3), (4), (5), and (6) respectively;

(2) striking out "All registrations" in subsection (3) and inserting in lieu thereof "Each registration"; and

(3) inserting after "year," in subsection (3) "or at such other time, not less than one year from the effective date thereof, as the Commission may by rule, regulation or order prescribe,".

SEC. 8. Section 40(1) of the Act (7 U.S.C. 60(1)) is amended by striking out "registered under this Act".

SEC. 9. Section 6 of the Commodity Exchange Act (7 U.S.C. 8) is amended by—

(1) inserting "on the record" after "hearing" in the second sentence;

(2) by inserting "on the record" after "hearing" in the second sentence of subsection (a);

(3) by striking out the third sentence of subsection (b) and inserting in lieu thereof the following new sentences:

"For the purpose of securing effective enforcement of the provisions of this Act, and for the purpose of any investigation or proceeding under this Act any member of the Commission or any Administrative Law Judge or other officer designated by the Commission is empowered to administer oaths and affirmations, subpoena witnesses, compel their attendance, take evidence, and require the production of any books, papers, correspondence, memoranda, or other records which the Commission deems relevant or material to the inquiry. Such attendance of witnesses and the production of any such records may be required from any place in the United States or any State at any designated place of hearing. In case of contumacy by, or refusal to obey a subpoena issued to, any person, the Commission may invoke the aid of any court of the United States within the jurisdiction in which such investigation or proceeding is carried on or where such person resides or carries on business, in requiring the attendance and testimony of witnesses and the production of books, papers, correspondence, memoranda, and other records. Such court may issue an order requiring such person to appear before the Commission or member or Administrative Law Judge or other officer designated by the Commission, there to produce records, if so ordered, or to give testimony touching the matter under investigation or in question and any failure to obey such order of the court may be punished by such court as a contempt thereof. All process in any such case may be served in the judicial district wherein such person is an inhabitant or conducts business or wherever he may be found.".

SEC. 10. Section 6b of the Commodity Exchange Act (7 U.S.C. 13a) is amended by inserting "on the record" after "hearing" in the first sentence.

SEC. 11. The Commodity Exchange Act is amended by adding after section 6c a new section as follows:

"Section 6d. (1) Whenever it shall appear to the attorney general of any State or such other official as the State may designate that the interests of the residents of such State have been, are being, or may be threatened or adversely affected because any person (other than a contract market or floor broker) has engaged, is engaging, or is about to engage in any act or practice constituting a violation of any provision of this Act or any rule, regulation, or order thereunder, the State may bring an action on behalf of its residents in the proper district court of the United States in such State, to enjoin such act or practice, or to enforce compliance with this Act or any rule, regulation, or order thereunder, and said courts shall have jurisdiction to entertain such actions and, upon proper application, shall also have jurisdiction to issue writs of mandamus, or orders affording like relief, commanding the defendant to comply with the provisions of this Act or any rule, regulation, or order thereunder, including the requirement that the defendant take such action as is necessary to remove the danger of violation of this Act or any such rule, regulation, or order.

"(2) No action may be brought under this section without the prior approval of the Commission unless the Commission specifies by rule or regulation that prior approval shall not be required in such a case.

"(3) Immediately upon bringing any such action, the State shall serve written notice thereof upon the Commission, and the Commission may intervene in the action by filing a notice of appearance in the action and, upon doing so, the Commission shall have the right to be heard on all matters arising therein and to file any petition for appeal therein.

"(4) No restraining order, in junction, writ of mandamus, or order affording like relief, shall be issued ex parte in any action brought under this section. Upon a proper showing, a permanent or temporary injunction or restraining order shall be granted without bond.

"(5) Any action under this section may be brought in the district wherein the defendant is found or is an inhabitant or transacts business or wherein the act or practice occurred, is occurring, or is about to occur, and process in such cases may be served in any district in which the defendant is an inhabitant or wherever the defendant may be found.

"(6) For purposes of bringing any action under this section, nothing in his Act shall present the attorney general or other duly authorized official of any State from exercising the powers conferred on him by the laws of such State to conduct investigations or to administer oaths or affirmations or to compel the attendance of witnesses or the production of documentary and other evidence.

"(7) For purposes of this section the word "State" means any State of the United States, the District of Columbia, or any territory or possession of the United States.".

SEC. 12. Section 8 of the Commodity Exchange Act (7 U.S.C. 12–1) is amended by striking out in the second paragraph "and make public" the second time that phrase appears.

SEC. 13. Section 8a(1) of the Commodity Exchange Act (7 U.S.C. 12a(1)) is amended by inserting after "by the Commission" the following:

", which may require the applicant, and any persons associated with the applicant as the Commission may specify, to be fingerprinted and to submit, or cause to be submitted, such fingerprints to the Attorney General of the United States for identification and appropriate processing".

SEC. 14. Section 8c(1)(B) of the Commodity Exchange Act (7 U.S.C. 12c(1)(B)) is amended by striking out the last sentence and inserting in lieu thereof the following:

"An exchange shall make public its findings in any such proceeding, including the action taken or the penalty imposed, but shall not disclose the evidence or reasons therefor, except to the person who is suspended, expelled, or disciplined, or denied access, and to the Commission: *Provided*, That this subsection shall not apply to criminal investigations or proceedings.".

SEC. 15. Section 9(c) of the Commodity Exchange Act (7 U.S.C. 13(c)) is amended by—

(1) striking out "or" after "section 40,"; and

(2) inserting "or section 19," after "section 8b,".

SEC. 16. Section 12(d) of the Commodity Exchange Act (7 U.S.C. 16(d)) is amended to read as follows:

"(d) There are hereby authorized to be appropriated to carry out the provisions of this Act such sums as may be required for the fiscal year ending June 30, 1975, for the period beginning July 1, 1975, and ending September 30, 1976, and for each of the fiscal years beginning October 1, 1976, and ending September 30, 1984, and not in excess * * * subsection, be authorized by law for any subsequent fiscal year.".

SEC. 17. Section 14 of the Commodity Exchange Act (7 U.S.C. 18) is amended by—

(1) striking out "registered" in subsection (a) and inserting in lieu thereof "who is registered or should be registered";

(2) striking out all after "Provided," in subsection (b) and inserting in lieu thereof the following:

"That in complaints wherein the amount claimed as damages does not exceed the sum of $5,000, a hearing limited to only the basic or novel issue or issues of the case shall be held, and additional proof in support of the complaint and respondent's answer may be supplied in the form of short depositions or verified statements of fact."; and

(3) striking out subsection (c) and inserting in lieu thereof the following:

"(c) After opportunity for hearing on complaints where the damages claimed exceed the sum of $5,000 has been provided or waived and on complaints where damages do not exceed the sum of $5,000, requiring hearing only on the basic or novel issue or issues in the case, as provided in this section, the Commission shall determine whether or not the respondent has violated any provision of the Act or any rule, regulation, or order thereunder.".

SEC. 18. The Commodity Exchange Act is amended by adding at the end thereof a new section as follows:

"SEC. 19. No person shall offer to enter into, enter into, or confirm the execution of any transaction for the delivery of any commodity specifically set forth in section 2(a) of this Act prior to the enactment of the Commodity Futures Trading Commission Act of 1974, pursuant to a standardized contract commonly known to the trade as a margin account, margin contract, leverage account, or leverage contract, or pursuant to any contract, account, arrangement, scheme or device that the Commission determines serves the same function or functions as does such a standardized contract, or is marketed or managed in substantially the same manner as such a standardized contract. Notwithstanding any other provision of this Act, the Commission may prohibit or regulate any such transactions involving any other commodities under such terms as the Commission shall initially prescribe by October 1, 1979: *Provided*, That any such order, rule, or regulation may be made only after notice and opportunity for hearing: *And provided further*, That the Commission may set different terms and conditions for such transactions involving different commodities. If the Commission determines that any such transaction is a contract for future delivery within the contemplation of section 3 of this Act such transaction shall be regulated in accordance with the applicable provisions of the Act.".

SEC. 19. Title II of the Commodity Futures Trading Commission Act of 1974 (7 U.S.C. 15a) is amended by striking section 217.

SEC. 20. (a) There is hereby established a National Commission on the Effects of Futures Markets on Farm Income (hereinafter referred to as the "Commission").

ORGANIZATION

(b)(1) The Commission shall be composed of nine members, none of whom may be employees of the Federal Government or Members of Congress, including—

(A) three members to be appointed by the President pro tempore of the Senate;

(B) three members to be appointed by the Speaker of the House of Representatives; and

(C) three members to be appointed by the President, by and with the advice and consent of the Senate, one of whom shall be designated as the chairman at the time of his appointment and who, by background, experience, and education is particularly suited to the position.

A vice-chairman shall be selected by a majority vote of the full Commission. The Commission members shall represent, as far as practicable, producers, processors, and distributors of agricultural commodities and their products, economists, family farmers, commodity exchanges, national agricultural organizations, and consumers.

(2) Any vacancy in the Commission shall not affect its powers, except the selection of

a vice-chairman, and shall be filled in the same manner as the original position.

(3) Five members of the Commission shall constitute a quorum.

COMPENSATION OF MEMBERS

(c) Each member of the Commission may receive compensation at the highest rate of pay for grade GS–18 of the General Schedule under section 5332 of title 5, United States Code, for each day such member is engaged upon the work of the Commission, and shall be reimbursed for travel expenses, including per diem in lieu of subsistence as authorized under section 5703 of title 5, United States Code.

DUTIES OF THE COMMISSION

(d)(1) The Commission shall study and appraise:

(A) the relationships between the prices established on futures markets and the prices of the actual commodities in the cash markets;

(B) the concentration and magnitude of trading by foreign individuals, corporations, or governments on domestic futures markets;

(C) the actions necessary to stimulate greater use of futures markets by American farmers, if advisable;

(D) the justification for the differentials in prices farmers receive for their crops and the futures prices for the same commodity;

(E) the effect of increasing the number of delivery points under a futures contract on the amount received by producers of that commodity; and

(F) the need for changes, if any, in the Commodity Exchange Act or the regulations thereunder.

(2) The Commission shall make such interim reports as it deems advisable, and it shall make a final report of its findings, conclusions, and legislative recommendations to the President and to the Congress by October 1, 1981.

(3) All books, papers, reports, memorandums, and all of the documents collected, produced, obtained, or in the custody or possession of the Commission shall be transmitted to the Commodity Futures Trading Commission which shall maintain them and make them readily available for public inspection and copying without regard to section 552 of title 5, United States Code.

POWERS OF THE COMMISSION

(e)(1) The Commission, or any three members thereof authorized by the Commission, may conduct hearings anywhere in the United States or otherwise secure data and expressions of opinions pertinent to the study. In connection therewith the Commission is authorized by a majority vote—

(A) to require, by special or general orders, any person to submit in writing such reports and answers to questions as the Commission may prescribe and within such reasonable period and under oath or otherwise as the Commission may determine;

(B) to administer oaths;

(C) to require by subpoena the attendance and testimony of witnesses in the production of all documentary evidence relating to the execution of its duties;

(D) in the case of disobedience to a subpoena or order issued under this subsection, to invoke the aid of any district court of the United States in requiring compliance with such subpoena or order;

(E) in any proceeding or investigation, to order testimony to be taken by deposition before any person who is designated by the Commission and has the power to administer oaths, and in such instances to compel testimony in the production of evidence in the same manner as authorized under paragraphs (C) and (D) of this subsection; and

(F) to pay witnesses the same fees and mileages as are paid in like circumstances in the courts of the United States.

(2) Any district court of the United States within the jurisdiction of which an inquiry under this section is carried on may, in case of refusal to obey a subpena or order of the Commission issued under this subsection, issue an order requiring compliance therewith; and failure to obey the order of the court may be punished by the court as a contempt thereof.

(3) Notwithstanding any other provision of law, the Commission is authorized to require directly from the head of any executive department, agency, or independent establishment of the Federal Government available information deemed useful in the discharge of its duties, and all such departments, agencies, and establishments are authorized and directed to cooperate with the Commission and to furnish all information requested by the Commission.

(4) The Commission is authorized to enter into contracts with Federal or State agencies, private firms, institutions, and individuals for the conducting of research or surveys, the preparation of reports, and other activities necessary to the discharge of its duties.

(5) Subject to the provisions of section 552 of title 5, United States Code, when the Commission finds that publication of any information obtained by it is in the public interest and would not give an unfair competitive advantage to any person, it is authorized to publish such information in the form and manner deemed best adapted for public use, except that data and information that would separately disclose the business transactions of any person, trade secrets, or names of customers shall be held in confidence and shall not be disclosed by the Commission or its staff.

ADMINISTRATIVE ARRANGEMENTS

(f)(1) The Commission is authorized to appoint and fix the compensation of an executive director and a chief economist without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and without regard to the provisions of chapter 51 and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates. The Executive Director, with the approval of the Commission, shall employ and fix the compensation of such additional personnel as may be necessary to carry out the functions of the Commission, except that no individual so appointed shall be paid at a rate in excess of the rate for GS–18 of the General Schedule under section 5332 of title 5, United States Code.

(2) The Executive Director, with the approval of the Commission, is authorized to obtain the services of experts and consultants as provided under section 3109 of title 5, United States Code.

(3) The head of any executive department, agency, or independent establishment of the Federal Government is authorized to detail, on a reimbursable basis, any of its personnel to assist the Commission in carrying out its work.

(4) Financial and administrative services (including those relating to budgeting and accounting, financial reporting, personnel, and procurement) shall be provided the Commission by the General Services Administration, for which payment shall be made in advance, or by reimbursement, from funds of the Commission in such amounts as may be agreed upon by the Chairman of the Commission and the Administrator of General Services.

(5) Ninety days after submission of its final report, as provided in subsection (d)(2) of this section, the Commission shall cease to exist.

AUTHORIZATION OF APPROPRIATIONS

(g) There is hereby authorized to be appropriated to the Commission such sums, not in excess of $1,000,000 for each year of its existence, as may be necessary to carry out the provisions of this section.

SEC. 21. The provisions of this Act shall become effective October 1, 1978.

---

SECTION-BY-SECTION ANALYSIS

Section 1. CFTC Membership; Chairman of the CFTC; Senate confirmation of CFTC Executive Director; CFTC Personnel: Prohibitions.

Section 1 of the bill amends paragraphs (1), (2), (5), (6), (7), (8), and (9) of section 2(a) of the Commodity Exchange Act.

Section 1(1) contains a technical amendment to section 2(a)(1) of the Act. (The amendment reflects the deletion in section 19 of S. 2391 of section 217 of the Commodity Futures Trading Commission Act of 1974, dealing with leverage contracts in gold or silver bullion or bulk silver or gold coins, and the addition of a new section 19 to the Commodity Exchange Act, dealing with leverage contracts on these and all other commodities.)

Sections 1(2) through (4) amend section 2(a)(2) of the Act to provide that (A) there will be five Commissioners on the Commodity Futures Trading Commission and (B) one of the Commissioners will be appointed by the President, subject to confirmation by the Senate, to be Chairman. An individual may be appointed as Chairman at the same time that person is appointed as a Commissioner. The Chairman will serve at the pleasure of the President and preside at Commission hearings. If the Chairman is subsequently replaced by another Chairman, he will serve the remainder of his term as a Commissioner.

Section 1(5) amends section 2(a)(5) of the Act by repealing the requirement that the appointment of the Executive Director of the Commodity Futures Trading Commission be subject to confirmation by the Senate.

Section 1(6) contains a technical amendment to section 2(a)(6)(A) of the Act to clarify that the executive and administrative functions of the Commission will be exercised solely by the Chairman chosen from the Commissioners by the President, consistent with the amendments contained in sections 1(2) through (4) of the bill.

Sections 1(7) and (8) amend the prohibitions on activities by Commission personnel. Section 1(8) amends section 2(a)(7) of the Act to prohibit any Commissioner or Commission employee classified as GS–16 or higher, for one year from his or her last day of service at the Commission, from making any appearance before the Commission or communicating with the Commission, any Commissioner of Commission employee on behalf of any person (other than the United States) on any matter before the Commission. This prohibition does not apply to any appearance or response pursuant to a Commission-issued subpoena or matters of an exclusively personal and individual nature.

Section 1(9) amends section 2(a)(8) of the Act to remove the requirement that the Commission establish a separate office within the Department of Agriculture to be staffed with Commission employees for the purpose of maintaining liaison, and imposes a requirement for maintenance of a liaison.

Sections 1(10) and (11) contain technical amendments to sections 2(a)(9)(A) and (B) of the Act, relating to Commission submittals of budget requests and legislative recommendations, to evidence the change in the name of the Senate Committee on Agriculture, Nutrition, and Forestry from the Senate Committee on Agriculture and Forestry.

Section 2. Approval of contract market rules; Options trading.

Section 2(1) of the bill conforms section 4c(a) of the Commodity Exchange Act with other provisions in the Act requiring the Commission's prior approval of contract market rules.

Section 2(2) contains a technical amendment to section 4c(b) of the Act to evidence the change in the name of the Senate Committee on Agriculture, Nutrition, and Forestry from the Senate Committee on Agriculture and Forestry.

Section 2(3) amends section 4c of the Act to prohibit commodity options transactions—except where both parties to the transaction are either a producer, processor, or commercial user of, or a merchant handling, the commodity on which the option is written and they enter into the option solely for the purposes of their businesses as such—until the following conditions are satisfied: (1) the Commission transmits evidence to the congressional agriculture committees of its ability successfully to regulate these transactions, and (2) 30 days of continuous session of Congress following transmission of the justification statement by the Commission passes without either House adopting a resolution disapproving of the proposed regulation. The Commission could transmit documentation of its ability to regulate option transactions regarding individual commodities, classes of commodities, or regulation of options trading on specific boards of trade, when the Commission deems it appropriate. Right or obligations arising out of any options transaction subject to the provisions of section 4c(b) entered into, or the execution of which was confirmed before October 1, 1978, are not affected. (The total prohibition on options transactions in basic agricultural commodities is not affected by this amendment.)

Section 2(3) adds a new subsection (d) to section 4c of the Act. New section 4c(d) exempts from the congressionally imposed ban on commodity options transactions under subsection (c), as added by section 2(3) of the bill, ban under subsection (b), dealer options that satisfy the requirements of that subsection. The grantor of the option must: (1) be in the business of buying, selling, producing, or otherwise using the commodity on which the option is written; (2) continuously maintain a minimum net worth of $10 million, certified annually by an independent public accountant using generally accepted accounting principles; (3) segregate daily, exclusively for the benefit of purchasers, money, government securities, commercial paper, or unencumbered warehouse receipts equal to the purchaser's profit; provide identification of each option granted; and provide confirmations for all options executed, including execution price and a transaction identification number. The futures commission merchant must have evidence that the grantor satisfies these requirements before he sells options written by that grantor. The futures commission merchant is required to: (1) treat and deal with all funds received from its customers as the options purchase price—to be held as money, government securities, commercial paper or unencumbered warehouse receipts—as security for performance of the option until its expiration or liquidation; (2) record each option in the customer's name by an identification number furnished by the grantor; and (3) provide a disclosure statement to customers pursuant to Commission regulations disclosing all costs, including any mark-ups or commission in the transaction. Section 2(3) adds a new subsection (e) to section 4c of the Act making the provision of new subsection (c) and (d) effective through September 30, 1984.

Section 3. Commingling of futures customers' funds. Section 3 amends section 4d (2) of the Act—which requires futures Commission merchants to account separately for funds and other property received by them from, or accruing to, their customers in connection with commodity futures contract trading—to authorize the Commission to prescribe the terms and conditions under which funds and property commingled and deposited under section 4d(2) may be commingled and deposited with other funds and property received by a futures Commission merchant and required by the Commission to be separately accounted for and treated as belonging to its customers.

Section 4. Maintenance of trading records by floor brokers. Section 4 of the bill substitutes the words "Floor brokers" for "Brokers" in section 4g(3) of the Act, which requires the maintenance of daily trading records in a specified manner and form, to make it clear that floor brokers are the persons required to maintain daily trading records. The term "floor broker" is defined in section 2(a)(1) of the Act, and the word "broker" does not appear in any section other than section 4g(3).

Section 5. Registration of futures commission merchants and floor brokers.

Section 5 amends section 4f(1) of the Act to provide that the registration of each futures commission merchant and floor broker will expire on December 31 of the year in which it was issued or at such other time, not less than one year from issuance of the registration, as the Commission may prescribe. Currently, the registration of all futures commission merchants or floor brokers expires on December 31 of the year of issuance.

Section 6. Registration of associated persons.

Section 6 amends section 4k(2) of the Act to authorize the Commission to prescribe the period of registration, not less than one year, for associated persons. If the Commission takes no action, the period of registration for associated persons would be two years, as is the case under existing section 4k(2).

Section 7. Registration of commodity trading advisors and commodity pool operators.

Section 7(1) deletes section 4n(2) of the Act, which provides that the registration of any commodity trading advisor and commodity pool operator is to become effective 30 days after the Commission's receipt of a registration application. The Act does not impose a time period for the Commission to process applications for other classes of registrants—futures commission merchants, associated persons, and floor brokers.

Section 7(2) and (3) amend section 4n(3) of the Act to provide that the registration of each commodity trading advisor or commodity pool operator will expire on June 30 of each year or at such other time, not less than one year from the effective date thereof, as the Commission may prescribe. Currently, the registration of all commodity trading advisors and commodity pool operators expires on June 30 of each year.

Section 8. Antifraud provisions relating to commodity trading advisors and commodity pool operators.

Section 8 deletes "registered under this Act" from section 40 of the Act, which makes it unlawful for any commodity trading advisor or commodity pool operator to defraud any client or participant or prospective client or participant. The amendment makes it clear that the antifraud provisions apply to all commodity trading advisors and commodity pool operators, regardless of whether they have registered or whether they are required to register.

Section 9. Refusal of designation as a "contract market" hearing on the record; suspension or revocation of "contract market" designation—hearing on the record; Commission subpoena power.

Section 9(1) amends section 6 of the Act to provide that the opportunity for a hearing afforded a board of trade whose application for designation as a "contract market" has been denied shall be for a hearing on the record.

Section 9(2) amends section 6(a) of the Act to provide that the hearing required before the Commission may suspend, for a period of not more than six months, or revoke the "contract market" designation of a board of trade must be on the record.

Section 9(3) amends section 6(b) of the Act to make the Commission's power to administer oaths and affirmations, to subpoena witnesses, and to take related actions for the purpose of conducting investigations and proceedings, independent from the authority currently contained in that section based on the Interstate Commerce Act. This section also expressly authorizes the Commission to invoke the aid of the courts of the United States in requiring the attendance and testimony of witnesses and the production of books and other records.

Section 10. Hearing on the record for a cease and desist order or imposition of a civil money penalty against a contract market.

Section 10 amends section 6b of the Act to require that the hearing the Commission must conduct prior to issuing a cease and desist order, or imposing a civil money penalty against a contract market for violating any provisions of the Act or any rule, regulation, or order thereunder, must be on the record.

Section 11. Jurisdiction of the States.

Section 11 adds a new section 6d to the Act.

New section 6d(1) authorizes States to bring actions seeking injunctive relief for violations of the Commodity Exchange Act, or Commission rules, regulations, or orders thereunder. The action would be brought in the proper United States district court in the State as described in subsection 5 of this section, which will have jurisdiction to issue writs of mandamus, or orders affording like relief, and to take such action as is necessary to remove the danger of violation of the Act or any Commission rule, regulation, or order thereunder.

New section 6d(2) requires Commission approval before a State may bring an action under this section, unless the Commission specifies by rule or regulation that prior approval is not necessary in such a case.

New section 6d(3) requires the State to serve written notice on the Commission that it is bringing the action. The Commission may intervene in the action by filing a notice of appearance and shall have the right to be heard on all matters arising therein and to file a petition for appeal in the action.

New section 6d(4) provides that no restraining order, injunction, writ of mandamus, or order affording like relief shall be issued ex parte in any action brought under this section. Subsection 4 further provides that, upon a proper showing, a permanent or temporary injunction or restraining order will be granted without bond.

New section 6d(5) describes the venue of the United States district courts for these actions. They may be brought in the district in which the defendant is found or is an inhabitant or transacts business or where the act or practice occurred, is occurring, or is about to occur. Process may be served in any district in which the defendant is an inhabitant or wherever the defendant may be found.

New section 6d(6) provides that, for purposes of bringing an action under this section, the State Attorney General (or other authorized State official) will not be prevented from conducting investigations or administering oaths or affirmation or compelling

the attendance of witnesses or production of evidence under existing State loans.

New section 6d(7) defines "State", for the purposes of this section, as being any State of the United States, the District of Columbia, or any territory or possession of the United States.

Section 12. Disclosure of traders and their positions on boards of trade to the public.

Section 12 of the bill amends section 8 of the Commodity Exchange Act by deleting the requirement that the Commission make public the information it has available on traders on boards of trade and their positions when such information is requested by a congressional committee.

Section 13. Fingerprinting applicants for registration.

Section 13 amends section 8a(1) of the Act to authorize the Commission to require fingerprinting of applicants for registration as futures commission merchants, persons associated with futures commission merchants, floor brokers, commodity pool operators, and commodity trading advisors, and any persons associated with the applicant, that the Commission may specify, that would be submitted to the Attorney General of the United States for identification and processing.

Section 14. Announcement of results of disciplinary or access denial proceedings by exchanges.

Section 14 adds a new section to section 8c(1)(B) of the Act requiring each exchange to make public its findings in exchange proceedings to discipline or deny membership to any person, including the action taken or the penalty imposed, but not the evidence or reasons for the action, except to the person subject to the action and to the Commission. This disclosure requirement does not apply to criminal investigations or proceedings.

Section 15 of the bill amends section 9(c) transactions.

Section 15 of the bil lamends section 9(c) of the Commodity Exchange Act to make it a misdemeanor for any person to engage in any leverage transaction contrary to Commission regulations.

Section 16. Authorization for appropriations.

Section 16 of the bill amends section 12(d) of the Commodity Exchange Act by extending the Act and authorizing appropriations for six years, fiscal years 1979 through 1984, for the operation of the Commodity Futures Trading Commission.

Section 17. Reparations.

Section 17 amends section 14 of the Act which deals with reparation proceedings.

Section 17(1) amends section 14(a) of the Act to make it clear that reparations proceedings may be brought against any person who is registered, or who should be registered, under the Act, and who violates the Act or the Commission's regulations thereunder.

[NOTE: This provision is consistent with the Commission's decision in *Stucki* v. *American Options Corp.*, CFTC Docket R-77-59 (February 13, 1978).]

Section 17(2) amends section 14(b) of the Act to provide that, in cases where the damages claimed do not exceed $5,000, a hearing would be held, limited to the basic or novel aspects of the case. Additional proof may be supplied in the form of short depositions or verified statements of fact. (Under the existing section 14(b), in cases whereinthe damages claimed do not exceed $2,500, a hearing is not required, and supporting documents may be supplied to the Commission.)

Section 13(3) amends section 14(c), which requires the Commission to render a decision in reparation cases, to conform to the amendment made by subsection (2) of this section.

Sections 18 and 19. Leverage transactions.

Section 19 deletes section 217 of the Commodity Futures Trading Commission Act of 1974, dealing with leverage transactions for delivery of silver bullion, gold bullion, or bulk silver coins or bulk gold coins.

Section 18 adds a new section 19 to the Act.

New section 19 makes it unlawful for any person to offer to enter into, enter into, or confirm the execution of a leverage transaction, or any contract, account, arrangement, scheme or device that the Commission determines serves the same purpose as a leverage contract, or is marketed or managed in substantially the same manner as a leverage contract, for the delivery of basic agricultural commodities. The Commission is authorized to prohibit or regulate leverage transactions involving any other commodity or commodities, without limitation, under such terms as the Commission may initially prescribe by October 1, 1979. The Commission may set different terms and conditions for leverage transactions involving different commodities. If the Commission determines that any leverage contract is a contract for future delivery within the contemplation of section 3 of the Act, that transaction will be regulated under the applicable sections of the Act.

Section 20. National Commission on the Effects of Futures Markets on Farm Income.

Section 20(a). Establishment of the Commission.

Section 20(a) Establishes a National Commission on the Effects of Future Markets on Farm Income (hereinafter referred to as the "Commission").

Subsection (b). Organization of the Commission.

Subsection (b) provides that the Commission will be composed of nine members: three appointed by the President Pro Tempore of the Senate; three appointed by the Speaker of the House of Representatives; and three appointed by the President, by and with the advice and consent of the Senate, one of whom would be designated as Chairman. A vice-chairman would be selected by a majority vote of the full Commission.

The Commission members would represent, as far as practicable, producers, processors, and distributors of agricultural commodities and their products, economists, family farmers, commodity exchanges, national agricultural organizations, and consumers.

Vacancies on the Commission would not affect the Commission's powers (except the selection of the vice-chairman) and would be filled in the same way as the original position.

Five members will constitute a quorum of the Commission.

Subsection (c). Compensation of members.

Subsection (c) provides that the members of the Commission would be compensated at the highest rate of pay for grade GS-18, and would be reimbursed for travel expenses, including per diem in lieu of subsistence while engaged in Commission duties.

Subsection (d). Duties of the Commission.

Subsection (d) provides that the Commission will study and appraise: (1) the relationships between the prices established on futures markets and the prices of actual commodities in the cash markets; (2) the concentration and magnitude of trading by foreign individuals, corporations, or governments on domestic futures markets; (3) the actions necessary to stimulate greater use of futures markets by American farmers, if advisable;

(4) the justification for the differentials in prices farmers receive for their crops and the futures prices for the same commodity; (5) the effect of increasing the number of delivery points under a futures contract on the amount received by producers of that commodity; and (6) the need for changes, if any, in the Commodity Exchange Act or the regulations thereunder.

The Commission's final report of its findings, conclusions, and legislative recommendations would be submitted to the President and the Congress by October 1, 1981. The Commission could also issue interim reports as it deems advisable.

All the materials collected, produced, obtained, or in the custody of the Commission would be transferred to the Commodity Futures Trading Commission and made available for public inspection and copying.

Subsection (e). Powers of the Commission.

Subsection (e) vests in the Commission the powers necessary to carry out its functions, including subpoena powers.

Subsection (f). Administrative arrangements.

Subsection (f) authorizes the Commission to appoint and fix the compensation of an executive director and a chief economist. The executive director would be authorized, with the approval of the Commission, to appoint and fix the compensation (not in excess of the GS-18 level) of subordinate Commission employees.

The Executive Director could obtain the services of experts and consultants.

Subsection (f) also permits the detailing of employees from other Federal entities to the Commission, on a reimbursable basis, to assist the Commission in carrying out its work.

The Commission's financial and administrative services would be provided by the General Services Administration, and would be paid for either in advance or by reimbursement from the Commission's funds as agreed upon by the Chairman of the Commission and the Administrator of General Services.

Subsection (f)(5). Termination of the Commission.

Subsection (f)(5) provides that, ninety days after submission of its final report, the Commission will terminate.

Subsection (g). Authorization for appropriations.

Subsection (g) authorizes appropriations of such sums, not in excess of $1 million for each year, as may be necessary for the Commission to carry out the provisions of this section.

Section 21. Effective date.

Section 21 provides that the bill will become effective on October 1, 1978.●

## FULL EMPLOYMENT AND BALANCED GROWTH ACT OF 1978—S. 50

AMENDMENT NO. 1774

(Ordered to be printed and referred to the Committee on Human Resources and the Committee on Banking, Housing, and Urban Affairs, jointly.)

Mr. HATHAWAY submitted an amendment intended to be proposed by him to amendment No. 1703 intended to be proposed to S. 50, the Full Employment and Balanced Growth Act of 1978.

AMENDMENTS NOS. 1775 AND 1776

(Ordered to be printed and referred to the Committee on Human Resources and the Committee on Banking, Housing, and Urban Affairs, jointly.)

Mr. HATHAWAY (for himself and Mr. RIEGLE) submitted two amendments intended to be proposed by them, jointly, to S. 50, supra.

THE HUMPHREY-HAWKINS BILL

Mr. HATHAWAY. Mr. President, as a cosponsor of the Full Employment and Balanced Economic Growth Act of 1977, the so-called Humphrey-Hawkins bill, I

am pleased as a member of the Subcommittee on Employment, Poverty, and Migratory Labor to have the opportunity to work on further refinements and improvements in the course of its deliberations this week.

PROVISIONS OF THE BILL

This legislation is a logical and long overdue extension of the principles set forth in the Employment Act of 1946. It provides a blueprint for mobilizing the economic potential of the private and public sectors. It requires, for the first time, the coordination of our national economic planning mechanisms toward achieving the goal of full employment.

The failure of our economy to achieve full employment has cost our society greatly. The range of costs is wide and tragic. The waste of human potential, the concomitant social ills of crime, alcoholism, drug abuse, and neglect constitute an immeasurable cost to our society and economy.

In more direct costs, it has been shown statistically that excessive unemployment has cost our economy over $600 billion in lost production since 1970—or over $12,000 for the typical family of four.

Further, every 1 percent of unemployment has been shown to cost $20 billion in lost Federal, State, and local tax revenues, extra unemployment costs and increased welfare costs.

The Humphrey-Hawkins bill does not promise a miracle cure to these ills, but it does provide a mechanism for addressing the massive and fundamental problem of unemployment in a comprehensive and rational fashion.

It sets as a national policy goal to be achieved by 1983 an overall unemployment rate of 4 percent; and a rate of 3 percent for those workers over the age of 20. Interim goals are also set. The legislation does not mandate that these goals must be achieved; we learned a long time ago that Congress cannot, simply by passing laws, solve all of society's problems.

But Congress can require that all the departments and agencies of the executive branch coordinate their programs and policies toward achieving this goal of full employment.

Consistent with this, the bill affirms in law the "right to useful employment paying decent wages for every American able, willing, and seeking work." But the bill clearly states that this is not the kind of right which allows a person to sue in court. Rather, the bill mandates that this right be translated into practical reality through the coordination of planning and implementation of Federal programs.

To fulfill this mandate, the legislation requires the President to propose to Congress on an annual basis both short term and medium term employment, production, and income goals, together with fiscal and monetary policies and objection intended to achieve the 5 year unemployment goals of the bill.

The Federal Reserve must also report to Congress its proposed monetary policies and to estimate the impact of these policies on inflation and unemployment.

Also, the legislation stipulates that first priority be directed toward promoting jobs and economic opportunity within the private sector. Consistent with this, the Full Employment and Balanced Economic Growth Act, as its name implies, recognizes that unemployment and inflation are parallel problems in our society, and that they feed upon each other in preventing us from fulfilling our national goals.

Therefore, the inflation consequences of the employment policies contained in the President's report and the report of the Federal Reserve must also be addressed. In this regard, the bill commits the Government to achieving reasonable price stability as rapidly as possible, and calls for the use of programs designed to monitor prices, stockpile commodities which are in short supply, and to encourage increased productivity on the part of both labor and management. The bill urges that antitrust laws be strengthened and the burdensome Government regulations be modified or eliminated.

The bill does provide flexibility to the President with respect to the employment goals established. If after 3 years it becomes apparent that the initial 5-year goals cannot be achieved, these may be adjusted. The bill is pragmatic in this regard, but the goals do not become meaningless thereby, and this is not a political loophole. Rather, it insures that the integrity of the planning mechanisms be maintained and the overall goal of balanced economic growth be assured.

The legislation does not set up a massive new bureaucracy or require expensive new initiatives. But it does recognize the integrated nature of our total economy and the role which the Federal Government has played and must continue to play to meet our job needs.

AMENDMENTS

While I support the bill, I do intend to work for specific improving amendments in the course of the subcommittee's markup and subsequent consideration by the full Human Resources Committee. My specific concerns fall into four areas. First, the bill should fully address the needs of small business. Second, its programs and policies ought to recognize the incalculable social and economic cost of alcoholism and drug abuse. Third, it should address the need to allocate equitably Federal facilities, bases, and installations to all regions of the country, with particular consideration to the need to ameliorate economic dislocations to individual regions from proposed closing or reductions. Finally, it should recognize and make provision for the awesome potential of Federal grants, contracts, and procurement programs and policies to improve the quality of life in given regions, and it ought to allocate these benefits equitably to all regions. One way to insure this goal is to give greater emphasis to setting aside such contracts to firms located in labor surplus areas consistent with Defense Manpower Policy 4A, the so-called labor surplus policy.

I shall be pleased to elaborate on each of these needs.

SMALL BUSINESS

Too often small business is a silent or neglected partner in Federal programs and policies. There are over 9 million small businesses throughout the country, accounting for over half the jobs in the Nation, and over one-third of our gross national product. At the same time, our laws and regulations are many times ill-suited to their needs.

In this regard it has been my privilege to serve on the Senate Small Business Committee, ably chaired by the Senator from Wisconsin, my good friend, GAYLORD NELSON. Senator NELSON also coincidentally serves as chairman of the Subcommittee on Employment, Poverty, and Migratory Labor, which has initial responsibility for reporting S. 50. It has been a pleasure to work with him on both committees and I am confident that together we will be able to tailor the provisions of S. 50 to refocus all Federal programs to take into account the legitimate needs and concerns of small business.

In this regard, amendment No. 1765, submitted by Senator NELSON on April 7 should go a long way toward achieving this goal. I was pleased to cosponsor this amendment.

The amendment modifies the bill in a number of ways to insure that its processes take full account of the needs of small business.

It requires the Chairman of the Council of Economic Advisers to advise both the President and the Congress with respect to the effects which overall economic policies have upon small business. It expands the overall responsibilities of the Council to include recommendations regarding how overall competition could be fostered and how opportunities for small business could be improved. It modifies provisions of the bill dealing with capital formation to insure the special needs of small business are taken into account. I know from my work on the Small Business Committee and from many discussions with small businessmen in the State of Maine that many outlets for capital taken advantage of by large business are totally foreclosed to smaller business. There is a need for new and imaginative approaches to overcome this problem.

There are other changes made by this amendment to other parts of the bill—all directed toward insuring that small business' needs are addressed.

This approach builds on a number of other initiatives intended to achieve the same overall goal.

For example, I have introduced a resolution, Senate Resolution 360, to require all Senate committees to review each and every regulation emanating from the executive branch. This review would focus on whether such regulations were inconsistent with or exceeded the scope of implementing legislation.

Also, I am cosponsoring a bill introduced by the Senator from Iowa (Mr. CULVER) directing Federal agencies and departments, in issuing regulations, to

take into account whether alternative, less administratively burdensome approaches could be taken with respect to small business. Where feasible, a separate, simplified set of regulations should be issued.

Also, I am sponsoring along with the Senator from Colorado (Mr. HART) the Competition Review Act, S. 2071. This would establish a Presidential commission to review 12 basic industries to determine the present level of competition, and thereby promote the goals of our society of free enterprise and equal opportunity. I appreciate Senator NELSON's kind remarks about this initiative in his statement on the small business amendment to S. 50.

Finally, I was pleased to have introduced in the 94th Congress, Senate Resolution 104, to give direct legislative authority over the Small Business Administration to the Committee on Small Business. This resolution which ultimately benefited from the cosponsorship of three-fourths of the Senate, was adopted and took effect with the beginning of the 95th Congress.

Since that time, the committee, under the leadership of Chairman NELSON, has undertaken a serious and thorough review of all of the legislation within its authority and its efforts have already resulted in the enactment of a large number of improvements.

In this regard, I was pleased to introduce and work toward enactment of the Small Business Authorization Act of 1978 and 79, Public Law 95–89, which provided greater emphasis on small business management assistance activities procurement assistance, and disaster relief.

The small business amendment to S. 50 builds on this record of achievement, and Chairman NELSON is to be complimented on insisting that the planning procedures in the Full Employment and Balanced Economic Growth Act incorporate such provisions.

ALCOHOLISM AND DRUG ABUSE

The current version of S. 50, amendment numbered 1703 contains in section 2 general findings, and in section 204 on youth-employment reference to the relationship between unemployment and drug addiction. The bill stipulates that one of the purposes of this legislation is to coordinate Federal policies to limit this and other adverse consequences.

As chairman of the Subcommittee on Alcoholism and Drug Abuse, I know too well of these findings and the need for an increased commitment and initiative. At the same time, I believe this language, in limiting the recognition of the problem to "drug addiction," may imply that other societal problems are not as important.

Consequently, I intend to propose an amendment to strike "drug abuse" each place it occurs and substitute instead "alcoholism and drug abuse."

Alcoholism costs our society not less than $42 billion per year in lost productivity and increased health care costs. Other human costs including auto fatalities, domestic violence, and child abuse are incalculable. The average alcoholic worker costs his employer 25 percent of his annual wages in lost producivity, increased breakage, and absenteeism.

The linkage between alcoholism and other societal problems has been long known, but the pervasiveness and wide-range of such linkages is being increasingly recognized.

Abuse of the so-called hard drugs—heroin and its chemical cousins—creates a direct economic loss of between $10 billion and $17 billion. Our Nation's approximately 500,000 heroin addicts are responsible for a grossly disproportionate share of crime and violence.

But drug abuse, of licit and illicit substances, is a much wider phenomenon, with much greater consequences.

These are chronicled quite thoroughly and articulately in the publication, "Drug Use Patterns, Consequences, and the Federal Response: A Policy Review" issued by the White House Office of Drug Abuse Policy ably directed by Dr. Peter Bourne.

FULL EMPLOYMENT AND FEDERAL GRANTS, CONTRACTS, AND PROCUREMENT

Another of my concerns is that Federal grant, contract, and procurement programs be mobilized toward achievement of the full employment goals of the Humphrey-Hawkins bill.

On this matter it is my intention to offer an amendment to establish as a national priority policy and program required for full employment, as delineated in proposed new section 6 of the Employment Act of 1946 that—

Proper attention be given to the relationship between (A) Federal grants, contracts, and procurement and (B) the distribution of jobs and income among different regions of the Nation and among urban, suburban, and rural areas, and moving toward an equitable allocation of the benefits from such Federal programs and policies to all regions, with particular attention to the needs of labor surplus areas.

The goal of this amendment is to incorporate by reference and thereby give increased emphasis to provisions already a part of existing law. I refer specifically to the procurement policy and priorites stated in section 15 (d) and (e) of the Small Business Act, which read as follows:

(d) For purposes of this section priority shall be given to the awarding of contracts and the placement of subcontracts to concerns which shall perform a substantial proportion of the production on those contracts and subcontracts within areas of concentrated unemployment or underemployment or within labor surplus areas. Notwithstanding any other provision of law, total labor surplus area set-asides pursuant to Defense Manpower Policy Number 4 (32A C.F.R. Chapter 1) or any successor policy shall be authorized if the Secretary or his designee specifically determines that there is a reasonable expectation that offers will be obtained from a sufficient number of eligible concerns so that awards will be made at reasonable prices. As soon as practicable and to the extent possible, in determining labor surplus areas, consideration shall be given to those persons who would be available for employment were suitable employment available. Until such definition reflects such number, the present criteria of such policy shall govern.

(e) In carrying out labor surplus areas and small business set-aside programs, departments, agencies, and instrumentalities of the executive branch shall award contracts, and encourage the placement of subcontracts for procurement to the following in the manner and in the order stated:

"(1) Congress which are located in labor surplus areas, and which are also small business concerns, on the basis of a total set-aside.

"(2) Concerns which are small business concerns on the basis of a total set-aside.

"(3) Concerns which are small business concerns, on the basis of a partial set-aside.

"(4) Concerns which are located in labor surplus areas on the basis of a total set-aside."

These provisions, signed into law on August 4, 1977, by the President, were originally proposed as part of S. 1442 which I was pleased to introduce on May 2, 1977,and which the Senate unanimously approved on May 19, 1977.

As further background on their significance, I ask unanimous consent that there be printed in th RECORD at this point the explanatory material from the Small Business Committee report, S. Report 95–184, filed on May 16, 1977, by Chairman NELSON.

There being no objection, the information was ordered to be printed in the RECORD, as follows:

TITLE IV—PROCUREMENT ASSISTANCE

BACKGROUND ON LABOR SURPLUS SET-ASIDE SECTION

Section 2 of the Small Business Act stipulates as a declared policy of the Congress that a "fair proportion of the total purchases and contracts or subcontracts for property and services for the Government . . . be placed with small business enterprise. . . ."

To implement this policy, section 15 of the act mandates that small businesses shall receive awards or contracts, or any parts thereof, whenever it is determined by SBA and the contracting procurement agency "(1) to be in the interest of maintaining or mobilizing the Nation's full productive capacity, (2) to be in the interest of war or national defense programs, or (3) to be in the interest of assuring that a fair proportion of the total purchases and contracts for property and services for the Government are placed with small business concerns. . . ."

This language is the statutory basis for the small business set-aside program by which contracts or parts of contracts are allocated for competition solely among small business concerns.

In fiscal year 1976, small businesses received approximately $12.4 billion in procurement awards from both defense and civilian procurement agencies out of a total of approximately $57 billion, or 22 percent. But of the $12.4 billion awarded to small business, only $3.19 billion were for set-asides.

Almost three-fourths of the aggregate value of procurement awards made to small firms, therefore, resulted not from set-aside procedures, but rather from small companies succeeding in open competition with large concerns. The net result was that small business set-asides constituted approximately 22 percent of the value of total procurement contracts awarded to small businesses and only 5.6 percent of overall Federal procurement.

The committee believes that in order to meet the requirements imposed by existing law, an increased number and proportion of

contracts, with an increased aggregate value, should be subject to set-aside procedures. It is also the committee's conclusion that small firms should be assured a "fair proportion" of Federal procurement. An appropriate target goal should be a proportion equal to not less than the small business proportion of private employment in the economy of the United States. As of last year, this figure was approximately 55 percent. It is clear that there is a great need for expansion of contract set-asides to achieve this goal.

This bill specifically authorizes $13 million for salaries and expenses for procurement assistance. These funds are to be used to employ an increased number of procurement officers to increase the number and total value of set-asides, and to develop a procurement data bank of small business concerns.

In order that these increased set-asides are awarded to those businesses which have the greatest need and could most benefit from such contracts, the committee feels it appropriate that priority be given to concerns which are located in areas of concentrated unemployment, underemployment, or labor surplus areas. In establishing this priority, the committee intends that there be greater coordination and interaction between the small business set-aside procedures and the set-aside procedures established pursuant to Defense Manpower Policy No. 4 (32A C.F.R. Part 8), the so-called Labor Surplus Policy. This policy, first made effective in 1952, applies to defense and civilian procurement and to large and small concerns.

Unfortunately, the Labor Surplus Policy has not been fully implemented and therefore remains largely dormant. In fiscal year 1975, labor surplus concerns received $74.4 million or 0.19 percent in preference awards of prime contracts in excess of $10,000 from the Department of Defense procurement agencies. Expansion of this total would be of benefit to the small business sector since, in fiscal year 1975, these small businesses receive approximately 77 percent of the DOD labor surplus preference awards. In the preceding fiscal year, the figure was 76 percent.

One of the principal reasons that the labor surplus program has not been adequately implemented is that under a General Accounting Office interpretation of existing law, labor surplus set-aside contracts must be split into two or more units. One of those units must be bid among all eligible firms to establish a competitive price. If Labor Surplus concerns can meet this price on the reserved portion of the contract, they are eligible to receive that portion as a labor surplus area set-aside.

While this procedure insures that the procurement agency receives a reasonable price on the total production run of the contract involved, it artificially restricts the number of contracts going into this program to contracts susceptible to being split into two production runs. It also ignores whether a reasonable price for the entire contract could be obtained from labor surplus area concerns.

SUMMARY OF LABOR SURPLUS SET-ASIDE SECTION

The Small Business Act is amended to authorize total labor surplus area set-asides if the head of the procurement agency involved "determines that there is a reasonable expectation that offers will be obtained from a sufficient number of eligible concerns so that awards will be made at reasonable prices."

The amendment requires that a contracting agency give highest priority to the setting aside of a total contract for performance by small business concerns eligible for labor surplus area contracts. If this is not feasible due to a lack of reasonable expectation that offers will be obtained from a sufficient number of eligible small business concerns, the contracting agency would then consider setting aside the entire contract to small firms regardless of their location. If this is not feasible, next consideration would be given to setting aside part of the contract for small business concerns regardless of location. Final consideration would be given to a total set-aside for large and small firms eligible for labor surplus area contracts.

Mr. HATHAWAY. Mr. President, as is clear from the Small Business Committee report, the legislative intent behind these provisions was to channel Federal procurement and other programs into areas of labor surplus consistent with the original goal of Defense Manpower Policy No. 4, first promulgated by President Truman as an Executive order in 1951. Unfortunately, this policy was never properly implemented by the executive branch due to confusion over its relationship with the small business set-aside program, and due to apparent reluctance or refusal on the part of some departments and agencies to participate in this vitally important effort.

Another reason for the lack of implementation of the labor surplus program was difficulty with the criteria of eligibility established by the Department of Labor in determining which firms were qualified as being within labor surplus areas. Until very recently these criteria took in over 80 percent of the firms in the Nation, which called into serious question the value of the bidding preference offered by the labor surplus program.

Two developments within the executive branch have radically altered this situation and greatly improved the outlook and utility of the policy.

On October 27, 1977, the General Services Administration issued a revised and updated Defense Manpower Policy 4A, which incorporated all of the provisions and the underlying intent of Public Law 95–89.

For the benefit of my colleagues, I ask unanimous consent that the text of DMP–4A be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

Title 32A—National Defense Appendix

CHAPTER I—FEDERAL PREPAREDNESS AGENCY, GENERAL SERVICES ADMINISTRATION

[Defense Manpower Policy DMP–A]

PART 134—PRESERVATION OF THE MOBILIZATION BASE THROUGH THE PLACEMENT OF PROCUREMENT AND FACILITIES IN LABOR SURPLUS AREAS (DMP–4A)

Agency: Federal Preparedness Agency, General Services Administration.

Action: Final rule.

Summary: This policy provides for directing the attention of Federal departments and agencies to the potential within labor surplus areas for the award of appropriate procurement contracts and grants and the execution of agreements, for the locating of new plants or facilities, and for assigning responsibilities to specified officials of the Government to carry out the policy. This revision brings the policy into conformance with Pub. L. 95–89. The effect of the revisions will be to direct an increased amount of procurement to labor surplus areas.

Effective date: October 27, 1977.

For further information contact:

J. J. Delaney, Controlled Conflict Preparedness Division, 202–566–0760.

Part 134 is recaptioned and revised to read as follows:

PART 134—PRESERVATION OF THE MOBILIZATION BASE THROUGH THE PLACEMENT OF PROCUREMENT AND FACILITIES IN LABOR SURPLUS AREAS (DMP–4A)

1. *Purpose.* Success of the national security program depends upon efficient use of all our resources, including labor force and facilities, which are preserved through practice of the skills of both management and workers. A primary aim of Federal manpower policy is to encourage full utilization of existing production facilities and workers in preference to creating new plants or moving workers, thus assisting in the maintenance of economic balance and employment stability. When large numbers of workers move to already tight areas, heavy burdens are placed on community facilities—schools, hospitals, housing, transportation, utilities, etc. On the other hand, when unemployment develops in certain areas, unemployment costs increase the total cost to the Government, and plants, tools, and workers' skills remain idle and unable to contribute to our national security program. Consequently it is the purpose of Defense Manpower Policy No. 4A to (a) direct attention to the potentialities of labor surplus areas for the award of appropriate procurement contracts and grants, for the execution of agreements, and for the locating of new plant or facilities, and (b) assign responsibilities to specified officials of the Government to carry out the policy stated below.

2. *Cancellation.* This policy cancels and supersedes Defense Manpower Policy No. 4.

3. *Authority.* Pursuant to the authority vested in the Administrator of General Services by Executive Order 10480, Executive Order 11051, as amended, and Executive Order 11725, and in accordance with Public Law 95–89, Defense Manpower Policy No. 4A is hereby issued.

4. *Policy.* It is the policy of the Federal Government to award appropriate contracts and grants to, and to execute agreements with, eligible labor surplus area concerns, to place facilities in labor surplus areas, and to make the best use of appropriate resources in order to achieve the following objectives:

(a) To preserve management and employee skills necessary to the fulfillment of Government contracts and purchases;

(b) To maintain productive facilities;

(c) To improve utilization of the Nation's total economic potential by making use of the economic resources of each area; and

(d) To help ensure timely delivery of required goods and services and to promote readiness to expanded efforts by locating procurement where the needed labor force and facilities are fully available.

5. *Applicability and scope.* The provisions of this policy apply to all Federal departments and agencies, except as otherwise prohibited by law. Set-aside procedures used under this policy shall apply to appropriate procurements, grants, and agreements greater than $2,500.

6. *Definitions*—(a) *Labor surplus areas.* Labor surplus areas are geographic areas determined by the Secretary of Labor. This determination shall be made so as to target this policy to the areas of greatest unemployment. Furthermore, in making such determination, the Secretary of Labor is authorized to declare certain areas labor surplus areas because of catastrophic events even though they may not qualify under normal procedures.

(b) *Eligibility.* An offering firm shall be deemed eligible for a labor surplus area set-aside award if it agrees to perform a substantial proportion of production, manufacturing, or appropriate services in labor surplus areas, as of the date of the award.

(c) *Substantial performance.* A recipient of a contract or grant or a party to an agreement shall be deemed to achieve substantial performance in a labor surplus area if the aggregate costs that will be incurred by the recipient or its first-tier subcontractors on account of manufacturing, production, or appropriate services performed in a labor surplus area amount to more than one-half of the contract price.

7. Implementation. (a) Priority shall be given in the awarding of contracts and grants, the execution of agreements, and the encouragement of the award of subcontracts to concerns which perform a substantial proportion of the manufacturing, production, or appropriate services on those contracts and subcontracts within labor surplus areas. Labor surplus area set asides are authorized if the Federal department or agency determines that there is a reasonable expectation that offers will be obtained from a sufficient number of responsible, eligible concerns so that awards will be made at reasonable prices.

(b) In carrying out labor surplus areas and small business set-aside programs, Federal departments and agencies shall award appropriate contracts and grants, execute agreements, and encourage the award of subcontracts for procurement to the following in the manner and in the order stated:

(1) Concerns which are located in labor surplus areas and which are also small business concerns, on the basis of a total set-aside.

(2) Concerns which are small business concerns, on the basis of a total set-aside.

(3) Concerns which are small business concerns, on the basis of a partial set-aside.

(4) Concerns which are located in labor surplus areas, on the basis of a total set-aside.

In this connection, contracting officers shall make unilateral set-asides in accordance with the above priorities.

(c) All Federal departments and agencies shall:

(1) Use their best efforts to award all procurement contracts and grants, and execute agreements, greater than $2,500 to concerns that will perform a substantial proportion of the manufacturing, production, or appropriate services on those contracts within labor surplus areas, to the extent that procurement objectives will permit.

(2) Ensure that firms in labor surplus areas that are on appropriate bidders mailing lists are given the opportunity to submit offers on all procurements for which they are qualified. Whenever the number of firms on a bidders mailing list is excessive in relation to size and type of procurement, a representative number of firms from labor surplus areas shall be given the opportunity to submit offers.

(3) Establish programs to encourage prime contractors to award subcontracts to firms that agree to perform a substantial proportion of the production, manufacturing, or appropriate services on those subcontracts in labor surplus areas.

(4) Cooperate with other Federal departments and agencies in achieving the objectives of this policy.

(d) The preferences described in this policy shall be in addition to other preferences to which firms may be entitled because of performance in labor surplus areas, such as the preference under the Buy American Act.

3. *Responsibilities.* To carry out the purpose and policy objectives set forth above, the following assignments of responsibilities are made:

(a) The Secretary of Labor shall:

(1) Classify labor surplus areas and disseminate this information on a timely basis to Federal departments and agencies.

(2) In cooperation with State and local authorities and the Secretary of Commerce, provide labor-market data and related economic information in efforts to assist in the initiation of industrial expansion programs in labor surplus areas.

(3) Identify occupations and skills which are in surplus supply within labor surplus areas and make this information available to firms requiring such occupations and skills and interested in establishing new plants and facilities.

(4) Identify occupations and skills for which labor will be needed by new or expanding industries and industries that expand during a mobilization; and, in collaboration with other Government agencies, make assistance available to labor surplus area institutions and users in developing on-the-job, apprentice, or other training programs for developing skills of the work force.

(5) Through the affiliated State employment services, receive job openings on a voluntary basis and/or under the mandatory listing program provided for by section 2012 of Title 38 of the United States Code and by Executive Order 11701, and refer qualified unemployed workers to concerns in labor surplus areas.

(b) The Secretary of Commerce shall:

(1) In cooperation with State economic development agencies, the Secretary of Defense, the Administrator of General Services, and the Administrator of the Small Business Administration, assist concerns which have agreed to perform contracts in labor surplus areas in obtaining Government procurement business by: (A) Providing such concerns with timely information on proposed Government procurements; and (B) maintaining current information on the manufacturing capabilities of such concerns with respect to Government procurement and disseminating such information to Federal departments and agencies.

(2) Urge concerns planning new production facilities to consider the advantages of locating in labor surplus areas.

(3) Provide technical advice and counsel to groups and organizations in labor surplus areas on planned industrial parks, industrial development organizations, expanding tourist business, and available Federal aids.

(c) The Administrator of the Small Business Administration shall make available to small business concerns in labor surplus areas all of its services, endeavor to ensure opportunity for maximum participation by such concerns in Government procurement, and give consideration to the needs of these concerns in the making of joint small business set-asides with Government procurement agencies.

(d) There is hereby continued in operation within the Federal Preparedness Agency the Surplus Manpower Committee.

(1) This Committee shall be chaired by the Director, Federal Preparedness Agency, General Services Administration, or his designee, and shall include representation from the Office of Federal Procurement Policy; Department of Defense; Department of Commerce; Department of Labor; General Services Administration; Small Business Administration; Department of Health, Education, and Welfare; Department of Housing and Urban Development; Department of Energy; and other interested departments and agencies.

(2) The Committee shall advise the Director, Federal Preparedness Agency, on policies, procedures, and activities in existence or needed to carry out the purpose of this policy.

(3) When an entire industry that sells a significant proportion of its production to the Government is generally depressed or has a significant proportion of its production units located in a labor surplus area, the Committee may make appropriate recommendations relative to that industry in lieu of recommendations relative to specific geographical areas. In such cases, after notice to and hearing of interested parties, the Director, Federal Preparedness Agency, will give consideration to appropriate measures applicable to the entire industry.

(e) All Federal departments and agencies shall give consideration to labor surplus areas in the selection of sites for Government-financed facilities, including expansion, to the extent that such selection is consistent with existing law and essential economic and strategic factors that must also be taken into account.

9. *Reporting requirements.* Reports and monitoring of the effects of this policy, including subcontracting activity, shall be the responsibility of the Department of Defense for all military procurements and the General Services Administration for all civilian procurements. Copies of these reports shall be furnished by agencies receiving these reports to the Federal Preparedness Agency on a regular basis.

(Pub. L. 95–89; Executive Order 10480; Executive Order 11051, as amended; and Executive Order 11725.)

NOTE.—The General Services Administration has determined that this document does not contain a major proposal requiring preparation of an Inflation Impact Statement under Executive Order 11821 and OMB Circular A–107.

JAY SOLOMON,
*Administrator of General Services.*

Dated: October 27, 1977.

[FR Doc.77–31897 Filed 11–2–77;8:45 am]

Mr. HATHAWAY. Mr. President, DMP–4A thus incorporated the new priorities for all Federal procurement as contained in section 15(d) and (e) of the Small Business Act. Further, it broadened the applicability of these principles to cover all Federal grant and contract activities.

The other major difficulty in administration of this program was cleared up on March 3, 1978, with the issuing by the Department of Labor of revised criteria for determination of labor surplus areas.

I ask unanimous consent that excerpts from the text of the DOL press release be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

LABOR DEPARTMENT ADOPTS NEW CRITERIA IN CLASSIFYING LABOR SURPLUS AREAS

Secretary of Labor Ray Marshall announced changes in the 25-year-old method of classifying labor surplus areas that enables employers to obtain preference in bidding on Federal procurement contracts.

The revised criteria, scheduled for publication March 3 in the Federal Register and effective immediately, link the classifications with the national unemployment rate on a quarterly basis. The new formula will give preference in procurement contracts only to areas with exceptionally high unemployment—that is, at least 20 percent higher than the national rate.

Under the new criteria, 453 areas of labor surplus are being listed as eligible, effective for the remainder of the quarter ending March 31, 1978, for preference in bidding on Federal procurement contracts (see below).

This is in contrast to the 1,171 labor areas listed last December when the old system was in use, based on a flat 6-percent-or-more unemployment rate as the qualifying benchmark.

The new procedure classifies an area as a labor surplus area for a three-month period if its local unemployment rate is at least 1.20 times the average national rate experienced in the four quarters immediately preceding.

The determination of eligibility based on the preceding four quarters, a moving average, is designated to reflect overall trends in the U.S. economy as manifested in unemployment rates.

Because the national rate averaged 7.3 percent for the preceding four quarters, areas qualify for eligibility if their average jobless rate for the four quarters was at least 8.8 percent (7.3 x 1.20=8.8).

In addition, such areas must have an average unemployment rate of at least 6 percent to qualify as labor surplus areas. This requirement would become effective whenever the national average unemployment rate is 5 percent or less.

Also, any area with a jobless rate of 10 percent or higher qualifies regardless of the national average rate. This "automatic" qualification occurs whenever the national rate reaches 8.3 percent or above.

Under the previous classification criteria, labor surplus areas generally consisted of areas with unemployment rates of 6 percent or more. When that policy was initiated in 1951–52, the national jobless rate was hovering around 3 percent.

Over the intervening years—especially during the 1970's—the jobless rate has drifted upwards. During this period, the number of areas classified as having substantial unemployment also increased significantly.

For the month of December 1977 there were 1,171 areas so classified, compared with 719 late in 1973 and 494 late in 1969. The excessive number of qualifying areas blunted the intent of Defense Manpower Policy No. 4—to have contracts awarded to areas of exceptionally high unemployment.

The changes implement amendments to the Small Business Act (PL 95–89), enacted Aug. 4, 1977. They also implement the revised Defense Manpower Policy No. 4A (DMP–4A), published in the Federal Register Nov. 3, replacing the previous DMP–4.

Previous studies—one by the General Accounting Office and another by the Northeast-Midwest Research Institute—and the Department's own analysis demonstrated that the previous policy was ineffective. Not only was procurement widely dispersed, thereby failing to target resources to areas most in need but it was also ineffective in responding to needs reflecting changing business conditions. These considerations prompted the Department of Labor to revise its definition of labor surplus areas.

A labor market area may be classified under the new criteria as eligible for DMP–4A preference if it encompasses a smaller area of concentrated high unemployment, as long as the overall unemployment rate for the entire area is at least equal to the "floor" rate of 6.0 percent.

Such classifications are made when (1) the jobless rates of the smaller areas (i.e., cities or counties) met the 1.20 ratio test, (2) each such unit has a population of at least 50,000, and (3) the number of unemployed in the smaller areas accounts for at least 25 percent of the total unemployed in the overall area.

The revised procedures for classifying labor surplus areas for Federal procurement purposes also permit the Labor Department, at its discretion, to waive the eligibility criteria in areas where a sudden and unforeseen rise in unemployment has occurred—not immediately reflected in the annual average unemployment for the area during the previous four quarters.

Such instances can arise due to natural disasters, plant closings, contract cancellations, layoffs caused by foreign imports, etc., that have a substantial impact on the area's employment and unemployment and are not the result of temporary or seasonal factors.

In situations where such exceptional circumstances exist, the Labor Department can, upon petition from a state employment security agency, declare such areas eligible for DMP–4A perference for a period not to exceed one year.

Mr. HATHAWAY. Mr. President, by altering the criteria for determining labor surplus areas from a straight 6 percent unemployment rate to one which is 1.2 times the national average, this DOL policy change has the effect of lowering the number of areas qualifying for preferential treatment by two-thirds, and thereby gives meaning to the preference.

We are therefore finally in the position, 27 years after President Truman first promulgated this policy, to see it properly and effectively implemented.

A significant percentage of the over $70 billion in Federal procurement contracts, and the greater dollar value of grants and contracts, can, with the cooperation of all departments and agencies of the executive branch be channeled into labor surplus areas. With this initiative, a large savings can be realized in unemployment compensation, welfare costs, health care and other associated costs.

Instead of receiving Government payments for not working, those individuals in our labor surplus areas could be put to work on worthwhile Government programs—not make-work efforts—but in meeting the already existing needs for goods and services.

But this will only occur, as I have pointed out, with the full cooperation of the executive branch, from the President on down.

This amendment to the Full Employment and Balance Economic Growth Act of 1977 would accomplish this goal. It would require a coordinated effort throughout all departments and agencies toward targeting grants, contracts and procurement to areas of labor surplus, with a view to equitable distribution to such areas throughout the Nation.

Along with listing this goal in the general priorities section, my amendment would incorporate it explicitly into section 202 dealing with countercyclical employment policies, and section 204 dealing with regional and structural employment policies.

EQUITABLE ALLOCATION OF FEDERAL FACILITIES, BASES, AND INSTALLATIONS, AND AMELIORATING THE IMPACT OF CLOSURES OR REDUCTIONS

Finally, I intend to offer an amendment to include as a national priority goal in proposed new section 6 of the Employment Act of 1946 the following language:

(6) proper attention to the relationship between the location of Federal facilities, including military bases and installations, and the distribution of jobs and income among different regions of the Nation, and moving toward an equitable allocation of the benefits from such facilities, bases, and installations to all regions, with particular consideration to ameliorating any economic dislocations from closures or reductions of such facilities, bases, or installations to any particular region.

First, this language is intended to insure that in pursuing the employment goal in proposed new section 6 of the opportunities of allocation of Federal facilities be fully considered and equitably distributed. For too long we have experienced a gradual but pronounced drift of these facilities to certain regions to the detriment of others. The resulting decline and ultimate stagnation impacts these neglected areas but at the same time hurts the Nation as a whole.

Further, the concentration of such Federal facilities in areas which are growing economically already offers no significant national advantage. On the contrary it exacerbates the pendulum-like shifts of population, and creates unnecessary stresses on the local resources of emerging areas. As a result, large proportions of still useful housing may stand vacant in declining regions while severe housing shortages and overextension of local public works may occur in booming areas.

Of course, the Federal Government cannot be expected to eliminate these phenomena, which are to some degree inevitable in a dynamic national economy. At the same time, though, its policies should not aggravate these tendencies, and to the extent feasible, ought to direct its policies toward limiting the more adverse effects. This amendment is intended to accomplish this goal.

It recognizes the merit of an overall policy on the part of the Congress and the executive branch of moving toward an equitable allocation of Federal military bases, hospitals, research facilities, office buildings, training centers, and so on, throughout all regions of the Nation. This can be a key element in insuring full and fair employment in such regions and can serve as an important counterbalance to otherwise occurring radical shifts.

The amendment further underlines the importance of programs and policies intended to ameliorate any economic dislocations from closures or reductions of such facilities, bases, or installations to any particular region.

In this regard, I am most familiar with one example in particular—the proposed reduction of Loring Air Force Base in Aroostook County. This 80-percent reduction, if implemented would result in an unemployment rate in excess of 26 percent for northern Maine, and would create direct and indirect costs to the Federal, State, and local governments of over $133 million over 5 years according to the save Loring committee.

While I am hopeful that this particular proposal will be rejected by the executive branch, this example has pointed out to me the devastating impact such an administrative action can have on a region and its people.

It seems fitting and appropriate that the Federal Government which created

such a facility in the first place owes a commitment to these countless individuals and families who have devoted the best part of their lives and their livelihood to making it a success. Small businessmen—grocery storeowners, small manufacturers, operators of services—who have undertaken substantial investment in financial and emotional resources to meet the needs of servicemen and their families must be provided with alternatives and opportunities. It is unwise and inhumane to require immediate uprooting and relocation. Further, taking into account the massive costs resulting to Government as well as to individuals, it is a poor business decision.

This new language I intend to offer would provide the impetus for an integrated cross-governmental approach to these problems, giving them the attention they deserve at the very highest levels of our Federal Government.

Mr. President, I ask unanimous consent that there be printed in the RECORD the text of these amendments.

There being no objection, the amendments were ordered to be printed in the RECORD, as follows:

AMENDMENT No. 1774

On page 4, line 8, strike out "drug addiction" and insert in lieu thereof: "alcoholism and drug abuse".

On page 4, lines 13 and 14, strike out "drug addiction" and insert in lieu thereof: "alcoholism and drug abuse".

On page 24, line 21, strike out "drug addiction" and insert in lieu thereof: "alcoholism and drug abuse".

---

AMENDMENT No. 1775

On page 16, line 2, strike out "and".

On page 16, between lines 2 and 3, insert the following:

"(5) proper attention to the relationship between (A) Federal grants, contracts, and procurement and (B) the distribution of jobs and income among different regions of the Nation and among urban, suburban, and rural areas, and moving toward an equitable allocation of the benefits from such Federal programs and policies to all regions, with particular attention to the needs of labor surplus areas; and".

On page 16, line 3, strike out "(6)" and insert in lieu thereof "(7)".

On page 22, line 17, after "Nation;" insert the following:

"Federal grants, contract, and procurement programs which are targeted on labor surplus areas;".

On page 24, lines 9 and 10, immediately after "Federal Government tax, expenditure" insert the following: "(including procurement of goods and services)".

---

AMENDMENT No. 1776

On page 16, line 2, strike out "and".

On page 16 between lines 2 and 3, insert the following:

"(6) proper attention to the relationship between the location of Federal facilities, including military bases and installations, and the distribution of jobs and income among different regions of the Nation, and moving toward an equitable allocation of the benefits from such facilities, bases, and installations to all regions, with particular consideration to ameliorating any economic dislocations from closures or reductions of such facilities, bases, or installations to any particular region; and".

On page 16, line 3, strike out "(6)" and insert in lieu thereof "(7)".●

● Mr. RIEGLE. Mr. President, I join with Senator HATHAWAY in introducing this legislation because I know all too well the devastating impact that base closings can have on local communities. I am anxious to assure that the Federal Government do everything it can to aid these communities, which have often provided military and support personnel with friendly, cordial homes for many, many years. Workers in these communities deserve to benefit from our long-overdue Federal commitment to achieving full employment as quickly as possible.

Federal procurement policy has long been linked with economic dislocations resulting from defense closures. I have worked with the Defense Department and other Federal agencies to mobilize the appropriate forces following the closing of Kincheloe Air Force Base in Michigan during the summer of 1977, and on other occasions. The amendments that we are offering today to the Full Employment and Balanced Growth Act of 1978 will go beyond these existing efforts to direct the President to put any new employment programs to work, wherever possible, to assist such communities.

These proposed amendments to the Full Employment Act supplement S. 1901, a bill I introduced with Senator GRIFFIN last July, which would set aside 10 percent of the estimated 10-year "savings" gained by a base closure to be used to aid those communities directly affected. I feel that programs of this nature are essential to meet the Government's moral responsibility to help the people directly affected by its decisions—and to help them in a manner that provides permanent, productive employment rather than through reliance on temporary welfare or unemployment payments.●

## LABOR LAW REFORM ACT OF 1978—S. 2467

AMENDMENTS NOS. 1777 AND 1778

(Ordered to be printed and to lie on the table.)

Mr. HELMS submitted two amendments intended to be proposed by him to the bill (S. 2467) to amend the National Labor Relations Act to strengthen the remedies and expedite the procedures under such act.

## PANAMA CANAL TREATIES—EX. N, 95–1

AMENDMENT NO. 103

(Ordered to be printed and to lie on the table.)

Mr. GRIFFIN submitted an amendment intended to be proposed by him to the resolution of ratification of the Panama Canal Treaty, Ex. N, 95–1.

## RESERVATIONS SUBMITTED FOR PRINTING

RESERVATION NO. 14

(Ordered to be printed and to lie on the table.)

Mr. HEINZ (for himself, Mr. HOLLINGS, and Mr. BELLMON) submitted a reservation intended to be proposed by him to the resolution of ratification of the Panama Canal Treaty, Ex. N, 95–1.

## NOTICES OF HEARINGS

CONDUCT OF MONETARY POLICY

Mr. PROXMIRE. Mr. President, the Committee on Banking, Housing, and Urban Affairs shall hold 2 days of hearings, April 24, 1978, and April 25, 1978, on the conduct of monetary policy pursuant to Public Law 95–188. The hearings will be held in room 5302 of the Dirksen Senate Office Building, and both days shall start at 10 a.m.

The hearing on April 24, 1978, shall consist of two panels. Testifying on the first panel will be Dr. Otto Eckstein, president of Data Resources, Inc., and Mr. Leonard Santow, adviser to the board and senior vice president of the J. Henry Schroder Bank & Trust Co. The second panel will consist of three economists: Prof. Donald Hester of the Economics Department at the University of Wisconsin, Dr. Thomas Thomson, vice president and chief economist of the Detroit Bank & Trust Co., and Dr. Joan Walters, chairman of the department of economics at Fairfield University.

On Tuesday, April 25, 1978, the committee will receive testimony from the Honorable G. William Miller, Chairman of the Board of Governors of the Federal Reserve System. Chairman Miller will convey to the committee the objectives and plans of the Federal Reserve Board and the Federal Open Market Committee for the upcoming 12-month period. These objectives and plans will be in terms of desired growth or diminition in the monetary and credit aggregates for the upcoming 12 months, taking into account past and prospective developments with respect to production, employment, and prices. This quarterly report to Congress is now required under Public Law 95–188, the Federal Reserve Reform Act of 1977, which inserted into the Federal Reserve Act a new section, section 2A.

Anyone requiring further information about these hearings should contact Steven M. Roberts, of the committee staff, at 224–0893.

SUBCOMMITTEE ON PUBLIC LANDS AND RESOURCES

● Mr. JACKSON. Mr. President, I wish to announce for the information of the Senate and the public, the scheduling of an additional day of hearings before the Subcommittee on Public Lands and Resources of the Senate Energy and Natural Resources Committee.

As my colleagues will recall, on February 23, I announced that the subcommittee had scheduled a hearing for April 12 to take testimony regarding legislation relating to reclamation law. The response to the announcement has been overwhelming, necessitating the scheduling of an additional day on April 13 to receive testimony. The hearing will begin at 10 a.m., in room 3110 of the Dirksen Building.

I might add that in addition to the three Senate measures earlier placed on the agenda, S. 242, S. 1812, and S. 2310, another measure S. 2606, a bill to amend

and supplement the acreage limitation and residency provisions of the Federal reclamation laws, has been placed on the agenda.

A heavy witness schedule faces the subcommittee and it has become necessary to limit the number of those presenting oral statements and I encourage the submission of written statements for the hearing record. Those who wish to submit a written statement should write to the Public Lands and Resources Subcommittee, room 3106 Dirksen Building, Washington, D.C. 20510. For further information regarding the hearings you may wish to contact Mr. Russell Brown or Mr. Steve Quarles of the subcommittee staff at telephone 224–2366.●

AQUACULTURE HEARINGS

● Mr. LEAHY. Mr. President, I wish to announce that the Subcommittee on Agricultural Research and General Legislation of the Senate Committee on Agriculture, Nutrition, and Forestry will conduct hearings on April 18 and 20 on the various bills to promote acquaculture in the United States. These hearings are to help the subcommittee determine what is the best approach that the Federal Government can take to assure that aquaculture in America realizes its full potential.

The hearings on April 18 will begin at 10 a.m., and at 9 a.m. on April 20.

We have scheduled a hearing on April 18 to accommodate out-of-town witnesses who will be testifying at similar hearings before the Committee on Commerce, Science, and Transportation on April 17.

Oral statements will be limited to 10 minutes, written statements may be of any length and will be inserted in the record in their entirety.

Anyone wishing to testify should contact Miss Denise Love, the committee hearing clerk, at 202–224–0014.●

SUBCOMMITTEE ON CITIZENS AND SHAREHOLDERS RIGHTS AND REMEDIES

● Mr. METZENBAUM. Mr. President, the Subcommittee on Citizens and Shareholders Rights and Remedies of the Committee on the Judiciary will hold a hearing on Thursday, April 20, 1978, on S. 2390, the Citizen Access to the Courts Act of 1978. The hearing will commence at 9 a.m., in room 6226, Dirksen Senate Office Building.

Anyone wishing to submit testimony for the record, contact Mr. Nathan R. Zahm, Acting Chief Counsel of the subcommittee, 4–B Russell Senate Office Building, Washington, D.C., 20510, phone 202–224–4703.●

SUBCOMMITTEE ON THE CONSTITUTION

● Mr. BAYH. Mr. President, the Subcommittee on the Constitution has scheduled hearings on Senate Joint Resolution 65, a proposal to amend the Constitution to provide for representation of the District of Columbia in the Congress. The hearings will be held Monday, April 17, Thursday, April 27, and Friday, April 28, 1978, at 9 a.m., in room 5110, Dirksen Senate Office Building.

Any person wishing to submit written statements for the hearing record should send them to the Subcommittee on the Constitution, suite 102–B, Russell Senate Office Building, Washington, D.C. 20510, before May 15, 1978.●

CHANGE IN HEARING ROOM—ARBITRATION OF CIVIL CASES IN U.S. COURTS

● Mr. DECONCINI. Mr. President, on February 1, 1978, I announced that an open public hearing would be held by the Subcommittee on Improvements in Judicial Machinery of the Committee on the Judiciary on S. 2253, a bill to amend title 28 of the United States Code to encourage prompt, informal, and inexpensive resolution of civil cases by use of arbitration in U.S. district courts, and for other purposes, and on March 23, 1978, I noticed a room change.

The hearing on this subject is now scheduled to be held on April 14, 1978, in room 2228, Dirksen Senate Office Building, commencing at 9 a.m.

Those who wish to testify or submit a statement for inclusion in the record should communicate as soon as possible with the Subcommittee on Improvements in Judicial Machinery, 6306 Dirksen Senate Office Building, telephone 202–224–3618, Washington, D.C. 20510.●

## ADDITIONAL STATEMENTS

## INVESTMENT IN SOUTH AFRICA

● Mr. GOLDWATER. Mr. President, while I was recently in South Africa I met a business friend of mine and when I asked him what he was doing in that part of the world he said that some of his directors felt they should close their plant in South Africa and not reopen it. I said how in the world can a successful business such as yours ever think of doing such a thing, not only from the business standpoint, but from the matter of relations with South Africa, a country that we need very badly on our side, but a country which could probably do just as well if all American business returned home. That encounter disturbed me and I have been looking for some way to answer it. Just today, a compilation that touches on this subject came to me from the Embassy of South Africa. Because it contains such vital information and raises such profound questions, particularly at this time, I ask it be printed in the RECORD.

INVESTMENT IN SOUTH AFRICA

Foreign private investment currently accounts for about 20% of total private investment in South Africa.

The U.S. share of total direct foreign investment was 16% in 1976 and, expressed as a percentage of total South African investment (including foreign investment), it amounted to 4%.

Roughly 350 American companies have direct investments in South Africa with a book value of more than $1.5 billion. This represents about 40% of all American investment in Africa, and 1.2% of total private American investment abroad.

It is estimated that between 90,000 and 100,000 blacks are employed by U.S. corporations in South Africa. An even greater number of blacks are employed in associated industries.

The progressive impact and productive role that United States corporations have had on the living standards of South Africa's black community, is often misrepresented by pressure groups. In fact, contradicting the position taken by such groups, South African black leaders—some of whom are outspoken critics of the South African Government—have unanimously opposed a disengagement of foreign investments:

Speaking in St. Louis on a visit to the United States in 1977, Zulu leader, Chief Gatsha Buthelezi, condemned advocacy of withdrawal of foreign capital as "a sterile exercise, because it does not help either side".

Addressing the Economic Club of Michigan during April 1977, Chief Lennox Sebe, Chief Minister of the black homeland Ciskei, said that while the West and black African states had been expressing concern for the welfare of blacks for years, that concern had never the form of effective help for the black man. This often critical black leader added that the South African Government was the only one giving such help.

Mrs. Lucy Mvubelo, a black labor leader, was quoted in Fortune as saying "if Americans withdraw it will lower the general standard of living here, and Africans will be the first to suffer".

The Shangaan leader, Professor Hudson Ntsanwisi, has also pleaded with foreign investors not to withdraw, but to help establish industries in the black homelands. This, he contends, would not be "supporting separate development, but assisting the black people of this country".

These views are shared, in one way or the other, by many influential Americans and South Africans:

Mr. Harry Oppenheimer, chairman of the Anglo American Corporation of South Africa, said in a recent interview with the Zurich financial newspaper, Schweigerische Handelszeitung, that stopping investment in South Africa was not the right way to bring about peaceful change.

"Many people, particularly in the U.S. and Britain, are demanding two totally contradictory things. On the one hand they want to help the blacks by not investing in South Africa, and on the other they demand that wages and other conditions are improved. But you cannot achieve improvements in the field of wages and other working conditions if industry is not registering a steady growth," Mr. Oppenheimer said.

In an interview with the Chicago Tribune on February 6, 1978, Ambassador Andrew Young, chief U.S. delegate to the United Nations, said: "Economic sanctions looked like an easy answer but South Africa is one of the most self-sufficient nations in the world. It could get along without us. In fact, their economy contributes about half a billion to the U.S. economy yearly. If we cut off investments we would lose jobs in this country and we wouldn't necessarily help blacks in that country."

There are a number of facts regarding the realities of South Africa's internal situation which regularly tend to be ignored. These involve the continued economic, social and political progress of South African blacks, coloreds and Asians.

Non-white purchasing power is estimated to have increased from $919 million in 1970, to $6.7 billion in 1977. The disposable income of blacks is forecast to exceed $9.3 billion by 1980.

The government increased wages and salaries for black government workers between 1973 and 1976 by 105%, compared to increases for white government workers which amounted to 22.8% during the same period.

In the "Summary and Recommendations" of U.S. Corporate Interest In Africa (Report to the Committee on Foreign Relations, United States Senate), which was submitted

by Senator Dick Clark, it is specifically mentioned: "It should be noted that there is no legal restriction in South Africa on paying equal wages for equal work just as there are no legal prohibitions against training black workers or placing blacks in executive or supervisory positions." Further in this document it is stated: "Training of black employees is one aspect of multi-national labor practices which the South African Government actively supports. Indeed the South African Government encourages black training through the provision of tax incentives . . ."

According to a year-long study by a Johannesburg stockbroking firm, Max Pollack & Freemantle, the real increase in earnings by blacks between 1970 and 1976 was 51.3% compared to 3.8% for whites. Black *per capita* income is forecast to rise 29.5% as against 7.3% for whites in the period 1975 to 1980.

Several U.S. corporations with interests in South Africa adopted a six-point set of principles for the operation of their South African companies. The South African Government has expressed it support for these objectives.

The Urban Foundation and the South African Employers' Consultative Committee on Labour Affairs have adopted a South African Code of Employment Practice. This Code expresses the resolve of South African industry and commerce to eliminate discrimination in employment practices.

In 1973 the Bantu Labour Regulation Act was amended to provide additionally for the creation of liaison committees at factory level. This increased works committees from 43 in mid-1973 to 2,681 in 1976. A clear indication of the success of the amplified committee system in creating healthier employer/employee relations, in the sharp decline in the number of strikes since the promulgation of the amended Act. In 1973, 246 strikes occurred in which 67,338 black workers took part with a loss of 1,389,873 man-hours. During 1976 there were only 105 strikes in which 15,725 black workers participated and 130,675 man-hours were lost.

In 1977 the government scrapped twenty of the existing 25 categories of statutory job reservation and announced that the Industrial Tribunal was investigating the possibility of doing away with the remaining five.

The Wiehahn Commission is presently engaged in a thorough re-examination of all labor-related legislation. After gathering evidence from all interested parties it will report on the way in which existing labor legislation operates and what changes are necessary to ensure an equitable new deal for all population groups.

In 1977 the recommendations of an all-black committee were accepted which will lead to the abolition of the "pass book" system. Blacks will now be issued with reference books identical to those being carried by whites.

Both the constitutional progress of the black territories and the level of development of urban blacks have reached the stage where the government is giving wide ranging powers to urban blacks to manage their local affairs via autonomous, elected urban community councils. These will eventually have autonomy over matters such as administration and policy, housing, schools, health facilities, business, transport, welfare and sport and recreational facilities.

The government has taken the first steps towards compulsory education for blacks (already more than 20 percent of South Africa's total black population is at school). The number of black students writing the twelfth grade examinations increased by 41.7 per cent in 1977.

In addition to the 41 multi-racial trade unions which existed in 1975, the Mines Technical Officials Association and the Master Builders Association opened their doors to multi-racial membership in 1978.

On April 1, 1978 all academic personnel at universities achieved complete parity in remuneration.

South Africa ranks among the 26 industrialized countries (the only one on the African Continent) and among the 15 foremost trading countries of the world. With only 5% of the African Continent's population, and 4% of its land sea, South Africa produces 22% of Africa's total output of goods and services, 90% of Africa's steel production and ranks fourth in the world in mineral production. It is the economic giant of the African sub-continent, and represents the key to the entire region to the foreign business community.

United States trade with South Africa in 1976 totaled $1,967.8 million. More significantly, South Africa was one of the few countries with whom the U.S. had a favorable balance of trade—in 1976 this amounted to $919.8 million.

The composition of trade with South Africa is important. Imports from South Africa consist mainly (nearly 70% of value) of metals and minerals. These include such essential elements as industrial diamonds, manganese and ferro-manganese, chrome and ferro-chrome, antimony, copper, uranium oxide, platinum sponge, palladium, rhodium, nickel, zinc and iridium, osmium and osmiridium. It is reported that the United States relies on South Africa for 35% of its imports of ferrochrome and ferromanganese, 57% of its vanadium imports, 43% of its antimony imports, 20% of its platinum group imports, and 13% of its imports of industrial diamonds.

These not only play an important part in the economic and industrial well-being of the United States but in many instances will be difficult to obtain from alternative sources, and if so, at economically realistic prices.

Few of the imports from South Africa are in competition with domestically produced goods.

Exports to South Africa, on the other hand, are mainly concentrated in the areas of machinery and transportation equipment, chemicals, the food industry and electrical and office equipment. These are also mainly the type of exports to South Africa which are supported by the Export-Import Bank. This is significant when viewed in conjunction with the gain of only 3% in volume of the exports of capital goods from the United States.

Curbs on foreign investment will seriously harm the fragile economies of neighboring and other black African countries on the sub-continent. During 1976 an estimated 2.1 million migrant workers from outside its borders took up temporary employment in the Republic of South Africa. The majority came from Transkei, Lesotho, Malawi, Mozambique, Botswana and Swaziland. Most of these countries are unable to employ the majority of their own people; in the case of Botswana and Lesotho only 10% of the labor force can be employed. The incomes derived from the workers who sell their labor in South Africa, represent up to 25% of the G.N.P. of these countries.●

## PROFILE OF ROBERT STRAUSS

● Mr. RIBICOFF. Mr. President, President Carter has made a wise choice in selecting Robert Strauss to lead the fight against inflation. As Special Trade Representative he has had a keen sense of the relationship between economic and political issues. This is a man with a grasp on reality. Nothing is more real than the pervasive problem of inflation. As a nation we must put our best strength against our most serious challenges, and we owe the President and Robert Strauss our support in this battle. Bob Strauss is a man of great ability.

I ask that a profile of Mr. Strauss by Warren Weaver, Jr., in today's New York Times be printed in the RECORD.

The profile follows:

EBULLIENT POLITICAL MANIPULATOR

(By Warren Weaver, Jr.)

WASHINGTON, April 11.—Since he arrived in Washington in 1970, Robert S. Strauss has piled one success upon another, first in the bloody arena of Democratic Party politics, then as a national political leader and finally as a cabinet-level officer and Presidential adviser. Now, President Carter has given the fast-talking, rough-kidding Texas lawyer an assignment—as Special Counselor on Inflation, that may give him pause for a moment or two. His friends are wondering whether in taking it on he has finally endangered his reputation as an immodest miracle-worker.

"If the President is counting mostly on jaw-boning to fight inflation, Bob may be just his man," one longtime political associate said today. "He can talk the skin off a snake and keeping him laughing all the while. But inflation? That's a big order, even for Strauss.

Until March 1977, Mr. Strauss had cultivated a reputation as a master political manipulator, the man who somehow pulled the Democratic Party back together after the divisive struggles of 1968 and 1972 and paved the way for victory in 1976 by a candidate who was not his original first choice.

But for the last year, the outspoken millionaire businessman has operated in a completely new area, as the President's Special Representative for Trade Negotiations. While he has his critics—Mr. Strauss would be uncomfortable without them—he has generally been regarded as surprisingly successful in the swampland of international economics.

His techniques, honed over years of reconciling political adversaries, have not seemed to change all that much. At a recess in critically important trade talks in Tokyo last January, he startled Nobuhiko Ushiba, his Japanese counterpart by throwing his arms around him and shouting: "Brother Ushiba, you're crazy as hell." The result: laughter and lowered tensions.

Mr. Strauss has always specialized in the humor of insult, to the almost universal delight of his associates. He dropped by the surprise birthday party of a noted political reporter and columnist the other day just long enough to announce: "You'd have thought that in 50 years, a guy could have found a better bunch of friends than this."

Robert Schwarz Strauss was born Oct. 19, 1918. The ebullient Texan has served the President during the last year not only in the sensitive role of trade negotiator. He has also devoted considerable time and effort to White House Congressional relations and to such emergency duties as mediating the coal strike with a barrage of telephone calls to his friends in industry.

Almost from the moment of his arrival in Washington, Mr. Strauss proved enormously successful at press relations, baiting reporters mercilessly, insulting them in areas of special pride and entertaining them at the same time. Perhaps this is why his confidential assignments in the Carter Administration tended to find their way into print.

Being a trusted White House adviser has tamed some of Mr. Strauss' social instincts. He has given up luncheon drinking alto-

gether although recently, on Air Force One, he commandeered a large gulp of a reporter's martini, rather than order one of his own in front of the teetotaling President.

EARNING THE PRESIDENT'S CONFIDENCE

The fact that Mr. Strauss has earned the confidence of President Carter at all is considered fairly remarkable by men who knew them both. In the preliminary maneuvering of 1976, Mr. Strauss, party chairman since late 1972, had privately favored Senators Henry M. Jackson, Hubert H. Humphrey and Lloyd M. Bentsen, in that order, for the Democratic nomination.

But when Mr. Carter emerged from the primaries and caucuses as the popular choice, Mr. Strauss threw all his energies behind him, organizing a smooth and happy convention in New York City and pulling all the party's diverse elements together for a relatively unified fall campaign.

Mr. Strauss forged close working relationships with several key Carter political advisers, notably Charles Kirbo and Hamilton Jordan, and wound up, by impartial accounts, as the only non-Georgian in the Carter inner circle.

His designation as special Trade Negotiator aroused some criticism in academic and professional circles, where he was regarded as a manipulator rather than a substantive expert. Similarly today, some authorities felt that the Administration's point-man on inflation should have been W. Michael Blumenthal, Secretary of the Treasury, Charles L. Schultze, chairman of the Council of Economic Advisers, or a figure on that level.

Still, he is conceded by virtually everyone to be a do-er. He assumed the chairmanship of the Democratic Party over bitter liberal opposition, then won that faction over so successfully that the conservatives attached him after the Kansas City convention of 1974.

First as treasurer of the Democratic man, he reduced the party's disastrous 1968 debt from about $10 million to $2 million, a point from which it has not budged since his departure late in 1976. Fund-raising has been regarded as one of his natural talents.

BORN IN LOCKHART, TEX.

Mr. Strauss was born in Lockhart, Texas, where his father owned a dry-goods store. He recalls with less than his usual good humor growing up in the only Jewish family in that community and attending the University of Texas at a time when campus anti-Semitism was commonplace.

He met John B. Connally at the university, worked for his successful campaign for the governorship and has remained close to him, even after his conversion to Republicanism. Graduated from the University of Texas Law School in 1941, he served as an agent of the Federal Bureau of Investigation during World War II, then opened a Dallas law firm that has prospered with its founder.

In 1941, Mr. Strauss married the former Helen Jacobs, and they have two sons and a daughter. His business interests include a family-owned radio station in Tuscon, Ariz., and majority stockholdings in a suburban Dallas bank, as well as the law firm, which now operates actively in Washington as well as Dallas. His partners bought him out when he went to the White House, but that is not regarded as an irreversible move.●

## PANAMA CANAL TREATY OPINION POLL

● Mr. SCOTT. Mr. President, our office is in the process of getting out our April report to constituents. Of particular interest to colleagues, I would think, is the result of our opinion poll. I would call their attention especially to the fact that 83 percent of the people responding opposed ratification of the Panama Canal treaties. I ask that a copy be printed in the RECORD.

CANAL TREATIES

(By BILL SCOTT)

The President submitted to Congress two interrelated treaties regarding the Panama Canal. One purportedly was to guarantee the permanent neutrality of the canal and was approved in the Senate by a narrow vote. The second, or more important treaty, is presently under consideration with a final vote scheduled for April 18. This second treaty transfers sovereignty, ownership and control of the canal to the Republic of Panama with provisions for its joint operation through December 31, 1999, or somewhat more than 21 years.

On various occasions I have spoken against ratification of the Canal Treaty proposal because it seems unreasonable for us to convey to Panama, without consideration, property of the United States having a replacement value of approximately $10 billion. Over the 21-year period of the treaty Panama would receive approximately $1.5 billion from canal tolls, and during the same period the treaty would cost the U.S. taxpayer $750 million. It also seems unwise for us to start on a course which could result directly or indirectly in communist control of this vital artery of commerce with its strategic military importance. However, proponents of the treaty argue that failure to give up our property will result in less friendly relationships with Latin America and its retention is a remnant of colonialism. To the contrary, respect for the United States would be lessened within the world community; and our allies within the free world will have less confidence in our ability to lead them toward peace through strength.

We do appreciate the many thousands of individual letters and phone calls received regarding this important matter that indicate Virginians are overwhelmingly opposed to ratification.

IMMIGRATION BILL

Our office has received considerable comment from constituents expressing the view that many responsible citizens may be deprived of potential employment opportunities by illegal aliens. Upwards of three million illegals are holding jobs in this country, according to Department of Justice figures.

A proposal I introduced would require Congressional approval of large-scale admission of foreign refugees, would impose fines on employers who knowingly hired illegal aliens, and prohibit those individuals living in the country illegally from receiving federal assistance, such as food stamps or Medicaid benefits.

Under current government policy, known as parole authority, the Attorney General can allow certain aliens to come into the United States and remain, without specific Congressional approval. A provision of the proposed bill would include the number of refugees paroled into the U.S. within the national quota for that country. It also provides that the government would be required for the first time to report quarterly on the number of illegal aliens holding jobs in the United States.

LABOR LAW REFORM

The Senate is expected to soon debate proposed amendments to the National Labor Relations Act. This is the basic law regulating collective bargaining in the United States and is intended to protect employees on their right to join unions and bargain collectively. During the past few months amendments to the Act have passed the House of Representatives with strong support of organized labor, and are now under consideration in the Senate.

Those supporting labor law amendments argue that delays in enforcement of employee rights have frustrated attempts of large numbers of employees to exercise their rights. They believe that changes are necessary to prevent delays in holding union elections and enforcing remedies in unfair labor practice cases.

The bill would, among other things, expedite enforcement of orders of the National Labor Relations Board, and prevent employers found guilty of unfair labor practices from receiving federal contracts for a period of three years.

Opponents of the bill claim, however, that it is really intended to arrest the decline in union membership; and that when viewed together, the amendments put considerable power in the hands of union organizers and sharply weaken the ability of employers to resist union organization. They argue, for example, that one of its provisions would compel them to give unions equal time, on company property, if management held conferences with employees on company time.

TUITION ASSISTANCE

The Finance Committee has reported a tuition tax credit bill which would phase in over the next three years a tax credit for educational expenses. Beginning August 1, 1978, the measure would provide a credit equal to 50 percent of tuition and fees to college students with a maximum credit of $250. Two years later, the credit would be increased to cover tuition and fees for grade schools and high schools. Starting the following year, 1981, the credit would be extended to cover the expenses of graduate students and part-time students. The Committee and the Administration admit the bill could cost the government over $5 billion a year in lost tax revenues.

Proponents argue that the tax relief provided by this bill is intended to maintain the nation's historic mixture of both public and private education. They do not consider the cost to be great in comparison with the total federal budget for education or that the grant and loan approach gives more power over education to Washington bureaucrats.

Opponents say that both the tuition tax credit proposal and the extension of the grant program to church-related and private grade and high schools are unconstitutional under the First Amendment provision for separation of church and state. They believe that church-related schools would be the primary beneficiaries of the bill.

RICHMOND VISIT

Our next visit to the Richmond office is scheduled for Friday, April 28, and any constituent desiring to discuss a problem or issue is welcome to stop by during regular business hours. The state office is located on the eighth floor of the Federal Building at 400 North 8th Street. The office phone number is 649-0049 if you care to call in advance but an appointment is not necessary.

MILITARY SPENDING

The President has forwarded to the Congress a budget request of $126 billion for the Department of Defense for the fiscal year beginning October 1. The funds would be spent for procurement of new weapons systems, research and development, military personnel and military retirement pay in addition to operations and maintenance of our active and reserve forces. This request is particularly important in light of a major buildup of the strategic and conventional forces of the Soviet Union over the last ten years.

We are told that the Soviet Union has significantly increased its manpower and nu-

clear and conventional war equipment such as long and intermediate range missiles, tanks, submarines, and this buildup shows no sign of slowing. The committees will take the Soviet buildup into account when making decisions on the U.S. defense budget, and the chairman of the Senate Armed Services Committee has recently indicated hearings will be had on the production of the neutron bomb.

Some adjustments in the President's recommendations will, of course, be made and this could include additional spending to maintain the capacity to defend the country and its vital interests throughout the world.

CIVIL SERVICE PROPOSALS

Constituents and especially Federal employees should be interested in Administration plans to reorganize the Civil Service System. Two means are being used to put the plan into effect: 1) a legislative proposal to be enacted by Congress, and 2) a reorganization plan under the President's general authority, to reorganize agencies unless either House of Congress disapproves the plan within 60 legislative days after it is submitted.

The Civil Service Commission would be abolished in favor of an Office of Personnel Management and a Merit Systems Protection Board. A Federal Labor Relations Authority would administer the existing federal labor-management relations program. Among many other proposed changes is the creation of a Senior Executive Service under which agency heads would have more authority over the pay grades, promotion and demotions of 9200 top government managers. Should you desire a copy of the bill as introduced or a copy of the organization plan, when submitted, please let us know.

CONGRESSIONAL PAPERS

During the 12 years of service in the House of Representatives and the Senate, our office has accumulated an assortment of papers which are being donated to George Mason University in Fairfax.

George Mason, a state institution, was chosen partly because our home for the past 31 years is within a few miles of the campus. However, the university is a developing institution with a present enrollment of approximately 9,600 students, with the prospects of becoming one of the major schools of higher learning in Virginia within a few years. It is understood that a legislative study committee is considering the establishment of a law school on the Fairfax campus; and the university, located within one of the most populous and fast-growing areas of the state, should be considerably expanded in the years ahead.

The papers will include a variety of material, such as statements made on the floor of the House and Senate, legislative proposals, committee activities, correspondence with private organizations and governmental agencies, newsletters, responses to annual questionnaires, speeches and background reports on issues considered by Congress.

Members of the University faculty and library staff will undertake the task of organizing and preserving items of significant historical value, and our office will work with them in the transfer of the material to the University. It is understood that I will have access to the material, and it can be utilized by the faculty, students working with them, and will be available to the general public three years after the termination of my Senate service.

OPINION POLL RESULTS

We are grateful to constituents who responded to our 12th annual questionnaire and shared their views on a number of important issues. The tabulation of results, some of which are shown below, leaves little doubt of how Virginians feel on the questions presented.

87 percent of the people responding opposed ratification of the Panama Canal treaties, while 13 percent favored ratification.

Only 6 percent favored election day voting registration, while 94 percent expressed opposition.

An overwhelming 86 percent of those responding opposed repeal of the Hatch Act, while 14 percent favored repeal.

The enactment of a national welfare system was opposed by a margin of 86 percent to 14 percent.

With regard to the proposed Strategic Arms Limitation Agreement now being negotiated, only 12 percent of the constituents who responded believed the Russians would adhere to any treaty agreed upon, while 13 percent believed the Senate should ratify a treaty regardless of any imbalance in numbers in order to obtain a limitation on the growth of strategic arms, and 15 percent believed we should allow the Soviets to have material superiority in some fields to compensate for our more sophisticated weapons in other areas. 88 percent, 87 percent and 85 percent, respectively, were of a contrary opinion.

83 percent of those responding would amend the Constitution to provide that the states rather than the federal government have the power to regulate the circumstances under which pregnancies might or might not be terminated.

76 percent of the people felt that foreign assistance should be reduced or eliminated entirely, while only 3 percent favored a spending increase. The remaining 21 percent preferred retaining foreign aid at present levels.

SOMETHING TO PONDER

"To inform the minds of the people, and to follow their will, is the chief duty of those placed at their head."

Thomas Jefferson.●

## DIPLOMACY AND HUMAN RIGHTS

● Mr. CRANSTON. Mr. President, on February 13, Deputy Secretary of State, Warren Christopher, spoke before the American Bar Association on "The Diplomacy of Human Rights: The First Year." The address warrants the special attention of the Senate because it is a comprehensive review of the first year of the Carter administration's actions on human rights—a keystone of the campaign of Jimmy Carter for President and a prime commitment of Jimmy Carter as President.

The address also warrants the special attention of the Senate because Secretary Christopher commits the administration to a new proposal for the worldwide advancement of human rights: The need to create an objective, reliable international clearinghouse to collect and to process information on human rights conditions. Secretary Christopher's remarks reinforce the administration's commitment to advancing the cause of human rights. He gives a realistic but encouraging assessment of our human rights policy in its day-to-day application as the administration is consulting with foreign leaders about specific human rights violations and trying to alleviate them, meeting with opposition leaders of other nations, making greater use of the tools available in public diplomacy, and incorporating human rights considerations into the operations of more Federal agencies and of the international organizations. Because political, social, and economic conditions vary from country to country, our officials need a variety of responses for the best mix of actions to accomplish productive results.

Secretary Christopher is aware of the difficulties in translating a commitment to human rights into an effective policy—a policy which works to achieve improvements in human conditions as contrasted to one which isolates us in moral righteousness and disassociates us from human rights violators. He is convinced, nonetheless, that through dedication, hard work, and creative diplomacy, we can make our human rights policy an active and effective one. I completely agree.

I might mention that Congress, too, has played an instrumental role in shaping human rights policy over the past few years. Congressional interest and determination elevated human rights considerations to a higher plane in U.S. foreign policy and made Mr. Christopher's predecessors at the State Department more aware of human rights. Congress has legislated a mandate to reduce the levels of military, security-supporting, and bilateral economic assistance to countries which systematically and severely violate the human rights of their own people. And the Congress has taken an active part in expanding human rights concerns from bilateral U.S. relations with other countries into international financial institutions.

I would like to add a note of caution in this regard. Human rights concerns clearly are relevant to the multilateral assistance effort: the international lending institutions try to help member nations provide them the most basic human needs—food, shelter, and health—to their people. But the Congress must be mindful of what actions our Government can take unilaterally to encourage other governments to improve human rights conditions. The actions of Congress should not be inconsistent with the purpose of the international institution or prevent the institutions from functioning effectively.

Expressing our concern in a variety of ways in the international institutions—by negotiating improvement in human rights conditions, quietly working with other countries, or using our vote—we are more likely to bring about desired changes than through congressionally mandated automatic "no" votes.

Perhaps the most promising part of Secretary Christopher's address in his suggestion that a responsible and objective human rights clearinghouse be set up to gather information on the human rights situations in all countries around the world. He committed the State Department to help create this kind of institution. I think this idea deserves serious consideration by my colleagues in the Senate. I believe that Congress is in a unique position to offer constructive suggestions as to the nature, composition and location of such a body.

Mr. President, I ask that the full text of Secretary Christopher's address to the ABA be printed in the RECORD.

The text follows:

THE DIPLOMACY OF HUMAN RIGHTS: THE FIRST YEAR

I am delighted to be here today among so many old friends. Last August, I had the good fortune of addressing the Gavel Awards luncheon at the ABA Convention. On that occasion I discussed the principles that guide one of the most important foreign policy initiatives of the Carter Administration—the human rights policy.

Today, after one year's experience with that policy, I would like to talk about how those principles have been put into practice, to talk about the diplomacy of human rights.

Before doing so, let me remind you that our policy concerns three categories of rights: the right to be free from governmental violations of the integrity of the person; the right to fulfill one's vital needs such as food, shelter, health care, and education; and civil and political rights.

In his inaugural address, President Carter set the tone for a foreign policy based firmly on our values as a Nation. "Because we are free," he said, "we can never be indifferent to the fate of freedom elsewhere." In this single sentence, from which so much has flowed, the President was expressing an old and sometimes ignored truth with new vigor.

Our strength as a Nation and our magnetism to the world at large are predicated on our commitment to human rights. It is only proper that the human rights considerations so important to our national life be reflected in our international life as well. This means they must be fully integrated into our diplomacy.

The pursuit of this cause is not an ideological luxury cruise with no practical port of call. Our idealism and our self-interest coincide. Widening the circle of countries which share our human rights values is at the very core of our security interests. Such nations make strong allies. Their commitment to human rights gives them an inner strength and stability which causes them to stand steadfastly with us on the most difficult issues of our time.

In this first year, I have been impressed by what a subtle, creative, and flexible process diplomacy can be in advancing the cause of human rights. Diplomacy is not just words, though words can be highly effective. It is also an impressive variety of intangible symbols and gestures, as well as tangible measures.

Diplomacy can be a rich mix, indeed. In the case of our human rights objectives, we have evolved a mix that is proving effective.

The primary ingredient of human rights diplomacy has a seeming simplicity: We frankly discuss human rights in our consultations with foreign diplomats and leaders. An obvious technique, yes. Just words, yes. But I must tell you that many of us have been amazed at its effectiveness

A career Foreign Service officer told me recently that until last January it would have been unusual for our Ambassador to raise with the leader of another country, in face-to-face conversation, the fate of political prisoners. Our diplomats intended to shy away from direct high-level dialogue on such sensitive human rights issues.

That has changed. Time after time in the past year we have had such conversations. And very often these very frank discussions have led to beneficial results. Sovereign governments have reexamined conditions in their capitals and provinces, and releases of prisoners and other positive actions have followed.

When we raise human rights with another government, we take an affirmative stance. We explain that our people, our Congress, and our government are deeply troubled by the human rights abuses we believe to be occurring. And we ask for the other government's assessment of the situation and the prospects for improvement.

Sometimes, it is true, the response is truculent and defensive. Sometimes, we are charged with "intervening" in the internal affairs of another sovereign state.

But much more often, the response is a real effort to join issue on the merits. Frequently, there is candid acknowledgement of the validity of our interest—and interest rooted in solemn international agreements that make the way a government treats its own citizens a matter of legitimate international concern.

Just as frequently there is disagreement over the degree and the causes of the problem. It is often asserted, for example, that terrorism justifies repression. But usually these differences in perspective are overtaken by a consideration of possible improvements. By consideration, for example, of:

Whether those held without trial, often incommunicado and for lengthy periods, can soon be released or at least charged and tried; or

Whether the return to civilian rule can proceed on schedule; or

Whether those responsible for mistreating prisoners will be prosecuted.

Sometimes we achieve explicit understandings on such issues. More commonly there is an implicit recognition of the need for improvement and for further consultations as the situation evolves. Either way, the raising of the issue has profound significance. Rather than being conveniently ignored, human rights abuses are brought to the center of the diplomatic interchange. There, they must be addressed.

I believe the almost geometric increase in world awareness of human rights issues is perhaps the major accomplishment of our human rights diplomacy. This new consciousness not only helps curb existing human rights abuses; it also acts as a deterrent to new violations.

The words of human rights diplomacy can effectively be joined with symbolic acts. For example, trips to other countries by our senior officials, and official invitations to the leaders of other nations to visit the United States, can be used to advance our human rights objectives. Such visits can mark our recognition that a country has an outstanding human rights record, or provide the opportunity to discuss human rights problems with the leader of a country where improvements are urgently needed.

There are a host of other measures that can be used symbolically to send the desired signal, such as: cultural and educational exchanges; selection of the site of international conferences; the level of our representation at diplomatic events; port visits by our fleet. Carefully used, such symbols and gestures can help advance the cause of human rights.

There is also significance in our willingness to meet, on appropriate occasions, with opposition leaders from countries with serious human rights problems. My colleagues and I have met with a number of such leaders in Washington, including some who are living in exile from their homeland. And abroad, our ambassadors regularly meet with opposition leaders.

These meetings enable us to hear both sides of the story, to learn how a human rights problem is seen by those directly affected, and to demonstrate that we are concerned about all the people of the country involved, not just those in power.

Beyond private diplomatic discourse and important symbolic steps, the diplomacy of human rights must sometimes include criticism of regimes implicated in serious human rights violations.

Public comment by our government is an official act that directs the attention of the entire world to the objectionable practices of another government. We believe that such criticism can have some inhibiting effect on such governments. We do not generally prefer this approach, but neither will we shrink from it.

Needless to say, public comment has been our first line of approach with respect to countries like Cambodia and Uganda, where we have little or no diplomatic contact, but yet where unspeakable violations of human rights are occurring as a matter of deliberate state policy. We deplore these policies. We hope other governments which have the contact that we lack can make known the extent of international concern and bring about improvements.

We have also, of course, spoken openly and forthrightly at the Belgrade meeting that has been reviewing implementation of the Helsinki Final Act. That document contemplates a full and frank review of whether the signatories have lived up to their human rights commitments. It is clear that the Soviet Union and the East European countries, in varying degrees, have not done so. We have not hesitated to say so publicly, to request an explanation, and to seek compliance.

Our comments and those of West European governments have helped sustain the Helsinki accord as a living force in the cause of human rights, an engine for keeping constant pressure on governments to respect the rights of their people. Our silence would have effectively permitted that force to fade away.

In speaking of our public efforts, I should note that we are actively using our public diplomacy tools such as USIA (United States Information Agency) to convey our human rights concerns to various nongovernmental audiences abroad. The Voice of America has increased its attention to these issues. Our embassies and offices abroad have organized seminars in which thoughtful Americans can directly express their human rights concerns to people from similar walks of life in foreign countries.

Our human rights initiative has given recognition and a new stimulus to the long-standing efforts of private nongovernment organizations in this field. We applaud these endeavors and recognize that over time they may well outdistance any government effort.

When our relationship with another government includes economic and military assistance, we are prepared to take tangible steps to recognize good human rights performance or to manifest our concern over human rights violations. When appropriate or necessary, in other words, we will support our words with actions. In taking such steps, we are guided and strengthened by important legislative provisions enacted by a Congress overwhelmingly committed to the cause of human rights.

Taking due account of the needs of the poorest, we have made a fundamental decision gradually to channel a growing share of our economic assistance to countries that respect the human rights of their people.

On the other hand, when countries we assist consistently curtail human rights, and where our preferred diplomatic efforts have been unavailing, we must consider restrictions on the flow of our aid, both overall levels and individual loans or grants. Thus, over the course of the past year we have, for example:

Deferred bilateral economic assistance to certain countries;

Opposed loans by the World Bank and the other international financial institutions for countries that engage in flagrant violations of human rights; and

Taken steps to insure that food aid provided to countries with serious human rights problems will reach the needy.

We have also advised other departments of the government on human rights conditions abroad that may affect their activities. For example, a recently enacted statute calls for the Export-Import Bank to take human rights considerations into account, and the bank regularly seeks advice on this issue.

Human rights performance is also an important factor in our decisions on military assistance and commercial arms sales subject to government licensing. We have reduced or declined to increase our military aid to a number of countries and refused to issue licenses in a variety of instances.

The diversity of cultures and the different stages of economic and political maturity tend to produce agonizing, almost incredibly complex, choices in granting or withholding aid. Moreover, human rights, while a fundamental factor in our foreign policy, cannot always be the decisive factor. But the difficulty of the decisions will not deter us from supporting our words with action.

It is important to note that we are not alone in pursuing the diplomacy of human rights. Increasingly, other governments are standing with us. In the United Nations, in the Organization of American States, and in other contexts, we have strong partners in the cause of human rights. Recently, we initiated consultations with our West European allies and others on how to promote broader international cooperation in support of human rights. In general, we are finding strong support for giving human rights a higher priority in international relations.

As I reflect on the first year of human rights diplomacy, there is one area in which I would like to ask for the creative thinking and counsel of this great association. I refer to the need I perceive for an objective, authenticated data base on human rights conditions in all countries.

Let me put the problem in perspective. With the aid of our embassies around the world, we are constantly trying to gather reliable and extensive human rights data. Nevertheless, the validity of our information on human rights conditions in other countries is frequently challenged. Probably it is inevitable that the data collected by any one country would be suspect. Coverage is bound to be limited, and there may be the suspicion that the collecting country has an ax to grind.

What is needed is an objective, widely respected clearinghouse for human rights information on all countries of the world. This would be an important resource for us and others interested in taking human rights conditions in other countries into account in policymaking. It would thus both inform our decisions and authenticate the existence and severity of human rights problems.

Perhaps you will be able to suggest how such a clearinghouse might be created. It is clear that it must be international in scope. What is not so clear is whether it should be sponsored by a private organization or by a group of countries or an international organization. Once created, I could visualize that such an entity might also play an important educational role in improving human rights conditions around the world. We stand ready to help in creating such an organization.

This, then, is a capsule view of the diplomacy of human rights. It is a diplomacy that refuses to "be indifferent to the fate of freedom elsewhere." It is a diplomacy that has permitted the United States to seize the initiative for human progress once again. Surveys conducted abroad have shown time and time again that the renewed interest in human values expressed by the President and implemented by our diplomatic efforts has had an enormously positive impact on the view people in foreign countries hold of America and our role in the world.

We are daily concerned with our government's response to human rights conditions in other countries. But our credibility—and indeed the inner health of our society—depends upon facing up to our problems here at home and seeking to improve our own human rights situation.

Much of President Carter's domestic program is directed toward the enhancement of the human rights of Americans. Proposals for welfare reform, efforts to cut the cost of health care, and the commitment to full employment are obvious examples. We should also note that within the past year travel restrictions for American citizens abroad have been eliminated and visa requirements for foreigners coming to this country have been significantly eased.

It is well to remember that we are far from perfect. Our ample due process with all its guarantees does not afford perfect justice. But whatever our shortcomings, they are faced frankly and openly. The three constitutional branches of government have the responsibility to do so. And the "fourth branch" is there to insure that that responsibility is met.

In making human rights a fundamental tenet of our foreign policy and greatly increasing sensitivity to human rights concerns, we have helped to create an atmosphere in which human rights progress is much more likely to occur. We do not take credit for particular improvements, but we note the tangible evidence from every continent that the condition of large numbers of people—of individual, identifiable human beings—is less oppressive now than it seemed one year ago.

In Africa, there have been releases of substantial numbers of political detainees; for example, in Sudan. Nigeria, Upper Volta, Mali, and Ghana are moving toward reestablishment of civilian governments. Most African leaders have intensified their efforts to promote agricultural development. Nigeria and other African nations are supporting creation of an African Human Rights Commission under U.N. auspices.

In the Near East, Morocco moved toward political liberalization after nearly a decade of rule by decree. Restrictions on freedom of the press were lifted, and significant numbers of political prisoners were released. Tunisia authorized establishment of the Tunisian League for the Rights of Man, which has been permitted to investigate allegations of human rights violations. Iran released a substantial number of political prisoners and agreed to a visit by the International Committee of the Red Cross (ICRC).

In South Asia, there was in India a magnificent resurrection of democracy, Nepal released political prisoners and lifted newspaper curbs. Sri Lanka changed its government for the sixth time since independence through the free choice of its people. Pakistan released over 11,000 political prisoners.

In East Asia, the Indonesian Government released 10,000 political detainees, confirmed its intent to release 20,000 more in accordance with its previously announced release schedule, and agreed to resumption of ICRC visits. South Korea released all but one of the Myong Dong prisoners—opposition political and religious leaders who had opposed the government. The Philippine Government eased some of its martial law restrictions and released some detainees. The new Government of Thailand has eased press restrictions, improved trial procedures, and stated its intent to seek general elections early next year.

In Latin America, political prisoners were released in Haiti, the Dominican Republic, Paraguay, Argentina, and Peru. The military Governments of Peru, Ecuador, and Bolivia annouced that elections will be held in 1978. States of seige were lifted in El Salvador and Nicaragua. Most Latin American governments have allocated increased resources to improving the living standards and productivity of their poor farmers. Some restrictive laws have been repealed in Panama. And El Salvador, Haiti, and Paraguay agreed to visits by the Inter-American Human Rights Commission.

In Western Europe, for the first time in NATO's history, every member of the alliance is a democracy. New churches have been constructed in Poland. Certain countries of Eastern Europe have eased their restrictions on emigration and family reunification. Some human rights activists in Poland and Romania have been released from prison. And live television programs in Hungary have allowed prominent Westerners to voice their views on political issues.

Despite these many improvements and others like them, the fact remains that the distance covered is dwarfed by the distance that remains to be traveled. I could recount in detail the retrograde human rights developments of the past year, as well as the horrendous human rights violations that persist across the globe—in many of the countries I have just mentioned, as well as elsewhere.

Suffice it to say that in all quarters of the world, too many people are still subject to torture and are suffering in squalid prisons, uncharged and untried. Too many people are hungry, have inadequate shelter, and lack medical care and educational opportunity. Too many people are living under martial law or are otherwise barred from political participation. Too many are denied the right to emigrate or even to travel freely within their own country.

These problems are the challenges of the future. They will not be solved easily. But our experience with one year of human rights diplomacy convinces us that while the journey is long, it is not impossible.

Of course none of us can know for sure where the progress of human rights may lead. But every so often during the past year, as I have struggled to understand the deep meaning of human rights, I have felt a fleeting intimation of what untold spiritual and material riches may lie ahead—perhaps centuries ahead—in a world of true, universal human freedom. Justice Holmes perhaps had a similar feeling and certainly expressed it much better than I ever could when he said:

"I think it not improbable that man, like the grub that prepares a chamber for the winged thing it never has seen but is to be—that man may have cosmic destinies that he does not understand. And so beyond the vision of battling races and an impoverished earth I catch a dreaming glimpse of peace."

I think that in the last analysis the cause of human rights has power and will succeed because, no matter what the obstacle, it tenaciously allows the world's people to "catch a dreaming glimpse of peace." ●

## DOE POSITION ON ALCOHOL FUELS

● Mr. JAVITS. Mr. President, the increasing amount of foreign petroleum imports are of great concern to me. I refer to an article in Thursday's New York Times. March 16, 1978. William G. Miller, recently appointed Chairman of the Federal Reserve Board, expressed serious concern about the economic impact of our energy situation. He warned that the United States must cut down on its use of imported oil and must take some positive and forceful steps to develop new energy sources in order to restore confidence in the dollar. He further stated that whatever we do, we must act quickly. Time is running out.

One of the most urgent energy problems this country must solve is to find a liquid energy replacement for gasoline used by our automobiles and industrial turbines. One such liquid fuel which can be integrated into our present energy system is alcohol. Alcohol can be synthesized with current technology from a variety of sources that are both renewable and plentiful. The urban waste generated by our cities which has become increasingly difficult to dispose of properly can be made into methanol. Timber, another renewable resource, as well as coal, one of our most abundant domestic resources, can also be made into methanol. In addition, agricultural wastes, certain energy crops, sugar cane, contaminated foods, and even algae, all can be used to produce ethanol.

I believe that increased use of alcohol fuels can substantially reduce our need for imported petroleum; in addition, alcohol fuels can help solve our sewage disposal problems, provide an alternative income source for our farmers, and enable us to utilize our high sulfur coals.

I have made predictions similar to William Miller's about the future state of the world economy, as well as our own financial security, if we do not quickly and assertively develop domestic technologies to supplement our energy imports. Alcohol fuels serve this purpose. We must have a liquid fuel that can be gradually integrated into our own energy system before the year 2000, that is at the same time versatile enough in its possible end uses to meet the many needs of our industrial society. Again, alcohol fuel fits this description.

Alcohol, in addition to its use as a gasoline extender, can be successfully employed as a industrial turbine fuel, a peak turbine fuel for utilities, and as an industrial chemical. Indeed, as an industrial chemical, alcohol could be utilized to wean energy dependent industries off of petroleum based chemicals since many of our plastics could be made from alcohol derivatives rather than from petroleum.

Most importantly, it is time for some positive action in the energy arena. Although alcohol fuels will not solve the energy crisis they can make a significant contribution by decreasing our need for petroleum imports. If we are to show our allies that the United States has the resources to meet the challenge of a more energy independent America, we must begin to utilize some technologies we have overlooked in the past.

In response to a joint letter signed by 28 Senators to Secretary Schlesinger, the Department of Energy Task Force on Alcohol Fuels has just submitted its report to Congress. In order to encourage discussion about alcohol fuel I would like to place the March 17, 1978, report entitled "United States Department of Energy Position Paper on Alcohol Fuels" in the RECORD.

The material follows:

DEPARTMENT OF ENERGY,
*Washington, D.C., March 17, 1978.*

DEAR MEMBER OF CONGRESS: This is a follow-up to the letter of December 6, 1977, from Dale D. Myers, the Under Secretary, on the subject of alcohol fuels. In that letter he stated that we would reassess the alcohol fuels activities in the Department, with a look toward emphasizing the near term. Our reassessment is complete. Enclosed is the DOE Postion Paper on Alcohol Fuels which brings out, among other things, the timing of a decision on commercialization of alcohol fuels.

We intend to continue to work closely with the Congress in this critical area.

Sincerely,

DONALD A. BEATTIE,
*Acting Assistant Secretary for Conservation and Solar Applications.*

---

DOE POSITION PAPER ON ALCOHOL FUELS

Ethanol and methanol are the alcohol fuels which are among the non-petroleum liquid fuel options which can be derived from resources available in abundance in the U.S. In addition to the alcohols, these options include: (1) petroleum-like hydrocarbon fuels from coal, oil shale, and biomass, and (2) in the far term, hydrogen.

Federal decisions on commercialization of any fuel option(s) could have significant far reaching and long term effects, domestically and internationally. It is important, therefore, that commercialization decisions be made only after all available options are compared and evaluated on a common basis to determine what options(s) best fit different national needs for different contingency conditions. The Supply Strategy Study, currently underway within the Department of Energy (DOE), serves as the key assembly and evaluation mechanism for all fuels options in this regard. The results of this study will lead to Federal policy decisions on commercialization of non-petroleum based fuels by January 1979. A newly initiated element of the DOE Alcohol Fuels Programs (AFP), called the Immediate Action Element, will provide the alcohol fuels data needed for the Supply Strategy Study.

The DOE has been investigating the resource bases and end-use technology aspects of alcohols for several years. The technical advantages and deficiencies of alcohols as fuels are well understood. There appear to be no major technological barriers facing either production or distribution of alcohol fuels. Certain end uses, although not all, require virtually no modification to combustion engines where the alcohol is blended with petroleum derived liquid fuels. There are several major uncertainties which remain concerning alcohol fuel supply potential, production cost, most appropriate applications, and the best approach to achieve commercialization. Lastly, there is uncertainty regarding whether Federally provided incentives are needed to foster commercialization and, if so, the types to be employed.

To help resolve these uncertainties, a series of special studies has been incorporated into the overall DOE AFP as an Immediate Action Element to be conducted in parallel with the Supply Strategy Study. These special studies are structured to examine and help resolve key technological, economic, environmental, and institutional issues. The information supplied to the Supply Strategy Study from the existing data base and the special studies of the Immediate Action Element will contribute to a DOE decision on commercialization of non-petroleum liquid fuels to be made by January 1979. If the decision is made to promote rapid commercialization, specifically of alcohol fuels, implementation of the best method, as defined in the Supply Strategy Study, will commence. Also, at that time the current DOE AFP may be revised and expanded to encompass activities such as end use demonstrations.

The following paragraphs briefly describe the supply, utilization, and economic characteristics of alcohols and note the major issues associated with their implementation. Also described are the major elements of the current DOE AFP.

ETHANOL

About 93 percent of current industrial (non-beverage) ethanol production in the United States is based on synthesis from ethylene derived from petroleum and natural gas constituents. Fermentation of grains, fruit, and sulphite liquors accounts for the remaining 7 percent. As crude oil costs increase, the market share of fermentation alcohol will likely increase. Industrial ethanol manufacture amounts by volume to about one-third of 1 percent of the fuel used in highway vehicles (100 billion gallons of gasoline per year). Ethanol has about 66 percent of the heating value of an equal volume of gasoline, so the amount of energy that this volume represents is an even smaller fraction of that used. If all practicably available farmland were used for farm crop plantings in excess of those required for food production, the ethanol produced from the crops and crop residues would satisfy no more than 8 percent of today's total liquid fuels energy demand.

Ethanol prices[1] at the plant gate are estimated to be in the range of $1–1.30 per gallon ($13.20–17.10 per million Btu[2]). The current price of gasoline on a comparable basis is somewhat less than $0.40 per gallon ($3.50 per million Btu[1]) based on overall supply. Therefore, unless ethanol production is heavily subsidized for national security, political, or other reasons, it is not likely to be in commercial fuel use in large quantities because of the high cost alone. Research and development are being conducted to increase crop yields, reduce processing time, and utilize energy conservation and other approaches which would improve both energy use and economics, but it is not likely that these will give savings large enough to enable ethanol to compete nationally with other alternatives. However, production and utilization of ethanol on a regional basis may have merit.

METHANOL

Methanol is presently made almost totally from natural gas in the United States, thus new plants are expected to use different feedstocks. The most abundant domestic source of methanol in the future is coal through gasification to a synthesis gas and subsequent catalytic conversion. The process steps in going from coal to methanol are commercial and commercial size plants could be in operation within 5 years using essentially current technology. Methanol could also be produced from wood, agricultural residues, and municipal solid waste using the same general technical approach as for coal, but process details and economics are not as well defined and costs vary with feed stock. Programs in progress at DOE will more accurately define the process and economics of methanol production for these longer term approaches.

Present manufacture of methanol amounts by volume to about 1 percent of the fuel used in highway vehicles (about ½ percent of the energy used since the heating value of methanol is about half that of gasoline). The forecast is that methanol from coal will be significantly less costly than ethanol, i.e., a selling price at the plant gate of about $0.30–.50 per gallon ($5.25–8.78 per million Btu[3]), depending upon such factors as feed stock price, rate of return on investment, and type of financing.

To provide some perspective on the magnitude of the supply problem, consider a rea-

---

[1] All costs and prices herein are given in 1977 dollars.

[2] Based on lower heating value of fuel.

[3] Based on lower heating value of fuel.

sonable scenario for methanol from coal in which ten state-of-the-art plants would be constructed in the 1980–1990 time period. Each plant would be capable of producing approximately 6000 tons (1.9 million gallons) per day; the largest current methanol plant produces 2000 tons per day. This production capacity would provide about 5 percent of the expected energy demand for transportation-oriented gasoline by 1990. If one new plant per year of the same size came on stream during the 1990–2000 period, about 8–9 percent of the gasoline demand could be satisfied by 2000. The cost for plant construction alone would be about $450–500 million per plant, or about a $10 billion investment up to the year 2000.

Methanol from high-yield forestry biomass is projected to be in the same general price range as methanol from coal, even though the production facilities are expected to be smaller, more dispersed, and with a total supply less than that from coal. In addition, the technology for biomass gasification requires further development.

END-USE CONSIDERATIONS

Alcohols have been used as fuels in motor vehicles for over 60 years in many places in the world, generally in blends with gasoline or other petroleum products. Petroleum shortages, agricultural surpluses, or national independence have generally been the driving force behind such use of fuel alcohols, which has occurred despite the fact that the consumers had to pay a premium price. Ethanol has been the alcohol of choice in the past because of availiability from fermentation of local agricultural products. On a technical basis, ehanol can be considered to be somewhat better than methanol because of its higher energy content (75,670 Btu per gallon compared to 56,560 Btu per gallon for methanol), and also better phase stability and violatility characteristics in gasoline blends. Although methanol has also seen limited engine use in the past as a racing fuel, recent interest has been due to potentially greater availability, lower cost than ethanol, and costs generally competitive with other synthetic fuels.

The DOE has been investigating the utilization of alcohol fuels in highway vehicles for several years, both as blends with gasoline for initial implementation and as straight alcohols in the longer term. Although several problems have been identified with both types of fuels, they are considered to be solvable through available engineering techniques.

Most of the end-use emphasis to date has been on internal combustion engines for vehicles but some preliminary tests have indicated that alcohols are suitable fuels for gas turbine peaking units, utility boilers, industrial heating, and fuel cells. Such applications are planned to be explored in greater depth in the future within the DOE alcohol program.

For all the presently foreseen alcohol fuel applications, it appears that the fuel supply problem rather than end-use technology will be the pacing item in achieving widespread commercial implementation.

MAJOR ISSUES

There are major issues concerning alcohol supply potential, production cost, regional versus national end-use applications, and whether or not the Federal Government should foster commercialization. Despite the general acceptability of alcohols as fuels, numerous potential resource bases, and a variety of potential end-use applications, these issues serve as barriers to commercialization and utilization. The most important barrier is the fact that alcohols cost more than petroleum fuels. Methanol produced in large scale operations from non-petroleum resources may have a price comparable to current methanol manufactured from natural gas, but it would not be competitive with gasoline, at today's prices, on a dollars per Btu basis. In the case of ethanol, current and projected production prices based on fermentation of agricultural products are more than double those of methanol. On the other hand, ethanol from agricultural crops apparently has become cost competitive with industrial ethanol from petroleum.

Some non-energy issues have resulted in considerable interest in producing alcohols. Because of present grain surpluses, local or regional proposals to use ethanol from grain as a supplement to gasoline have raised the issue of the need for government tax and/or other incentives to offset the high cost of production. The desire to dispose of municipal solid waste and utilize forest and agricultural residues has resulted in still other proposals to produce and use methanol and ethanol on a small-volume localized basis.

THE DOE PROGRAM FOR RESOLUTION OF ISSUES

The DOE has a number of current activities directly related to the resolution of most of the above major issues. They include (1) the Alternative Fuels Utilization Program of Transportation Energy Conservation, (2) the coal gasification, methanol conversion, automotive test, and economic analysis projects of Fossil Energy, and (3) the agricultural and wood products of the Fuels From Biomass Program of Solar Energy, in response to Congressional, DOE, and other concerns regarding the production and use of ethanol and methanol as liquid fuels, an expanded plan of action is being implemented to (1) remove uncertainties, and (2) provide information supportive of potential national decisions in this area. This Plan contains the following basic elements:

Immediate Action Elements: A series of special studies to examine and help resolve key technological, economic, environmental, and institutional issues that obstruct or cloud commercialization decisions. Planning for early end-use demonstration is included.

Alcohol Fuels RD&D Element: An expanded and integrated continuation of current DOE alcohol-related RD&D activities in the Conservation, Fossil Energy, and Solar Energy areas.

The DOE is currently conducting a fuels Supply Strategy Study. The special studies in the Immediate Action Element of the AFP will provide analyses of key issue areas for alcohol fuels to support the Supply Strategy Study. These special studies will examine the following aspects of alcohol fuels use: (1) resource availability, (2) economic, environmental, and social impacts, (3) end use applications, (4) Federal fiscal consequences, (5) industry incentives, and (6) policy instruments for price control, market assurance, and import control.

An output of the Immediate Action Element studies will be an evaluation of various techniques for facilitating the commercialization of alcohol fuels. For example, one such approach to be considered is a regulatory program requiring that a specified percentage of the U.S. liquid fuel demand be met with domestically produced alcohols or other synthetic fuels.

The information provided to the Supply Strategy Study from these special studies together with existing information will permit a comparison with other liquid fuel options and result in a DOE decision on commercialization of alcohol fuels to be made by January 1979. Based on the policy selected, firm decisions can be made at that time as to (1) whether or not the current Alcohol Fuels RD&D program elements requires modifications, and (2) what additional program elements should be initiated, if any.

While these special studies are in progress, current programs will be expanded to (1) inform the U.S. public and industry on various aspects of the use of alcohol fuel in passenger cars and other applications, (2) improve the technology for conversion of renewable biomass via fermentation and gasification techniques, (3) perform mission analyses and system studies to assess market potential, (4) cooperate with the USDA in implementing the Food and Agriculture Act of 1977, and (5) cooperate with various state and local programs involving the production and/or use of alcohol fuels.

TIME FRAME CONSIDERATIONS

In the near term (by 1985), alcohol fuels are not likely to be extensively used on a commercial basis in the absence of new Federal initiatives because (1) the production costs of alcohols are much higher than those of gasoline, (2) there is insufficient production capacity with which to supply such fuels, and (3) there is no ready end-use market and support infrastructure. Limited use may occur in local areas where the fermentation of surplus grain to ethanol is subsidized by tax credits and loan guarantees for new plant construction.

Therefore, the DOE Alcolhol Fuels Program is structured to (1) help resolve the many issues associated with commercialization of alcohols, (2) help establish a National policy regarding alcohol fuel production and use, and (3) demonstrate selected production and end-use technologies which would permit and facilitate a rapid implementation of alcohol fuel production and use it if it should become National policy to do so (for reasons other than traditional marketplace economics).●

## RURAL SOLID WASTE

● Mr. HATHAWAY. Mr. President, in the State of Maine many small towns and communities are faced with EPA requirements to end open dump burning in order to comply with the Clean Air Act. These communities are frequently faced with a small tax base and relatively large expenses to obtain the equipment to convert to a sanitary landfill or some alternative to open dump burning.

At present there is inadequate Federal funding to help assist these smaller towns. In 1976 Congress authorized special assistance for small rural communities under section 4009 of the Resource Conservation and Recovery Act (RCRA). That section remains to be funded, however, as the specific requirements of the solid waste act have not yet taken effect. The program for State grants, which includes a set aside for technical assistance panels, is also proposed to be funded at less than one-half the authorized level of $42 million.

One of the most cost-effective ways for dealing with solid waste disposal problems is through recycling of materials. That effectiveness for large population centers has been apparent for some time. Rural areas, however, may also benefit from regional or multicommunity recycling projects, cutting down considerably on the need for land disposal. A recent publication of the National Wildlife Federation describes such rural projects, one already underway in Tennessee and three others being planned in various parts of the country, including Lincoln County, Maine. These projects show the possibilities for cost-effective, environ-

mentally sound solid waste projects in rural communities.

At this point, I ask to print in the RECORD excerpts from the articles on Lincoln County, Maine, and Benton, Tenn. from the NWF publication on "Rural Solid Waste."

The excerpts follow:

THE COUNTY THAT COULD!

For the past four years, Benton County, Tennessee has been demonstrating how a little creative thinking can be harnessed and applied to a particular situation to develop a rural solid waste management system that makes both economic and environmental sense. Although not perfect, the system developed by Thomas (Norman) Hale, Benton County Solid Waste Manager, is clearly a step in the right direction. In the past, valuable resources have been needlessly thrown away and rural areas have remained littered and polluted remnants of what was once the most pristine part of America. The way out of the open dump dilemma in sparsely settled rural America has often seemed blocked by the projected costs of establishing and maintaining a sound collection and disposal system. "Recyling" was a concept thought to be relevant only in the city. Fortunately, times have changed.

A sign of these changing times can be seen in Benton County. This small rural county in western Tennessee faced familiar barriers when citizens and local governmental officials sought to clean up their community. With a population of only 15,000 people, including 5,000 in Camden, the county's only sizeable city, local leaders were well aware that only a limited tax base and limited funding would be available. It became Hale's task to design and adapt a solid waste system to Benton County's situation in the most economical fashion possible. Hale found that the most economical approach would be to include the recycling of valuable materials. As a result, he has come up with a solid waste management system that is probably one of the least expensive countywide systems in the nation. Hale states that the system operates on a yearly budget averaging approximately $50,000. Yearly revenues from the recycling of various materials average around $25,000 and are a prime factor in keeping the cost of the overall system at close to half that of more typical solid waste disposal systems for counties of similar size and population.

Hale was able to utilize a fairly inexpensive collection system. He decided to use twelve large (20 cubic yard) containers which are located at key sites in the county on the roads leading to Camden. These containers, which cost $2,000 apiece, were the only items for his system purchased with outside funds, in this case federal revenue sharing funds. The containers are picked up and hoisted onto a regular flat trailer truck twice a week and emptied at the county sanitary landfill near Camden. When the truck picks up a full container it drops off an empty one.

For one month, Hale kept tabs on all the garbage and trash entering the county landfill, discovering that over 50 percent of the wastes were cardboard and paper. Realizing that by just breaking even on the added costs involved in recycling he would be ahead of the game since he would also be saving valuable landfill space, Hale started recycling paper, cardboard, and eventually white goods. Hale's approach to recycling is a flexible one, depending upon the dictates of the open market. He understands the environmental benefits that result from recycling, but his decision to engage in resource recovery in Benton County is of purely economic origin: it saves money. He has, at times when the price was right, recycled tires, plastic, and wooden boxes.

Currently, cardboard, metals, and aluminum are separated by hand and baled for sale to nearby markets located in Jackson (50 miles away) and Nashville (75 miles away), Tennessee. Most of the cardboard is brought to the landfill separately by truck from the companies in the county which use it in large quantities. A baler, which cost $5,000 to install, was donated to the landfill operation by a buyer of the recycled cardboard. Hale recycles about 100 tons of cardboard per month at approximately $25 per ton. He pays $4 per ton to a broker who assures him of a ready market at all times. Hale recycles an average of 25 tons of metal a month at $30 a ton and receives ten cents a pound for aluminum mixed with some iron. The revenue raised in the sale of these materials is used to offset operating cost for the entire system.

Hale's landfill and recycling operation is not only saving resources from waste, reducing overall costs, and extending landfill life, but it is also providing jobs at no extra cost to the community. The salaries paid to the additional workers involved in the baling and recycling process comes from the sale of the recycled materials which were previously just being thrown away.

To some, Hale's operation looks more like a salvage business than a recycling effort. Although he has constructed a building where the recyclable materials are baled and stored for shipment to the west Tennessee markets, piles of metal are left out in the open at various times and tires, wooden boxes, and tree shrubbery are left uncovered. Hale contends that this does not present a problem. He admits that pulling recyclables out of the waste stream as they enter the landfill detracts somewhat from exacting attention to other landfilling practices, but he can't see how recycling could prove economically feasible in Benton County, otherwise. He can also point to the significant sanitary and environmental improvements that have occurred since he was able to develop a system that is workable within Benton County's very limited budget.

In the future Hale may develop new methods for recycling resources in rural areas. What he has done so far, however, provides an illustrative example of tailoring a solid waste management system to prevailing local conditions, stressing the adaptive quality that is so essential if rural systems are to make sense for rural people.

DOWN EAST

"Down East" in coastal Lincoln County, Maine, site of the Project's first community education effort, a sudden burst of progress in the New Year culminated in the signing of a consulting firm to design a county-wide solid waste system. SCS Engineers of Augusta is drawing up the specifications for both a sanitary landfill and a materials recovery program.

Recycling will be accomplished through source separation of recoverable materials by the residents, who will, as always, bring the wastes to the town disposal site. Barrels will be provided for the recyclables. County funds will be used to purchase a few pieces of necessary equipment, including a truck and a baler, and for the construction of a central storage and service building. The overall operation will be serviced by a county employee, probably hired with Comprehensive Employment Training Act (CETA) funds.

The proposed sanitary landfill will serve primarily the Boothbay region where the bulk of the county population resides. The county seat, Wiscasset, currently operates a sanitary landfill as well.

The county is committing over $200,000 in compiled revenue sharing funds for implementation of the system. Warrants for individual towns to participate in the system will appear on the March town meeting ballots. An extensive public education program will precede actual start-up of the system.●

## GOADING ISRAEL

● Mr. CASE. Mr. President, I call to the attention of my colleagues an editorial in the Washington Post of April 7, 1978, on Israel's use of American arms in Lebanon. The editorial concludes that "a calculated decision seems to have been made to use the issue as a gratuitous political goad." I ask that the article be printed in the RECORD.

The article follows:

GOADING ISRAEL

For 26 years Israel has acquired arms under a formal agreement with the United States. On occasions too numerous to recite it has used those weapons *outside* as well as inside its own borders. Through three major wars and countless incidents, successive administrations have understood that the realities of Arab hostility justified the reading that, in using American weapons in that way, Israel was acting in legitimate self-defense. Why, then, did the secretary of state feel bound to slap Israel hard on Wednesday by informing Congress that Israel "may" have violated the 1952 military-aid agreement in its recent intervention in Lebanon?

Mr. Vance offered no explanation. He merely made the charge and indicated Washington would not invoke the arms cutoff that a 1976 law requires if a "substantial violation" of a military-supply agreement is found. But that is unsatisfactory. What *are* the standards the State Department applies, in this case and in general? All arms recipients are entitled to know. Is it conceivable that "legitimate self-defense," the 1952 language, does *not* cover a country that has lost more than 1,000 lives to terrorists crossing from a neighboring state—Lebanon—that does not perform the elementary national duty of policing its own territory? A country that, even as the rebuke arrives, is withdrawing its forces under the terms of a U.N. resolution drafted in the first instance by the United States? We don't understand.

We support the administration's strategy of seeking a Mideast peace agreement. But some of its tactics are insensitive. Right now, for instance, the administration should be concentrating on persuading Israel to rethink parts of its position in the negotiations with Egypt. It can only weaken the American case if, while presenting it, the United States acts in other ways to embarrass Israel and nourish its swollen suspicions that its security is of fading American concern. It is one thing to criticize the Lebanese operation, as we have done, for its heavy civilian toll. It is another to smear Israel with a vague allegation that puts a cloud over access to the arms on which its security depends. As a good lawyer, Mr. Vance could have found a half-dozen other ways to handle the congressional inquiries on Israel's use of American arms in Lebanon. Instead, a calculated decision seems to have been made to use the issue as a gratuitous political goad.●

## CAREER OPPORTUNITIES FOR SOCIAL WORKERS IN ISRAEL

● Mr. METZENBAUM. Mr. President, I would like to take a moment to inform my colleagues of an opportunity for Americans to make a positive contribution for themselves and to the State of Israel.

At the present time, there is a severe shortage of qualified social workers in Israel. Israel has long recognized that American social services are among the best offered in the world, especially in the field of social work. Recognizing this fact, an appeal has been made for professionals seeking a career in social work in Israel. Israel's own Minister of Social and Labor Affairs, Dr. Israel Katz, received his doctorate in social work from Case Western Reserve University in my home town of Cleveland, Ohio.

Israel is offering a challenge to interested Americans to take on a multiplicity of social problems. The need exists to work with thousands of immigrants from Arab countries who came to Israel without any worldly possessions or skills whatsoever. Many of these immigrants have been in Israel over 20 years, yet they are still struggling to gain basic social and economic security within Israel society.

Within the last 6 years, Israel has extended its social services twofold in order to bridge the social gap existing between native Israeli Sabras and new immigrants. However, all the money in the world without mobilized professional support will not begin to solve the problems.

The opportunity for a career commitment and a professional challenge exists for social workers in Israel. Israel offers wages equivalent to a better than middle-class standard of living.

Finally, I wish to praise Mr. David Bedein, the Israeli Representative of the Israel Association of Social Workers, for his work and determination to help Israel meet its unyielding social needs. Mr. Bedein is currently in the United States recruiting interested Americans for careers in social work. For the benefit of my colleagues, I ask that an article which appeared in the April edition of the National Association of Social Workers News, be printed in the RECORD.

The article follows:

ISRAELIS CROSS ATLANTIC TO FIND SOCIAL WORKERS

The Israel Association of Social Workers (IASW), represented in the U.S. by David Bedein, an Israeli-trained social worker and community organizer, has opened an office in New York City to launch a 9-month campaign to interest young American social work professionals and recent graduates in careers in Israel.

There is a severe shortage of qualified social workers in that country. Bedein, in a recent interview, said, "I am here on a mission, part of which is to tell every one within earshot of the serious need for social workers in Israel."

RECRUITMENT GOALS

As part of his vigorous campaign, Bedein, a native of Philadelphia, now in the U.S. on a grant from the Israel Government, plans to bring together people on a regular, informal basis so they may learn first-hand about the employment opportunities in Israel for social workers, the possibilities of making preliminary pilot trips to Israel, and the vital need for social workers there. It is his goal to recruit 400–500 professionals by mid-1978. There are currently about 1,750 certified social workers employed professionally in Israel (another 1200 non-professionals are also in the field) according to Bedein, and annual projections show that there will be a need for 500 more a year through 1981.

Susan Lapid, American-born and currently on leave from her Israeli-based job as a school social worker, will not be a target for Bedein's recruitment efforts—she has been committed to the challenge of effecting social change in Israel since she made a trip there during her sophomore year at Queens College. "I was so struck," said Lapid, "by the spirit and determination of the people of Israel to bridge the social gap between the cultures, that I felt this was the place for me to act upon my deep commitments . . ." Her enthusiasm runs high and her concern is evident as she describes some of the problems facing Israel society in general and the Israeli social worker in particular.

"People from the Eastern countries," she explained, "come to Israel with definite disadvantages. Basically, they are lacking in marketable skills for a modern western-oriented society. In addition, the children often enter school without the cognitive skills of those who come from European or American backgrounds. Although they may be just one year behind at the start, this gap widens irreparably year by year until they become discouraged, frustrated, and ultimately drop out of school." Her jobs, first as a street worker and then (upon graduation from the Hebrew University School of Social Work), as a school social worker, have brought Lapid up close to some of Israel's most pressing social problems. She has also worked as a juvenile probation officer and is already developing plans for a "youth village" for children to grow and flourish in a healthier environment than their homes can provide. Many large, poor Sephardic [1] families, according to Lapid, simply buckle under the strain of the shift from the patriarchal system to a more modern, egalitarian one, in which the woman of the household must also work.

STRANGERS COPING TOGETHER

When asked how her Sephardic clients accepted (or did not accept) her as an Ashkenazi [2] social worker, Lapid explained that they identify with her rather than respond to her with suspicion or fear. "They see me as one of them—an immigrant who speaks Hebrew with an accent—and they know I've been through a great many experiences similar to theirs in adjusting to a new life—and they're right. But they also know that I come from a more privileged background than they do, and that I have had to adjust to a more difficult life than I had in the States—they're right about that, too—and they respect that."●

[1] Sephardic—referring to a member of the occidental branch of European Jews settling in Spain and Portugal, or one of their descendants.

[2] Ashkenazi—a member of one of the two great divisions of Jews comprising the eastern European Yiddish-Speaking Jews.

## FINANCIAL STATEMENT OF MR. LUGAR

● Mr. LUGAR. Mr. President, consistent with a practice which I established during my service as mayor of Indianapolis, I am submitting personal financial statements for publication. Included are itemizations of net worth, income, and taxes paid by Richard and Charlene Lugar.

I insert these statements to be printed in the RECORD.

The statements follow:

*Senator Richard G. and Charlene S. Lugar, sources of income for year ending December 31, 1977*

| | |
|---|---|
| U.S. Senate | $55,102 |
| Secretary-Treasurer, Thomas L. Green & Co., Inc. | 24,419 |
| Lugar Farm Co., partnership distribution | 2,271 |
| Lugar Stock Farm, Inc., dividends | 342 |
| Thomas L. Green & Co., Inc., dividends | 6,772 |
| Honoraria from speeches | 24,945 |
| Interest on savings accounts | 374 |
| Reimbursement from campaign fund for expenses | 1,108 |
| Net rent income from personal residence | 1,006 |
| Total income | 116,339 |
| 1977 Federal income taxes paid | 33,748 |
| 1977 Social security taxes paid | 965 |
| 1977 Indiana State and local taxes paid | 4,803 |
| Total Federal, State, and local taxes | 39,516 |

Taxes Paid as Per Cent of Income=34.0 percent.

*Senator Richard G. and Charlene S. Lugar, financial statement, Mar. 31, 1978*

ASSETS

| | | |
|---|---|---|
| Cash in savings and checking accounts | | $371.00 |
| Cash value of life insurance | | 39,353.53 |
| Adjusted residence—land and improvement costs | 181,090.17 | |
| Less: Mortgage | 83,084.47 | |
| | | 98,005.70 |
| Automobiles—current estimated values | | 8,500.00 |
| Thomas L. Green & Co., Inc. (233½ shares of common stock at cost, December 1962) | | 61,293.25 |
| Lugar Stock Farm, Inc. (168 shares owned by Richard and 60 shares owned by Chalene at cost, December 1959) | | 22,800.00 |
| Lugar Farm Company (⅛ share of partnership—book value as indicated in 1977 tax return) | | 4,029.03 |
| Individual retirement account as of Dec. 31, 1977 ($1,500 deposited both in 1975 and 1976 at 1st Federal Savings and Loan, Indianapolis, Ind.) | | 3,387.34 |
| Total net assets | | 237,739.85 |

NOTES.—The shares of Thomas L. Green & Company, Inc. and Lugar Stock Farm, Inc. represent minority interests in closely held family businesses. The last transaction in the stock of Thomas L. Green & Company, Inc. occurred in December of 1962 when Thomas R. Lugar and Richard G. Lugar purchased an equal number of shares at the cost presented in this statement. It is probable that the shares have increased in value.

No transactions have occurred in the stock of Lugar Stock Farm, Inc. since its incorporation in December of 1959. The cost of the shares was then based on an Internal Revenue Service appraisal when the estate of the late Marvin L. Lugar was settled. The 604.5 acre Lugar farm was valued at $305.00 per acre in November 1956.●

## JOBS AND THE ENVIRONMENT

● Mr. McGOVERN. Mr. President, one of the most distressing events of the last few years has been the unnecessary hostility between environmentalists on the one hand and trade unionists and working people on the other. The issues involved in building large new powerplants, particularly nuclear plants, has

divided groups which should be natural allies working for social progress.

I have been extremely impressed with the work and thinking of Dr. Barry Commoner, of the Center of the Biology of Natural Systems, at Washington University in St. Louis, Mo. He has become one of the most effective spokesmen on energy questions in the United States.

In recent months, Dr. Commoner has begun to analyze the problem of continuing high unemployment. He argues effectively that our national commitment to capital intensive energy development is in part responsible for our high unemployment. Dr. Commoner points out that the development of energy conservation, solar energy, and other alternative energy technologies is required if we are to significantly reduce unemployment in America.

Mr. President, I ask that Dr. Commoner's speech to the Canadian Labour Congress on February 20, 1978 entitled "Energy and Labor: Job Implications of Energy Development or Shortage" be printed in the RECORD.

The speech follows:

ENERGY AND LABOR: JOB IMPLICATIONS OF ENERGY DEVELOPMENT OR SHORTAGE

The theme of this conference—jobs and the environment—is a timely and crucial one. Both are urgent and unsolved problems. Canadian unemployment has jumped from a "normal" rate of 4 or 5 percent to 8.4 percent, the highest since World War II. In the United States, despite a 6.4 percent figure in December, unemployment averaged 7 percent last year. About 15 percent of young workers are unemployed and nearly 40 percent of young, black workers are unemployed. At the same time, in spite of major legislation and a huge effort to clean up the environment, we are still plagued by pollution. Some environmental problems, like toxic chemicals, have become even worse. Their most serious effects, such as sterility and cancer, have been imposed on labor—the workers who produce and use these chemicals.

Now the persistent problems of unemployment and environmental decay have been joined by a third one—the energy crisis. Although there is much confusion about what the energy crisis is, who is to blame for it and even whether it is real, this much is clear: Whatever is done about energy or even if nothing is done, it will have enormous effects on both jobs and the environment, and indeed on all the other issues with which labor is concerned—prices, working conditions and the strength of the economy.

We therefore confront three serious, simultaneous problems: Unemployment, environment and energy. The worst feature of this troublesome triumvirate is that it seems impossible to solve any one problem without making the others worse When more than 20,000 U.S. steelworkers were laid off in the last six months and steel plants closed, the industry blamed the cost of pollution controls for its inability to compete with steel imports. Here in Canada you are told that to meet the nation's energy needs, much of Alberta's land and water must be diverted to mining tar sands, and that the resulting environmental damage must be borne as a kind of patriotic duty.

People seem ready to accept the notion that there are built-in, insoluble conflicts among the three goals of employment, energy sufficiency and environmental quality. Compromise seems to be the only way out, trading off jobs for environmental quality and energy for agricultural land and clean waters. "There is no free lunch," we are told; we cannot meet all these goals at once, something has to give. Anyone proposing to solve one of the problems is expected to question the importance of solving the others. The oil companies call for strong incentives for oil and natural gas production, but want environmental controls to be "reexamined" and made "more reasonable." Those of us who are seen as "environmentalists" are expected to argue strongly for environmental quality and energy conservation, making only some sympathetic sounds about the plight of the unemployed.

And inevitably, labor is caught in the middle. Utility executives and business leaders pressure labor to join battle against environmentalists, claiming that their opposition to nuclear power plants will throw people out of work. Auto executives pressure the unions to join in condemning gasoline conservation for fear that it will worsen the economic situation in the auto industry.

Before I examine this situation, let me make my own position unambiguously clear:

If there were in fact a conflict between jobs and environmental quality, or between maintaining the supply of energy and ecological balance, I would personally favor actions that cut unemployment and maintain the flow of energy, and suffer the environmental consequences. I say this because my own interest in the environment and in a sensible energy policy is based on a much more fundamental aim—the improvement of human welfare. And I know of no way to accomplish that aim if people are out of work, if inflation is rampant and the economic system is in a decline.

I'd like to carry this argument even further, and assert that of these three issues, the one which most urgently needs to be solved is unemployment, and the attendant problems of runaway inflation and economic decline. Unless we can solve the unemployment problem, the rest won't matter very much. How long can we tolerate the rejection of one in every five young workers—or two in five if they are black—trying to find their very first job; trying, as every young person must, to discover if they can find a place in society? It is hard to conceive of a nation finding the will to tackle the enormously complex energy crisis or coping with thousands of chemical pollutants when the new generation which is supposed to reap the benefits of these improvements is condemned to such despair. Or to put it in more practical terms, an economic system incapable of finding work for such a large proportion of its new generation of workers could hardly be expected to muster the huge financial resources needed to clean up the environment and to weather the energy crisis. On these grounds I am convinced that if we were forced to choose among them, the task of reducing unemployment and of rebuilding the faltering economy would have to take precedence over the energy and environmental crisis.

But are we in fact forced to make this desperate choice? Must we sacrifice environmental quality—which is, after all also essential to human welfare—on the altar of high employment and economic stability? My answer is *no*.

I am aware that this is a strong claim which seems to fly in the face of common wisdom about our trio of crises. And I would agree, if you are convinced that people are unemployed because they don't want to work, that the Arabs are to blame for the energy crisis and that pollution is due to our sloppy habits, it is indeed hard to see any connections among the three issues. Looked at this way, there does not seem to be a way to harmonize the three goals rather than compromise them; to solve all the crises rather than trying to improve one situation by worsening the others.

But if we look for more funamental reasons why, like ancient Egypt, we have been afflicted with this series of unexpected plagues, we will discover that they are connected. More than that, we will discover that the only way to meet the fundamental needs of labor—to reduce unemployment and inflation and reverse the present economic decline—is to adopt a policy that would at the same time make sense out of the energy crisis and reduce pollution. The reverse is also true: the only sound energy and environmental policy—a policy that can best give the nation a stable energy supply and a clean environment—is one that serves these needs of labor. This is the main point of my remarks, in which I hope to demonstrate why I have reached these conclusions.

To begin with, we must recognize that the place where labor works, where energy is produced and used, and where most environmental problems are created, is the same: the productive enterprise—the mine, the factory, the farm. This means that the relation between the availability of jobs, the production and use of energy and impact on the environment depends on how these productive enterprises are designed and operated—more generally, on the technology of production. In turn, the design and operation of a mine, a factory or farm involves economic factors: the wages paid to labor, the price of energy and other necessary inputs, the amount of capital needed to buy or build the productive machinery, the value of the goods that are produced and the expected rate of profit.

The welfare of labor—the availability of jobs, for example—depends on how this complex system operates, and that, in turn, depends on how all of its different technological and economic elements are connected. What labor requires from this system, simply stated, is that it should operate at its highest possible capacity; that it should provide, for all who can work, decent jobs at decent pay, in conditions that protect safety and health; that the goods which it produces should be sold at prices that labor can afford; that inflation, which erodes the standard of living, should be controlled; that labor should be free to organize and to take part in the decisions which affect its welfare.

Our task here is to learn how the production and use of energy and the quality of the environment affect these requirements which labor—and indeed society as a whole—must place on the production and economic system. Specifically, we need to ask what energy policy will encourage strong economic activity, ample job opportunities, control inflation and enable labor to play its proper role.

The first, most obvious feature of such a policy is that energy must be available. It is a simple, but often overlooked fact that every form of production—in factories, farms, transportation, offices—requires energy and cannot operate without it. This is the inescapable result of the physical laws which govern the production and use of energy. These laws tell us that work must be done if we wish anything to happen that won't happen by itself (for example, producing an auto) and that work can be done only if there is a flow of energy. Any block in the flow of energy means that production stops—and people lose their jobs. And a small interruption in the flow of energy can have a much larger effect on the economy. For example, when the Midwest ran out of natural gas last winter—because Texas producers preferred to make an extra profit of $1 per thousand cubic feet by selling gas within the state rather than shipping it north at a lower, regulated price—the resulting economic dislocation involved losses, in wages alone, many times greater than the cost of the missing fuel. No matter what else is done about energy, it must continue to flow if goods are to be produced and people are to remain at work.

The second basic point is that the availability of energy depends on its price. People have frozen to death because they couldn't afford to pay their utility bill. In turn, the price of energy has a heavy influence on general inflation and worsens its damaging effects: reduced purchasing power, lowered demand for goods, depressed production and unemployment. Because energy is used in producing all goods and services, when the price of energy rises it inevitably drives up the cost of everything else. When the price of energy, which was essentially constant for 25 years, suddenly began escalating in 1973, wholesale commodity prices followed suit. Before 1973 commodity prices had been inflating at a modest rate of about 2 percent a year. After 1973 they took off, going into double-digit figures in 1974, and since then running at more than 10 percent a year.

The prices of goods that are particularly dependent on energy are hardest hit by inflation. Unfortunately, these energy-intensive goods include housing (which depends on the cost of fuel and electricity), clothing (most of which is now made from petroleum-based synthetic fabrics) and food (which now heavily depends on fertilizers and pesticides, chemicals made out of petroleum and natural gas). This puts a particularly heavy burden on the poor. In the United States, the poorest fifth of all families use about 25 percent of their budget to buy such energy-intensive items; the wealthiest fifth of the families use only 5 percent of their budget for this purpose. When the price of energy rises the poor suffer most.

The rising price of energy also damages the economy and increases unemployment because of its influence on economic predictability. This is an important factor in a new industrial investment because an entrepreneur needs a reliable prediction of the long-term cost of the energy needed to operate it. This is how the rate of return on the investment is computed—the famous "bottom line" which determines whether or not an investment will be made. The price of energy is now rising at a rate unprecedented in the history of the United States. In the ten years before 1973 the energy price index increased at about 3.7 percent per year; in 1973–76 it increased at the rate of 25 percent per year. The problem for the businessman is not so much the actual price of energy, since in most cases he can pass the cost—and usually a little more—along to the consumer. What the businessman cannot cope with is the rate of increase, because when the rate is very high it is also uncertain, making future energy costs highly unpredictable. Several business commentators have pointed to such uncertainties as a major cause of the present slow rate of investment—which means that plants are not built, and job opportunities are lost.

Unfortunately, nearly all of our energy now comes from sources that must, inevitably, rapidly increase in price. Nearly all of our energy comes from oil, natural gas, coal and uranium. These are nonrenewable resources. They are limited in amount. We are "running out" of them. At this point some people tend to visualize oil and gas supplies slowing down to a trickle as the underground pools run dry. But that is not the way it works. What happens as oil, for example, is taken out of the ground is that the easiest oil to produce is produced first. As a result, the cost of producing oil inevitably escalates as more oil is produced. The law of diminishing returns is at work. As production of oil, natural gas and, more recently, uranium, increased it became necessary to drill deeper, to tap smaller deposits and to use more expensive recovery methods.

Inescapably, whenever the limited supply of a nonrenewable fuel is sufficiently depleted, its price begins to rise exponentially—that is, the higher the price, the faster the price increases. (In the case of oil this is sometimes blamed on OPEC and the Arab states' embargo. But in fact two years before the embargo, the OPEC oil ministers got their cue from a massive and detailed report published by the U.S. National Petroleum Council. The NPC—which should know, since it is composed of the officers of the U.S. oil companies—predicted that the price of domestic U.S. oil, which had been essentially constant for the previous 25–30 years, would, beginning in 1972–73, need to rise exponentially if the oil companies were to maintain their rate of return on investment. The OPEC oil ministers believed their American colleagues and took steps to see that they were not left behind.)

In sum, the situation is this: As long as we continue to use nonrenewable energy sources, the price of energy will continue to escalate, causing a series of disastrous economic effects—rapid inflation, an erosion of the standard of living of poor families and uncertainties about investments in new production—all of which depresses the economy and worsens unemployment. Continued dependence on nonrenewable energy sources inevitably hurts the country, and labor in particular.

A third basic link between energy and the economy is provided by capital. We now hear frequent complaints in the financial columns that the present weakness of the economy is in good part due to the lag in new capital investment. This is an ominous sign, for a slow rate in investment in new productive enterprises today means much lower productive capacity—and job opportunities—tomorrow. The availability of capital, and the willingness of investors to risk it in new productive enterprises, is a crucial feature of the economy's health.

There is a close connection between the flow of energy and of capital. It is widely recognized that the availability of capital strongly influences energy production. Utilities have been forced to abandon new construction projects (especially nuclear power plants) and investors have been forced to abandon synthetic oil and shale oil projects for lack of the necessary capital. What is less well-known is that the opposite connection is also important: The ways in which we now produce and use energy strongly influence the availability of capital, and therefore the rate of new investment which depends on it.

Various methods of producing energy differ considerably in their capital productivity—that is, in the amount of energy (for example, BTU's) produced annually per dollar of capital invested. One dollar invested in oil production (in 1974) produced about 17 million BTU's of energy per year. But that same dollar invested in producing strip-mined coal yielded only 2 million BTU per year; in shale oil about 400,000 BTU per year; and nuclear power brings up the rear with the equivalent of 20,000 BTU per year. Thus, any energy policy which emphasizes the production of electricity (particularly from nuclear power plants), rather than direct burning of fuel; which favors the use of coal over oil and natural gas; or which emphasizes the production of synthetic or shale oil, would worsen the energy industry's already serious drain on the availability of capital.

Each of the different ways of producing energy also has its own particular demand for labor. For example, in 1973 for every unit of energy yielded (trillion BTU's), oil and natural gas extraction created six jobs; strip mining, six jobs; deep coal mining, 18 jobs. As a result of these differences, and differences in capital productivity, the same amount of capital invested in different ways of producing energy can have very different effects on unemployment. For example, one calculation shows that a given amount of capital would produce two to four times as many jobs if invested in solar energy rather than electricity generation. A report to the New York State Legislative Commission on Energy Systems calculated that investment in energy conservation would produce about three times as many jobs as the same capital invested in nuclear power.

Finally, the impact of different forms of energy production on working conditions and on the general environment also vary a great deal. The physical dangers of work in coal mines and the risk of diseases such as black lung are well known. In the nuclear power industry, uranium miners are exposed to particularly high risks of radiation-induced cancer. The risks of radiation to other workers in the industry are still poorly understood, but some recent studies suggest that they may be higher than most earlier estimates. Shale oil production and conversion of coal to synthetic fuels produce highly carcinogenic substances; workers in a pilot coal conversion plant operated in West Virginia in the 1960's suffered 16–37 times the incidence of skin cancer as comparable workers in different jobs. There may be similar problems in tar sands operations.

The environmental impact of different energy sources closely parallels their impact on the workers' health. Coal mining, shale oil and tar sands oil production devastate the land and use large amounts of scarce water. Coal conversion operations are heavy polluters of the air. Coal-burning powerplants pollute the air with nitrogen oxides, sulfur dioxide and carcinogens. The nuclear power industry has yet to solve its serious environmental problems, such as safe disposal of radioactive wastes. Recent reports show that radiation leaking from reactors has contaminated milk from nearby dairies with unsafe levels of strontium 90. When energy is conserved all of these difficulties are, to that extent, reduced. And if solar energy were used instead of these conventional sources, environmental impact would be very sharply reduced.

From these considerations it is apparent that the effect of energy production on major factors which govern the welfare of the nation, and of labor in particular—inflation, employment, the availability of capital, working conditions and environmental quality—varies greatly depending on the form of energy which is produced. While a continuous flow of energy in some form is essential to keep the production system going and the economy strong, the way the flow is sustained can have the opposite effect. For example, if we were to choose to sustain the necessary flow of energy by relying heavily on very capital-intensive sources of energy (such as nuclear power, shale oil production and the production of synthetic fuels from coal) the enormous drain on capital would hinder investments in the productive enterprises that use the energy and seriously disrupt economic development. It is true that continued production of energy is essential to the economy. But it is also true that we could literally bankrupt the economy by investing heavily in the wrong kinds of energy production.

Perhaps the most striking example of this danger is nuclear power, as Saunders Miller, a prominent utilities investment counselor, has pointed out:

"Based upon thorough in-depth analysis, the conclusion that must be reached is that, from an economic standpoint alone, to rely upon nuclear fission as the primary source of our stationary energy supplies will constitute economic lunacy on a scale unparalleled in recorded history, and may lead to the economic Waterloo of the United States."*

*The Economics of Nuclear and Coal Power, Miller, S.; New York; Praeger Publishers, 1976; p. 109.

If we turn now from the ways in which we produce energy to a consideration of the ways in which we use it, we see once more that there are profound differences which seriously affect both labor and the national welfare. Here we need to consider how efficiently energy, capital and labor are used in production processes. A convenient way to measure these efficiencies is in terms of the productivity of an enterprise, such as a particular manufacturing operation. This measures how much economic gain—usually expressed as value added—is produced per unit of energy, capital or labor used. Thus, three basic productivities need to be considered:

Energy productivity, or how efficiently the enterprise converts the energy that it uses into value added. This is measured as: dollars of value added per BTU used in production.

Capital productivity, or how efficiently the enterprise converts the capital invested in it into value added. This is measured as: dollars of value added per dollar of capital invested.

Labor productivity, or how efficiently labor is converted into value added. This is measured as: dollars of value added per man-hour.

Let us compare the productivities of two industries which produce competing materials: leather products and the chemical industry which produces the plastics that have so heavily replaced leather and other natural materials. Of the two industries, leather production is about 4.5 times more efficient in converting capital into valued added, and nearly 13 times more efficient in its use of energy. This relationship between capital and energy productivity is quite general among different industries. Five industries, petroleum products, chemicals, stone, clay and glass products, primary metals and paper, account for about 59 percent of electricity and 77 percent of the total energy used in manufacturing. They also have the lowest capital and energy productivities of all major sectors of manufacturing.

There is a good correlation between energy productivity and capital productivity because energy is used to run the machines purchased by capital; the more capital (machinery) involved in an industry, the more energy it uses. And in many cases, this means fewer jobs, since the energy is often used to replace human labor. For example, for the same economic output the chemical industry uses less than one-fourth the amount of labor than the leather industry.

Another important feature of the relation between energy and the economic system is that—strange as it may seem in the light of supposed economic principles—capital and energy tend to flow toward those enterprises that use them least efficiently. Capital used in industrial production flows heavily toward those sectors which are low in both energy productivity and capital productivity. For example, the five industries cited earlier that use energy and capital least efficiently use nearly one-half of the capital invested in all manufacturing industries. In contrast, the seven most energy-efficient industries (such as leather production) use only 7 percent of the capital invested in manufacturing.

As pointed out earlier, various methods of producing energy also differ significantly in their capital productivity (i.e., how efficiently capital is used to produce energy). Here too capital tends to flow toward those enterprises which use it least efficiently. For example, although electric power represents only 21 percent of the total amount of energy which we use, it consumes 56 percent of the capital invested in energy production. At the same time, due to thermodynamic limitations, no more than one-third of the fuel used to drive a power plant is converted into electricity. Electric power is therefore by far the most expensive form of energy in terms of capital expenditure. When electricity is used to produce space heat, more than 97 percent of the thermodynamic value of the original energy is wasted. Yet about a fifth of U.S. electric power is used in this way—an enormous waste, not only of energy, but also of the capital needed to produce job-generating factories and homes.

In recent years industries with high energy and capital productivity (such as leather) have given way to industries with low capital and energy productivities (such as plastics). This is particularly true of the displacement of natural products (leather, cotton, wool, wood, paper and soap) by synthetic ones (plastics, synthetic fibers and synthetic detergents). For the reasons cited earlier, this displacement not only drains supplies of energy and capital, but also worsens unemployment. In the U.S. about half of the unemployment is "technological"—that is, job opportunities lost when such new production technologies are introduced and cut the overall demand for labor—and usually disproportionally increase the demand for energy and capital.

Now we can see the basic links among energy, the economic system and the environment: The same shifts in production technology that reduced the productivity of capital and energy and have cut the number of jobs usually increased the impact of production on the environment. As synthetic products replaced natural materials more petroleum and natural gas were used both as raw materials and for fuel, polluting the environment with combustion products and toxic chemicals. The petrochemical industry demonstrates the close links among the wasteful use of energy and capital, the assault on the environment and unemployment.

Thus, we find that unemployment is part of the same economic trends that generated the energy crisis and the environmental crisis: Energy has been produced increasingly in forms (especially electric power, and nuclear power in particular) which use a great deal of capital relative to the amount of energy that they yield. As a result, energy production has claimed an increasing proportion of the capital available for business investment, making it less available for investment in new job-creating enterprises. (In 1960, energy production claimed 26 percent of the capital invested in industry; by 1980 it is expected to claim more than a third.) At the same time, industries which use energy inefficiently also use capital inefficiently; they also pollute the environment most heavily and are often least effective in creating jobs. In sum, the same economic tendencies—the displacement of labor by energy-driven machines—that have worsened employment carry a good deal of the responsibility for the energy crisis and the environmental crisis. The crises in employment, energy, and the environment are, in this sense, the same crisis.

Against this background what can be said about Carter's National Energy Plan, which is the United States' first effort to establish a comprehensive energy policy? Judged by the standards developed above, most of the plan must be given rather bad marks, especially for its effect on labor. The plan is based on the strategy of raising energy prices as a means of encouraging energy conservation. Leaving aside that the plan would in fact accomplish very little conservation (only 16 percent of the increased demand for energy between now and 1985 would be met by conservation) this approach will only worsen inflation, and with it unemployment and all the economic ills which trouble labor.

The plan mandates a sharp increase in the present rate of nuclear power plant construction and in the use of coal—with a resulting doubling in the contribution of electricity to the energy to be acquired between now and 1985. This means heavy reliance on the ways of producing energy that are most wasteful of capital, a step that is certain to add to our present economic difficulties. At the same time, by increasing the availability of electricity (relative to direct use of fuel) the plan would encourage those industries that are power-intensive—and which are thereby likely to use little labor. Finally, the plan would create enormous new environmental difficulties, because it relies so heavily on the two methods of producing energy that most severely threaten the environment—the use of coal and nuclear energy.

In sum, the National Energy Plan is likely to aggravate the energy crisis rather than solve it, for it would worsen the main effects of the energy crisis: inflation, unemployment and economic uncertainty. This means, I fear, that if the plan is enacted in anything remotely resembling its present form, we would be confronted even more by the divisive antagonisms among those concerned with unemployment, energy and the environment that only contribute confusion to a national debate that cries out for clarity.

Is there no way out? There is. There are alternatives to the nuclear power plants, the strip mines, the coal gasification projects, to the continued use of oil and natural gas which will rise in price forever. The alternative is, of course, solar energy.

Now at this point many people will react with a faraway look in their eyes, and perhaps with some impatience and frustration, expecting to hear another one of those pie-in-the-sky schemes about a beautiful solar future. But that is not what I am talking about. I am not going to tell you that all will be well if we do more research on solar energy, set up a few more demonstration houses or learn how to build a solar power plant in space. What I am going to tell you—and not on my own authority, but on the authority of U.S. government agencies—is that for most methods of using solar energy the technology is already in hand, and can be introduced at once in most parts of the country, for a wide variety of uses, at economically competitive costs. To many people, and apparently to some government officials, this is news. But it is good news, for the most important thing about solar energy is that unlike conventional energy sources it will stabilize the price of energy, slow inflation and improve investment planning; it will create rather than destroy jobs; it can turn the country's faltering economy around. It can give us a real energy plan that solves the energy crisis rather than making it worse—the kind of energy plan that meets the needs of labor.

Here are a few reminders about what solar energy is all about.

First, unlike oil, natural gas, coal or uranium, solar energy is renewable; it will never run out (or at least not in the next few billion years). Because solar energy is renewable it is not subject to diminishing returns—which means that its price, instead of escalating like the price of present energy sources, will be stable and even fall as the cost of devices continue to decline. By stabilizing the price of energy, solar energy reduces the threat of inflation and eases the task of planning investments in new productive enterprises, thus relieving two of today's worst economic problems.

Second, the use of solar energy does not depend on any single technique. There are different sources of solar energy, some forms more available in one place and other forms in other places. Everywhere that the sun shines solar energy can be trapped in collectors and used for space heat and hot water. Of course, the amount of sunshine varies from place to place, but not as much as most people think. The sunniest place in the

United States, the Southwest, gets only twice as much sunshine as the least sunny place, the Northwest. In some places the most available form of solar energy may be wind (the wind blows because the sun heats the air on the earth's surface unevenly). In agricultural areas solar energy will be available in the form of organic matter (which is produced by plants, through photosynthesis, from sunshine): manure, plant residues, or crops grown to be converted into methane (the fuel of natural gas) or alcohol. In forested areas, waste wood, or even wood grown for the purpose, can be converted into heat, either directly, or by being made into gas. And wherever the sun shines, photovoltaic cells can be used to convert solar energy directly into electricity.

Third, for each of these solar processes the scientific basis is well understood and the technological devices have been built and are in actual use. Solar collectors are used all over the world, and were once (about 30 years ago) common in Florida and California; small windmills used to dot the farm landscape; methane plants are in operation in hundreds of thousands of Indian and Chinese villages; alcohol produced from grain was used extensively, mixed with gasoline, to run cars and trucks during World War II; photovoltaic cells now power satellites and remote weather stations. Of course solar energy needs to be stored during the night or over cloudy periods. This can be done in batteries, in tanks of alcohol or methane, in silos full of grain, as standing timber, or for that matter in piles of manure. All these items exist.

The main questions are, once again, economic: Granted that most solar technology exists, does it pay to introduce it? More precisely the question is not whether it will pay, but when. The cost of conventional nonrenewable fuel is now rising exponentially and will do so indefinitely. Since it is renewable, the cost of solar energy is fixed only by the cost of the equipment, which will fall in price as experience is gained. Place these two curves on the same time scale and inevitably they will sooner or later cross. Solar energy, which a few years ago was more expensive than the conventional alternatives, will inevitably equal them in price and then each year become cheaper relative to conventional energy.

Estimates of when and how solar energy systems become economically advantageous have now been made by the Solar Energy Task Force of the Federal Energy Administration (now part of the new Department of Energy). Here are the main features of the task force's "National Solar Energy Plan":

Solar heating: In most of the central part of the United States, if the government would provide low-cost loans, it would today pay a householder who uses electricity or oil for space heat and hot water to replace about half of it with a solar collector system. Even borrowing all the necessary funds at eight percent interest, with a 15-year amortization period, would cut the average annual heating bill by 19–20 percent.

Photovoltaic electricity: Here is the biggest surprise. For a long time even those of us most optimistic about solar energy were convinced that this technology—a wonderfully simple way to produce electricity from sunshine—was unfortunately so expensive as to remain uncompetitive for some time to come. Now the FEA report shows that the production of electricity from photovoltaic cell systems can compete with conventional power sources and exactly how that can be accomplished. The report shows that, beginning immediately for the more expensive installations such as gasoline-driven field generators, within two years for road and parking lot lighting, and within five years for residential electricity in the Southwest, photovoltaic units can compete, economically, with conventional power. All that is required to achieve this remarkable accomplishment is to invest about $0.5 billion in the purchase of photovoltaic cells by the federal government. This would allow the government to order about 150 million watts capacity of photovoltaic cells. This order would allow the industry to expand its operations sufficiently to reduce the price of the cells from the current price of $15/watt (peak) to $2–3/watt in the first year; to $1/watt in the second year and to $0.50/watt in the fifth year, achieving the competitive positions noted above and successfully invading the huge market for conventional electricity. A similar federal (or state) purchase plan could bring large-scale power-generating windmills down to a competitive price, according to the FEA report.

Methane and alcohol production from organic matter: While methods of commercializing these sources of solar energy have not yet been worked out by the FEA task force, current research already begins to show that can be done. Public works funds can be used effectively to rebuild urban garbage and sewage-sludge disposal systems so that they generate methane, which can help meet a city's energy demand. In certain farm operations—such as a dairy with 200 or more cows or a farm raising 5,000 or more chickens—it is already economical to replace current manure-disposal systems with methane generation, using it, for example, to produce electricity to drive farm machinery and heat to warm the barns. In Texas, one company has already begun to sell methane produced from feed-lot manure to the natural gas pipelines. Several Midwestern states are actively developing alcohol production from grain, as a partial substitute for gasoline in cars, trucks and tractors.

The most important aspect of solar energy, I believe, would be its effect on employment and economic recovery, but solar energy has another unique feature—it has no economy of scale. In all conventional energy production, there is a very large economy of scale—the cost of the energy falls sharply with the size of the unit. Solar energy is very different. When a farmer wants to produce more corn he does not produce bigger corn plants, but plants more of them over a larger area. And each corn plant operates at the same efficiency, so that one acre of corn traps solar energy as efficiently as 1,000 acres of corn. The same is true of all solar techniques, such as photovoltaic cells. You can run a flashlight or a whole house on photovoltaic cells, at the same energetic efficiency.

In conventional energy production the large economy of scale means that only very large corporations can compete (that explains why the energy corporations are such big ones). In solar energy production a small or middle-sized company (or a household) can do as well as a corporate giant. As a result, huge, centralized solar installations are unneeded. The power can be produced on a scale that matches its use, where it is used, thus eliminating the need for heavy transmission systems (although light ones will be useful to balance out production and demand). It is easy to see that the introduction of solar energy would mean a rebuilding of not only our system of energy production, but also many of the ways in which energy is used in manufacturing, agriculture and transportation. This would mean a vast program of new construction; it would create new jobs, and in doing so begin to control inflation.

The point of the foregoing analysis of the economic consequences of different ways of producing and using energy is not so much to support this particular theory about the role of energy in the production and economic system. What I wish to emphasize is the basic point that all energy sources and ways of using energy in production, are not alike in their effects on jobs, inflation and economic stability—and therefore on the interests of labor. Yes, some form of energy must be available if production and the economy is to continue—if goods are to be produced and if people are to have jobs and afford to buy what they need. But it makes a big difference which form of energy is chosen to support production, and how it is used. Choose the wrong form of energy and the effort to support the economy and create jobs will have the reverse effect. The economy will suffer and jobs will be lost.

Consider, for example, the often repeated claim that nuclear power plant construction is a good way to produce energy, support the economy and create jobs. This claim simply does not stand up before the facts. When compared with alternative ways of producing the needed energy it becomes clear that nuclear power is not the best way to sustain the economy and to provide jobs. Here is a concrete example: The Fiat Company, in Italy, has just announced the availability of a cogeneration unit ("TOTEM") which uses natural gas, or methane produced from a solar source, to drive a converted gasoline engine, producing electricity and recapturing the normally wasted heat as a source of space heat. About 67,000 TOTEM units would produce a total of about 1,000 megawatts of power—the capacity of a typical U.S. nuclear power plant. However, whereas the nuclear plant would cost about $1 billion, the TOTEM units would cost only $191 million, and they would produce electricity at about one-fourth of the cost of electricity from the nuclear plant.

The economic efficiency of such cogeneration units, as compared with nuclear power means not only lower electricity prices, but also a more effective use of capital, therefore more opportunities for productive investment of capital—and more jobs. Because they can run on methane—a renewable solar fuel—such units can help bridge the gap between our present dependence on nonrenewable fuels and a solar economy. As should be evident from Fiat's accomplishment, such units could readily be manufactured in U.S. and Canadian auto plants, where they could take up the slack created by the disruptive effects of the energy crisis.

It is also informative to compare nuclear power with photovoltaic cells. If the proposed U.S. federal purchase plan were carried out, in five years or so the photovoltaic industry would expand enough to begin to allow local installations to compete economically with nuclear power in many parts of the United States. Again, many more jobs would be created by the solar technology than the nuclear one. The widespread availability of competitive photovoltaic cells would also create many opportunities for new types of industrial production. For example, it would encourage the development of battery operated hand-tools, since batteries could readily be recharged by a photovoltaic unit mounted on the factory roof.

These are only two examples of the choices that are now open to us, and I mention them only to emphasize that there are choices. There is only one way in which the familiar arguments that pit jobs against the environment, that put labor leaders on the side of nuclear utility executives, make sense. And that is if we accept the assumption that the alternative to a new nuclear power plant is no new electricity and that the alternative to massive strip mining is no new sources of heat. In other words, this argument holds only if we give up the right to choose, among the different ways of producing energy, those which best serve the nation's—and labor's—needs. Then, of course, the bitter choice between jobs and the environment must be made, for if the flow of energy is disrupted we will surely suffer massive unemployment and economic disaster.

I am aware that labor groups have often decided to support nuclear power, shale oil production, coal conversion and similar energy sources which, on the basis of the foregoing analysis, seem to be not in labor's interests. But I know of no instance in which such support has been based on an actual comparison with alternative sources of energy. In every case, it is not a matter of making the wrong choice, but of avoiding a choice—in the belief that energy is essential for production and jobs (which is correct) and that all forms of energy will yield the same beneficial effects (which is not correct). Resolutions have been passed by labor groups which in one place strongly urge a fight for jobs and against inflation, and elsewhere urge the development of all forms of energy, listing sources such as nuclear power and coal conversion—which are bound to do employment and inflation more harm than good—alongside solar energy, which is labor's most powerful weapon against energy-driven inflation and unemployment.

If labor is to win its fight for jobs, for reasonable prices, for decent working conditions and for a strong economy, it must accept the responsibility of deciding, for itself, which forms of energy and which ways of using it will best sustain these aims. Up to now these decisions have not been made by labor, but by management. And now that management's choices—for nonrenewable sources such as oil and capital-intensive sources such as nuclear power, rather than the solar alternative—have precipitated the energy crisis, the decisions are being made by government executives and legislators. But, again, labor is on the sidelines.

Unless labor enters into the debate—on its own terms, making its own decisions about what energy policy best serves the needs of society, and labor in particular—we will make the same disastrous mistakes once more. Nor is it enough for labor to rely on "environmentalists" and other people of good will to suggest the right way to produce and use energy. There is no guarantee, for example, that an energy policy will be free of serious economic and social disadvantages just because it is based on solar energy. Devotion to solar energy is not, after all, proof against indifference to social welfare, greed or simple foolishness.

Consider for example two different ways to achieve a transition to solar energy. One option is to deliberately increase the price of conventional energy, so that solar technologies will become more quickly competitive. The other is to hold down the price of conventional energy as much as possible and use public funds to cut the cost of solar alternatives and make them competitive. For the reasons already given, the first approach would place an intolerable economic burden on the people, especially the poor and the minorities, who suffer most from unemployment. At the same time, wealthier people would benefit from the transition.

This strategy would increase both the general cost of energy and the price the consumer needs to pay to shift to a solar source. Poor people, unable to afford the high price of the new solar technology, would be forced to pay higher fuel prices, while wealthy people, who could afford the solar investment, could avoid buying the high-priced fuel. The strategy of rising fuel prices in order to encourage solar energy would tax the poor and favor the rich, justifying the suspicion already voiced that public movements for energy conservation and solar energy are likely to be more in the interest of the wealthy than of the poor and the unemployed.

Perhaps the most serious dangers of this approach arise from a feature which in some quarters would be regarded as a virtue—the strategy relies on the "free marketplace" to govern the introduction of solar technologies. Bluntly stated, this means that the introduction of each solar technology would be governed by a single criterion—that it generate a profit for its producer greater than one he might obtain from an alternative investment. Such a strategy would please the companies now entrenched in the energy field. The oil companies would, of course, benefit from higher oil and natural gas prices. Even if the price increase were generated by taxes, it would make the oil companies' holdings in coal and uranium more valuable, and help support the price of oil in the world market—in which most of the U.S. companies are also involved. Private utilities could also benefit, by using their position in the consumer market and their access to capital to sell or lease to their customers whatever solar technologies are most profitable and least damaging to their centralized operations.

The last to gain from such a solar transition would be the poor. They would need to wait for benefits until, in the course of time, the massive substitution of solar energy for conventional sources stabilized the rising price of energy, and reduced the rate of general inflation. Finally, when the cost of the solar technologies fell far enough, the poor could afford them too. Such a profit-oriented transition would mean that the benefits of solar energy would be allowed, as usual, only to trickle down to the mass of people.

Clearly, it would not serve labor's interests—or for that matter, the nation's—to rely on such an approach to an environmentally-sound system of solar energy. Rather, labor and the nation need an approach which permit rational planning of the development, testing and introduction of solar technologies in keeping with their efficacy in the overall process of transition rather than on the basis of the narrow criterion of profitability. This approach would, of course, challenge the widely fostered notion that private profit is the sole acceptable basis for new productive investments. But this has happened before, in connection with the development of energy resources—notably in the development of hydroelectric projects, in particular the Tennessee Valley Authority, rural electrification and most recently nuclear power. In each case the creation of the system required public initiative and at least the initial investment of public funds.

The issue is not necessarily one of public ownership, since in the case of nuclear power, the decision to develop it and the design of the technology was determined socially, while the ownership and operation of most of the industry has been in private hands. The example of nuclear power should also remind us that social governance of such decisions is by no means a guarantee that they will be in the best interest of society. Social governance is a necessary but not sufficient condition for maximizing social welfare.

An independent labor position on energy could provide a powerful remedy for some of the serious economic difficulties in U.S. and Canadian industry. Many industries—auto, steel, textiles, shoes and electronics—are being forced to cut back because they cannot compete with imports. These industries face the enormously difficult job of overcoming the economic advantages of foreign producers, achieved by their more modern productive facilities, in order to regain their share of the market. Meanwhile, plants close and people are thrown out of work. From what has been said earlier it should be evident that to cope with the energy crisis all industrial countries will need to develop new renewable sources of energy and new energy- and capital-efficient production technologies. Promising examples are photovoltaic cells and cogeneration units such as Fiat's TOTEM. Consider this very sobering thought—that U.S. and Canadian industry, still locked in the old pattern of producing and using energy—will not move quickly enough to develop photovoltaic cells and cogeneration units, failing to meet the inevitable demand for them. If that happens we will soon see Japanese photovoltaic cells and Italian cogeneration units capturing not just a part of the North American market, but all of it. We will have been frozen out of a good chunk of the enormous worldwide industrial transformation that is certain to take place under the impetus of the energy crisis.

I believe that labor can protect us from this fate, strengthen economic development and create jobs by taking its rightful place in the decision-making process that will determine our response to the energy crisis. Labor has the most to lose from the wrong decisions, and the most to gain from the right ones. Labor has the experience to understand how old production facilities can be converted to new uses and how to train workers in the new skills. Labor has the experience to defeat the notion, already being heard in some quarters, that union labor would drive prices up and make the solar transition that much harder, and to show that non-union labor would mean shoddy workmanship that could only hold back the new technologies. Finally, only labor has the political strength to break the corporate stranglehold on energy and to help society apply the power of public governance to the creation of a new energy system that can truly serve human welfare.●

## EDUCATION FOR THE HANDICAPPED

● Mr. MATHIAS. Mr. President, efforts to make education more accessible to the handicapped, in terms of both program design and architectural barrier removal, have presented unique challenges to institutions at all levels. The willingness schools have shown in acknowledging shortcomings is very encouraging, but the challenges cannot be met without difficulty. Where the handicapped were ignored, programs have had to be expanded and more special education teachers employed to serve the new students. The schools can look with much hope, however, to Public Law 94–142, the Education of All Handicapped Children Act, which authorizes Federal spending of up to 40 percent of the additional per pupil costs of educating all handicapped children. The act, properly funded, will shoulder much of the initial financial burden of making public education truly universal.

There is a second problem that has not been so clearly accounted for in our national educational policies. Institutions will be required to remove all the barriers that make programs physically inaccessible to the handicapped by 1980 under section 504 of the 1973 Vocational Rehabilitation Act. Architectural barriers cannot be removed without sizable capital outlay. Older buildings on most college campuses unfortunately were constructed without any thought given to the difficulty faced by the handicapped. Those campuses must make significant changes in their physical plant to give all students equal opportunity at education. Elementary and secondary schools face the same problem and will have to spend a great deal of money to pay for these corrections.

Estimates of the national cost of architectural barrier removal reach into the several billions of dollars. Secretary of Health, Education, and Welfare Califano told me when he came up to discuss the budget with the Appropriations Committee that he thought those estimates were highly exaggerated because most schools have simply overestimated the size of changes that will have to be made. That may be so. I certainly hope so, but the schools are faced with the problem now and cannot take much solace in the Secretary's verbal assurances. They cannot afford to make changes that may be found inadequate when the date for compliance rolls around, but they hesitate to begin if they may also be found wasteful.

I am urging the Appropriations Committee to begin spending Federal funds to help these institutions begin the job. I have urged and intend to work in the committee for a fiscal year 1978 supplemental appropriation of $150 million for barrier removal in the schools. Fifty million of that figure would be for higher education and the remainder for elementary and secondary institutions. I intend to work for the same amount in the fiscal year 1979 budget. The administration has recommended only $50 million, for higher education and only in fiscal year 1979.

I do not pretend that this will pay for any substantial part of the total national costs of these needs. I do hope it will allow the Secretary of Health, Education, and Welfare to give schools the kind of guidance they need to do what is necessary, while not incurring huge expenses which are not called for. This is an important task, and HEW should be given the means to help the schools with it. The money should be available for grant awards to institutions whose plans are completed early and correctly, without waste.●

## IS CONGRESS UP TO THE CHALLENGE OF INFLATION?

● Mr. MUSKIE. Mr. President, yesterday, President Carter announced a series of anti-inflation initiatives. He pledged his influence, his power, and his prestige to the battle. In doing so, he challenged each of us to follow his lead. Now the Congress must ask itself whether we are up to that challenge.

President Carter called on the Nation to tighten its belt. He called on individuals who suffer least from inflation to accept a voluntary freeze on income. He has told his own top officials that their salaries will be frozen, and, in a symbolic gesture to set the tone for both business and labor, he has set a ceiling on a wage increase for Federal employees.

The Congress voted to forgo any increase in pay for Members last year, and we should do so again this year.

The President has pledged to continue to fight unemployment while trying to maintain control of inflation. He has asked us to pledge ourselves to a degree of national austerity. He has asked us to increase productivity by reducing waste. He has asked us to lower the outflow of dollars by conserving energy.

He has asked Congress not to contribute to inflation as a result of excess Federal spending and increased Federal deficits. He has pledged to back his words with the credibility of his office and the power of his veto.

The President's requests are a tall order. They represent a challenge to himself as well as to the Congress. The country will follow the President's lead based on his performance.

But the Congress too has a special responsibility.

The Congress pledged a new approach to spending priorities in the congressional budget process, but has, whenever politically convenient, ignored that discipline.

We now have before us a challenge to our credibility. The question is whether each individual group will insist on being the last under the price-wage spiral fence or whether each will place the national interest first.

Some of us asked the farmers for restraint and a majority of our colleagues disagreed. We will ask Government employees for restraint and we will be asked to reject that request for restraint. We will have another opportunity when the tuition tax credit legislation comes to the floor of the Senate. And, undoubtedly, we will have repeated opportunities as appropriations and tax bills come before us.

It is time to hold both the Congress and the President politically accountable for each individual decision which has a detrimental effect on our battle against inflation. The public should know whether each Senator, each Representative, and the President himself is acting as well as talking against inflation. Each Member should have an opportunity to explain to his constituents why a particular special interest. like the grain farmers, was placed above the general national interest—and even the interest of other farmers—in the fight against inflation. Our voters will have the right to judge for themselves whether they are prepared to accept the judgment of their representatives.

The President said, in his speech:

We all want something to be done about our problems—except when the solutions affect us. We want to conserve energy, but not to change our wasteful habits. We favor sacrifice, as long as others go first. We want to abolish tax loopholes—unless it's our loophole. We denounce special interests, except for our own.

No Act of Congress, no program of our government, no order of my own can bring out the quality that we need: to change from the preoccupation with self that can cripple our national will, to a willingness to acknowledge and to sacrifice for the common good.

It is only with this kind of discipline—with the electorate informed of the meaning of the votes we make—that the effort the President has initiated can be successful. We have an opportunity and a responsibility, and I for one am prepared to join the President in his new initiative.

Mr. President, I submit for the RECORD a perceptive analysis of the President's speech by Haynes Johnson in the Washington Post this morning and the text of the speech as released by the White House.

The material follows:

CARTER ON INFLATION: A DELIVERY MORE FORCEFUL, A MESSAGE MORE INTERESTING

On the eve of the president's anti-inflation address the network television cameras captured a telling vignette for the national audience. They showed gold traders clamoring loudly over bids as prices rose while a market analyst stood in the foreground explaining what was happening.

The market was reacting favorably, he said, because of the conviction the president would not take strong action such as recommending wage and price controls. In other words, he went on, the president won't take steps to affect the long-term consequences of inflation. Ergo: let 'er rip. Get it today, the hell with tomorrow. Even in these cynical times that was a singularly candid expression of the doctrine of selfishness—and thus worth pondering alongside the president's words yesterday.

Jimmy Carter's speech on inflation to the newspaper editors came one year, less a week after he delivered his nationally televised "moral equivalent to war" address on energy. The differences between those two speeches are striking—in tone, delivery, and content.

Then the president began somberly, starky. "I want to have an unpleasant talk with you about a problem that is unprecedented in our history," he said. "With the exception of preventing war, this is the greatest challenge tsat our country will face during our lifetime." He called for sacrifices, and warned that the alternative to action "may be a national catastrophe."

But his delivery belied his words: he was low-keyed, soothing almost.

Yesterday, the president began by accentuating the positive. He brought us good news jobs were up, unemployment down, household incomes and business profits rising, and the rate of inflation being held within reasonable and predictable boundaries. Carter gave no martial summons, issued no grand appeal for sacrifice, flatly rejected wage and price controls, both now and later, and stressed the need for voluntary cooperation among business and labor and other private citizens.

But Carter's delivery yesterday was notably more forceful, and his message perhaps even more interesting. He was going to do what he could as president about inflation, he was saying, including the use of vetoes. And he was determined to set the government's own house in order as an example for the rest of the nation.

At the same time, he said, the idea that government can do it alone is a myth. He uttered no cheap homilies about such traditional American virtues as thrift triumphing in the end. There was no pleading for WIN buttons, WIN flags, and WIN gardens as in the Gerald Ford era when the president gave us the immortal prescription for solving inflation now by saying, in words printed in upper case to underscore their importance: "Grow more, waste less . . . drive less, heat less."

Carter's closing words were especially interesting, for they struck at the truly most difficult problems, those involving public attitudes and appetites.

"We all want something to be done about our problems—except when the solutions affect us. We want to conserve energy, but not to change our wasteful habits. We favor sacrifice, as long as others go first. We want to abolish tax loopholes—unless it's our loop-

hole. We denounce special interests, except for our own."

And, his theme:

"No act of Congress, no program of our government, no order of my own can bring out the quality that we need: to change from the preoccupation with self that can cripple our national will, to a willingness to acknowledge and to sacrifice for the common good."

Whether Jimmy Carter's words will strike any response remains to be seen. One speech does not a policy make. Nor has the president spelled out, except in vague generalities, just what it is he expects of his fellow citizens. But it followed up by presidential deeds and further systematic candid reports on where we stand, he just might arouse public supports for action on what surely has become the scourge of these times.

The fact of inflation of ever-rising prices and increasing pressures for more and more and more, has become so imbedded in the weary public consciousness that it's hard to realize how relatively new a phenomenon we confront.

Just a decade age, as the war in Vietnam began to spread its poison throughout the American system, Lyndon Johnson held a press conference. He was asked about growing public dissatisfaction with the war and rising inflation. Always prepared, LBJ produced a chart he said he had had made for the press the night before.

The chart showed where consumer prices stood in 1960 for a number of key industrial nations. Since then, LBJ pointed out, prices had been rising dramatically. He crisply ticked off the figures—more than 40 percent in Japan, some 30 percent in Italy, 20 in France, about the same in the United Kingdom and slightly less in Germany. But for the United States—well, there we were, doing better than anyone.

"Our average price increase has been less than 1½ percent a year," Johnson said proudly. "Rates in other countries have been at least double that. . . . So the cost-of-living record of the United States is far superior to the performance of any other major industrial country."

The tragedy of the Johnson Presidency, of course, is that LBJ failed to ask for a tax increase to sustain the accelerating costs of Vietnam, driving us into a deadly inflationary spiral. That's a familiar story. What doesn't seem to be understood is a more significant aspect of the problem.

If the economic "experts" have any credence left (probably a dubious assumption) they make two generally telling points: it's the world, and not just the United States and selected industrial powers, that faces the perils of mounting inflation; and, these worsening problems represent something relatively new and ominous.

As one thoughtful scholar, Irving S. Friedman, puts it: "For many centuries, the phenomenon of rising prices, called inflation, was temporary." When inflation did occur, the causes were easily identifiable—and of short duration. Our own post-Civil War period, particularly in the conquered South; the devastation of Germany, after World War I, when barrels of marks were exchanged for loaves of bread, or of Russia after its revolution—these were the examples.

But an all-pervasive inflation is something that dates from the years after World War II. And, if people such as Friedman are right, we don't yet see "persistent inflation as a potential destroyer of societies"—as something, indeed, that moves like a plague from country to country, eventually infecting all.

Here's one citizen who doesn't expect the President to "solve" the problem. But he would welcome more Presidential accounting, and explaining, of where we are, what we face, and what actions we ought to take. That kind of public Presidential followup was missing a year ago after Carter's "moral equivalent to war" speech. But the role of President as public educator and teacher remains open.

Who knows, it might even work.

---

TEXT OF THE ADDRESS BY THE PRESIDENT TO THE AMERICAN SOCIETY OF NEWSPAPER EDITORS APRIL 11, 1978

During the last 15 months we in the United States have made good progress in sustaining growth and creating jobs. Four-and-a-half million more people are at work today than fifteen months ago. The unemployment rate has fallen from nearly 8 percent to a little more than 6 percent. Average household income, after adjustment for both taxes and inflation, is 5 percent higher now than a year ago. Business profits in the second half of 1977 were 15 percent higher than one year before, and during that time the inflation rate was held to a reasonable and predictable level.

But too many Americans—particularly young people and members of minority groups—are still without jobs. I am determined to sustain our economy's progress toward high employment and rising real income, with both existing programs and with new, carefully targeted incentives to encourage private business to hire the hard-core unemployed.

We have other economic problems which cause us continuing deep concern.

Our nation's economic health can be protected only if we can cope with the two developments that now threaten it most seriously—the high level of oil imports and the increasing rate of inflation.

These two problems both imperil our economic recovery and threaten the strength of the dollar, and they must be controlled.

The steps that we will take are part of a wider international effort by the major industrial nations to promote world recovery in 1978. In this effort, each country has a role to play—with the U.S. maintaining its growth while attacking inflation and limiting oil imports, other countries achieving their growth targets, and all countries avoiding protectionism and providing greater aid to developing countries. In the hope that this concerted approach will make a large contribution to world recovery, I joined the leaders of six other nations yesterday in announcing that we will meet on July 16 and 17 in Bonn to press ahead with our common efforts.

But the first requirement is effective action within each nation.

The primary reason for our problems with the balance of trade and the decreasing value of the dollar is no mystery. Ten years ago we were paying roughly $2 billion for imported oil. This year oil imports will cost us more than $45 billion.

Our energy problems are no longer theoretical or potential. They are an active threat to the economic well-being of our people.

Of all the major countries in the world the United States is the only one without a national energy policy, and because the Congress has not acted, other nations have begun to doubt our will. Holders of dollars throughout the world have interpreted our failure to act as a sign of economic weakness, and these views have been directly translated into a decreasing value of our currency.

The falling dollar in international monetary markets makes inflation worse here at home. It raises the price of goods we import, and this makes it easier for domestic producers to raise their own prices as well.

That is why we must have meaningful energy legislation without further delay. Our security depends on it, and our economy demands it. If Congress does not act, then oil imports will have to be limited by administrative action under present law, which is not the most desirable solution. One way or the other, oil imports must be reduced.

Recently our healthy and sustained economic growth has exceeded that of most other nations who are our major trading partners, so we have been better able to buy their goods than they have to buy ours.

Our standard of living and our ability to grow depend on the raw materials and goods we import from other countries. Therefore, to prevent further serious trade imbalances, we need to export more agricultural products and other goods and services to pay for our purchases abroad.

A Cabinet-level task force, chaired by the Secretary of Commerce, will develop additional measures to promote exports, and will report back to me within 60 days.

Now I will discuss the steps we must take to protect our national economic growth and the jobs and prosperity of our people from the threat of growing inflation.

Conserving energy, increasing efficiency and productivity, eliminating waste, reducing oil imports and expanding our exports will help to fight inflation; but making that fight a success will require firm government policies and full private cooperation.

The inflation we are suffering today began many years ago and was aggravated in 1973 and 1974 by a quadrupling of OPEC oil prices, widespread crop shortages, Soviet grain purchases, substantial devaluation of the dollar, and a worldwide industrial boom that led to double digit inflation in the United States and around the world. It now has become embedded in the very tissue of our economy. It has resisted the most severe recession in a generation. It persists because all of us—business and labor, farmers and consumers—are caught on a treadmill that none can stop alone. Each group tries to raise its income to keep up with present and anticipated rising costs; eventually we all lose the inflation battle together.

There are no easy answers. We will not solve inflation by increasing unemployment. We will not impose wage and price controls. We will work with measures that avoid both extremes.

Our first and most direct efforts are within government itself. Where government contributes to inflation, that contribution must be lessened; where government expenditures are too high, that spending must be reduced; where government imposes an inflationary burden on business, labor, and consumers, those burdens must be lightened; wherever government can set an example of restraint and efficiency, it must do so.

The budget I have proposed for the next fiscal year is both tight and capable of meeting the nation's most pressing needs. The prospective deficit in that budget is as large as we can afford without compromising our hopes for balanced economic growth and a declining inflation rate. As always, pressures are developing on all sides to increase spending and enlarge that deficit.

Potential outlay increases in the 1979 budget which are now being considered by Congressional committees would add between $9 billion and $13 billion to spending levels next year. The price of some of these politically attractive programs would escalate rapidly in future years. I am especially concerned about tuition tax credits, highway and urban transit programs, postal service financing, farm legislation, and defense spending.

By every means at my disposal, I will resist those pressures and protect the integrity of the budget.

Indeed, as opportunities arise, we must work to reduce the budget deficit, and to ensure that beyond 1979 the deficit declines

steadily and moves us toward a balanced budget. I will work closely with the Congress and, if necessary, will exercise my veto authority to keep the 1979 budget deficit at or below the limits I have proposed.

The Federal government must also act directly to moderate inflation.

Two months ago I proposed that in each industry and sector of the economy wage and price increases this year be voluntarily held significantly below the average increase for the two preceding years—an important principle of deceleration.

I am determined to take the lead in breaking the wage and price spiral by holding Federal pay increases down. Last year, Federal white collar salaries rose by more than seven percent. I intend to propose a limit of about 5.5 percent this year, thereby setting an example for labor and industry to moderate price and wage increases. This year I will also freeze the pay of all Executive appointees and members of my senior staff. I believe that those who are most privileged in our nation—including other executives in government and in private companies—should set a similar example of restraint.

State and local governments employ every seventh worker in our nation and I have sent letters to every Governor and to the Mayors of our larger cities asking that they follow the Federal example and hold down their pay increases. I have also asked that if those governments plan to reduce taxes they first consider lowering sales taxes, which add directly to the consumer's burden.

The Federal government will take several other steps to reduce inflation:

All Executive Branch agencies will avoid or reduce the purchase of goods or services whose prices are rising rapidly, unless by so doing we would seriously jeopardize our national security or create serious unemployment. I am also asking that all new or renegotiated Federal contracts which contain price escalation clauses should reflect the principle of deceleration.

We must cut the inflationary costs which private industry bears as a result of government regulations.

Last month I directed Executive regulatory agencies under my control to minimize the adverse economic consequences of their actions. I am determined to eliminate unnecessary regulations and to ensure that future regulations do not impose unnecessary costs on the American economy. Our efforts to reorganize the Federal bureaucracy and to streamline the Civil Service will help us put the government's house in order.

I support "sunset" legislation to ensure that we review these regulatory programs every few years, and eliminate or change those that have become outdated.

I also urge Congressional budget committees to report regularly to the Congress on the inflationary effect of pending legislation, much as the Council of Economic Advisors and the Council on Wage and Price Stability now report to me.

The combined actions of my Administration and the Civil Aeronautics Board have already led to substantial cuts in some airline passenger fares. Despite the opposition of private interests, the airline regulatory reform legislation must be enacted this year. We are also re-examining excessive Federal regulation of the trucking industry, an effort which may result in increased efficiency while reducing freight transportation costs and retail prices.

In addition, I am asking the independent regulatory agencies to try to reduce inflation when they review rate changes, and to explore regulatory changes that can make the regulated industries more efficient.

Last fall, major new legislation was passed which will improve economic conditions for farm families, and we have announced additional administrative action to raise farm income this year.

Unfortunately, the Senate has just passed a bill that would raise food prices by 3 percent and the overall cost-of-living by .4 percent, shatter confidence in the crucial export markets for America's farm products, and cripple American farm families through increased costs. It is bad for farmers, bad for consumers, and bad for our nation.

I will veto any farm legislation, beyond what I have already recommended, that would lead to higher food prices or budget expenditures.

Housing construction rates have been at a high level and costs have risen rapidly, partly because of sharp increases in the price of raw materials such as lumber. Since lumber accounts for one-fourth of the total cost of a new house, we can obtain some relief by increasing production and using our existing lumber output more efficiently. Therefore, I have instructed the Departments of Agriculture and Interior, the Council on Environmental Quality, and my economic advisors, to report to me within 30 days on the best ways to sustain expanded timber harvests from Federal, State and private lands, and other means of increasing lumber yields in ways that would be environmentally acceptable, economically efficient and consistent with sound budget policy.

Daily hospital costs have jumped from $15 in 1950 to over $200 today, and physicians' fees have risen 75 percent faster than other consumer prices. It is very important that Congress act now on the proposed Hospital Cost Containment Bill as the most effective step we can take toward reasonable hospital prices. Failure of Congress to act on the Hospital Cost Containment legislation will cost the taxpayer more than $18 billion in needless government spending over the next five years.

Together with the airline deregulation bill, this is one of the two most important measures the Congress can pass to prevent inflation.

These measures have so far been delayed by the opposition of powerful lobbying groups. I will continue to give this legislation my full support, and I call on the leaders of Congress to do the same.

Such government actions as I have discussed today can be important steps toward controlling inflation. But it is a myth that the government itself can stop inflation. Success or failure in this overall effort will largely be determined by the actions of the private sector of the economy.

I expect industry and labor to keep price, wage and salary increases significantly below the average rate for the last two years. Those who set medical, legal and other professional fees, college tuition rates, insurance premiums and other service charges must also join in. This will not be easy. But the example of Federal action must be matched. Inflation cannot be solved by placing the burden of fighting it only on a few.

The Council on Wage and Price Stability recently began a series of meetings with representatives of business and of labor in major industries such as steel, automobiles, aluminum, paper, railroads, food processing, communications, lumber and the postal services. In consultation with the private parties the Council will identify the rate at which prices, wages and other costs have been rising in recent years, the outlook for the year ahead and the steps that can be taken to reduce inflation.

Let me be blunt about this point. I am asking American workers to follow the example of Federal workers and accept a lower rate of wage increase. In return, they have a right to expect a comparable restraint in price increases for the goods and services they buy. Our national interest simply cannot withstand unreasonable increases in prices and wages. It is my responsibility to speak out firmly and clearly when the welfare of our people is at stake.

Members of my Administration have already discussed this deceleration program with a number of leaders of labor, business and industry. They have promised their cooperation. Later I expect to meet with business and labor leaders to discuss contributions that they can make to help slow the rate of inflation. One of the most important contributions they can make is to show that restraint applies to everyone—not just the men and women on the assembly line, but also the managers in the executive suites. Just as I will freeze the pay of the top executives in the Federal government, the American people will expect similar restraint from the leaders of American business and labor.

I am determined to devote the power of my office toward the objective of reduced inflation. Our approach must be flexible enough to account for the variations in our complex economy—but it must be comprehensive enough to cover most of the activities of our economy.

In the long run, we should develop special programs to deal with sectors of the economy where government actions have the greatest potential for reducing inflation. These include housing, medical care, food, transportation, energy and the primary metals industries. The members of my Cabinet will work individually and with the Council on Wage and Price Stability to develop and to announce early action to reduce inflation within their own areas of responsibility.

To accomplish our deceleration goals in the private sector, I am asking my Special Trade Representative, Robert Strauss, to take on additional duties as a Special Counselor on Inflation. He will work with me, with Treasury Secretary Blumenthal, my chief financial spokesman, with Charlie Schultze, the Chairman of the Council on Wage and Price Stability and its Executive Director, Barry Bosworth. He will have specific authority to speak for me in the public interest, and will be a member of the Steering Committee of the Economic Policy Group under the chairmanship of Secretary Blumenthal.

Reducing the inflation rate will not be easy and it will not come overnight. We must admit to ourselves that we will never cope successfully with challenge until we face some unpleasant facts about our problems, about the solutions and about ourselves.

The problems of this generation are, in a way, more difficult than those of a generation before. We face no sharply focused crisis or threat which might make us forget our differences and rally to the defense of the common good.

We all want something to be done about our problems—except when the solutions affect us. We want to conserve energy, but not to change our wasteful habits. We favor sacrifice, as long as others go first. We want to abolish tax loopholes—unless it's our loophole. We denounce special interests, except for our own.

No Act of Congress, no program of our government, no order of my own can bring out the quality that we need: to change from the preoccupation with self that can cripple our national will, to a willingness to acknowledge and to sacrifice for the common good.

As the nation prepared for the challenge of war, Walter Lippmann addressed these words to our nation forty years ago:

"You took the good things for granted," he said. "Now you must earn them again. It is written: for every right that you cherish, you have a duty which you must fulfill. For every hope that you entertain, you have a task you must perform. For every good that

you wish could happen . . . you will have to sacrifice your comfort and ease. There is nothing for nothing any longer."

These words of admonition apply to us now.●

## WATERWAY USER CHARGES AND THE OCTOPUS

● Mr. DOMENICI. Mr. President, for anyone involved in the issue of waterway user charges, refreshment is regularly available from the publications of the barge industry. For example, a recent newsletter of the National Waterways Conference, Inc., comes complete with the drawing of an octopus, its mouth snarling with evil, its tentacles reaching out to crush the waterways. Of course, the octopus is labeled "user charges."

The octopus image is probably an unfortunate one for the barge industry, since it might just remind some people that the barge industry is really dominated by a few giant multinational corporations, like Exxon and United States Steel.

And, sadly, the tentacles of this barge-industry octopus seem most attracted to picking up scraps of misinformation in an effort to propagate the fear of user charges.

One of the more grandiose examples of distortion was propounded by a barge group known as the Ohio Valley Improvement Association, quoted of late in the Waterways Journal. The OVIA said that waterway user charges would raise electricity rates for a Cincinnati family "by $11 a month."

Now, stop for one moment and look at that figure. Let us assume all of the costs of producing electricity in Cincinnati are due directly to fuel shipped by water: There would be no costs related to labor, no cost for capital plant, no cost for transmission lines, no costs for other types or sources of fuel. Since my proposal prevents any user charge from exceeding 1 percent of the delivered price of a commodity, that means today's average monthly electrical bill in Cincinnati must be at least $1,100, or $13,200 annually. Do you think the OVIA figure might be a trifle high?

Let us look at another example, this one from a recent paper distributed in the Senate on behalf of the barge industry and prepared by a retired professor named Marvin Barloon. Should any user charges be collected at a particular new lock on the Ohio River, Mr. Barloon warns, the charge—

> Would amount during the construction period to something higher than 36 cents per ton . . . more than doubling present carrier charges.

In another context he refers to my bill as imposing a charge of "59 cents a ton."

Mr. Barloon would flunk his homework, for he does not appear to know simple mathematics. As I said, my proposal limits any charge to 1 percent of the commodity's value, which means the charge on $20 coal could never exceed 20 cents, for example. The charge on $3 gravel could never exceed 3 cents. How, therefore, can it reach 36 cents or 59 cents on one short stretch of river, when it could not exceed 3 or 20 cents for the entire voyage?

But Mr. Barloon is not to be daunted. He goes on to calculate that my waterway user charge proposal means charges—

> * * * 75 times as high as the 6¢ fuel tax of H.R. 8309.

Using Barloonian logic, that translates roughly into an annual cost of some $5 billion. That, too, seems a bit excessive, since my proposal is based strictly on a percentage of expenditures, and expenditures are less than $500 million yearly.

Nevertheless, I have come across some recent statement favoring user charges from what might be termed "unexpected sources." The St. Louis Post Dispatch, on a user-charge editorial, said this:

> The Carter Administration favors the idea and, as a matter of principle there is nothing wrong with it. River transportation should not have an entirely free ride at the expense of the taxpayers or competing forms of transportation.

A study in a recent issue of Transportation Journal by James C. Johnson and Donald L. Berger found, in a survey of 358 transportation and marketing executives, that 82.6 per cent of the marketing executives and 86 per cent of the transportation executives favored waterway user charges. About 60 percent of these executives also concluded that user charges would have no adverse impact on costs and consumer.

Regrettably, however, the OVIA-Barloon mentality continues to have the greatest buoyancy along the waterways. I have put together a few of these statements (cited for ease of identification as "Fiction"), followed by clarification (cited as "Facts").

> Fiction: Any greater charge (than the House bill) would . . . bring about the termination or substantial reduction of service on most of our waterways . . . The Domenici plan would permanently cripple our system of water transport . . . (Anonymous). If user fees are imposed immediately at an unreasonable level, the trophy is going to be one Mr. Carter will live to regret. For he will see before many months have passed following their imposition an economic upheaval, the likes of which he never before has witnessed. (A waterway industry editorial.)

Fact: The Department of Transportation calculates that even with the most severe assumptions of my approach, waterway tonnage will grow by 40 per cent over the next decade. Some crippling! Art Sogn, a grain marketing economist at South Dakota State University, made this point:

> It is important for South Dakota producers to have the lowest possible cost of shipping their grain to the Gulf . . . However, if the advantage is too heavily weighed in favor of barges the eventual result could be inadequate rail transportation from December to April when the barges cannot operate.

Fiction: The Domenici bill would "effectively close some waterways . . . We believe that (the House proposal) would be much more equitable and manageable." (Glover Wilkins, chief of the Tennessee-Tombigbee Waterway Development Authority).

Fact: Mr. Wilkins should favor the House bill, since it exempts traffic on the $1.4 billion Tennessee-Tombigbee Waterway from any charge whatsoever.

Fiction: "Low cost transport of coal . . . low cost transport of fuel oil . . . low cost transport of raw materials . . . low cost transport of grain . . ." (John A. Creedy, President of the Water Transportation Association).

Fact: Of course Mr. Creedy thinks barges are a "low-cost" mode, since the taxpayers are contributing what amounts to more than 40 percent of the industry's revenues by providing a free right of way through extensive and elaborate Corps of Engineers expenditures. And that is not counting the Coast Guard expenditures, and the Maritime Administration equipment guarantees, and so on—expenditures not affected by my amendment.

Fiction: One waterways publication described the growth of barge traffic, compared with other modes, as an example of "survival of the fittest."

Fact: That is true, if fittest means the group getting the richest Federal subsidies.

Fiction: Cost recovery schemes on water resources are "radical measures" (Mr. Creedy). A cost-recovery concept on the inland waterways is "irrational." (J. W. Hershey, Chairman of American Commercial Barge Lines, Inc.).

Fact: Cost-recovery is so "radical" and "irrational" that it is the standard used on hydropower projects, on water supply projects, on irrigation projects, and it is built into the highway, airway, and numerous other Federal programs.

Fiction:

> The Domenici tax would have devastating effects on already hard-hit farmers. Two-thirds of all inland waterway tonnage consists either of the products the farmer grows or the products he used for growing, such as fertilizer, agricultural chemicals, etc. (Anonymous)

Fact: According to the Department of Agriculture, 8 percent of inland waterway traffic involves agricultural products.

Fiction:

> The Domenici tax at 1% of the cargo value . . . (Anonymous)

Fact: My proposal would establish an upper limit of 1 percent of commodity value, not a fee of 1 percent. And any 1 percent charge, in those rare instances when a lid is needed, would probably not come into effect until about 1990. That percentage limitation, of course, was included in my proposal at the request of the late Senator Humphrey as a way to protect the farmer.

Fiction:

> Under a system of charges that differentiates among waterways, movements of cargo by water would eventually become uneconomic on all but the main stem of the Mississippi and possibly the Ohio River. Traffic on tributary waterways would cease. (Anonymous). Under the proposed segment-by-segment cost recovery system certain important areas—the Arkansas, the upper Ohio, West Virginia, and the Missouri—would find their transport costs sky-rocketing, industrial plants rendered obsolete and jobs disappearing. (Mr. Hershey).

Fact: How can a top fee of 20 cents a ton on coal or 3 cents a ton on gravel or even $1 on petroleum—the outside limits established by the 1 percent lid—make all those waterways uneconomical?

But the drumbeat of distortion goes on. Harry N. Cook, executive vice presi-

dent of the National Waterways Conference, Inc., recently made this point:

We will not accept any bill based on the cost-recovery principle.

An interesting declaration. But is it really fair to charge a small community in Nevada or Ohio or Nebraska the full cost for tapping into a Corps water supply reservoir, or charge an electric co-op the full cost of producing the Federal hydropower it uses, then let the big barge companies off the hook when it comes to relating their costs to the expenditures they impose on the public? You will note that percentage user charges are never described as unfair or bad economics. They are simply called "radical" or "irrational."

Mr. President, sound arguments may indeed exist against my proposal to phase-in, over 11 years, a system of user charges based on waterway expenditures (leaving a perpetual 50 percent taxpayer subsidy on new construction). But I doubt that debate in the Senate or in the Nation is served by the cacophony of distortions blaring from the barge industry.

I will admit that the barge representatives do speak sometime with accuracy. Mr. Creedy is quoted as making this assertion:

There is a considerable case for getting the facts right.

I agree.●

## PERFORMANCE OF OUR ARMED FORCES

● Mr. McINTYRE. Mr. President, as chairman of the Senate Armed Services Subcommittee on Research and Development I take great pride in citing outstanding examples of superior performance by our armed services.

It is with special satisfaction that I today call the attention of the Senate to the milestones achieved by the 157th Air Refueling Group (AREFG), Air National Guard, New Hampshire.

The 157 AREFG consistently performs in excess of required standards. Some recent achievements include the following:

The 157th AREFG reached C–2 status and was available to accomplish one line of EWO (emergency war order) alert, July 1, 1976, 3 months prior to the programed date.

The 157 AREFG satisfactorily completed its first limited operational readiness inspection on February 1, 1977. It was the first Air National Guard unit to have its commander's capability estimate of C–1 confirmed by the SAC Inspector General.

First Combat Evaluation Group—SAC's standardization/evaluation team—conducted an evaluation of the 157 AREFG's flying and standardization program September 6–13, 1977. The overall rating was excellent, with aircrew performance rated outstanding. Their report contained the following:

Individual crew member pride and professionalism was evident on all flight evaluations. Flight crews should be commended for their outstanding performance.

The commander of the 157 AREFG, Col. James E. Cuddihee, logged his 20,000th hour of military flying time on December 16, 1977. This milestone made him the leader in flying time among all active Air Force pilots.

The 157 AREFG has completed over 19 years of accident-free flying (no class A mishaps). This places them very near the top of SAC's Hall of Fame for Tactical Flying.

Along with the 509th Bomb Wing (SAC), they had the first joint operational readiness inspection of our strategic total forces. The results were that on March 21, 1978, all areas were rated satisfactory or better—another first. Forty of eighty-seven areas were rated outstanding or excellent. The SAC Inspector General noted:

Aircraft were generated well ahead of schedule . . . Personnel are commended for their strong performance . . . Aircrews are highly knowledgeable . . . Mission effectiveness is rated Outstanding.

This is an outstanding record, Mr. President, for which the 157 AREFG can be justly proud and it is an honor for me to salute them for a job well done.●

## SOLAR PRODUCTS INDUSTRY

● Mr. HASKELL. Mr. President, recently I had the opportunity to address a meeting of solar dealers who sell and install solar furnace systems. The men and women attending this meeting are among the pioneers in a relatively new and exciting industry. They represent the true spirit of American free enterprise. They are putting their reputations, money, and future on the line as they enter into what they consider to be one of the major growth industries of the near future.

One of the things that impressed me most at this meeting was a resolution which the dealers all signed. It is composed of such easily understandable language that it would provide a model for the rest of the solar industry and certainly for some Government offices and agencies which sometimes have a tendency for overkill in their wording of documents which the businessman and consumer have to decipher. I offer this resolution for the edification and guidance of the industry and Government officials involved in the solar future of this country.

The resolution follows:

RESOLUTION

I. Be it resolved that we will wholeheartedly support the efforts of the S.E.I.A. to prevent the placing of unnecessarily restrictive, grossly discriminatory and unduly burdensome warranty requirements upon the solar industry by government agencies at federal and state levels.

II. Be it resolved that we will actively watch and provide input into what is happening in our own state regarding standards, certification, warranties, tax incentives, sun rights and advertising restrictions, and that we do not need the urging of "canned" responses to issues or actions we know little or nothing about. We will anticipate legislation, actively support that which is positive and needed and actively oppose that which is negative and wasteful.

III. Be it resolved that we will approach our local building code officials and get the groundwork laid for revisions of the code based not upon cheap energy as they are, but upon scarce energy, as they will eventually be. We will encourage them to correspond with A.G.A. to find out what they could or should be doing to lead the way in the coming energy usage revolution.

IV. Be it resolved that we support individual ownership of energy producing devices and that those who own such devices ought to be treated exactly like other energy producers regarding tax breaks, etc. Furthermore, we strongly oppose the spending of tax dollars (in immensely disproportionate amounts) to finance "energy in the sky by and by" schemes which will perpetuate the same kind of total dependence upon large energy corporations which we are subject to now.

V. Be it resolved that we support industry developed standards, performance specifications, uniform labeling of solar products and internal enforcement of same through the S.E.I.A.

VI. Be it resolved that we support and display the following solar code of ethics:

1. I will not decide or degrade my competitors' product. Instead I will stress the positive advantages my system has over my competitors' product.

2. I accept my responsibility as a pioneer in a new industry to provide meaningful education about solar heating to the general public.

3. I will educate my potential customer ethically, especially stressing the advantages of proper insulation and conservation of energy in his home, even though this may result in the sale of a smaller piece of solar equipment. I will never sell a piece of equipment without counseling the customer about the merits of "solar insulation".

4. I will have my equipment tested by independent professional engineers and will publish useful BTU output ratings of my system, so that the consumer may make an educated decision about which product to buy.

5. I will truthfully and completely disclose to my customers the projected costs of maintenance, on an annualized basis, of my product.

6. I will give my customer a clear, concise and understandable warranty concerning parts and labor on my product.

7. I will disclose all costs of the solar heating system to my customer, including special insulation, remodeling, special construction techniques, additional costs over conventional construction techniques, the costs of living space lost to the solar heating equipment, all labor and profits as a total installed price, so that he may knowledgeably cost-comparison shop my product against my competitor's product.

8. All prices will be properly quoted in writing to my customer prior to installation of the equipment.

9. I will constantly strive to upgrade quality of my product while endeavoring to reduce its price.

10. I will disclose to my customers any problems of which I am aware with regard to building permits and insurance which he may encounter.

11. I will not engage in price-fixing of my product or related equipment.

12. My advertising will be clear and concise, designed to give the customer a fair, clear understanding of costs and performance. I will not engage in deceptive practices.

13. I will not talk about "typical houses", because this is deceptive. Rather, I will recommend solar insulation, whether the house is new or used. Just as it is common knowledge that electrically heated homes require more insulation, I will clearly explain that solar heated homes need even more insulation if the system is to be cost effective.

14. I will not use sloppy "rules of thumb" which mislead the customer and are deceptive. For example, I will not use phrases like "it takes a collector half the square footage of the home". Rather, I will care-

fully perform a complete heat loss calculation on the structure in question and present different sized systems and their costs so my customer can make an educated decision.

15. I will not use fear tactics in my sales. Although I may educate my customer to the realities of the energy crisis, I will not unduly emphasize this or strive to frighten my customer into purchasing.

VII. Be it resolved that we support passage of a National Energy Policy *NOW*. Whether it is President Carter's or the Senate's, the House's or any combination thereof, we know that there will be possible or probable necessity for modification based on increased understanding of what is and is not in our national interest. We advocate built-in mechanisms for swift and easy modification of the plan to keep pace with the virtually unprecedented rapidity of change which we have experienced in the energy field.●

## NOMINATION OF LYNN COLEMAN

● Mr. BUMPERS. Mr. President, we will shortly be called upon to vote on the nomination of Lynn Coleman of the District of Columbia to be General Counsel of the Department of Energy. It is in the interest of Senators to inform themselves as thoroughly as possible. To this end, I would like to share with my colleagues an article by Congressman BOB ECKHARDT of Texas. This article appeared in the Nation magazine on February 18, 1978. It has previously been brought to the attention of the House of Representatives by Congresswoman BARBARA JORDAN of Texas.

Mr. President, I submit for the RECORD Miss JORDAN's remarks and Mr. ECKHARDT's article:

NOMINATION OF LYNN COLEMAN

Miss JORDAN. Mr. Speaker, I commend to you and submit for inclusion in the RECORD an article written by our colleague, BOB ECKHARDT, regarding the appointment of Lynn Coleman as General Counsel of the Department of Energy. This article appeared in Nation Magazine on February 18, 1978.

Mr. Speaker, what are the questions we should ask of a proposed public official? Is he qualified? Is he honest? Will he place the public interest above his own? Is he a person of integrity?

If those questions are answered affirmatively, there is no reason to deny the opportunity for public service.

The record reflects that in the case of Lynn Coleman, the answers to those questions are "yes."

The Senate, I trust, will confirm this nomination.

---

A GOOD WORD FOR THE REVOLVING DOOR

(By BOB ECKHARDT)

In the issue of November 12, 1977, we criticized editorially James Schlesinger's appointment of a "registered oil lobbyist out of John Connally's Houston law firm to be general counsel of his [Energy] department." That man, Lynn Coleman, is now being considered by the Senate and we publish below an argument by Rep. Bob Eckhardt (D.-Texas) for his confirmation.

At issue here is a weighing of the merits and hazards of the "revolving door" relationship that exists in this country between private business and public service. The government logically seeks to appoint to its agencies men and women who have substantial knowledge of the areas in which they would work. But such persons, almost inevitably, have associations with and attitudes toward the industries they will be expected to supervise. In this situation, the Senate must examine not only the candidate's ability and experience but his or her character or principles. Such, at least, is the theory.

Representative Eckhardt, who appears here as Mr. Coleman's defender, is known in Washington as a liberal Congressman with deep commitment to the public interest. He is the immediate past president of the Democratic Study Group, the liberal caucus of the House. He has always opposed deregulation of natural gas, and he drafted the Staggers-Eckhardt Amendment to the Oil and Conservation Act of 1975, which brought "new" oil under federal regulation, and was bitterly opposed by oil interests.

In view of this record, we believe readers will be interested in his reasons for thinking that the country will profit from the presence of Lynn Coleman in the Department of Energy.

Lynn Coleman, a young man, is in what are considered the most active years of a trial lawyer's career. President Carter appointed him to the position of general counsel to the new Energy Department, and his confirmation hearing before the Senate Committee on Energy and Natural Resources raises interesting ethical issues concerning the proper U.S. policy about movement from private to public life.

Of course, the government has frequently tapped law firms for public service, and there have been notable examples of this in Texas, the most striking occurring during Wilson's administration. The firm was Gregory, Batts and Brooks. Gregory was Wilson's Attorney General and Batts came to Washington to aid in prosecuting some of the major anti-trust cases during the great era of trust busting. The firm was small but distinguished, composed only of the three partners; though they had personally represented corporate clients, not a breath of criticism of either Gregory or Batts reflected on the quality of their public service.

Coleman has practiced with Vinson and Elkins, one of the largest and most prestigious law firms in Houston. There are 240 lawyers in the firm, and former Secretary of the Treasury John Connally is one of the senior partners. The firm is old, and Connally is relatively new in it. Two other firms in Houston, Baker and Botts, and Fulbright and Jaworski, employ from 200 to 250 lawyers each. Fulbright and Jaworski represents a number of oil and gas interests—as does Vinson and Elkins. (The former firm's revolving-door relationship with government is well-known, and I have not heard it urged that Leon Jaworski's predilections, developed through long association as a partner with that firm, disqualify him for public service.)

I think the public still envisages a law firm as small, like Gregory, Batts and Brooks, rather than huge, like Vinson and Elkins. When critics say Lynn Coleman is in John Connally's law firm, they picture Connally, Coleman and a few other lawyers engaging together as comrades in arms in "'often successful legal battles on behalf of such clients as Union Oil Company, Continental Oil Company, and other major oil and natural gas firms," as Sen. Howard Metzenbaum (D., Ohio) puts it. Although Metzenbaum fairly and accurately added that Coleman was never personally involved in handling cases on behalf of major oil companies, and that Coleman had asserted that his experience with smaller companies did not make him partial and biased in favor of oil and gas interests, criticism of the appointment did not diminish. Nor did Metzenbaum blunt his attack.

Perhaps a third of the young Texas lawyers graduating with high marks each year go to the Houston metropolitan area; another third, to the Dallas-Fort Worth area. Since the big Texas firms vigorously recruit talent from the law schools of the state and the top law schools throughout the country, it may be conservatively estimated that these big firms in the three cities get about half of the young lawyers with the highest marks entering practice in Houston, Dallas and Fort Worth. Are the very substantial number of lawyers who are in these firms or pass through them so tainted as to be disqualified for later public appointment?

Twelve years ago, Lynn Coleman was one of these promising young recruits. He had grown up in Vernon, Texas, and gone to the University of Texas Law School after graduating from Abilene Christian College. When he finished law school, he spent a year as a clerk with federal Judge John Brown and then went to Vinson and Elkins. Over the next twelve years he rose to the status of partner and then to head the firm's Washington office. Coleman has said—and none of his factual presentations were challenged—that about 3 percent of his time in his Washington practice had been spent advising major oil companies, about 50 percent had been spent working on matters for the government of Puerto Rico, and the rest involved representing a diverse assortment of clients, including Houston Natural Gas Company, an intrastate pipeline. This background raised suspicions in Senator Metzenbaum's mind about the new appointee.

Senator Metzenbaum is an astute and thorough man. His examination of witnesses in hearings and his performance in conferences between Senate and House conferees display his ability as an advocate. But he is able in other ways: he has a strong feeling that the broad public interest should be protected against narrower private interests. Therefore, he was less impressed that the twelve years duing which Lynn Coleman had occasionally represented oil and natual gas interests would improve his skills as general counsel than he was fearful that such an experience might bias Coleman's legal judgment in important policy matters in favor of those former clients.

Moreover, Metzenbaum and Sen. James Abourezk (D., S.D.), who had strongly supported the President's program to contain gas prices within reasonable bounds, had been stung by the Presidential Whip when the Vice President and the leadership of the Senate killed their filibuster in order to hasten passage of energy legislation through the Senate in any form.

Against this background, it is understandable that Senator Metzenbaum approached the Coleman confirmation in, to say the least, an uncooperative spirit. He must have felt that the President had played into his hands by submitting the appointment of a Connally partner, an oil-and-gas fox to guard the people's chicken coop. What a ready-made forum this was to explore the threat of conflict of interest within the energy agency! And he exploited the situation.

The confirmation hearing afforded a good stage for a blistering attack, but there was not much substance of it. Coleman had arranged to sever all relations with his law firm permanently and to handle no cases in which it had been involved. Senator Metzenbaum, to his credit, began his examination of Coleman by saying: "In order to clarify the record, I intend to ask some specific questions about the issues I have raised." He then cited a series of cases in which Coleman had participated. It could be argued that they revealed a bias on Coleman's part in favor of oil and gas interests, to the detriment of the general public, and that they ought therefore to disqualify Coleman from appointment to the office for which he had

been named. Despite his perhaps preconceived view of the Coleman confirmation, he conducted the hearing interrogation fairly.

There were no startling disclosures. Coleman, as a young lawyer, had participated on the brief in two typical examples of corporate representation, one involving United Gas Pipeline Company, concerning what should be the proper rate base for pipeline charges, and another involving Austral Oil Company, which sought to uphold in court the Federal Power Commission's grant of a gas price of 18.5 cents based on certain factors that went beyond "cost base pricing."

The latter case was the more important. The FPC had generally adhered closely to "cost based" pricing of natural gas at the wellhead. In the Austral case the FPC did not abandon cost as a basis of pricing but broadened the criteria for judging what costs are involved in production. The case importantly affected existing energy policy and law by significantly broadening the base and permitting higher prices.

Then Senator Metzenbaum brought up another case in which Coleman was more actively involved, the Trans-Ocean Oil Company case. There, the FPC was demanding information concerning gas reserves in the area where Trans-Ocean was drilling. Trans-Ocean sought to withhold this information, contending that to make it public would give its competitors important data for bidding on other "blocks" or areas in which it was also interested in bidding. The commission finally ordered the company to submit the data, but only after bids and sales on certain "off set blocks" had been completed. The case was a typical conflict between two commercial interests.

Then Senator Metzenbaum referred to the Montana Power case, the only one in which he found Coleman's advocacy to his liking. Senator Metcalf had previously praised Coleman's participation in this litigation, which he called a "very remarkable series of cases." Coleman had represented Montana producers against the Montana Power Company.

Finally, Senator Metzenbaum referred to the Puerto Rican case. Crude oil refined in Puerto Rico was unusually expensive because it consisted almost wholly of foreign oil. Under federal law, refiners are permitted to pass costs of crude oil on to the consumer in higher prices for products like gasoline, diesel fuel and heating oil. The extension of the refiner rule to Puerto Rico made subsidiaries of the United States refiners base the prices for their products on the nationwide refining cost of their parent companies rather than directly pass through the higher cost incurred in buying refiner products from the island refiner, Commonwealth Oil Refining Company, which accounted for 80 percent of Puerto Rican supplies for consumption.

Senator Metzenbaum found it "probably confirmable" that Coleman's successful defense of the rule saved consumers of Puerto Rico $144 million a year. But he claimed that the case was really a contest between Shell, on the one side, and Texaco, Mobil and Exxon on the other. Shell supported the Federal Energy Administration's position, which was favorable to Puerto Rican consumers.

This history of former law practice is not very revealing, except to show ability and experience. In the hearing, Sen. Bennett Johnston (D., La.) had said to Coleman:

"We have been talking about a counsel's job here. It is just absolutely inconceivable to me . . . that we would deny you a spot of general counsel because you had experience in the private sector."

But the Louisiana Senator, who has been strongly pro-oil and gas on the Energy Conference Committee, was inclined to be friendly to a lawyer with oil and gas experience.

Senator Metzenbaum then very properly explored Coleman's lobbying activities for Houston Natural Gas Company. Since Houston Natural operates within the state, it is not a "jurisdictional pipeline": the Federal Power Commission does not regulate its rates with respect to its purchase, sale and transportation of gas. Thus, Houston Natural may buy gas in Texas and sell it to Houston Lighting & Power Company in Texas without having either the price of the gas or the cost of its transportation controlled by the FPC. But it may not buy gas for the interstate market and mix it with the gas it is transporting for use solely in Texas without making the total mix "jurisdictional," and thereby making itself a pipeline subject to FPC regulation.

The energy legislation now being considered would tend to move gas from use in industries in Texas, where it is produced, to homes throughout the country. This is the opposite direction to that toward which gas has moved in the past. It had been moving into the intrastate market, where it was sold at uncontrolled prices about three times those of gas going to interstate use. The proposed legislation would stop this trend. Further, it would phase out the use of gas for boiler fuel by both direct prohibition and taxes on certain uses not prohibited. Even with the increased prices permitted by recent FPC decisions and the even higher prices permitted under the proposed legislation, gas would still be a bargain compared to oil, and its value is further enhanced by its being the cleanest of fuels.

This movement of gas from the intrastate market to the interstate market would of course leave gas pipelines, that had previously carried only intrastate gas, functioning at less than capacity, thus inefficiently. It is as if a train of 100 railroad cars, each full of oil, should be compelled to operate half full, while another train was provided to carry oil to interstate users. It is obvious that it would be better and cheaper to use the excess capacity of the first 100-car train. But if, in order for the intrastate pipeline to use its excess capacity to carry interstate gas, it must subject all its gas and all its carriage to FPC control, the pipeline will elect to operate with a less than full load. Thus, each 1,000 cubic feet of gas which makes up the less than full load will cost more, and the fuel bills will rise for both residential and industrial consumers in Texas. Also, if new interstate pipelines must be built to deliver gas that could have been handled through the excess capacity of the old intrastate pipelines, such will add an additional cost burden to interstate gas.

Coleman, as a lobbyist for Houston Natural Gas Company, brought this to my attention, and I drew an amendment, which became part of the House-pased bill, to permit intrastate pipelines to use their excess capacity to move gas into interstate commerce, without giving the FPC the power to control their gas that remains in intrastate use.

In the confirmation hearings, Senator Metzenbaum called the amendment "the Coleman Amendment" and characterized it as a loophole for moving gas at unregulated prices into the interstate market. What he failed to recognize was that the amendment required the FPC to pass on the arrangements and to approve them only if it were assured that the prices involved were "fair and equitable."

Coleman's activity as a lobbyist throws more light on his character and ethics than does the history of his law practice. There are essentially three types of lobbyists in Washington: the old-fashioned beefsteak-and-bourbon lobbyist; the new-fashioned Washington emissary lobbyist, and the lawyer lobbyist. The first kind influences through affability, sometimes verging on bribery. The second compels by organizing support or opposition at home. The third persuades by showing ways of solving problems or reconciling differences.

Coleman is of the third type. The talents of such a person are of the kind most desired in a Congressional staff member or an attorney in an administrative agency. And when one having these talents is known to be a person of candor with a natural impulse to act in the public interest, such a person is a prime candidate for appointment and for confirmation in a job like that of general counsel of the Energy Department.

My experience with Coleman in matters such as the excess pipeline capacity question goes back a number of years. I have found him a useful adviser and confidant in other matters where his expertise and my interest coincided. His representation of Houston Natural is a good example. In that matter Coleman did not act improperly. He argued in support of the amendment, and its adoption was of course favorable to his client. But he made no misrepresentations and did not attempt to affect the legislative process by any improprieties. His lobbying efforts were limited to presenting legal and economic arguments.

Senator Metzenbaum's skeptical view of the amendment was also not at all improper. Though his criticisms were developed in a "stop Coleman" movement, they raised legitimate points. Generally, the FPC's standard is based upon the judgment that the price is "just and reasonable." Here the standard rested upon the language "fair and equitable." This might be construed to be a less rigid standard, but it was necessary to use language other than that of the Natural Gas Act because all the judicial baggage that "just and reasonable" carried could not practically be carried over to a determination respecting a pipeline whose economic structure would not be subject to total FPC scrutiny and control.

Senator Metzenbaum also raised this precaution: that we make sure that the amendment not be a vehicle for the intrastate pipeline to "broker" gas, thus drawing off a middleman's profit in addition to a reasonable profit for transportation. We are working on these points in conference now, and the Senator and I are in substantial agreement.

Sen. Henry Jackson (D., Wash.), who seemed generally favorable to Coleman, raised another question: Should a person of integrity and character, who clearly possesses a high level of competence and against whom there is no evidence of wrongdoing, nevertheless be disqualified from serving in a high public post if there were an appearance of taint because he had represented interests which he must control after his appointment? While assuring Coleman he did not personally question his probity, Senator Jackson worried about how the public could be convinced "that someone who has been so closely identified in a firm with the oil industry" could "really fulfill the important obligations that fall on the office of general counsel."

Sen. John Durkin (D., N.H.) asked Coleman in the hearing the following question which I paraphrase:

I have nothing but admiration for your ability and respect your integrity, but how do I tell the people of New Hampshire and New England that you, as general counsel for the Department of Energy, are going to solve the national energy problems for them when you have been an oil company lawyer?

How can such a question be answered?

It seems to me that Senators have an obligation to discover for the people of New England and the rest of the country whether in fact Lynn Coleman has become indelibly tainted by his oil and gas associations. Their obligation is the more serious when they deal with a man about whom they admit there is no evidence of wrongddoing and about whose ability and integrity there is substantial and unchallenged evidence. Further, they must

examine each nominee on his or her individual merits. The Coleman case seems to me to demonstrate conclusively that no general rule can possibly be applied without seriously restricting the government in recruiting people sufficiently talented and experienced to deal with technical problems, such as those involved in regulating the oil and gas business.

The result of the Coleman confirmation proceeding described here will probably be final by the time this is printed. Whatever the result, the issues involved in it and the manner in which they were considered matter. People will inevitably move outward through the revolving door at the portal of public service. We should not deplore the fact that they sometimes move inward. The Senate should welcome those who are honest, qualified and well motivated to perform public service and bar those who are not. This should be the only rule or standard.●

## HMO'S WORK AT KEEPING HEALTH CARE COSTS DOWN

Mr. PELL. Mr. President, during this period of rising health care costs, more and more attention is being paid to health maintenance organizations as a type of health care delivery and health care cost containment.

Health maintenance organizations—HMO's—are prepaid group practices where for a monthly premium an individual or a family can have a comprehensive health care program.

On February 17 of this year President Carter visited an HMO in Providence, R.I. RIGHA—the Rhode Island Group Health Association—was the first fully qualified HMO under the Health Maintenance Organization Act of 1973, and it serves as a model for many developing HMO's throughout the country. On March 10 Secretary Califano held a special day-long meeting in Washington of hundreds of business, labor, and health leaders to introduce them to the idea of HMO development as a workable solution to skyrocketing health cost inflation.

At that meeting one of the most important and interesting speeches was given by a close friend of mine from Rhode Island, who was essential in the founding of RIGHA and in seeing it through thick and thin until today, Edwin C. Brown, the Secretary-Treasurer of the Rhode Island AFL–CIO.

Ed Brown's eloquent statement clearly points out the importance of HMO's as well as the heroic efforts of men like the late Thomas Policastro and of Ed himself to get RIGHA on its feet.

I would like to share with my colleagues this excellent statement and bring their attention to the important role that HMO's play in taking care of people when they are sick, in keeping them healthy, and in keeping health care costs to a minimum in today's incredibly expensive health environment. At this point I would like to print Ed Brown's statement in the RECORD:

The statement follows:

STATEMENT BY EDWIN C. BROWN

Dr. Elwood, members of the panel, and conference participants: The health care industry is shrouded in mystery and myth. It is complicated, fragmented and confusing. America has the very best medical schools, the best trained physicians and nurses, and the best equipped hospitals. Americans also spend more money per capita for health care than any other nation in the world, and yet, our residents do not receive a better quality of health care.

The question I frequently ask myself is . . . "How in the world did a jewelry toolmaker ever become so involved in such an unorganized business? It is a question for which I have no rational answer. In retrospect, however, I can think of more reasons why I should not have become involved. I survived, and I believe the creation of the Rhode Island Group Health Association has been a significant factor in improving the delivery of health care in Rhode Island.

My involvement, on behalf of the Rhode Island AFL–CIO, was a back door happening. During World War II, most unions had negotiated with employers for amounts of money to be set aside for the purchase of a schedule of health benefits. The employer usually purchased the benefit package from a friendly insurance carrier. These plans were expensive, benefit coverage was inadequate, and the employee, physician, hospital, and employer were inundated with an avalanche of paper work before benefit payments would be made. The required forms were drafted by insurance companies—no two companies had the same forms—and they were complicated and incomprehensible.

The situation became so intolerable that providers were insisting upon their payment directly from the ailing worker and he in turn would arm-wrestle with the carrier for reimbursement. The workers, the providers, and the employers were becoming increasingly disenchanted with the burdensome system. Subsequently, unions insisted that employers turn to the Blue Cross-Blue Shield arrangement as a solution to the complicated and unsatisfactory paper work method of the insurance carriers. With the Blues, the union and employer negotiated a specific level of benefits. All parties understood their benefit schedule and there were no reams of forms to be filed.

For years the health care industry of the nation was sick, and after the war the patient took a turn for the worse. Hospital expansion took place. Obsolete hospitals required modern buildings and hardware, cost of supplies skyrocketed, wages for hospital employees needed updating, and the convenient conduit of the Blues firmly in place, physicians altered their mode of practice and were demanding a greater share of the health care dollar.

Union leadership found itself in a very unpleasant situation. They were negotiating greater and greater amounts of money from employers for health coverage, but these amounts were purchasing less and less health care. Deductibles became more numerous, out of pocket payments by workers increased, and it was almost impossible to obtain a family physician. If health care was needed on a Wednesday, holiday, weekend, evenings, or during the doctor's vacation, it was necessary to visit a hospital emergency room and suffer the consequences. The so-called system was a mess. It was not working satisfactorily and getting worse. The Blues made no meaningful effort to contain costs, or improve the level of care. The governing boards of the Blues vigorously resisted union efforts to have the membership of the boards more accurately represent the population of subscribers.

The question raised repeatedly by our membership was—"are we getting our monies worth? We were convinced we were not, and improvement in the disorganized method of health care delivery appeared remote.

Union members were agitating for changes in the manner in which the Blues operated, and also the legislation that governed them. It was at this juncture that the state labor council became deeply involved. The council was convinced that the Blues was reluctant to break with the past and were comfortable with the status quo.

This so-called system was the cause of many of the deficiencies we were complaining about. It contained no provisions to assure high quality care, there was no concern over needless operations, overcharging, excessive and unnecessary hospitalization. It did nothing to provide early diagnosis, prevention of disease, or health care education, and it met but a fraction of the health care costs. The Blues were incapable of containing costs, and as a matter of fact, their system was contributing factor in the rapid rise of health care costs. Their scheme was based on the antiquated, solo practice, fee for service, piecework system—so many dollars for a tonsil, or an appendectomy or a hysterectomy.

Because some of the changes unions sought required legislative action, labor's legislative arm, the Rhode Island AFL–CIO, was mandated to seek amendments in the enabling legislation of the Blues. The AFL–CIO concluded that the Blues were merely serving as a conduit for the transfer of funds from an employer to a provider. The unions had bargained for these amounts of money and they were not permitted any voice in the dispersal of their negotiated money.

We expressed our lack of confidence in the health care industry publicly. We exerted extreme pressure for change in the state legislature and we served as strong opposition before regulatory agencies during the frequent hearings on rate increases. We experienced limited success, but we were laying a foundation for future developments. The public discussion focused attention on the shortcomings of the health care industry, and employers, our members, elected and appointed officials, and the general public received a revealing education concerning the goings-on associated with that industry. It was evident that supplying more and more money for less and less care was not a sensible arrangement.

Our union leadership soon realized that it was not going to be easy to correct many of the deficiencies in the industry. We became convinced that it was imperative that alternative ways to provide adequate health care at a reasonable cost must be devised.

Consequently, the Executive Board of the Rhode Island AFL–CIO established a Health Services Committee. Our committee learned that there were organized systems of providing health care. They became aware of the Lahey and Mayo Clinic systems. Most were already familiar with the military system. They learned how presidents and congressmen have available a group practice system for their health needs. They also discovered the prepaid, group practice plan run by Kaiser on the West Coast, the Meatcutters one in Cleveland, the HIP plan in New York City, and the Teamsters plan in St. Louis.

By the time of the 1966 convention of the Rhode Island AFL–CIO, the committee was far enough advanced to offer a resolution that stated—"the continuation of the solo practice, fee for service, fragmented method of delivering health care was not in the best interest of our members and the population of the State." It mandated the officers of the Rhode Island AFL–CIO to develop a method of improving the existing system. The new system would be addressed to the major problems of availability of care—organization of a prepaid group practice, distribution, utilization, improved quality, and the financing of health care based upon experiences in other sections of the United States. To help defray the cost of this venture, the convention delegates voted to increase the per capita tax from 5 cents to 10 cents per member per month.

It was at about this time we turned to National AFL–CIO for guidance. On a visit to

the Social Security Department of the National AFL–CIO, we informed Nelson H. Cruikshank and Bert Seidman of our interest in the formation of a health care program. They were members of the prepaid group practice plan in Washington, D.C. and they were enthusiastic supporters of the concept. They arranged for Thomas F. Policastro, president of the Rhode Island AFL–CIO, and myself to meet with Dr. Palmer Dearing and Lou Segadelli of Group Health Association of America. We became affiliated with the Group Health Association of America and have profited from that association.

In March, 1967, I received a call from Lou Segadelli of GHAA. He informed me that GHAA had been awarded a grant from the federal government to conduct studies as to the feasibility of establishing prepaid group practice plans. He asked if the Rhode Island AFL–CIO would be interested in having a study made in Rhode Island as to the feasibility of establishing a group health plan. I had two questions. What would a feasibility study consist of, and how much would it cost us? The first question was explained, and the reply to the second was "nothing." At that price, I agreed. Tom Ludwig of the GHAA staff was assigned to direct the feasibility study.

To help finance certain phases of the study we needed additional local funds. We had available the funds raised by the previous increase in per capita tax. We also returned to our local unions for additional voluntary contributions. The leaders of these unions resorted to ingenuous ways of raising their share of the seed money. They conducted car washes, cake sales, entertainments, drawings on TV's, and direct solicitations. Other unions appropriated monies from their local's treasury, or from their health and welfare reserves. In total, we raised about $300,000 in seed money. On June 28, 1967, the conclusions of the 90-day feasibility study were published. It was agreed that the necessary ingredients were present for possible success.

We learned much from the feasibility study. We learned that a significant number of union members, employers, physicians, hospital administrators and Brown Medical school officials were sufficiently interested in discussion alternative methods of delivering health care. This gave us encouragement to proceed.

Some employers were not only concerned about the escalating costs of regular health care, but were also interested in trying to do something about lowering the costs of workers' compensation.

Members of our committee visited the plans in Cleveland and New York, but it was their conclusion that none of the plans visited would be successful if transplanted to Rhode Island. They learned that group practice plans were an effective way of encouraging early diagnosis, preventive care, education, and reduce costs through less hospitalization. They learned that group practice plans were far superior to the uncontrolled solo practice, fee for service method. They learned that the Blues and third party payers were not solving the cost problem, they were making it worse. Their system was an incentive to hospitalize unnecessarily. They failed to encourage preventive health care techniques or educational programs. The committee learned our negotiated fringe benefits were purchasing a schedule of benefits and not providing health care. They learned that medical audits were top drawer secret documents and there was no way of learning if we were receiving good, bad, or mediocre care. There was no way of learning about a report of a hospital utilization committee, or the findings of a tissue committee, or a disciplinary action by the medical staff for a poor performance of a fellow physician, or the results of peer review, if any. They also discovered that independent journalism was featuring the virtues of group practice and pointing an accusing finger at the evils of the health care industry. Among them were: Time, Life, Look, Fortune, Business Week, Progressive Architecture, and others.

Before the feasibility study had been completed, there was a serious question if the existing practice of medicine was not hazardous to our health.

Unions wanted a one-stop service for the subscribers. It was our belief that if a plan were to be successful in Rhode Island, it must be a free standing facility based at a primary hospital where it would be convenient for plan physicians, patients and family. In too many instances we learned that union members had no medical specialists to care for the family, and very often the wife's physician was considered to be the family physician.

In a Rhode Island plan there must be a team of primary care physicians on call at our health center seven days a week; including nights, weekends, and holidays. The subscriber must have a free choice of the plan's primary care specialists to care for the entire family and sub-specialty consultants were to be readily available. The patient need not travel all over the state for treatment, lab tests or x-rays. The plan would engage in early diagnosis and preventive care. We wanted the medical records for all the members of the family located in the central place for better family health care. Duplication of services and hardware were to be eliminated and ancillary services convenient.

We wanted a nonprofit, comprehensive, prepaid, multi-specialty, hospital based, prepaid group practice plan. We were convinced that the type of group practice engaged in at Mayo and Lahey Clinics should be made available to our subscribers.

Although the legal umbrella to organize a plan in Rhode Island would have been adequate, we decided it would be advantageous to have the state legislature adopt special enabling legislation for our particular needs.

After traveling the legislative route of public hearings and meeting the usual problems associated with such legislation, the bill was passed and signed into law by the then governor and now U.S. Senator John H. Chafee. However, in preparing the legislation, a listing of the names of incorporators was necessary. We wanted a list of incorporators that showed a broad base of community support. In particular we invited some of the major employers to join with us. To this point in time, we had received considerable encouragement from many employers, some physicians, public officials, etc. However, we soon learned that union officers had no monopoly on stupidity. There was a sufficient supply of the commodity to be shared with others. We received more lame-brained excuses from them for not joining with us in public view than you could shake a stick at. Some hedged because they were on the boards of the Blues, or hospitals, or health agencies, and they feared there would be conflict. Others, sought the nonmedial advice of their physician friend.

That was tantamount to asking if Lenin believed in Communism. They were scared off. They were told our scheme would never work, they would become involved in a communist conspiracy, it was socialized medicine and would destroy the free enterprise system. These hard-nosed employers did not have the courage of their earlier convictions.

We turned elsewhere for support. To our pleasant surprise, we found several public-spirited individuals who came forth and supported our effort. A president of a college, a former governor, a university professor, a clergyman, a financier, the head of the Urban League, and some small businessmen were included. But we did not receive universal support of the business community.

The early reluctance displayed by employers and physicians to cooperate has turned around. We now have enthusiastic support. During the past couple of years we have attracted the chief operating officers of our telephone company; a major insurer, (not Prudential); the financial officer of a large manufacturing firm and the personnel director of a major hospital, and other management representatives. All are contributing their expertise to our success. The early fear and hostility of physicians is no longer as vicious. We have a healthy list of applicants, consultants are seeing patients at our facility, and we have comfortable working arrangements with most all specialties.

After the legislation was in place, we embarked upon meeting after meeting with hospital administrators and trustees, physicians, employers, supply houses, government officials, union members, and anyone else who would meet with us. We were waltzed around pretty well by the health care establishment.

During the course of our hospital trustee meetings, a classic example of employer resistance took place. I had completed my plea to the trustees for affiliation with a large community hospital. The trustees remained silent, they looked at each other and after a deafening silence, the trustee chairman spoke up . . . "Ed, I hear what you say, I understand your request, but honestly, what are you really after?"

He was expressing the fears of an insecure business community. Their concern was—were we trying to organize the employees of the hospitals? Were we trying to use a health plan as a scheme to organize workers in unorganized plants or did we have ulterior motives?

Another example of an employer's reluctance to venture along new social paths took place when a group of Steelworkers wanted the opportunity to join our plan. The employer refused to offer a choice. It was only after the union members threatened a work stoppage did the employer agree to dual choice of plans, and we were successful in enrolling a large percentage of the workers.

Our enabling legislation was enacted in early 1968 and it was not until 1971 before we were able to start delivering services. And it was not because we were not trying.

Our affiliation with a hospital came about only after a strong stand taken by our Catholic Bishop. He and some of the trustees were convinced that the type plan we were proposing made sense and he was willing to give us a try at the catholic-run hospital. The medical staff of this hospital resorted to every possible tactic to prevent our affiliation. He insisted that the hospital was for the convenience of patients and not the doctors. The irresponsible behavior of some of the staff physicians is what gives doctors a bad name.

The first two years of our operation was a nightmare. We were in a hand to mouth operation. The reservoir of local union funds was depleted. The federal government was not prepared to make a meaningful commitment. I next turned to national AFL–CIO unions. George Meany and Lane Kirkland of the AFL–CIO were our greatest champions. Through the intervention of Bert Seidman, the National AFL–CIO provided us with a $100,000 loan; Twenty-five thousand dollars came from the Textile Workers of America and another $25,000 from the Ladies' Garment Workers; $57,000 from the Rhode Island AFL–CIO; $5,000 fom the Transit Workers; and $2,000 from Local No. 580 of the Social Workers. We also negotiated a $90,000 loan from the local Laborers' Health and Welfare fund. After about two years of operation, we were on the ropes. Employers were continuing to resist our enrollment efforts, physicians and the Blues were bad-mouthing us on every occasion. The bickering among the hospitals, the medical staffs, and poor

administrtaion by our staff was discouraging. For the first time I was about ready to admit failure.

During our trials and tribulations, I was visited frequently by representatives of various insurance carriers, suppliers of medical and hospital equipment, foundations, and sundry entrepreneurs. They were creating an erroneous impression that they were interested in helping us succeed. I became convinced they were merely picking our brains.

When I was at the lowest point in my confidence as to the future of RIGHA, I received a visit from a team of Prudential Insurance Company representatives. Until this time, I had never been aware of Prudential's interest in RIGHA or in the HMO concept.

Prudential was not included in number of insurance companies that had previously proved to be such an annoyance. My first reaction was, here was a new kid on the block and I was damned he was not going to pick my brains about the good and bad of RIGHA. My reception of this team of gentlemen would not have qualified me as a prime candidate for the British Diplomatic Corps. Their reception was somewhat less than cordial. To my amazement, their approach was so much different than the previous insurance peddlers.

They were not on a fishing venture. They convinced me they were on the level. They had done their homework. They knew very accurately the situation at RIGHA. They were very frank as to the potential of the plan. They stated in general business terms why Prudential was interested in a relationship that may help RIGHA. They were clear on what they would do for us and the experience their company may gain from a cooperative relationship. I visualized the possibility of saving RIGHA.

I arranged meetings between members of the RIGHA board and representatives of Prudential. Originally there was a difference of opinion within my own family as to the wisdom of a union-sponsored plan embracing the giant of the insurance industry—or vice versa. I was convinced it was the only way to go. Within weeks, a plan was developed, all the pertinent information had been exchanged and the wedding consummated. As financial support was a necessary ingredient, Prudential came through with grants and loans. But most important Prudential had recognized our basic weakness—lack of good management talent. Our arrangement with Prudential not only included financial assistance, but we consummated a management contract that, to my way of thinking, was more important than the money commitment.

The health care consultants who were advising me were insistent that I turn to the health care industry for professional management. I had tried that route on several occasions and it was a failure. They had brought the bad habits of their health care experiences to RIGHA and things went from bad to worse. I was convinced that what was needed was a good business manager with common sense.

The management contract with Prudential produced a team, headed by Ken Simmons, that turned RIGHA from a failure to success. In addition to Simmons, there was Sam Havens an administrator; Dave Robertson, the comptroller; and a marketing person. It gave strong management. It made the plan attractive to physicians and other professionals. It made local employers more comfortable with the plan. It attracted to the plan Dr. Robert Rosenberg, who is responsible for many of our medical successes. Words of mine or inadequate to express the worthwhile contributions Ken Simmons and Dr. Rosenberg have made to RIGHA.

During our period of agonizing suffering, many staunch supporters came forth with a helping hand. Among the true friends were U.S. Senator Claiborne Pell, Dr. Joseph E. Cannon, Rhode Island director of health, and his deputy John Tierney; John Kittredge and Lesley Ralson of Prudential. The governors of the state, and mayors of several cities were also very supportive.

On opening day, June 1, 1971, RIGHA had enrolled 1200 members—far short of our targeted goal. There was slow gradual growth until 1973 when Prudential came to our rescue. In 1974, the state of Rhode Island and the federal government enacted legislation that called for employers to offer employees a choice of health care plans when such were available. This was a significant factor in the enrollment growth. Since 1974, the enrollment has increased from 12,000 members to 28,000 prepaid and over 5,000 fee for service patients. There are 25 full time physicians, 250 employees, our main facility is located in an attractive restored historic mill building and we operate a satellite center twelve miles away. We were the first qualified HMO in Rhode Island and in the country. The second qualified HMO in Massachusetts and we are now in the process of marketing our plan to a Massachusetts population of over 200,000 residents. We are operating one of the most successful alcoholism programs in the country, we have "no smoking" clinics, weight control sessions, mass inoculations, health education, and during the recent New England snowin, our facilities and staff served, for several days, the health needs of many stranded travelers. If I sound proud of the accomplishments of RIGHA, it is because I am proud. RIGHA has recovered from a serious condition of weak management and financial malnutrition and thanks to the diagnostic and remedial prescriptions provided by Doctor Prudential, we are out of the woods.

Management or labor cannot do it alone. We tried it and did not meet with unqualified success. Labor and management must adopt the sames working relationship for HMO as it does with the United Way campaign and other worthwhile community endeavors. They must work together with a professional medical, marketing, and managerial staff. It is not an adversary, but a cooperative venture.

There is no right way to organize such a plan. The plan and techniques employed must be tailored to meet the paricular situations in the location. Also, you will find that there is no specialized genius who can do it for you. It takes hard work, patience and money.

Management has a vital role to play in the improvement of health care delivery. It is in your best interest you become deeper involved.

The HMO vehicle is the American private enterprise system at work. To be successful, it must receive complete cooperation from government, private employers, and unions.

In closing, I will offer a greater challenge. I believe we should be working to deveop a heath care system that would provide complete health care for ailing individuals regardless the cause of their condition. The day to day health care matters should be folded into the health care plans associated with injury or illness on the job, auto accidents, or from any other source. All that is needed is the will to do it, and I believe such a plan is possible.

## A DEMONSTRATION PROGRAM TO STIMULATE CONSERVATION

● Mr. McINTYRE. Mr. President, this Congress has an opportunity to take an important energy conservation step in the fiscal 1979 Department of Energy budget. This opportunity has been presented to us and to the administration before, but strangely, we have let it slip by.

We have begun long-range programs to convert our economy to domestic sources of energy. And we have begun to authorize research and development programs for measures such as natural gas burners, electric heat pumps, and natural gas heat pumps. But it is absurd that almost 5 years after the Arab oil embargo, we do not have any programs to take advantage of the potential savings in home oil heating systems.

My esteemed New Hampshire colleague (Senator DURKIN) plans to introduce soon in the Committee on Energy and Natural Resources an amendment to the Federal energy budget that will provide $10.5 million for a "Residential Oil Heat Efficiency Improvement Program." This amendment has my full support, and I hope all my colleagues will support it as well.

Below I will outline how this program can save over 200,000 barrels of imported oil every day. Through this program, millions of citizens can save 15 to 30 percent, and possibly as much as 40 percent of their heating oil bills. But first, Mr. President, it would be a good idea to review the rationale for Federal involvement in this program to improve the efficiency of home heating oil burners.

According to Federal data, approximately 14 million homes in the United States are heated with oil.

Some energy policymakers have concluded that the use of heating oil will or should be phased out in the future. The likelihood that this will happen without severely coercive Government pressure is practically nil. Indeed, the Department of Energy projects that without this program demand for home heating oil will grow in the coming years to the following totals:

| | |
|---|---|
| 1980 | 409 million barrels |
| 1985 | 446 million barrels |
| 1990 | 498 million barrels |

With this substantial and growing projected use of home heating oil, it is appropriate for the Government to see what can be done to achieve maximum conservation. We have already filled our citizens' ears with exhortations to cut down their use of fuel by turning down thermostats. And people are installing insulation as fast as the Nation's manufacturers can produce it.

More can be done to help people conserve in comfort. New burners which have already been developed and tested can save between 15 percent and 30 percent of the oil now used in home heating oil burners. And replacement of existing burners with some new burners being developed can save as much as 40 percent of the oil consumed.

If only half of the 14 million oil-heated homes in the Nation were equipped with these high-efficiency burners, the energy saving would be tremendous. Some statistics below show the potential savings. According to the Department of Energy, residential heating oil consumption is expected to be 1.4 million barrels per day by 1985. Here are some examples of potential savings:

First. If half (50 percent) of the oil burners in the Nation were replaced by burners that save only 15 percent of oil use and cost, the saving would be 50 percent×15 percent×1.4 million barrels/day=100,000 barrels per day.

Second. If half of the oil burners were replaced with burners that are 30 percent more efficient, the savings would be 50 percent×30 percent×1.4 million barrels per day=200,000 barrels per day.

The efficiency of an oil heating system can also be improved in many instances by reducing the size of the burner nozzle.

During the era of cheap energy, builders were more concerned about supplying ample amounts of heat to a home than about conserving energy. As a result, many oil heating systems have larger nozzles than are needed. Consequently, many families can save 10 to 15 percent on their heating bills simply by reducing the size of burner nozzles at a cost of less than $50.

The $10.5 million program that Senator DURKIN will offer, and which I heartily endorse, consists of two parts: a $6 million demonstration of existing energy-saving technologies, and a $4.5 million research and development program from new energy-saving oil heating system components.

Significant energy savings can be achieved through development of new components for oil heating systems.

New boilers and furnaces that deliver heat more effectively from a burner to the room being heated are on the drawing boards, but need development funding.

Also, experimental new burners, which may be more efficient than the best burners now on the market, which in some cases can use a mix of fuels such as wood and oil, are also being developed.

Oil-fired heat pumps are also being developed. These heating systems may have higher initial installation costs than today's oil heating systems, but they may also save half the oil that would be used by a conventional system.

Although the Department of Energy is funding programs to develop gas-fired and electric heat pumps, no money is budgeted for oil-fired heat pumps, which offer the biggest potential saving of all these research and development items.

PAYBACK PERIOD

Refitting oil heating systems with new, improved burners can be one of the most cost-effective energy conservation measures possible in a home. The Commonwealth of Massachusetts has done a study of the relative costs and savings of replacing oil burners compared to adding insulation and other measures. This comparison has been published in a proposed "Demonstration Project for Residential Oil Burner Modification/Replacement Technology." I ask unanimous consent to insert a copy of this proposal at the end of my statement.

The Massachusetts report analyzes the so-called payback period, which is the period of time needed for the homeowner to get back, in savings on fuel costs, the amount of money spent on the energy measure. The shorter the payback period, the more energy is saved for a given measure. An example of a payback period is the rate at which money deposited in a bank earns interest. At simple interest of 10 percent, money in a bank account would pay for itself in 10 years.

The results of the Massachusetts analysis of payback periods are startling. For each type of house studied, both new burner installations and adjustments to the firing rate of existing burners have payback periods of less than 2 years. This is substantially less payback time than insulation, even for poorly-insulated houses.

In other words, one of the best energy-saving investments that a homeowner can make is in a good new oil burner.

WHY A FEDERAL ROLE?

If replacing oil burners is such a good idea, why does the citizen need the Federal Government to get involved? Why are people not already replacing burners in large numbers or hurrying to obtain new burner equipment with reduced firing rates, just as people are insulating homes?

There are several reasons. One is that the Government has put a great deal of effort into publicity telling people about insulation, but there has been virtually no publicity regarding efficient oil heating systems.

Also, the public does not know much about the technology involved in oil heating. A new burner costs $200 or more, and at this price, people are naturally unwilling to spend money on measures which promise savings over time but with which they are unfamiliar. In addition, some home heating oil dealers, who sell eqipment as well as oil, may be unwilling to sell equipment that cuts down their sales volume. However, through a Federal program, oil dealers can be shown that although sales volumes decline, profitability need not suffer. I might note in passing that the Oil Heat Institute of Long Island and the New England Fuel Institute, whose members are heating oil dealers in those regions, both support a Federal program of this nature.

The burner industry is too small to overcome buyer resistance as well as doing all the research, development, testing, standardization, and certification. The largest manufacturer of burners in the Nation had sales of only $11 million in 1976. With small companies facing small demand and substantial buyer resistance, the industry is stumbling just when it should be advancing.

These and other market barriers can be overcome through a cooperative program between Government, the equipment industry and heating oil retailers.

This program will become doubly important if the proposed Federal income tax credit for energy conservation measures and a Federal loan program to help people finance energy conservation measures are passed.

Improved heating oil burners are among the items for which the Federal consumer income tax credit has been proposed. If this tax credit is to be an effective instrument of Federal policy, the public will need to have full knowledge of the savings potential of these devices.

THE PROPOSED PROGRAM

The following activities, and others, would be important parts of a Federal program.

I. For the $6 million demonstration program:

(1) Training programs for retailers and installers in order to ensure that replacements are done properly;

(2) Monitoring programs to check on installations and to verify projected savings;

(3) Public information programs to make consumers aware of the potential energy savings and to allay the fears of both the public and the oil retailers about these measures;

(4) A demonstration of the potential energy savings that can result from replacing old burners;

(5) A demonstration of the safety of flue dampers and other heat recovery measures.

II. For the $4.5 million research and development program:

(1) Development of new boilers and furnaces for residential use;

(2) Development of new, more efficient burners;

(3) Development of equipment to burn both wood and oil; and

(4) Development of oil-fired heat pumps.

ADDITIONAL NEEDED STEPS

In addition, I have introduced a bill, S. 2733, the Small Business Energy Loan Act, to provide Small Business Administration loans to small firms that make or sell energy-conserving measures but cannot obtain financing elsewhere. This bill could help small-burner manufacturers to convert their plants or expand to produce new energy-conserving burners and parts. These energy-conserving measures and others would be brought to market faster as a result of this legislation.

In conclusion, Mr. President, I see several potential energy-conservation gains resulting from this program. It would help to show more clearly how much oil can be saved through conversion to new, efficient burners that are now coming onto the market. Also, we would learn more about, and hasten development of, newer burner technologies with even greater energy conservation potential.

This program would stimulate development and manufacturing activity, and it would encourage contractors and retailers to sell and install new, efficient burners. It would provide consumers with the information they need to make intelligent purchasing decisions, and raise confidence in energy-conserving heating equipment.

The proposed program dovetails with the contemplated Federal income tax credit for residential energy conservation measures and with the untility residential energy conservation program in the President's energy legislation to save the Nation hundreds of thousands of barrels of oil imports per day, and save consumers a substantial portion of their heating bills.

I wish to submit for the RECORD copies of the proposed programs:

The material is as follows:

A DEMONSTRATION PROJECT FOR RESIDENTIAL OIL BURNER MODIFICATION/REPLACEMENT TECHNOLOGY

I. INTRODUCTION

The proposers, The Massachusetts Energy Policy Office and the Walden Division of Abcor, Inc., along with their principal subcontractor the Better Home Heat Council,

Inc., offer unique qualifications to conduct a community-wide demonstration program in the application of oil burner modification/replacement technologies which hold high promise for conserving a substantial portion of the energy used for residential space heating. The program is designed to evaluate the institutional and marketing barriers to widespread implementation of these available technologies. The results of this experiment will have important economic benefits for this state and region as well as a significant effect on the realization of national energy conservation goals. The ultimate goal is to provide a proven fuel oil conservation program for statewide implementation based upon the concepts described below. The Better Home Heat Council, Inc., of Massachusetts, an association of 400 retail fuel oil dealers, will coordinate all program activities that require the participation of the oil heat industry.

II. TECHNICAL DISCUSSION

A. A brief description of the technologies to be demonstrated

The rationale for this demonstration is based upon field research conducted by Walden Division of Abcor, Inc., located in close proximity to Boston, Mass. For the last three years Walden conducted extensive investigations into potential energy conservation techniques, retrofits, and equipment modifications related to oil-fired residential heating sytems for the National Bureau of Standards and Federal Energy Administration.[1] These evaluations have clearly demonstrated the technical feasibility and cost-effectiveness of two oil burner retrofit modifications which could provide major reductions to homeowner's oil heat bills while conserving significant quantities of No. 2 fuel oil. The two measures are firing rate reductions on oil burners found to be overfired with respect to the heating load (and hot water load if supplied by heating plant) of the residence and the installation of new, flame retention oil burners with reduced firing rates on overfired heating plants in which the original burner was found to be inefficient, generated high smoke levels, or the firing rate could not be reduced.

Table 1 below summarizes the effect of these energy conservation measures on the cost and quantity of fuel used by homeowners. The payback realized from these conservation measures is more favorable than the conventional alternative investments in residential conservation such as insulation and storm windows.

Walden has also recently completed field studies under contract to the National Bureau of Standards[2] to evaluate the energy conservation potential of motorized stack dampers, sealed combustion units, and stack heat reclaimers. Although analysis of these data has not been completed, certain qualitative observations have been noted.

[1] DOC Contract No. 5–35781 (published), and DOC Contract No. 6–35738 (published).

[2] DOC Contract No. 7–35747 (to be published).

TABLE 1.—ENERGY CONSERVATION POTENTIAL OF OIL BURNER RETROFIT MODIFICATIONS FOR THE AVERAGE HOMEOWNER

[Based on a 6,000 degree day heating season]

| Modification | Average seasonal fuel oil saved | | Average annual cost savings | | Cost of modification | Average payback period |
|---|---|---|---|---|---|---|
| | Gallon | Percent | Amount | Percent | | (years) |
| Reduced firing rates[1] | 252 | 14.0 | $90 | 11.1 | $70 | 0.8 |
| New burner installation | 531 | 30.4 | 215 | 27.9 | 340 | 1.6 |

[1] Data based on units that supply space heating load only.

Motorized stack dampers definitely conserve fuel oil by reducing offcycle convective flue and barometric damper flow. The fuel saving potential is considerably less than found from firing rate reductions and new burner installations with reduced firing rates. The installation cost of the stack damper exceeds the cost of a firing rate reduction and is less than the installed cost of a new, flame retention burner. Three factors might limit the utility of incorporating stack dampers in the proposed demonstration program. First, installation of dampers on certain units generate intolerable odors that disperse throughout the residence. The underlying cause of the odors is thought to be associated with low stack draft. Second, crimping of sheet metal flue ends that insert into the damper have caused damper failures which will override oil burner controls leading to "no heat" calls. Even careful installation protocol has not always guaranteed continued operation. Finally, stack dampers have received significant attention through television documentaries and news articles so that the market forces of supply and demand have already established a viable mechanism for delivery. A decision whether to include these devices in the demonstration program will be based on Walden's final evaluation and conclusions. Results indicate that sealed combustion and stack heat reclaimers offer considerably less energy saving potential and cost-effectiveness, therefore both devices will not be considered in this demonstration.

*B. Barriers to the application of this technology*

These conservation techniques are neither widely applied by homeowners nor promoted by the retail oil heat industry. The realization of the energy conservation potential associated with these techniques has been hampered by the following barriers:

(1) Consumer knowledge of the efficacy of burner firing rate reductions is virtually nonexistent when compared to the widespread understanding of the benefits obtained from the more conventional residential energy conservation practices such as insulation, storm windows, etc. There is in fact no significant consumer demand for this service at this time. Additionally, consumers have not been widely informed of the advantages and fuel savings potential of new, flame retention oil burners when compared to low speed, conventional burners.

(2) Since oil heat dealers are by and large the only source from which homeowners can obtain technical services related to oil burner maintenance/replacement/modification, structural and economic factors in that industry effect the availability of this service. Among these are the following:

(a.) The oil burner modification obviously lowers customer sales of fuel oil. Dealers offering the service trade off the longer term profit of higher average sales per customer for the immediate profit of an oil burner modification or installation. In the absence of widespread demand, it is difficult to market this service profitably. Dealers who do offer the service tend to see it as an expense rather than as a money maker and therefore it is not marketed aggressively.

(b.) The structure of the oil heat industry undercuts competitive pressures to market this service. The industry is fragmented with over approximately 8,000 dealers servicing the national residential market. Labor and transportation costs limit dealers to servicing a circumscribed territory. A given area may be served by two types of dealers, full service oriented dealers and "oil only" dealers. Typically, the latter operates with one or two trucks, his own labor and non union help; competing with other dealers on price only; often selling at a lower margin than the full service dealer. The full service dealer has modern equipment and higher operating costs; markets annual maintenance services as well as fuel; and competes on reliability and quality of his services. Given the recent escalation in retail prices, these dealers are very sensitive to assuming additional costs for a service which will effect their competitive position on price.

(c.) The oil burner firing rate reduction is a technically complex and labor intensive operation requiring previous training on the part of the installer and the use of instrumented testing procedures during installation. Some oil heat dealers have limited or no technical capability in this area. Others are reluctant to commit technicians to an operation which requires on the average 3.76 labor hours to perform and will not yield a guaranteed minimum savings for every customer. In undertaking this program they would assume some risk of dissatisfaction among long term customers. The lack of either industry or state regulated standards that define accepted practice for making these modifications creates a risk that dealers who market this service would be accused of deceptive advertising.

(d.) Banks no longer finance low interest property loans through dealers preferring higher interest, personal loans for new burner installations. This personal loan approach doesn't insure payment to dealers for work, therefore dealers, already taxed with larger than normal accounts receivables, are reluctant to incur additional receivables.

(e.) In theory, the optional application of these technologies suggest that they be done subsequent to the application of insulation, storm windows and other procedures which reduce the overall space heating load of a residence. This implies that oil heat dealers, who market the burner technology services, should first encourage homeowners to invest in insulation, storm windows, etc., in order to minimize the space heating load of their residence before reducing burner firing rates on the existing burner or installing a new, flame retention burner. But this raises two significant issues. The first has to do with the fact that oil dealers do not provide these other conservation services and are limited in their ability to influence a homeowner's investment decisions in this regard. The second is raised by the data presented in Table II. This comparative analysis ranks the standard residential conservation measures against the oil burner modifications in terms of cost, savings and payback. These data document that the payback on burner modification/replacements as compared to other measures is much more attractive due to significantly lower costs for comparable savings. On this basis, one could reasonably conclude that burner modification/replacements should be done independently of other measures. This is particularly the case where there are constraints on the homeowner's ability to raise the substantially large amounts of capital required for other measures.

The four cases in Table II represent prototypical housing units for the period indicated as derived from housing stock characteristics for New England.[3] The cost data is derived from NBS publications. The residential unit types vary in age, or in differences in the combination of existing insula-

[3] Unpublished monograph by Mitchell G. Tyson for the Energy Analysis group of Brookhaven National Laboratory on "Residential Heat Load Characteristics for the Northeast."

tion and/or storm windows. The analysis reveals that in all cases, reduced firing rates and new burner installations with reduced firing rates produce much faster paybacks than any other single or combined measure(s), regardless of whether the burner modification occurs prior to or after the other measures are implemented. The costs shown for insulation and stormwindows may be offset somewhat by do-it-yourself homeowners, but this will only produce a payback comparable to reduced firing rates in the case of insulating a previously uninsulated attic.

PAYBACK ANALYSES

Case I: Pre-1940 single family detached, uninsulated, no storm windows (New England)

| Measure | Cost | Annual savings | Payback (years) |
|---|---|---|---|
| Add ceiling insulation (R-30) | $312 | $170 | 1.84 |
| Add storm windows | 875 | 160 | 5.47 |
| Add basement floor insulation (R-30) | 424 | 70 | 6.06 |
| Add wall insulation (R-11) | 672 | 110 | 6.11 |
| Total | 2,283 | 510 | 4.48 |
| Reduce burner firing rate | 70 | 112 | .63 |
| New flame retention burner with reduced firing rate | 340 | 267 | 1.27 |

Case II: Pre-1940 single family detached R-5 in wall, R-7 in ceiling, with storm windows

| | | | |
|---|---|---|---|
| Add basement floor insulation (R-30) | $424 | $70 | 6.06 |
| Add ceiling insulation (R-24) | 276 | 40 | 6.90 |
| Total | 700 | 110 | 6.36 |
| Reduce burner firing rate | 70 | 58 | 1.21 |
| New flame retention burner with reduced firing rate | 340 | 137 | 2.48 |

Case III: 1940-65 single family detached, R-5 in wall, R-7 in ceiling, no storm windows

| | | | |
|---|---|---|---|
| Add basement floor insulation (R-30) | $460 | $70 | 6.57 |
| Add ceiling insulation (R-24) | 299 | 45 | 6.64 |
| Add storm windows | 875 | 90 | 9.72 |
| Total | 1,634 | 205 | 7.97 |
| Reduce BFR | 70 | 76 | .92 |
| New flame retention burner with reduced firing rate | 340 | 181 | 1.88 |

Case IV: 1965-72 single family detached, R-7 in walls, R-11 in ceiling, storm windows

| | | | |
|---|---|---|---|
| Add basement insulation (R-30) | $566 | $85 | 6.66 |
| Add ceiling insulation (R-19) | 277 | 30 | 9.23 |
| Total | 843 | 115 | 7.33 |
| Reduce BFR | 70 | 55 | 1.27 |
| New flame retention burner with reduced firing rate | 340 | 133 | 2.56 |

III. PROPOSED PROGRAM

A. Objectives

The objectives of the proposed program are the following:

a. Establish the viability of the oil saving retrofit option as an energy conservation measure that will cause homeowners to take the initiative and purchase it on their own.

b. Demonstrate the most effective methods of creating demand for proven oil burner conservation technology.

c. Demonstrate the most effective method of delivery of this technical conservation service.

d. Evaluate the interface of oil burner technology with other residential conservation technologies.

e. Define the institutional and market barriers that require public policy initiatives at the State and local level to assure wide scale implementation.

B. Program Design

The project is organized as a sequence of activities, progressing toward the goal of statewide implementation of the policies and programs in both the public and private sectors, that are necessary to achieve wide scale application of oil burner modification and replacement technologies. For purposes of planning and scheduling, three distinct project phases have been identified. Phase I concentrates upon development of marketing and training programs that will stimulate both demand for oil burner conservation services in the residential sector and the oil dealer's ability to supply the service. These training and market activities are focused on support of three program strategies which in phase I will be brought to the stage of readiness for actual demonstration.

Each strategy addresses some of the stated objectives of the proposal and is designed to focus on a set of institutional or market barriers which must be overcome to facilitate the widespread utilization of oil burner conservation technology. The first strategy referred to as the "homeowner initiative" addresses the lack of consumer awareness by developing and testing educational materials that will enable homeowners to make a simple assessment of their need for oilburner conservation services and where the need is indicated to take the initiative in seeking the service from their oil heat dealer.

By carefully monitoring this approach to stimulating demand, it is expected that the project will delineate the practical problems encountered by consumers both in using this type of material and in obtaining the satisfactory level of service from their regular dealer.

The second strategy, Industry Marketing, will focus on building the oil heat industry's capability to market burner modifications and installations for developing a pilot marketing program and technician training program. The marketing program will be coordinated by the Better Home Heat Council of Massachusetts and developed with cooperating oil heat dealers as a test of the best sales techniques and most economical methods for selling burner conservation services to their customers.

This effort will yield a wealth of information on the effectiveness of dealer advertising and marketing on stimulating demand, on training needs, and on cost of service. Also, it will highlight the types of resources and policies that will be required of both the public and private sectors in a full-scale implementation effort.

The third program strategy, community-based conservation, recognizes the extensive activity of community-based agencies in promoting energy conservation in various localities in Massachusetts. Examples of these types of agencies are: community action programs, that are a major source of subsidy for weatherizing the homes of low-income owners and tenants; city sponsored neighborhood rehabilitation planning and counselling services, that provide technical assistance and financial support for upgrading the housing stock in urban neighborhoods; and the University of Massachusetts extension service which has been an educational outreach service in rural and suburban areas that counsels and trains homeowners and tenants in energy conservation methods.

It is believed that using this channel to reach homeowners and tenants in urban neighborhoods will be more effective than relying solely upon mail or media-based advertising/education in promoting burner testing and conservation technologies since these neighborhoods have lower income and may be served by minimum service oil dealers.

Phase II of the project involves the integrated implementation of the three program strategies in the setting of a community or a region. Using the channels developed through each of the program strategies, a comprehensive effort will be understaken to reach every residential unit serviced by an oil dealer, to evaluate the efficiency of the combustion system in terms of modification or replacement and encourage the homeowner to take recommended action.

This demonstration in the scale of a single community will have three important outcomes.

(1) It will permit an evaluation of the effectiveness and limitations of each strategy. The demonstration of the homeowner in industry strategies will indicate the degree to which private market mechanisms when stimulated by the necessary information/advertising achieve the desired change in consumer behavior. To the degree that the demonstration validates the effectiveness of the marketing and homeowner education packages, they will be made available statewide to oil dealers and consumers for use in conservation programs. Results of the community based strategy will indicate the degree to which public subsidy will be required to improve oil burner technology in lower income households.

(2) Conducting a community-wide demonstration will provide a highly visible setting for testing a proven technology that consumers are presently unaware of. In this context, the demonstration will serve as a powerful stimulus for achieving the desired changes in both consumer and oil dealer behavior. Extensive media coverage of the demonstration while in process combined with a report evaluating the results will communicate the importance of oil burner modification/replacement to audiences around the state.

(3) The demonstration wil generate a substantial data base, documenting the effectiveness of several replacement/modification technologies, the viability of various marketing strategies and the problems that the demonstration strategies may not adequately resolve. The information will be the basis for formulating the public policy initiative that may be necessary to achieve successful statewide implementation.

Phase III activities are not proposed for inclusion within the scope of funded project activities. Phase III is referenced here to emphasize the commitment of the Massachusetts Energy Policy Office to using results of this demonstration project as the basis for a statewide program aimed at achieving wide scale application of the technology. Statewide implementation will in part rely upon use of the products, particularly the training and marketing materials that have been developed and proven effective in the demonstration program. For example, if this statewide implementation effort involved the continuing program of homeowner education, the Energy Policy Office will be in a position to commit a portion of the resources available in its state conservation plan to this objective.

The other critical aspect of the State's support of this project is commitment to pursuing the public policy initiatives that may be necessary to address problems encountered in the demonstration. The data generated during the Phase II demonstration will provide both a sound and highly visible basis for whatever public policy actions may be indicated to resolve these problems. The Energy Policy Office has the capacity and commitment to propose and promote appropriate legislative and/or regulatory remedies.

C. Schedule

The demonstration project will span a period of approximately two calendar years. There are several factors influencing the timing and start-up of the project which could cause some restructuring of certain program elements. Anticipating receipt of funds by October, 1977, a period of about eight months would be required to map the project, prepare the requisite educational, training, and advertising materials, develop the organizational/contractual relationships, train personnel involved in delivery of technical services, and if possible, small-scale pilot testing of the materials for each of the strategies. The full-scale demonstration must be initiated during the summer months

of 1979 so that field evaluation can take place over the 1978–80 heating season. Table III displays the proposed timetable for both Phase I and Phase II.

[Table 3 not printed in RECORD.]

D. Discussion of Phase I Strategies

A general description and outline of the Phase I tasks within each of the three option strategies follows:

1. Homeowner initiative strategy:

This segment of the program plan would be primarily concerned with an evaluation of homeowner initiatives to obtain requisite energy conservation services from the oil heat industry so that the following items could be determined.

type of homeowner educational programs needed (manuals, pamphlets, seminars, courses, etc.);

utility of educational package as a device for homeowner assessment of energy conservation options;

effectiveness of media campaign (public service announcements) directed toward homeowners; and

quality of service provided by oil heat industry.

The major product of this effort will be a homeowner educational package that informs the homeowner about oil-fired residential energy conservation measures available to him, provides a methodology for homeowners to determine the general condition of their heating plant, and instructs him in the evaluation of the services, including cost-effectiveness. The result of this evaluation will be incorporated in an overall strategy that will include a comprehensive homeowner initiative package.

A segment of the population will be chosen to participate in this phase of the program. The selection process will take into consideration such factors as location, oil heat dealer, type of house, type of heating system, need for insulation, etc., so that a meaningful sample will be obtained. The sample group will then receive information regarding all aspects of this option including announcements of meetings and courses, energy conservation information, and other incorporated concepts. The responsiveness and participation of group members will be monitored to assess the effectiveness of each measure. Those participants that actually request service from the oil heat industry will be followed closely to determine the results of their inquiry.

Specific task assignments and scheduling associated with this program segment follow:

1. Prepare full-service homeowner information manual—3 months.

2. Select participants to receive package and development of delivery system—2 months (simultaneously with Task 1).

3. Monitor the action taken by participants (includes any retrofits)—3 months.

4. Modify the homeowner initiative package—3 months.

2. Industry marketing strategy: The objective of this strategy will be to assess the effectiveness of industry marketing of conservation services on a profit basis. During this program, a complete profit motivated conservation service package for the oil heat industry will be developed. The applicability of this supply-motivated option will be evaluated as a component of the overall delivery system of energy conservation services. In addition, the training requirements for service personnel will be determined, capital requirements in terms of first costs and pricing will be defined and the quality of service and fuel savings will be analyzed. With the support and assistance of the Better Home Heat Council, selected oil heat dealers will internally institute mechanisms through which they can offer complete residential energy conservation services. The Better Home Heat Council will serve as a communications link to insulation specialists and weatherization contractors while also aiding in the organization and dissemination of training manuals, courses, or information.

To support the available resources of the BHHC and the individual oil heat dealers, assistance will be provided by the Energy Policy Office and Walden for the development of the service program and promotional package. The promotional package will be developed primarily within existing marketing mechanisms employed by the Better Home Heat Council to gain the support and confidence of the participating dealers.

Upon completion of the promotional package and structuring of the delivery mechanisms to be used by the dealers, small-scale implementation of the service will be enacted to provide assessment of the effectiveness of this strategy. Those homeowners responding to the promotional package will receive the requested service as part of the program plan so that monitoring of the technical effectiveness can be performed.

The major tasks and scheduling associated with this option channel are the following:

1. Select participating dealers—2½ months.

2. Develop and deliver oil heat promotional package—4 months (simultaneously with Task 1).

3. Prepare technical assistance needs of dealer (training, measuring equipment, materials, etc.)—1½ months.

4. Prepare and deliver training program for service and support personnel (includes monitoring retrofit activity)—3½ months.

5. Modify and finalize oil heat industry initiative option—3 months.

3. Community based conservation strategy:

This program strategy will enlist community service agencies as a channel for reaching homeowners and tenants with information and services to encourage oil burner conservation practices. The types of agencies to be involved will include community action agencies that presently operate a program of weatherization assistance for low income persons and municipally sponsored neighborhood rehabilitation services that currently provide a range of technical and financial services to residents of urban neighborhoods. The existing activity of these agencies recommends them as a valuable conduit of information and assistance to residents of urban neighborhoods with lower incomes who are served by small oil dealers and therefore less likely to be reached and/or persuaded by the industry marketing or homeowner initiative channel. It is also generally the case that agencies to be used as channels are a source of subsidy funds to facilitate the investment by lower income households in weatherization and rehabilitation. By developing a capability within these agencies to offer oil burner conservation services to their clients, it is expected that their subsidy funds will eventually be made available to support investment in oil burner modification/replacement. This will of course have a significant multiplier effect on the eventual statewide implementation effort as lower income households might otherwise be unable to avail themselves of these conservation practices. The availability of weatherization subsidy will also permit some testing of the effect of oil burner modification/replacement with and without weatherization of the building.

The several objectives served by this program option are:

Building the effectiveness of community based weatherization/housing rehabilitation agencies as channels for promoting oil burner modification/replacement practices in urban neighborhoods.

Train agency weatherization/rehabilitation counseling staff in conducting steady-state and seasonal efficiency tests to evaluate burner efficiency.

Develop an information package on oil burner modification/replacement to be used by agency staff in personal contacts with homeowners and tenants.

Acquire oil burner modification/replacement services as a "free standing" service independent of regular oil dealer/customer relationship.

The major tasks and scheduling associated with this option are:

1. Select target community service agencies, define scope of program, cement contractual relationships, and establish coordinating mechanism for project management—1½ months.

2. Provide training to agency counseling staff—2½ months.

3. Select vendor(s) for delivery of replacement/modification services—2 months.

4. develop information package for agency staff in personal contact with homeowner (includes small-scale delivery)—3 months.

5. modify and finalize information package for agency staff—3 months.

IV. Impact of the program on Massachusetts and New England:

A program that achieves wide scale implementation of oil burner modifications will produce important benefits for Massachusetts and New England. In 1974, approximately 15 percent of U.S. energy consumption was used for residential space heating (75 percent of residential sector use). Essentially all of that energy was derived from fossil fuel combustion, either directly with combustion equipment on the premises or indirectly through the use of electrical resistance heating. Logically, a demonstration of oil-fired residential energy saving options must be focused in those regions or states most dependent upon this fuel as a source of energy. New England's dependence on fuel oil far exceeds and dramatizes the unique circumstances New England is faced with.

The energy shortage in New England is exacerbated by the region's lack of indigenous energy sources and extremely high dependence upon imported oil, both domestic and foreign. Therefore, it is particularly important for New England to reduce the vulnerability of its fuel supplies to outside forces by initiating significant energy conservation programs. Massachusetts is ideally suited for the site of this proposed demonstration. Massachusetts houses nearly half the population and oil burner units of New England, while almost 45 percent of New England's residential fuel oil is consumed in the state. Furthermore, the residential oil burners in the state represent ten percent of the national oil burner population. Additionally, the age distribution of the existing stock of homes in Massachusetts (47 percent built prior to 1940) is considerably older than other regions of the country and offers a greater potential for cost-effective energy conservation from weatherization programs. With a broad mix of oil burner types (conventional, flame retention, shell, and low pressure), heating plant systems (warm air furnaces, hot water and steam boilers), and building structures (single family detached and attached, multi-family low rise and high rise), communities in the state could provide almost any desired distribution of housing characteristic and heating system variables needed to satisfy a statistical design for random or representative sampling.

Table IV shows the hypothetical impact of oil burner retrofits in this state, the region, and the country assuming that approximately 50 and 10 percent of all presently installed residential burners can be cost-effectively modified for firing rate reductions and new burner installations, respectively. Nine percent of the total estimated national savings would occur in Massachusetts

with the result that 4.3 milion barrels of No. 2 fuel oil (equivalent to 15 percent of state residential sector fuel oil consumption) could be saved annually if these procedures were implemented at residences amenable to the specific retrofit modifications. Additionally, over 75 million dollars in residential heating bills would be saved annually.

TABLE IV.—POTENTIAL FUEL SAVINGS FROM OIL BURNER RETROFIT OPTIONS

| | Average seasonal fuel oil saved * | | Average annual cost savings ** | | Cost of modification | payback period (years) |
|---|---|---|---|---|---|---|
| | Gallons | (Percent) | Amount | (Percent) | | |
| Reduced firing rates: | | | | | | |
| Massachusetts | $118.8\times10^6$ | 14.0 | $\$49.9\times10^6$ | 11.1 | $\$35.8\times10^6$ | 0.7 |
| New England | $224.7\times10^6$ | 14.0 | $94.4\times10^6$ | 11.1 | $70.4\times10^6$ | .7 |
| United States | $1,333.5\times10^6$ | 14.0 | $561.1\times10^6$ | 11.1 | $462.8\times10^6$ | .8 |
| New Burner installations: | | | | | | |
| Massachusetts | $63.6\times10^6$ | 30.4 | $26.7\times10^6$ | 27.9 | $40.6\times10^6$ | 1.5 |
| New England | $121.8\times10^6$ | 30.4 | $51.2\times10^6$ | 27.9 | $82.1\times10^6$ | 1.6 |
| United States | $571.2\times10^6$ | 30.4 | $239.9\times10^6$ | 27.9 | $420.2\times10^6$ | 1.7 |

* Based on typical heating season for the Boston, Mass., area.

** Based on fuel oil cost of $0.42 per gallon and electric cost of $0.036 per kilowatt-hours.

V. Qualifications of Massachusetts Energy Policy Office—Walden:

As the proposers of this project, Massachusetts Energy Policy Office and Walden bring to bear a unique blend of talent and resources. The Massachusetts Energy Policy Office is located within the Executive Office of the Governor and is the lead state agency for energy conservation policy and programs within the Commonwealth. In existence since July of 1974, the office now comprises a staff of 30, twenty of whom are professionals trained in engineering, law, public policy, architecture, business administration, city and regional planning, economics and international relations. As the principal source of policy analysis and advice to the Governor and the Cabinet in energy related matters, Massachusetts Energy Policy Office has the ability to formulate legislative or regulatory policies for consideration by relevant state agencies, which would be directed to overcoming barriers impeding the wide scale adoption of oil burner modification/replacement technologies in Massachusetts.

As the lead agency in initiating and funding energy conservation programs, Massachusetts Energy Policy Office now manages a State Conservation Program funded under the Energy Conservation and Policy Act at a level of $500,000. It is anticipated that this funding will reach an annual level of $1,000,000 in calendar 1978. A significant portion of these resources are committed to support of residential and commercial conservation activities. Since the outcome of this proposed demonstration program will be an optimal strategy for promoting this technology in Massachusetts, it is expected the Massachusetts Energy Policy Office program resources will be committed to implementation of this strategy.

Its past experience in residential conservation includes operation of one of two national models of a Federal Energy Administration funded Project Conserve program. This program provided homeowners in the state with individualized computer analyses of their houses and suggested energy-related home improvements. The success of the program as a public education and awareness program was demonstrated by the large participation, over 135,000 homeowners, throughout the state.

Massachusetts Energy Policy Office has the demonstrated ability to coordinate the diverse group of actors and institutions that would be involved in this demonstration program. Most important it has the capacity and the mandate to commit its resources to implementing the strategy and activities demonstrated to be effective in achieving wide scale implementation of oil burner modifications in Massachusetts. These resources include both the financial resources to support ongoing program activity and the ability to propose and promote the necessary public policy initiatives.

Walden, as a company with experience in the environmental and energy area has conducted extensive research on the "as is" condition of residential oil burners in Massachusetts and on the degree to which efficiency can be improved by a range of technical modifications to the burner system. This research has documented that most residential burners are oversized relative to the space heating load of the residence they serve with the consequence of excessive convective heat loss during the burner off-cycle.

Walden has shown that reduced firing rates, leading to an improvement in seasonal efficiency, will yield annual fuel savings of 14 percent on the average, while installation of new, flame retention burners with reduced firing rates will yield an annual fuel savings of 30 percent. Both Walden's field experience and technical expertise with respect to the specific retrofit procedures is essential to the successful execution of the proposed program. With these unique capabilities, Walden personnel will be able to technically train servicemen, using existing facilities or creating new avenues, supervise the implementation of all heating system modifications, and evaluate the technical quality and effectiveness of the various retrofit options. Walden has prepared a manual of guidelines for use by oil heat service managers for the training of skilled technicians in the procedures of reducing firing rates.

The Walden effort was conducted as a realistic field test with cooperation of the retail oil heat industry. As a result, Walden has established strong working relationships with the Better Home Heat Council.

SEPTEMBER 14, 1977.

Hon. THOMAS J. MCINTYRE,
*Chairman, Subcommittee on Government Regulation and Small Business Advocacy, Senate Office Building, Washington, D.C.*

DEAR SENATOR MCINTYRE: Enclosed is an outline of oil heat conservation opportunities I promised in my appearance before the Small Business Subcommittee June 28th to support a rebate to home heating oil consumers should the proposed crude oil equalization tax go into effect.

During my testimony I pointed out that heating bills were considerably higher than they need be for some 13 million oil heat homes, and that they and the nation would benefit from a very modest investment in research to improve the efficiency of presently installed heating systems.

Other industry representatives with me June 28th supported the view that target energy savings of at least 10% were realistic, and that they would welcome an opportunity to cooperate with responsible government agencies in improving the efficiency of existing installations.

The proposed program does not require any technological breakthroughs. It calls for examining, applying and demonstrating already known technology. As to why this has not already been accomplished I can only surmise that federal policies seem directed to more exotic and longer range energy choices.

We agree that a wide range of energy projects should be pursued and look forward to the day when solar back-up to oil heating systems and advanced cycle oil heat pumps become practical. However, one must not forget that even by 1985 well over 80% of all space heating installations will be those which are now in place. Our proposals recognize this important fact and suggest a higher priority for government sponsored research in upgrading existing installations.

We note that Senator Bumpers successfully proposed an amendment to the current ERDA authorization specifically directing $3 million dollars research to improve the efficiency of gas heating furnaces. This, even though ERDA did not request such funds and despite the oft-claimed superior efficiency for natural gas fuel and equipment. We hope that when the opportunity arises the Congress will include a similar charge to ERDA for oil heat equipment since its users are exposed to considerably higher fuel costs than natural gas consumers at this time.

We sincerely appreciate the Small Business Subcommitee's interest in this practical approach which offers significant energy savings for the nation and hard pressed oil heating users in the near term.

Very truly yours,

WILLIAM R. MARRAN.

A GRASSROOTS HEATING OIL RESEARCH CONSERVATION PROGRAM

PART I—SOME BACKGROUND QUESTIONS ON THE CONCEPT AND APPROACH

What is the energy saving potential?

What are the current projections for heating oil demand?

What would be the cumulative conservation effect of just a 10% reduction in these oil demand projections?

How does the ERDA Research & Development budget for energy resource development compare with that for distillate oil resource conservation?

Why would heating oil marketers willingly cooperate in a government sponsored research program that will reduce sales to existing customers?

Summing up:

What are the precepts underlying the grass roots approach?

What are the goals to be achieved by this program?

PART II—IMPLEMENTATION OF THE GRASS ROOTS OIL HEATING RESEARCH AND DEVELOPMENT PROGRAM

Oil heat Research & Development conservation board.

Initial projects.

Data gathering, analysis.
Evaluating options, setting priorities.
Information dissemination.

PART I—WHAT IS THE ENERGY SAVING POTENTIAL?

According to census and Bureau of Mines figures there are approximately 13,000,000 residences which use distillate heating oil for space heating.

Over 487,000,000 barrels of distillate oil was used for heating in 1975, according to Bureau of Mines. It is expected that the 1976 figure when compiled will have grown to approximately 540,000,000 barrels.

According to one assessment within ERDA [1] ". . . oil-fired heaters (in the field) have overall efficiencies of some 50%—Retrofit and new furnace designs requiring no new technology can be developed quickly and easily to increase these efficiencies to better than 80%."

Given such efficiency improvements, it follows that the United States could soon save over 150,000,000 barrels of heating oil a year if the necessary funds were made available.

The energy conservation potential is equivalent to almost half the entire output of all of the nuclear generators in the United States!

WHAT ARE THE CURRENT PROJECTIONS FOR HEATING OIL DEMAND?

The Federal Energy Administration projects distillate heating demand as follows:

Short-term demand of distillate oil use: Residential: 1980—408,566,000 barrels [2].

Long-term projections of distillate oil use: [3]

Residential: 1985—446,352,000 barrels; 1990—497,854,000 barrels.

The foregoing FEA forecast makes it abundantly clear that future need for heating oil will continue undiminished into the foreseeable future.

Whatever doubt existed among some government planners about the need to count on heating oil is being erased by declining supplies of natural gas.

The President has stated [4]: "The cornerstone of the National Energy Plan is conservation, the cleanest and cheapest source of new energy supply."

WHAT WOULD BE THE CUMULATIVE CONSERVATION EFFECT OF JUST A 10 PERCENT REDUCTION IN THESE OIL DEMAND PROJECTIONS?

Applying a 10% conservation reduction to the FEA heating oil projections reveals the cumulative effect can be enormous.

For example, the energy savings in just six years would exceed all of the energy output expected from the Alaska pipeline all next year.

In ten years the seemingly modest 10% conservation savings could equal the total amount of heating oil refined in an entire year.

HOW DOES THE ERDA RESEARCH AND DEVELOPMENT BUDGET FOR ENERGY RESOURCE DEVELOPMENT COMPARE WITH THAT FOR DISTILLATE OIL RESOURCE CONSERVATION?

The Energy Research and Development Administration budget authority in fiscal years 1976, 1977 and 1978 for research, development and demonstration programs includes the following amounts:

[In thousands of dollars]

| | 1976 | 1977 | 1978 |
|---|---|---|---|
| Nuclear | 756,000 | 1,183,000 | 1,204,000 |
| Solar | 115,000 | 290,000 | 368,000 |
| Wind | 14,400 | 21,600 | 34,700 |
| Geothermal | 31,000 | 55,000 | 116,000 |
| Shale Oil | 14,900 | 22,700 | 28,900 |

Footnotes at end of article.

While few would question the need of funds for research and development in all the areas listed above, the obvious disparity in the conservation research category should call for an objective reevaluation.

To the best of our knowledge total expenditures on oil heat conservation research by all government agencies combined in the last 20 years does not exceed $800,000, which includes budgeting of approximately $300,000 this year and last for an efficiency identification program at Brookhaven National Laboratories.

Compared to the ERDA allocations for alternate energy sources, it would appear that oil heat conservation research is the cheapest source of new energy supply and is deserving of vigorous government support.

WHY WOULD HEATING OIL MARKETERS WILLINGLY COOPERATE IN A GOVERNMENT SPONSORED RESEARCH PROGRAM THAT WILL REDUCE SALES TO EXISTING CUSTOMERS?

Independent locally owned and operated oil heat marketers deliver 75% of the nation's heating oil, and service.

Oil heat marketers are totally dependent on the satisfaction of their retail customers to stay in business and grow.

Oil heat customers have seen their bills for this life essential double in the past five years.

Marketers are aware that increased costs have forced their customers to conserve to their limits.

It does marketers little good to deliver larger volumes to customers who cannot pay for amounts needed for health and comfort.

Major oil company suppliers generally look upon heating oil as the low end of their market. Therefore, they allocate no funds to research and are increasingly indifferent to the retail oil heat marketers who buy from them.

Manufacturers of heating equipment, if they are large, and sell gas and electric equipment consider the heating oil portion of their product mix of lesser importance. Government attitudes toward heating oil, (such as those expressed in Project Independence) have not encouraged manufacturers.

Five manufacturers sell 80% of all burners. They tend to be quite small. One of the largest oil burner manufacturers in the country has total annual sales of $11,000,000 a year. Another of the larger burner manufacturer's sales totalled $4,000,000 annually.

Marketers realize fuel costs will continue to rise if availability is to be assured.

The only solution is to reduce the amount of more expensive fuel needed by their individual customers, so they can afford it.

The fuel thus conserved can then be sold to other new heating oil customers, preserving an opportunity for the marketer to continue to survive and serve all those dependent on his services.

SUMMING UP: WHAT ARE THE PRECEPTS UNDERLYING THE GRASSROOTS APPROACH?

There has been mention by ERDA of the need of our industry support. This is precisely what is recommended. It will take the form of grass roots support by oil dealers, and active advisory participation by an industry board.

The Grass Roots Program for heating oil conservation is based on the following precepts:

Distillate oil and natural gas are the two most efficient modes of energy conversions available for heating the home today.[5 6]

There is no practical substitute for heating oil at this time, and it will remain an essential part of the energy mix for a long time.

Heating oil conservation is an important area of energy savings.

The heating oil distributors and service industry, not to be confused with the major oil producers, is in great need of conservation tools and technology.

The heating oil dealers and manufacturers will willingly participate in a meaningful effort to implement a conservation program to help the home owner, and their country. A significant aspect of the participators will be in the gathering of field test data by heating oil dealers on a voluntary basis.

WHAT ARE THE GOALS TO BE ACHIEVED BY THIS PROGRAM?

Develop a sound knowledge of the sources and magnitude of energy lost in the process of converting heating oil to usable heat in the home.

Identify the areas which hold most promise of savings to be gained from future research and development.

Provide a source of reliable data for those governmental and regulatory agencies concerned with energy matters as related to use and conservation of heating oil.

Create a greater awareness and sophistication on the part of the public who must make the final decisions on the application of heating oil conservation techniques and equipment in their homes.

Help the heating oil service organizations to better understand the use of present technology and equipment for heating oil conservation, and keep them informed of new developments.

Provide an improved base of technical knowledge to inventors, manufacturers, engineers, and scientists, who are concerned with designing improved fuel saving techniques and equipment.

Develop a forum in which industry can interface with ERDA and other appropriate governmental bodies for a more efficient application of funds and available knowledge to the field of heating oil conservation.

Develop information which can lead to reasonable requirements that new heating equipment be built to meet certain efficiency standards.

PART II

On April 29, 1977 the President appealed to all citizens to rediscover the ingenuity and efficiency which made our country prosper. He said "We can rediscover small-scale, more creative ways of satisfying our needs. If we are successful, we can protect jobs, the environment, and the basic American standard of living, not only for ourselves but also for our children and grandchildren."

GRASSROOTS HEATING OIL CONSERVATION PROGRAM

The projects outlined in this proposal should be run simultaneously to the greatest extent possible, in the interest of reaping early results in fuel conservation.

Much will be gained by getting out information to oil dealers, service organizations, manufacturers and the like as early in the program as possible. The development of continuing interests in the program is an essential ingredient to its success.

IMPLEMENTATION OF PROGRAM—OIL HEAT RESEARCH AND DEVELOPMENT CONSERVATION BOARD

In the past it seems that the limited Government funds which have been budgeted to research in heating oil conservation have not warranted concentrated effort. The result has been that the research was often not coordinated with detailed knowledge in the field. They have therefore been unable to get the results hoped for. Furthermore, it is also quite likely that very limited interest in heating oil, except to phase it out may lead to failure of future studies, and R & D unless a different method is used to direct this application of budgeted funds.

Bear in mind that there is a significant body of highly qualified, interested people who could make a meaningful contribution in supplying direction and advice in the area of oil heat conservation studies. These people can be found among the dealers, service managers, oil burner manufacturers and design engineers who have a vital interest in the outcome.

From this group should be drawn a Heating Oil Conservation Advisory Board which would meet at the top level of overall Project Direction. The function of this Board would be:

To help arrive at the proper order of priorities

To insure that the selection of projects for R & D be worthwhile and practical

To keep abreast of program progress

To consider change in direction, or possibly termination of those projects which appear headed towards failure

INITIAL PROJECTS—I

Gather and interpret basic data on areas of greatest fuel saving potential:

Heat lost up chimney during operating phase of combustion cycle:

Amount of heat lost through use of heated inside air to support combustion (consider possibility of using unheated outside air)

Amount of heat lost by admission of excess air, often two to three times as much as necessary to support combustion which has effect of carrying considerable amount of heat up chimney—(consider problems of stability, and particularly danger of refractory burnouts at temperatures which develop with zero excess air)

Energy lost by use of heated inside air as source of draft regulation.

Losses due to excess heat carried up chimney because of incomplete extraction of energy from combustion gasses. Consider as well the potential problem of condensation within chimney at low flue gas temperatures.

Heat lost up chimney during periods between combustion when heating plant is in standby mode:

Energy loss by flow of heated inside air through draft regulator and up the chimney.

Energy lost through drift of heated inside air up the chimney by way of combustion air intake and heat exchanger, gathering heat from firebox and heat exchanger as well. Consider in particular the effect of a range of boiler standby temperatures on this considerable source of heat loss. Consider effect of reduction of fire size which extends operating period, thereby reducing percentage of standby time lost. Consider effect of high speed flame retention configuration on off cycle air drift through heat exchanger during standby.

Loss of heat caused by unwanted radiation and convection from boiler, furnace jackets, heat and hot water pipes, heating ducts.

Loss of heat caused by reheating mass of fire box, and heat exchange surfaces on each firing cycle. Consider optimization of length of firing cycle to reduce frequency of this loss.

Loss of energy caused through unwanted flow of heat from sides and floor of dry base boilers.

It must be pointed out that although there are bits and pieces of information, and research on many of the points covered in the areas listed above, there is little solid ground from which to start to develop the neded solutions. It has not been pulled together, and good data has not been separated from the poor. There has been almost no field testing to validate concepts developed by scholars often somewhat unseasoned in the area of home heating. It is essential that cost effective, on target R&D be based on a firm knowledge of the field. The most likely targets for a successful improvement in efficiency of heating must be clearly identified before they can be worked upon. This has not happened in the past.

INITIAL PROJECTS—II

Research and development of quality control, handling, and improvement of combustion properties of heating oil.

One of the simplest and cheapest, and most effective means of saving heating oil in the home is to reduce the size of the flame. Furthermore, proposed Government regulations would restrict new equipment sizing to the actual heat loss which is often below ½ gallon of heating oil an hour. There is however a major obstacle to implementation of this concept, and that is the problem of nozzle plugging at low firing rates.

Another proven method of saving heating oil is to make precise adjustments of heating plants through the use of combustion testing equipment. Again the problem of heating oil quality control creates substantial problems in these adjustments for continuous peak efficiency. All too frequently these adjustments do not hold because of the quality of the oil delivered to the nozzle.

It is very important therefore that studies be conducted in the following areas:

Effects of comingling of oils by suppliers, terminals, etc.

Evaluation of the causes of deterioration of fuel quality; particularly during storage in the home owner's tank.

Field evaluation of additives commercially available to oil dealers:*

To retard or eliminate soot formation

To stabilize quality of oil stored in the homeowners tank—particularly against sludge formation.

To keep oil lines, filters, pumps and nozzles clean

Field evaluation of commercially available oil filtering systems, particularly those installed in the home.*

Evaluation of the present range of heating oil specifications allowable under present Federal and State regulations, as they relate to:

Pollution control

Compatability in comingling

Equipment failure in the home: Tank leaks, oil line, filter, nozzle plugging, fuel pump failure

Following the evaluation a developmental program should be embarked upon to:

Set up uniform quality standards for heating oil, particularly to insure compatability and stability

Develop reliable additives to keep fuel clean, and to reduce soot formation

Field evaluation work to include controlled tests programmed for dealer participation

Develop better filters for use in the home

Higher capacity (perhaps through staged filtering)

Finer filtering to accommodate smaller nozzle orifices

Lower emergency failure rate (perhaps with a simple warning system to signal when filter needs changing)

DATA GATHERING AND ANALYSIS—FIELD TESTS OF ENERGY SAVING CONCEPTS, AND EQUIPMENT

Once the basics are known, the greatest return on R & D will probably come through a field test program geared to evaluate the cost effectiveness of energy saving modifications of heating systems. Many of these modifications will consist of a carefully thought out application of existing hardware. The object of this phase of study would be to develop the ability to predict the savings which certain changes can produce. This knowledge would be most helpful to the homeowner, as well as to the company which proposes an energy saving investment. It would also aid the government in evaluating those changes which may be worthy of tax credits. There can be no doubt that the net effect would be an acceleration of energy savings through modernization and modification.

Brookhaven National Laboratories has compiled a list of such possible "retrofits".* It should be noted that the cost in none of the examples above exceeds $150 and that the homeowner might get his money back in less than three years. Unfortunately, it is at this point conceptual, and strictly theoretical. It has not been proven in the field.

To translate this basic data into practical application of energy saving concepts, a plan of field testing, in the user's homes must be put into effect. Much of this can be done through the cooperation of participating oil dealers.

EVALUATING OPTIONS AND SETTING PRIORITIES

The technical information arrived at in Phase I should be disseminated to all parties who might be interested—manufacturers of heating oil equipment, heating oil dealers, design engineers, inventors, and their comments invited.

The responsible government project director, and his aides, should then meet with the Heating Oil Conservation Advisory Board to arrive at a set of further projects:

TABLE 2.—BROOKHAVEN NATIONAL LABORATORY REPORT

| Retrofit action | Estimated cost (dollars per unit) | Total potential market ($10^6$ units) | Estimated maximum annual retrofits ($10^5$ units per year) | Energy savings per retrofit ($10^6$ Btu per year) | Gallons saved | Payback period for oil at 40¢ per gal (year) |
|---|---|---|---|---|---|---|
| 1. Reduced burner nozzle size | 20 | 11 | 11.00 | 18.7 | 133 | 0.37 |
| 2. Retrofit controls: | | | | | | |
| (a) Variable aquastat for boiler water temperature | 150 | 14 | 3.90 | 18.7 | 133 | 2.78 |
| (b) Timers for thermostat control | 100 | 11 | 3.66 | 16.6 | 119 | 2.10 |
| (c) Continuous circulator operation | 30 | 10 | 5.00 | 10.4 | 74 | 1.00 |
| 3. Burner steady-state efficiency adjustment | 20 | 14 | 14.00 | 5.2 | 37 | 1.33 |
| 4. Retention-head burner with reduced firing rate | 150 | 11 | 2.75 | 25.00 | 179 | 2.10 |
| 5. Convective stack damper to reduce downtime losses | 150 | 11 | 2.75 | 20.8 | 149 | 2.50 |
| 6. Outside air ducting for combustion air | 100 | 7 | 2.33 | 12.7 | 91 | 2.77 |

[1] Energy savings per "Retrofit" have been converted to gallons saved per year (per Home) for greater ease of understanding.

[2] Based on a total of $14 \times 10^6$ single family units and oil consumption of $500 \times 10^6$ bbl/yr.

Notes: (1) Savings from retrofit actions are not additive. (2) Options 5 to 10 have less development.

For field testing existing equipment, and conservation techniques using modified applications of available hardware.

For requests for proposals to develop new fuel saving equipment, following specifically defined guide lines.

It should be noted that the objective of this approach is to encourage private initiative to come into play once the stage has been set by initial research that only government funds could accomplish.

While further funds may be needed for specific R & D projects, there is reason to believe that private industry will work on its own to a great extent.

INFORMATION DISSEMINATION

Create an adequate repository of information for heating oil energy decision making and to insure accuracy of product and technological papers.

Develop educational films, papers and seminars on heating oil conservation equipment, materials and technology for presentation to heating oil dealers, service managers and service personnel. Objective is to increase quality of services to oil consumption.

Prepare heating oil conservation leaflets, film presentations, equipment efficiency rating information, and the like to help owners of oil space heating systems understand and evaluate the options available to them which might decrease their annual oil consumption. This includes heating system improvement and home construction alteration as well as consumer information on the proper operation and maintenance of oil furnaces and boilers.

Provide a periodic mailing of updated technical information and developments to manufacturers of heating oil equipment, design engineers, inventors, trade publishers, heating oil service organizations and trade groups.

Provide technical information to municipalities, state and federal agencies involved in energy programs.

[5 6] National Energy Plan—Page 45—"Two-thirds of the energy used in electricity generation is wasted."

Brookhaven National Laboratory ERDA R & D Report, March, 1977 studies show that in the best heat pump, electric hot water combination, 2,245 gallons of oil are required at the generator to provide heat and hot water for a typical home in the Northeast, while the best oil combination in that same home would use only 1,233 gallons. This is exclusive of the extra air conditioning load to be expected to be associated with a heat pump.

BNL BURNER-BOILER/FURNACE TESTING PROGRAM—PROGRAM RATIONALE

PURPOSE

This testing program will provide technical information for use in support of the DOE RD&D program in Space Conditioning Technology, with the objective of achieving a significant reduction in the consumption of oil and gas for space heating of residential and commercial buildings. Reference: Schedule 189 dated May 1977.

APPROACH

In order to accomplish the above, BNL will provide and operate test facilities of advanced design with the capability for accurate efficiency measurement of oil and gas-fired space heating equipment with emphasis on evaluation of the annual performance of the equipment. The testing program will provide:

1. Efficiency Test Methodology: By the continued improvement and refinement of the enthalpy flow efficiency measurement procedure.

2. An Evaluation of Other Test Methodologies: By the evaluation of and comparison with testing and seasonal performance methodologies developed by other organizations in both the public and private sectors.

3. Characterization of Available Commercial Equipment: By the testing of commercially available general types of equipment to provide baseline information on the performance of such equipment. The number of units to be tested will be limited to the minimum required to characterize the generic types of equipment which make up the existing commercial stock. When appropriate, BNL will recommend demonstration of high efficiency equipment to accelerate the rate of consumer acceptance.

4. Evaluation of Refit Actions: By the testing and evaluation of the annual performance improvement which can be achieved in existing heating system installations through modifications ("refit actions") or changes in operational procedures.

5. Evaluation of Development Equipment: By the testing of developmental equipment not presently commercialized, to identify equipment with potential for high seasonal performance efficiency, and identifying the developmental status of promising equipment and the appropriateness of government support to achieve commercialization of the equipment.

6. Disseminate Results: Widespread dissemination of the results of the test programs, as appropriate, including the efficiency measurements and annual fuel use and efficiency evaluation.

Enthalpy flow efficiency test procedures and annual fuel use methodology have been established. A hydronic test stand was completed, including automatic controls, at the end of FY 76. A forced air stand was available for manual operation in May 1977 and will be equipped for automatic operation early in FY 78. The two test stands have been in continuous use and the schedule for testing voluntarily submitted commercial and prototype equipment now extends to August 1978. Offers of additional equipment items for testing continue to be received, at a rate greater than that of the test capability. The 21 equipment items tested to date have been distributed approximately equally in areas 3, 4, and 5 described above. The number of units tested in each of these three categories represents only a very small fraction of the numbers which will have to be tested in order to achieve the objectives of the program.

The response to the test program by potential offerors of equipment of the type sought has been greater than expected. This led to preparation of plans, in conjunction with DOE, for construction of an additional test stand at an early date, to carry out the test work in the areas described. It was determined that the schedule for conducting the program would be unreasonably long without such an expansion. An expansion was approved by DOE in June 1977 and $85,000 of incremental spending was authorized from FY 77 funds to initiate the work.

While the specific mix of equipment to be tested in future years cannot be forecast accurately at this time, flexibility is provided in the design of the test stands. Each of the three stands—two hydronic and one forced air—will be capable of testing oil-fired equipment.

RESULTS

The BNL enthaply flow efficiency test methodology has proven to be the most accurate means to assess the performance of space conditioning equipment and equipment refit combinations. The reason is simply that other test techniques either do not or cannot measure burner off-cycle losses accurately. Test procedures and annual performance methods used by or intended to be used by other organizations have been evaluated and additional evaluations will be conducted as they are received.

A small number of commercial units have been tested to identify their efficiency of operation. Substantial further testing, including some equipment from other countries, will be required to adequately characterize the stock of commercially available equipment with regard to efficiency.

Some refit actions have been evaluated and a large number of others have been identified. This type of testing is expected to yield profitable results for several more years.

Some developmental equipment has been tested, notably low firing rate oil burners. Many more items are awaiting tests. Experience shows that the amount of promising new equipment or design concepts that will be offered is difficult to estimate but will probably be greater than was expected when the test program was first conceived.

Dissemination of results has been initiated on a selective basis. Plans are now being developed for more widespread dissemination.

It is not possible to provide a precise estimate of the probable, useful duration of this test program. At present, it is evident that the results are likely to be sufficiently profitable in terms of achieving the purpose of the program to continue testing for at least three more years (through FY 1980). We believe that a good planning estimate would be that the program should continue for five years, through FY 1982.

A quantitative outline of the generic type of equipment and the estimate of the minimum number to be tested to characterize each type is attached. This outline does not include testing required by the need to procure equipment not voluntarily offered but which may be required to complete a characterization study.

*Oil-fired heating equipment characterization tests*

(Listed in order of priority for testing)

| | No. of tests |
|---|---|
| I. Boilers (forced hot water heating systems): | |
| A. Boiler—Available w/matched burner (domestic): | |
| 1 Dry base—Steel (DB–Stl) | 3 *1 |
| 2 Wet base—Steel (WB–Stl) | 3 *1 |
| 3 Dry base—Cast iron (DB–CI) | 3 *1 |
| 4 Wet base—Cast iron (WB–CI) | 3 |
| Total | 12 |
| B. Boiler—Available w/mismatched burner (domestic): | |
| 1 DB–Stl | 3 |
| 2 WB–Stl | 3 |
| 3 DB–CI | 3 |
| 4 WB–CI | 3 |
| Total | 12 |

## RONALD REAGAN ON THE FUTURE OF AMERICA'S NEIGHBORHOODS

● Mr. GARN. Mr. President, Congress has recognized that the people of our urban neighborhoods are a vital human resource, and a key force for the revitalization of America's troubled cities. In creating the National Commission on Neighborhoods last year, Congress mandated a careful examination of the administrative, legal, fiscal, and structural obstacles facing neighborhood people seeking to improve their neighborhoods. In doing so, Congress recognized that much of the problem facing neighborhoods is of governmental origin. There was at least a strong hint that sweeping away the obstacles posed by unwise and thoughtless governmental policies, laws, regulations, and practices might do far more to unleash the energies of neighborhood people than a host of new Federal programs.

Former Governor Ronald Reagan addressed this point in a national radio commentary aired during March 1978. I ask that Governor Reagan's text be printed in the RECORD at this point.

The statement follows.

THE FUTURE OF AMERICA'S NEIGHBORHOODS

Last December, President Carter named the 16 persons who, along with four members of Congress, serve on the new National Commission on Neighborhoods. Now, it is no secret that Presidential commissions have, as often as not, been devices for either generating support for a President's existing policies or for sweeping unpleasant issues under the rug for awhile. But, this new commission just may turn out to be different.

We all know the importance of preserving strong urban neighborhoods. For millions of city residents their neighborhood is far more than just the location of a home or apartment. The neighborhood scale is a human scale—a place where the real spirit of a community can develop. Many neighborhoods are rich in tradition and memories. And, in many, there is a mixture of generations and functions, so that activity is continuous. This, in turn, works to keep crime down when, as one urban planning critic described it, there are "eyes on the street"; eyes of grandparents and shopkeepers who watch the passing parade.

Neighborhoods can provide a sense of roots. It is the home of the fraternal lodge, the church, the deli, the corner pub, the street festival, the Fourth of July celebration.

The legislation that created the Neighborhoods commission recognized all this and more. It recognized that foolish government policies over the past several decades have often worked to undermine, even destroy established neighborhoods, building codes, zoning laws, highway construction, urban renewal, federal mortgage insurance, the so-called model cities program, forced school busing—these and other factors have often combined to depress the value of neighborhoods and undercut the fullness of their life.

Wisconsin Senator William Proxmire, a member of the new commission, commented on this at a Senate hearing when he said to a witness, "You would probably have better neighborhoods today if there had been no federal programs at all!" Amen to that!

Congress has given the new Presidential commission the responsibility for assessing the impact of all this governmental activity on urban neighborhoods and to make recommendations for sweeping away the obstacles that face people who try to keep up their neighborhoods.

Quite a few of the commission's members seem committed to that point of view, including its chairman, Massachusetts State Senator Joseph Timilty.

A particular target of commission disapproval is likely to be HUD—the federal Housing and Urban Development department.

What America's neighborhoods need, of course, is not a massive "delivery of services" from government, but a massive rebirth of opportunity. That could begin with the new National Commission on Neighborhoods. Let's hope so.●

## STATEMENT BY SENATOR WALLOP ON NATIONAL HOUSING GOALS

● Mr. GARN. Mr. President, this morning the Banking, Housing, and Urban Affairs Committee was fortunate to have Senator MALCOLM WALLOP of Wyoming testify regarding energy impacted communities and the related housing problems. As he points out, the problems of impacted housing do not lend themselves to one national strategy. Further, may I point out, it is not just a "western" problem: Impacts are being felt in such diverse areas as Appalachia, the Dakotas, Illinois, Wyoming, Indiana, Utah, and Colorado just to name a few. It is clearly not an easily defined problem.

Mr. President, I ask that Senator WALLOP's very cogent statement be printed in the RECORD.

The statement follows:

STATEMENT OF SENATOR MALCOLM WALLOP ON NATIONAL HOUSING GOALS

Mr. Chairman, in light of the administration's intention to accelerate U.S. energy production, one must consider that housing problems are often the first negative impacts to surface in communities near mineral and energy production. The lack of adequate housing has many far reaching consequences on the social and economic environment. I am pleased the Banking, Housing and Urban Affairs Committee has called hearings on S. 2855, the National Housing Goals, because the housing needs of the energy producing states of the country especially in the West and more specifically my home state of Wyoming, have changed considerably in the past ten years. As each day passes, it becomes clear that national attention must be focused on the housing needs of each region of the nation. A single housing strategy cannot and will not accommodate all geographical areas of this country.

The setting of goals to act as a guide post for direction is useful, but the goals should be flexible enough to make sure that the differences of housing markets and the changes occurring over time may be accounted for. After reading the proposed legislation I am pleased to see the provision for "an annual reassessment of housing conditions, requirements and needs, by region and area . . ." To illustrate the need for flexibility and periodic reassessment of the housing goals I would like to share with you a scenario of housing problems in an "energy boomtown" in Wyoming.

The development of energy resources is often located in a sparsely populated rural area far from any major population center. Gillette, Wyoming is one such area. The population of Gillette has been increasing in leaps and bounds since 1970 and is expected to increase between 10 and 16 percent annually for at least the next ten years. The present overall vacancy rate for all types of housing in the Gillette urban area is estimated to be less than 1 percent and a five to six fold increase in the annual demand for housing is expected in the next five years. Permanent households will be the predominant source of this demand. As the lack of adequate housing grows, the turnover rate of workmen spirals resulting in net loss in energy production. The inadequate housing also increases the difficulty of recruiting doctors, teachers, and other community service people. I think you will agree that as these services decrease, so does the quality of living environment for all community members.

The housing needs in energy impacted communities fall into two broad categories: those of the newcomers, and those of the existing community. The needs vs. income gap applies to many members of both groups, and as experience shows, conflict between housing distress and housing reality produces major problems.

The newcomers no matter what type of work they perform expect to have a choice of housing. They do not want to settle for a lower quality of life, nor do many find mobile home parks a suitable solution to the housing needs. The existing community citizens, on the other hand, expect to continue their traditional lifestyles but are threatened by the expanding population. Inflation in the energy development area tends to squeeze many residents, specially the elderly and those on low and fixed incomes. Long time residents find themselves involved in a rapidly escalating cost/demand spiral, robbing them of security.

As we all know, housing costs are escalating each day. The problem is aggravated in rural energy impacted communities by the following factors:

Limited land for development due to extensive federal holdings.

Construction labor is scarce, expensive and sometimes unqualified.

Materials are expensive to obtain, due to distance from major suppliers.

Construction and permanent financing is often unavailable from local sources.

Community infrastructure has not been upgraded or extended for use by new housing developers.

Lack of significant competition within the local home building industry.

I hope some light has been shown upon the wide range of housing problems facing communities that have a massive number of people, in a short period of time, descend upon them. If this is going to be the trend of the future for areas and states containing needed energy supplies, we must devise a mechanism to adjust to the geographical variation of income, housing costs, condition of housing stack and migration.

Mr. Chairman, I do not want to give the impression that I am looking to the federal government to shoulder the total burden of the problem. This is a shared responsibility of local industry, state and federal governments. Several agencies in the federal government though can make changes that will make dealing with the housing problems in energy impacted areas much easier.

The Department of Housing and Urban Development has several programs which, if made available to energy impacted areas, could be beneficial. I would like to suggest:

The Department of Housing and Urban Development develop specific criteria for energy impacted areas.

A revision of prototype housing costs (public housing), and revise fair market rents (Section 8) which could be responsive to the needs and construction costs in those areas.

Provide technical assistance to communities in the use of programs which are uniquely able to meet the needs of the low income and elderly.

Modify statewide mortgage limits such as exist in Section 235 homeownership program. Such limits severely limit the ability to address energy impact housing needs.

Make greater use of Community Development Block Grant Funds for providing building site and community facilities in energy impacted communities.

The development of a creative grant and loan program that will provide planning and technical assistance for the conversion of temporary homesites, mobile home parks, to permanent homes. The temporary homesites will be constructed in a manner that will accommodate the later construction. Such programs are already being tested in several communities in Wyoming.

The Federal Housing Administration appraisal criteria is too often based on urban needs. FHA is without an apparent understanding of the differing needs of rural areas and the specific area that will be impacted by energy development. A more appropriate appraisal criteria needs to be developed.

The Farmers Home Administration county supervisors are heavily burdened with responsibility for traditional agricultural needs. The burden detracts from the supervisor and staff's ability to be totally knowledgeable of programs that could be of use in energy impacted areas. I would like to see:

Special training in energy impacted housing needs and programs provided to existing and future county supervisors.

Additional staff as necessary to process housing applications should be provided.

The present maximum loan limits on a single family home is $33,000. The limit should be raised to meet the market price of housing.

The Region VIII Federal Regional Council is pursuing to coordinate cooperation within the different federal agencies. There should be more encouragement for intergovernmental cooperation.

In conclusion, Mr. Chairman, I would like to urge the Committee to extend the national housing goals with the idea in mind that we are a very diverse union of states and a single housing strategy cannot accommodate all geographic regions of our nation.●

## INFLATION AND PRESIDENT CARTER

Mr. HARRY F. BYRD, JR. Mr. President, President Carter spoke yesterday in regard to inflation, and I applaud the President for emphasizing the inflation which this country is now experiencing.

I am convinced that the inflation facing the American people is our No. 1 enemy.

When one analyzes the President's program, however, one cannot look at it with much enthusiasm—at least, the Senator from Virginia cannot.

In the course of his remarks, the President said that the Federal Government can do very little about inflation. Yet, in my judgment the No. 1 cause of inflation is what is happening in Washington, D.C.

Washington, D.C. is a major cause of the inflation which the American people are undergoing today.

It is the huge, accumulated, and accelerated deficit spending by the Federal Government that is fueling the fires of inflation.

President Carter's new budget, which he submitted only 2 months ago, calls for an increase of 10 percent in the cost of Government.

Since then, he has advocated additional new programs.

He wants an additional bailout of New York City; the Carter administration has advocated a new $2.4 billion urban aid program; the administration wages a major increase in foreign aid, all to come out of deficit spending.

The Carter administration has advocated a new welfare program which would increase the number of people on the welfare rolls and would greatly increase the cost to the Federal Government of the welfare programs—thus adding even more to the runaway deficit.

Mr. President, the place to start to fight inflation is here in Washington, D.C.

I am greatly disappointed that President Carter has made no mention of an official report issued by the Inspector General of the Department of Health, Education, and Welfare. This official report states that that one Department in 1977 misspent $7 billion.

The Inspector General's report stated that this misspending resulted from waste, mismanagement, and fraud. Yes, $7 billion of American tax funds have been misspent by that one Department.

I think it is important that the President and his cabinet address themselves to this basic problem.

How long are we going to continue to permit these departments of Government in Washington, particularly the Department of HEW, to misspend, though waste, mismanagement, and fraud, the money coming out of the pockets of the hard-working wage earners of our Nation?

How much is $7 billion, which was misspent by HEW through waste, mismanagement, and fraud?

The sum of $7 billion is greater than all the Federal income taxes paid by all the people of Virginia during the past year.

To put it another way, that sum of $7 billion is equal to the total income taxes paid by 5 million American families earning $15,000 a year each.

I say again, Mr. President, that if inflation is to be tackled effectively, if inflation is to be got under control, Government spending must be got under control. I am convinced that we will not get the cost of living under control until we get the cost of Government under control.

Jimmy Carter, the candidate, properly in speech after speech emphasized the need to balance the Federal budget.

But Jimmy Carter, the President, is going in the opposite direction. The combined Federal funds deficit for this year and next will be greater than was the entire cost of Government in 1965.

## THE GENOCIDE TREATY AND HUMAN RIGHTS

Mr. PROXMIRE. Mr. President, article 55 of the United Nations Charter calls for "universal respect for, and observance of, human rights and fundamental freedoms for all * * *." In order to insure that such an exhortation does not become empty rhetoric, article 56 obligates all United Nations members, "to take joint and separate action in cooperation with the Organization for the achievement of these purposes * * *."

In the period following the Second World War, there have been a number of treaties and declarations on human rights designed to meet this obligation. These documents have served to protect civil, political, and economic rights, to name a few. The first of these treaties, and one of the most important, is the Genocide Convention, which makes genocidal acts crimes under international law.

For years, I have felt the need to speak out on our failure to ratify this treaty. It is one of the great unfinished pieces of business facing the Senate. It is an integral part of an international, concerted effort to protect human rights. I urge its prompt ratification.

Of course, there is still more work to be done in the area of human rights. The United Nations Association of the United States has produced an informative pamphlet outlining the development of human rights treaties. This pamphlet also highlights our involvement in these treaties. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the pamphlet was ordered to be printed in the RECORD, as follows:

### THE UN AND HUMAN RIGHTS

The protection of individual human rights has traditionally been considered the responsibility of national governments. Human rights provisions are included in the UN Charter, however, and from the beginning, the UN has tried to set standards of conduct for governmental behavior. What follows are brief analyses of just a few of the human rights issues being dealt with by the United Nations. Others include the status of women; the rights of children, refugees, the elderly and the handicapped; the right of asylum; freedom of information; torture and treatment of prisoners; and religious intolerance.

Some changes in the actions and procedures described below are expected as a result of the initiatives now being taken by the United States as well as other countries.

### THE CHARTER PROVISIONS

There are specific references to human rights in the Preamble and six articles in the UN Charter; the most important are in Articles 55 and 56. Article 55 calls for "universal respect for, and observance of, human rights and fundamental freedoms for all . . . ." Article 56 obligates all UN member nations "to take joint and separate action in cooperation with the Organization for the achievement of (therse) purposes . . . ."

In an apparent contradiction of these provisions, Article 2 (paragraph 7) stipulates that "Nothing contained in the present Charter shall authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state . . . ." This is the most frequently used justification for rejection of international jurisdiction over human rights issues. In the opinion of most experts, however, this is negated in part by the Nuremberg principle that criminal violations of human rights are subject to the rules of international law. In addition, two advisory opinions by the International Court of Justice uphold the view that all obligations of the Charter are legally binding, including those on human rights. President Carter, in his address at the United Nations in March 1977, supported this contention: "All the signatories of the UN Charter have pledged themselves to observe and respect human rights. Thus, no member of the United Nations can claim that mistreatment of its citizens is solely its own business."

### DEFINING HUMAN RIGHTS

Perceptions of human rights vary widely among UN member nations. The Western concept tends to emphasize individual political freedoms such as the right to vote and hold public office and the rights of free speech and assembly. In the developing countries, the achievement of economic and social rights, such as the meeting of basic human needs for adequate food, clothing and shelter, are necessarily seen to be at least as important as political rights. Political rights, in this view, may be subordinated to progress on economic and social development, if only temporarily in some cases. Communist doctrine is essentially incompatible with both these positions. Under Marxist theory, there are no individual rights; human rights are defined collectively in terms of the needs of the state which are considered paramount.

Since 1946, with the founding of the UN Commissions on Human Rights and the Status of Women, most UN activities in the human rights field have been directed at further defining the Charter provisions. Both Commissions report to the Economic and Social Council (ECOSOC) and through ECOSOC to the General Assembly (GA). Through the work of these and other forums, the UN has built up an impressive body of standards, law and precedents. These fall into three main categories: conventions and covenants (treaties), non-binding declarations of principles and recommendations for national and international action.

The UN lists 19 major conventions on human rights and over 20 declarations. Others have been adopted by the UN's specialized agencies. What follows is a brief description of the more important of these international instruments.

### THE UNIVERSAL DECLARATION OF HUMAN RIGHTS

The Universal Declaration of Human Rights was adopted by the General Assembly in 1948. It had been drafted in the UN Commission on Human Rights under the leadership of Eleanor Roosevelt. Based in part on the US Bill of Rights, its 30 Articles cover the full range of civil, political, economic, social and cultural rights. The GA proclaims it a "common standard of achievement for all nations."

Although not legally binding, it has become the basis for most subsequent UN actions in this field. Its provisions have been included in the constitutions and legislation of many of the newly independent countries, and it has served as the basis for several judicial decisions. Experts consider it an authoritative interpretation of the human rights provisions of the UN Charter as well as part of customary international law. In this respect, it has attained a degree of legal importance.

### THE INTERNATIONAL COVENANTS ON HUMAN RIGHTS

Because of the non-binding character of the Declaration, it was considered necessary to translate its provisions into treaty form and to define them in greater detail. Work began in 1949, and was completed by the Human Rights Commission in 1954. After long and difficult negotiations in the GA's Third (Social and Humanitarian) Committee, two Covenants were finally adopted in 1966. Both have been criticized for loose wording which might be subject to distortion and manipulation, and for weak implementation procedures which rely too heavily on reporting by governments.

The Covenants took effect in 1976, after 35 governments ratified them. There are now 46 parties to the Covenant on Economic, Social and Cultural Rights and 44 to the Covenant on Civil and Political Rights. Of the five permanent members of the Security Council (US, UK, USSR, France and China), only the UK and Soviet Union have signed and ratified both Covenants, the latter on the basis of interpretations which in effect nullify their provisions. China has indicated its intention to examine all treaties entered into by the Nationalist regime after October 1, 1949, the date the Mao government assumed power in Peking, but has taken no action.

In the United States, much of the opposition to the Covenants, and to other human rights conventions as well, is based on the contention that under the 10th Amendment to the Constitution the protection of human rights is left to the states. Advocates of ratification question the states' rights argument because national legislation already deals with many of these issues. President Carter has announced his intention of signing both Covenants and transmitting them to the Senate for ratification.

The International Covenant on Economic, Social and Cultural Rights includes provisions on freedom from hunger, the right to an adequate standard of living, favorable working conditions and the right to an education. Governments ratifying the Covenant are required to submit to the Economic and Social Council (ECOSOC) periodic reports on steps that have been taken to implement its provisions.

To most of those developing countries which have ratified the Covenant, these terms are viewed as goals to be achieved gradually. In the United States, however, where ratification would automatically make it the law of the land, the chief criticism of the Covenant is that the standards it sets might be difficult to enforce in the courts because some of them are in conflict with US domestic law and with the US economic system. For example, Article 6 refers to the "right to work," a highly controversial phrase in the United States; Article 7 has language even more precise than the proposed Equal Rights Amendment with regard to "women being guaranteed conditions of work not inferior to those enjoyed by men;" Article 10 requires paid leave during a "reasonable period" before and after childbirth, an issue subject to union contracts in most cases. Even the strongest supporters of ratification assume the US would have to add reservations to its ratification to the effect that the Covenant's provisions could not supersede domestic law in certain areas.

The International Covenant on Civil and Political Rights includes, among others, the right to life, liberty, security and privacy of person, freedom of expression and assembly and the right to equality before law. In most instances, these rights are qualified by the need to protect national security and public order, public health, morals, and the rights and freedoms of others. Certain rights, however, such as protection from torture, inhuman or degrading treatment are not subject to these exceptions.

Much of the criticism of the Covenant in the United States has centered on Article 20, which prohibits "propaganda for war" and any "advocacy of national, racial or religious hatred that constitutes incitement to discriminate, hostility or violence." This might constitute an infringement of First Amendment rights to freedom of speech and the press. US ratification of the Covenant would probably be contingent on a reservation protecting US constitutional rights.

A Human Rights Committee of 18 experts will review reports by governments on their compliance with the Covenant. Under Article 41, the Committee is also authorized to hear complaints of violations by one state against another, provided both have accepted the competence of the Committee to do so. The Committee held its first session in March 1977, to approve its rules of procedure.

The Optional Protocol to the Covenant on Civil and Political Rights provides for complaints by individuals against their governments. The Human Rights Committee is required to hear such complaints in closed session, to forward its views to the country and the individual concerned and to submit an annual summary of these activities to the GA. Petitioners must have exhausted all domestic remedies for their grievances and all complaints must be signed and verifiable.

The Protocol took effect in 1976; it has been ratified by only 17 nations, including Canada and the Scandinavian countries, but by none of the major powers.

### CONVENTION ON THE PREVENTION AND PUNISHMENT OF THE CRIME OF GENOCIDE

The Genocide Convention, adopted in 1948, defines the term as "acts committed with the intent to destroy, in whole or in part, a national, ethnic, racial or religious group." These acts include killing, "causing serious bodily or mental harm, deliberately inflicting . . . conditions of life calculated to bring about physical destruction," measures to prevent birth and forcible transfer of children. Article 1 of the Convention specifically states that "genocide, whether committed in time of peace or in time of war is a crime under international law which (governments) undertake to prevent and to punish."

The Convention became effective in 1951 and has now been ratified by 82 nations. The US, which had played a leading role in drafting the Convention, was among the first to sign it. It was transmitted to the Senate for ratification in 1951, where it ran into opposition from some who feared its implications on treatment of US minorities and by others who argued that it would supersede the authority of the states in criminal matters. Several attempts at ratification failed. President Carter has included the Genocide Convention in his list of four conventions to be recommended for Senate ratification. If ratified, enabling legislation under the "necessary and proper clause" of the Constitution would probably stipulate the continued power of the states to act in criminal cases such as murder.

### INTERNATIONAL CONVENTION ON THE ELIMINATION OF RACIAL DISCRIMINATION

The General Assembly adopted the Convention in 1965. It has been in effect since 1969, and has been ratified by over 90 countries. The Convention obligates all states to combat all acts of racial prejudice and discrimination, which is defined in the text as "any distinction, exclusion or preference based on race, color, descent or national or ethnic origin."

It was the first human rights treaty to contain implementation provisions. A Committee on Racial Discrimination examines periodic reports submitted by governments on measures taken in compliance with the Convention. The Committee is also authorized to hear state-to-state complaints of violations (Article 11), and it may review complaints from individuals and groups if the state concerned has accepted the competence of the Committee to do so. (Article 14)

The United States signed the Convention in 1966, but it was not sent to the Senate for ratification. One potential obstacle to US ratification is Article 4, which obliges states to "declare illegal and prohibit organizations, and also organized and all other propaganda activities, which promote and incite racial discrimination." Article 4 also calls for "due regard to the principles embodied in the . . . Declaration" but US ratification will thus certainly require a reservation specifying protection of constitutional rights of free speech and assembly. The UK has attached a similar reservation to its ratification.

President Carter is expected to transmit the Convention to the Senate during the 95th Congress.

The International Convention on the Suppression and Punishment of the Crime of Apartheid was adopted by the GA in 1971. It is directed primarily against South Africa and its policies of racial segregation. The text defines apartheid as any "act committed for the purpose of establishing and maintaining domination by one racial group of persons over any other racial group." Such acts are to be treated as criminal offenses "against humanity." The Convention took effect in 1976 and has now been ratified by 31 states. The US and most other Western countries have criticized its loosely worded definition of *apartheid*. They also consider it redundant because most of its key provisions are already included in the Genocide and Racial Discrimination Conventions.

The Decade for Action to Combat Racism and Racial Discrimination, an effort to focus world attention on racial issues, particularly in southern Africa, was inaugurated by the GA in December 1973. The Assembly also adopted a program of action for the ten-year period which has since been expanded to include a World Conference to Combat Racism, now scheduled for 1978 in Ghana. In protest over the Assembly's adoption in 1975 of a resolution equating Zionism with racism, the US has refused to participate in either the planning or the funding of the Conference.

### IMPLEMENTATION PROCEDURES AND THE "DOUBLE STANDARD"

A major criticism of actions in the human rights field is the UN's "double standard," the ignoring of known violations in many nations, while indulging in regular denunciations of only a few countries, usually South Africa, Israel and Chile. In part this is a reflection of the difficulties in reaching agreement on what constitutes violations of human rights. More importantly, many human rights issues, particularly those related to the Middle East, are in fact highly explosive political issues. And, because the UN is essentially a political institution, even if they are not political issues, they are usually treated as such. The decision in 1977 by the Human Rights Commission not to investigate charges of murder in Uganda is eloquent testimony to the priority accorded political considerations, in this case, maintenance of African unity. The machinery for dealing with human rights violations exists, but it is cumbersome and is not often activated.

ECOSOC Resolution 1503 was adopted in 1970. It established the first procedures not required by treaty for reviewing complaints from private groups and individuals. It authorizes the Human Rights Commission and its Sub-Commission on the Prevention of Discrimination and Protection of Minorities to review and make recommendations on those situations "which reveal a consistent pattern of gross and reliably attested violations of human rights."

Since adoption of Resolution 1503, the number of complaints has risen dramatically to over 50,000 in 1976. Processing of these complaints is slow, however, taking a minimum of 18 months. The complaints are handled on a confidential basis and the petitioner is not informed if his complaint is being considered, if or when it has been rejected, or if and how it has been acted upon. (In 1972 and 1973 several cases were reportedly referred to the Sub-Committee by the special five-member working group charged with reviewing the complaints, but no further action was taken.)

The Soviet Bloc is now claiming that the 1503 procedures are no longer needed because

they have been supplanted by those included in the Covenants. The Covenants' procedures, however, apply only to governments, not private complaints, and governments are usually loath to criticize other governments for fear of possible retaliation. The worst cases of human rights violations are usually publicized, not by governments, but by private non-governmental organizations.

The ILO Precedent: The International Labor Organization (ILO) has developed effective and sophisticated procedures for enforcing the provisions of the more than 150 conventions it has sponsored, several dealing with human rights. The effectiveness of the ILO procedures lies in the tripartite character of the agency: governments' reports on their implementation of ILO conventions are regularly and critically reviewed by both management and labor experts, as well as by other governments. These reviews have frequently led to improvements in national legislation. The US is not a party to any ILO convention. In 1975 the United States gave formal notice of its intention to withdraw from the ILO partly because of the "erosion of tripartite representation in the agency." In its letter of intent, the US declared that it "cannot accept the workers and employer groups in the ILO falling under the domination of Governments."

UN High Commissioner for Human Rights: This proposed office, first suggested by Costa Rica in 1975, would be intended to provide high-level private conciliation and mediation efforts by a respected and impartial international civil servant. Although his powers have not been defined, the Soviet bloc and the Arab states have consistently opposed the proposal as a violation of Article 2(7) of the UN Charter and a potential encroachment on national sovereignty. The idea has been shelved since 1974. President Carter has announced his intention to revive it.

US POLICY: CREDIBILITY AND THE CONSTITUTION

The US has ratified only five UN human rights conventions, dealing with the status of refugees, the political rights of women and slavery. Those who support US ratifications of other UN conventions maintain that the US will have little or no credibility in its advocacy of human rights until action is completed on at least those four conventions supported by President Carter. In addition they cite the ineligibility of the US to participate in either the Human Rights Committee or the committee on Racial Discrimination because the US is not a party to either the Convenant on Civil and Political Rights or the Racial Discrimination Convention. This permits, by default, the USSR and Third World countries to interpret the conventions in ways which tend to distort or negate their original intent.

Opponents of ratification rely primarily on the 10th Amendment provisions on states' rights. The landmark Supreme Court decision of *Missouri* v. *Holland* in 1920, refuted this argument. This so-called "migratory birds case" involved the constitutionality of Congressional legislation giving effect to a treaty with Canada which encroached on state game laws. The Court upheld the authority of Congress to implement valid treaty commitments even if they deal with matters normally under state authority. In addition, Justice Holmes, writing for the majority, stated that "no doubt the great body of private relations usually fall within the control of the state. but a treaty may override its power."

In 1953, Secretary of State John Foster Dulles took a different view. He pledged that the Eisenhower Administration would "not become party to any (human rights) covenant or present it as a treaty for consideration by the Senate," but would seek to promote human rights by "methods of persuasion, education and example." The treaty-making power was not to be used "to effect internal social changes."

Ten years later, President Kennedy attempted to reverse this policy, and transmitted three conventions to the Senate for ratification, all apparently chosen to avoid the constitutional issue: the Convention on the Political Rights of Women, a matter of federal law under the 19th Amendment; the Supplementary Convention on Slavery and the ILO Convention on the Abolition of Forced Labor, both under the purview of the 13th Amendment. The Slavery Convention was ratified in 1967, and the Convention on the Political Rights of Women in 1976. No action has been taken on the ILO Convention.

The Security Assistance Act of 1976 requires annual reporting on observance of human rights in every country receiving US security assistance. The first report issued in 1977 showed most of the 82 countries listed as violators of human rights. Cuts in security assistance, however, were proposed for only three countries, Argentina, Uruguay and Ethiopia. For political and security reasons, there were no requests for others such as Brazil, South Korea and the Philippines.

In addition, several attempts have been made to add human rights criteria to loans made by international financial institutions (IFIs) such as the World Bank. These conditions are strongly opposed by World Bank President Robert McNamara who maintains they would destroy the traditionally nonpolitical character of international development agencies.

The Helsinki agreement, scheduled for review in June 1977, is not being dealt with in the UN, but it has been discussed as a possible precedent for future regional agreements on human rights.

Mr. PROXMIRE. Mr. President, I yield the floor.

## ORDER FOR RECOGNITION OF CERTAIN SENATORS TOMORROW, AND DESIGNATION OF PERIOD FOR ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow after the prayer, the Senator from New York (Mr. JAVITS) be recognized for not to exceed 15 minutes; that he be followed by the Senator from New Mexico (Mr. SCHMITT) for not to exceed 15 minutes; and that thereafter, until the hour of 11 o'clock a.m., there be a brief period for the transaction of routine morning business, with statements therein limited to 5 minutes each, as in legislative session.

The PRESIDING OFFICER. Without objection, it is so ordered.

## ORDER FOR RECESS UNTIL 10:15 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in recess until the hour of 10:15 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. This would mean, then, Mr. President, that the Senate would resume its consideration of the treaty at 11 o'clock; am I correct?

The PRESIDING OFFICER. The Senator is correct.

Mr. ROBERT C. BYRD. I understand that Mr. DOLE will be ready at 11 o'clock on his amendment, and I believe that rollcall votes in relation thereto should occur at about noon tomorrow, for the information of Senators.

## COMMITTEE MEETINGS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Committee on Rules and Administration be authorized to meet during the session of the Senate on Wednesday, April 19, to hold further hearings on S. 2, the Programs Evaluation Act of 1977, and S. 1244, the Federal Spending Control Act of 1977, otherwise known as the "sunset legislation."

The PRESIDING OFFICER. Without objection, it is so ordered.

## CONCLUSION OF MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask that morning business be closed.

The PRESIDING OFFICER. Without objection, it is so ordered.

## EXECUTIVE CALENDAR

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of nominations on the Executive Calendar, beginning on page 2 under "New Reports."

Mr. BAKER. Mr. President, reserving the right to object, and I will not object, the items appearing on the Executive Calendar from the point identified by the majority leader through and including the nominations in the Coast Guard placed on the Secretary's desk have been cleared on this calendar, and we have no objection to their immediate consideration and confirmation.

## DEPARTMENT OF STATE

The second assistant legislative clerk read the nomination of David D. Newsom, of California, to be Under Secretary of State for Political Affairs.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the nomination was confirmed.

Mr. BAKER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

## INTERNATIONAL JOINT COMMISSION, UNITED STATES AND CANADA

The second assistant legislative clerk read the nomination of Robert J. Sugarman, of Pennsylvania, to be a commissioner on the part of the United States.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the nomination was confirmed.

Mr. BAKER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

## NOMINATIONS IN THE COAST GUARD PLACED ON THE SECRETARY'S DESK

The second assistant legislative clerk proceeded to read routine nominations to be placed on the Secretary's desk.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that these motions be considered en bloc.

Mr. ALLEN. Mr. President, reserving the right to object, and I shall not object, are those the nominations as ensigns in the Navy? Are they the ones the distinguished majority leader had reference to?

Mr. ROBERT C. BYRD. They are Coast Guard nominations, beginning with—yes, the Senator is correct.

Mr. ALLEN. That would indicate that the United States Senate has to approve commissioning an ensign in the Navy. I raise that point because I sought to get the Senate to provide for approving the members of the Panama Canal Commission, feeling that they were as important, possibly, to the conduct of the Nation's business as requiring the Senate to confirm the commissioning of ensigns. But these are ensigns requiring the approval of the United States Senate?

Mr. ROBERT C. BYRD. Yes, they are; and I do not believe that the present members of the Panama Canal Board are required to be confirmed.

Mr. ALLEN. Yes, but the Senator does know that the present members, with the exception of one, have actually been confirmed in the positions which they hold as Assistant Secretary of the Army, and things of that sort.

Mr. ROBERT C. BYRD. Yes; he would be required to be confirmed for the position of Assistant Secretary of the Army.

Mr. ALLEN. I thank the Senator. I withdraw my reservation.

Mr. BAKER. Mr. President, reserving the right to object, as a former ensign, I might say they are entitled to that recognition.

Mr. ALLEN. I am a former ensign, myself, but I rose to the rank of lieutenant, junior grade.

Mr. BAKER. Well, the distinguished Senator from Alabama and I share many things, and we share that distinction as well.

Mr. ROBERT C. BYRD. Mr. President, I am sorry that I cannot claim that distinction, so therefore I cannot join the distinguished company in this regard. I salute them, however.

The PRESIDING OFFICER. Without objection, the nominations are considered and confirmed en bloc.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the nominations were confirmed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of the nominations.

The PRESIDING OFFICER. Without objection, it is so ordered.

## SENATE RESOLUTION 432—WAIVING A REQUIREMENT FOR SERVICE ON THE SELECT COMMITTEE ON ETHICS

Mr. BAKER. Mr. President, as in legislative session, I ask unanimous consent that I may send a resolution to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. Without objection, the resolution will be stated.

The legislative clerk read as follows:

A resolution (S. Res. 432) waiving for the remainder of this Congress with respect to the minority party the requirement that a member of the Select Committee on Ethics have served in the Senate for more than six but less than twelve years.

The PRESIDING OFFICER. Is there objection to the immediate consideration of the resolution?

Mr. ROBERT C. BYRD. Mr. President, reserving the right to object to the immediate consideration, and I shall not object, this resolution has been cleared with Mr. PELL from the Committee on Rules and Administration and with Mr. STEVENSON, the chairman of the Select Committee on Ethics. I have no objection.

The PRESIDING OFFICER. Without objection, as in legislative session, the resolution is considered and agreed to.

The resolution is as follows:

*Resolved*, That subsection (d)(2)(B) of the first section of Senate Resolution 338, Eighty-eighth Congress, agreed to July 24, 1964 (as added by section 102 of Senate Resolution 4, Ninety-fifth Congress) shall not apply for the remainder of the Ninety-fifth Congress with respect to a member of the Select Committee on Ethics from the minority party.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I do not often have the opportunity to move to lay on the table a motion by the distinguished minority leader. He is always moving to lay on the table my motions to reconsider, but this is one time I am going to move to lay on the table his motion.

The PRESIDING OFFICER. Without objection, the motion is agreed to.

## KEMP-ROTH TAX CUT BILL

Mr. BAKER. Mr. President, as in legislative session, on March 15, 1978, the House of Representatives took up the Kemp-Roth tax cut bill. An impressive number of House Members, on both sides of the aisle, voted for this important measure, which received 194 affirmative votes and lost by only 22 votes.

I have strongly supported this bill to cut taxes and I look forward to a time when we can vote in the Senate on this sound and sensible legislation. It would not only provide for more jobs and a boost to the American economy, but it would also bring about long-term growth for the country.

Mr. President, in the April 10, 1978, issue of Fortune magazine there is an excellent analysis of this proposed tax cut and a profile of Representative JACK KEMP of New York who, with my distinguished colleague from Delaware, Senator ROTH, created and now advocates this important proposal. Congressman KEMP is one of the most able and impressive leaders in the House and I would hope that other Members of the Senate would learn more about the proposal which he and Senator ROTH are advancing.

I ask unanimous consent that this article be printed in the RECORD at this time.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JACK KEMP WANTS TO CUT YOUR TAXES—A LOT

(By Irwin Ross)

Jack Kemp is a most unusual Congressman. Members of Congress come from a variety of fields, but very few were professional athletes. Kemp was: in the middle 1960's he ranked among the outstanding quarterbacks in pro football. Most Congressmen read a lot, of necessity, but relatively few are heavy readers of serious books. Kemp is: he's a dedicated, not to say compulsive, student of economics. Few members of Congress emerge as national figures without quite a lot of seniority behind them. Kemp did: regarded as merely a curiosity after his football stardom catapulted him into Congress in 1970, he has become a political star, a spokesman for his party and a molder of its policies.

A man of missionary zeal, Kemp is involved in no less daunting an effort than trying to reshape the thrust and strategy of the Republican party. He wants to drop the old rhetoric about cutting spending and balancing the budget and instead rally the voters with a new battle cry of jobs and economic expansion through big tax cuts. He has already had a remarkable impact. Last fall, the Kemp-Roth tax-reduction bill (coauthored by Republican Senator William Roth of Delaware) was unanimously endorsed by the Republican National Committee. It has picked up more than 160 cosponsors in the Congress.

Kemp has become one of the G.O.P.'s most sought-after speakers; since last September he has carried his campaign to nineteen states, averaging better than a speech a week. He is featured in the Republican Naitonal Committee's twenty-eight-minute TV film on tax cuts, and has been invited to address fourteen Republican state conventions (not all of which can be fitted into his schedule).

ECHOES OF J.F.K.

Kemp's program has a bold and dramatic sweep to it. His bill calls for a deep across-the-board cut in personal income-tax rates—an average of 30 percent, to be phased in over a three-year period. By comparison, the tax-rate cut that President Carter recently proposed is positively niggling. The Kemp-Roth bill also calls for a mild reduction in the top corporate rate, from 48 to 45 percent over three years, as well as an increase in the threshold—from $50,000 to $100,000—at which the top corporate rate takes effect.

Kemp makes much of the point that his tax program is modeled after the Kennedy cuts of 1964–65, which reduced income-tax rates nearly 20 percent and cut the corporate rate from 52 to 48 percent. In Kemp's view, the Kennedy cuts were a tremendous success in reviving incentives and stimulating the economy. He frequently uses the slogan, "Let's get the economy moving again," echoing the theme of John F. Kennedy's 1960 presidential campaign. The Republican film on taxes actually includes a clip of J.F.K. presenting his tax program to a joint session of Congress in January, 1963. The frequency with which Kemp invokes Kennedy suggests that the late President may be passing into the pantheon of nonpartisan national heroes. At the same time, of course, Kemp is making an effort to deflect Democratic flak directed against his tax plan.

BEYOND BLOCK-THAT-DEFICIT

There is a touch of irony in Kemp's advocacy of grand-scale tax reduction. He has generally been identified with the conservative wing of his party. He worked briefly for Ronald Reagan during his time as governor of California, was an ardent hawk on Vietnam, and has tended to take a right-wing position on most issues—for example, against ratification of the Panama Canal treaties and against decriminalization of marijuana. Early in his congressional career he introduced a constitutional amendment to prohibit busing.

His tax program, however, is anything but conservative, if that label is taken to signify old-fashioned, block-that-deficit fiscal conservatism. Indeed, in speaking of his economic views, Kemp occasionally refers to himself as a radical, by which he means that he gets at the roots of things. Conservatives, of course, would like to lower taxes, but they worry about the budgetary consequences and therefore want tax cuts to be accompanied by spending cuts. Kemp, while making an occasional reference to "prudent spending," does not propose any reduction in outlays.

"I don't worship at the shrine of the balanced budget," he says. "Republicans have been trying to balance the budget ever since Herbert Hoover. I would much rather have a growing economy and a budget that's unbalanced than a contracting economy with a balanced budget." He is well aware that in a growing economy, stimulated by tax cuts, the relative proportions of private and public spending would shift in the direction of the former, but he does not stress the point.

"SO THEY ELECTED ME"

On the platform the boyish-looking, powerfully built Kemp is a rousing performer. He will start out conversationally, but as he warms to his theme he is soon bouncing around behind the podium, rearing back one moment, jutting forward another, and continually using his hands—to form globes, trace soaring arcs, or emphasize points with an outstretched finger, a slicing motion, or a clenched fist pounding the air.

Before he gets to the main business, he indulges in some genial self-depreciation. He recalls, for example, that when he was first running for Congress, he told a TV interviewer that he'd probably return to football if he lost the election. That night, as Kemp tells it, a newscaster solemnly reported that "congressional candidate Jack Kemp warned the people of Buffalo that if he is not elected, he will play football." Kemp adds: "So they elected me." The crowd roars.

The economic message, when it comes, is delivered in short, staccato bursts. Kemp has a number of favorite bits, which also pepper his conversation. Among them: "Generally speaking, if you tax something, you get less of it. If you subsidize something, you get more of it. In America, we tax work, growth, investment, employment, savings, and productivity, while subsidizing non-work, consumption, welfare, and debt."

To explain the impact of high marginal tax rates on incentives and output: "Let's say your income is taxed 10 percent on Monday, 20 percent on Tuesday, 30 percent on Wednesday, 40 percent on Thursday, 50 percent on Friday, and so on. For most people, sometime around Friday, you'd decide not to work anymore." Kemp feels that he can be allowed such simplistic formulations, for, as he frequently points out, "I'm not an economist. I have no formal training in economics. But I am an expert in incentives."

"DRAINING ME OF EVERYTHING I KNEW"

Kemp's awareness of his lack of formal training in economics may partly account for the remarkable intensity of his search for knowledge. Jude Wanniski, a writer on the Wall Street Journal, vividly recalls the first time he met Kemp, early in 1976. Wanniski walked into Kemp's office, without an appointment, and sent in his card. Fifteen minutes later, Kemp burst out of his room. "Wanniski!" he exclaimed, "I've just been thinking about how I was going to meet you." He explained that he had been reading Wanniski for a long time. They immediately began talking about economics.

It was then 10:00 a.m. They talked all day, Wanniski canceling appointments and following Kemp around Capitol Hill. In the evening, Kemp took him home to Bethesda, where his wife, Joanne, prepared dinner. And they talked until midnight. "It was exhausting," says Wanniski. "He was draining me of everything I knew. He was squeezing my head."

Kemp counts Wanniski among the people who have had an important influence on his thinking. Another is Irving Kristol, the well-known essayist and coeditor of The Public Interest. Kemp credits Kristol with pointing him in a new direction, toward the view that the Republican party, as Kristol puts it, needs to become "a party of hope—rather than a party that has benefited from Democratic disasters." At times, Kemp calls himself a "Kristolian."

Early in his acquaintance with Kemp, Kristol was agreeably surprised to note that "when you mention something that he should read, he goes out and reads it. Last year, I recommended some old articles in The Public Interest, and when we met again, he had read them all. I didn't remember them as well as he did."

Kemp sometimes reveals a touch of insecurity when he runs into an argument for which he has no adequate response. Half an hour before he was to deliver a speech, he unexpectedly telephoned one of his economic advisers for some help on a technical point of economics. He had learned that a reporter who had disputed the point with him would be in the audience.

The insecurity emerged not long ago when a visitor asked whether he had read Keynes' General Theory of Employment, Interest and Money, which many professional economists have never managed to finish. Kemp looked crestfallen and confessed that he had not. An hour later, as he dropped his visitor at the airport, he suddenly said, "You've got me worried. I'll have to go back and read the General Theory."

Kemp's intellectual energies are by no means exhausted by economics. During the bicentennial year, he returned from a speaking trip all steamed up with curiosity about the quality and texture of life in this country in the 1770's and 1780's. He pulled together everything he could find on the social and intellectual history of the period, and went on a reading jag. When finally sated, he moved to something else. Some other enthusiasms, apart from economics, have been enduring. He knows quite a bit about ballet, an interest that goes back to the time an aunt took him to a performance of the Bolshoi Ballet in Los Angeles in the Fifties.

THE DREAM CAME TRUE—SLOWLY

Los Angeles is where Kemp was born and grew up. His father was a businessman, coowner of a small trucking firm; his mother had once been a social worker. Jack's abiding boyhood ambition was to play pro football. He played quarterback at Fairfax High School in Los Angeles and at nearby Occidental College, where he majored in physical education.

The early years of his football career were so unpromising that a less dogged man might have become discouraged. Soon after his graduation from college in 1957, the Detroit Lions drafted him as a third-string quarterback, and he then spent three frustrating seasons employed by no fewer than five teams, hardly ever getting off the bench. His chance finally came in 1960, when he was taken on by the Chargers, a Los Angeles team that later moved to San Diego. Kemp became the starting quarterback of the Chargers, but he achieved national celebrity only after he joined the Buffalo Bills for the 1962 season. He came to be recognized as a very smart, spunky quarterback who energized the whole team when he came onto the field—the inspiring leader straight out of boys' books. He led the Bills to two A.F.L. championships and in 1965 received the league's Most Valuable Player award.

Kemp was a leader off the field too. He was a cofounder of the A.F.L. Players Association and later served as its president. He helped negotiate the first collective-bargaining agreement in pro football, an experience that gave him some knowledge of how unions operate (but did not make him a union partisan when it came to voting in the House of Representatives).

His intellectual development went forward during his pro football years. One important influence was an article in Fortune (March, 1960) on the free-market economist Friedrich Hayek and his new book *The Constitution of Liberty*. The article led Kemp to read the book and start to explore the ideas of other conservative economists. While playing for the Chargers, Kemp also took some postgraduate courses in history and political science, working toward an M.A. He had a vague idea that he might want to teach someday.

A POLITICAL GODFATHER

The San Diego period proved to be crucial in Kemp's post-football career, for it expanded a budding interest in politics. Through the sports editor of the San Diego Union, Kemp met the paper's editor, Herbert Klein, who had been Nixon's press secretary in the 1960 campaign. Klein, an ardent football fan, provided Kemp's entrée into Republican politics. Kemp speaks of him as "kind of my political godfather." Klein was also helpful in getting Kemp enrolled in the paper's editorial-training program during the off-season. Kemp did research for the editorial writers, wrote "a couple" of editorials himself, and made a good many speeches for the paper before community groups.

In 1970, while Kemp was still with the Buffalo Bills, Republicans leaders in Erie County asked him to run for Congress from what was then the Thirty-ninth District. The district spread over a large suburban expanse and a small segment of Buffalo and had a sizable population of blue-collar workers. It was a marginal district, then represented by a liberal Democrat, Richard (Max) McCarthy, but previously by a right-wing Republican. McCarthy did not run in 1970, and Kemp beat another newcomer in a tight race. Thereafter the district lines were redrawn, but the new Thirty-eighth remained substantially the same in demographic composition as the old Thirty-ninth. Kemp's share of the votes rose to 73 percent in 1972 and 78 percent two years ago.

THE BLUE-COLLAR LINKAGE

This extraordinary popularity is in part the payoff for careful nurture of his constituency, of the sort that is typical of diligent congressmen. In Washington, Kemp is always available, by phone and in person, and he regularly flies back to Buffalo. He holds periodic meetings around the district, from 9:00 a.m. to 4:00 p.m., at which constituents with problems involving federal agencies can consult him. Moreover, he has devoted an enormous amount of time to obtaining federal funds for local public-works projects—notably sewage-treatment plants and an ambitious urban mass-transit system.

One of Kemp's more impressive political achievements has been the collecting of a sizable number of local union endorsements in past elections, despite a voting record that the A.F.L.–C.I.O. ranks as dismal. Last year, for example, he voted against both the common situs picketing bill and the increase in the minimum wage. State and national labor endorsements go to his opponents, and the Buffalo A.F.L.–C.I.O. Council is dead set against him, but a number of Buffalo-area unionists like him. Floyd Lisinski of the pressmen's union says of Kemp: "He was always there when I needed him. He returns my calls almost immediately." Moreover, the building-trades unions prize the construction jobs he has brought the district.

Kemp himself credits much of his present popularity to his tax program. The idea of economic expansion through tax cuts has a strong appeal to blue-collar audiences, he insists. The election figures certainly indicate that he has substantial blue-collar support, but it is difficult to evaluate the specific appeal of his tax program in Buffalo. Local observers are of divided mind about its popularity—though never about Jack's.

Whatever the impact of Kemp's ideas on people in Buffalo, it was the high level of unemployment in the city that turned him to a search for economic solutions some years ago. Initially, he was a fairly orthodox, budget-balancing Republican. Then he underwent a major change in his economic views and political emphasis.

Before his tax-reduction bill, Kemp sponsored a "jobs creation" measure, which would have legislated a wide range of fiscal therapies, including lower tax rates, an exemption for new personal savings, and the abolition of double taxation of dividends. But it was too complicated to promote effectively, and so he moved to his present proposal. Last year, in his conversations with Senator Roth, Kemp urged a 30 percent cut in personal income-tax rates in one year, but Roth thought it imprudent to move that fast, and so they settled for 10 percent a year.

IN FAVOR OF WORK

While Kemp is well aware of the political attractiveness of cutting taxes, he also offers a respectable, though disputed, economic rationale for his program. Simply stated, the argument is that substantial cuts in tax rates would lead to a bigger G.N.P. by increasing people's preference for work, saving, and entrepreneurial risk-taking—as against leisure, spending, and less productive forms of investment, such as real-estate speculation. A faster-growing economy would ultimately increase government revenues, even at lower tax rates, because there would be a larger volume of private and corporate income to tax. This line of argument—from the "supply side" rather than the "demand side," as economists put it—descends from classical theory, and specifically the views of the nineteenth-century French economists Jean Baptiste Say and Leon Walras. A modern version has been put forward in recent years by Robert A. Mundell of Columbia and Arthur B. Laffer of the University of Southern California.

In setting forth his ideas, Kemp makes use of the "Laffer curve," which he is continually drawing on paper napkins and the backs of envelopes. The curve (see below) illustrates the relationship between tax rates and government revenue. Very high rates of taxation limit revenue by restraining output. Lowering tax rates from such counterproductive levels can increase government revenue by stimulating greater output. That is why Kemp has no fear that his tax proposals would result in a bigger federal deficit.

In Kemp's view, the Kennedy cuts proved the efficacy of this approach. Now incentives have to be restimulated once again—because over the intervening years inflation has greatly increased the tax bite, in real terms, by pushing people into higher marginal brackets.

To support his case, Kemp points to what happened after the Kennedy tax cuts went into effect. Last year he asked the Library of Congress to compare the revenue the Treasury projected back in 1963, when Kennedy proposed his program, with what actually happened. The Treasury forecast a revenue loss of $89 billion for the years 1963–68. As things turned out, tax revenues increased by $54 billion, because of the great acceleration in economic activity. What we did before, Kemp is fond of saying, we can do again.

His economic advisers are split on what Kemps' tax cuts would do to the budget deficit. Laffer believes the Kennedy experience would be repeated. Norman Ture, a Washington consultant on whom Kemp also relies, has put the Kemp-Roth tax cuts through his econometric model, which has a heavy emphasis on supply-side effects, and comes up with a revenue gain of $1 billion in 1978 (assuming the progam was already in effect) but a revenue loss of $40 billion in 1980 and $43 billion in 1982.

Ture's explanation is that in the first year there would be a sizable jump in G.N.P., as underutilized plant capacity is put to fuller use, but that in successive years the growth of G.N.P. would be slower. Nonetheless, Ture projects such a vast increase in savings that the additional deficit could be financed without any "crowding out" of private investment—a point that Kemp has seized on.

Keynesians, of course, also consider the Kennedy cuts to have been a huge success, but in their view the crucial element was expansion of demand. They argue that the effect of tax cuts on incentives has not been proved, at least in the tax environment in the U.S. For his part, Kemp says that "Kennedy's economists did the right thing for the wrong reasons." He will only grudgingly concede any stimulative effect from enlarged demand.

The political irony is that the Republican party is now on record for big tax cuts, whereas the Democratic Administration is proposing modest nicks in personal income-tax rates, and other changes that, as Kemp sees it, only increase the progressivity of the tax schedule and lead to "income redistribution rather than income growth." Many Democrats think Kemp is being demagogic and absurdly heedless of a ballooning deficit; Kemp thinks the Democrats are prisoners of false dogma.

"YOU'RE NOT SUPPOSED TO LAUGH"

The Kemp-Roth bill, of course, will not pass; such proposals by the minority party never do. But it may well raise the ante in the tax debate, for there is already a disposition among Democrats to go beyond the Carter Administration's program.

Meantime, Jack Kemp has begun to alter the face that the Republican party presents to the world. In the process, he has become a national leader of the party. Recently he has been urged to run for governor of New York this year, but that would be very chancy. Besides, the political argument he is interested in is centered in Washington. The next move he freely talks about is to the Senate in 1980, if Jacob Javits, now seventy-three, retires.

Some of Kemp's admirers see him on the national ticket two years hence, possibly even as a presidential candidate. This suggestion was reported to him somewhat jocularly a few weeks ago. "You're not supposed to laugh at that," said Kemp, not laughing. Even if his staffers share that view, however, they have been avoiding use of his middle initial (F for French, his grandmother's maiden name) or of his three initials, which have a certain familiarity: J.F.K.

## TIME-LIMITATION AGREEMENT ON DOLE AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I understand this request is agreeable with Mr. DOLE: I ask unanimous consent that there be a limitation of 1 hour for debate on the amendment by Mr. DOLE tomorrow, and that that time be equally divided between Mr. DOLE and Mr. CHURCH or their designees.

The PRESIDING OFFICER. Without objection, it is so ordered.

## PROGRAM

Mr. ROBERT C. BYRD. Mr. President, the Senate will convene tomorrow at 10:15 a.m. After the prayer, Mr. JAVITS and Mr. SCHMITT will be recognized, each for not to exceed 15 minutes, after which there will be a period for the transaction of routine morning business until 11 a.m., with statements therein limited to 5 minutes each.

At 11 a.m., the Senate will resume its consideration of the treaty, and Mr. DOLE will be recognized with respect to his amendment. Rollcall votes will occur throughout the afternoon.

## RECESS UNTIL 10:15 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the order previously entered, that the Senate, in executive session, stand in recess until the hour of 15 minutes after 10 o'clock tomorrow morning.

The motion was agreed to; and at 7:01 p.m., the Senate, in executive session, recessed until tomorrow, Thursday, April 13, 1978, at 10:15 a.m.

## CONFIRMATIONS

Executive nominations confirmed by the Senate April 12, 1978:

DEPARTMENT OF STATE

David D. Newsom, of California, a Foreign Service officer of the class of Career Minister, to be Under Secretary of State for Political Affairs.

INTERNATIONAL JOINT COMMISSION, UNITED STATES AND CANADA

Robert J. Sugarman, of Pennsylvania, to be a Commissioner on the part of the United States on the International Joint Commission, United States and Canada.

The above nominations were approved subject to the nominees' commitments to respond to requests to appear and testify before any duly constituted committee of the Senate.

IN THE COAST GUARD

Coast Guard nominations beginning Will Daniel Agen, to be ensign, and ending Edward Lewis Young, Jr., to be ensign, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on March 22, 1978.

# HOUSE OF REPRESENTATIVES—*Wednesday, April 12, 1978*

The House met at 3 o'clock p.m.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

*Let your light so shine before men, that they may see your good works and glory your Father who is in heaven.*—Matthew 5: 16.

Almighty God, our heavenly Father, in this quiet moment we open our hearts unto You praying that we may feel the touch of Your spirit upon us as we begin the work of this day. Grant unto each one of us wisdom for the decisions we have to make, good will in the contacts we have with one another, and faithfulness in our devotion to You and to our country.

Bless the citizens of our Nation with the flora of Your continued favor. May we as a people be great enough in spirit to be a channel through which peace, justice, and good will can flow into our world.

Thy love divine hath led us in the past;
In this free land by Thee our lot is cast;
Be Thou our Ruler, Guardian, Guide, and Stay,
Thy word our law, Thy paths our chosen way.

Amen.

## THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

## MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Sparrow, one of its clerks, announced that the Senate had passed without amendment a joint resolution of the House of the following title:

H.J. Res. 578. Joint resolution authorizing the President to proclaim the third week of May of 1978 and 1979 as "National Architectural Barrier Awareness Week."

The message also announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 2424. An act to amend the act incorporating the American Legion so as to redefine eligibility for membership therein.

## CONFERENCE REPORT ON FARM BILL EXCEEDS THE LIMIT

(Mr. MOORHEAD of Pennsylvania asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, I have always supported farm legislation and last year I not only supported the omnibus farm bill, I spoke in favor of it. I have no regrets, though its income and price supports have unavoidably proved expensive in budgetary terms at a time of large crops. I said then, and reaffirm today, that a healthy urban economy depends in good part on a healthy agricultural economy, and vice versa. But there comes a limit. This conference report exceeds that limit.

Mr. Speaker, the essence of my argument on the 1977 bill, when I spoke during debate on the rule, was that the farm program—reinforced by the 1977 act which we eventually approved—would help to assure ample agricultural supply. From the point of view of the Nation's inflation problem, that is the heart of the matter, more important than the budgetary cost. It is quite true that prices at the farm gate now amount to only about one-third of the cost of finished food to the consumer, but it is equally true—as the 1973–75 experience demonstrated beyond any doubt—that a surge of prices at the farm level caused by changes in world demand or supply conditions can by itself lead to an explosion of food prices at the supermarket. There is only one guarantee against a repetition of that painful experience, and it is ample farm supply.

The conference report before us hits directly, overtly, and purposely at farm supply. Its whole thrust is to retire acreage and cut production. We have heard and will hear various estimates of budgetary cost and impact on consumer prices. I do not really trust any of those figures, which are bound to be imprecise. But we do not need those figures to make the case against this bill. Instead, we need look at only one magnitude that really is important. Let me emphasize it and repeat it:

With maximum farmer participation in the set-aside program established by this bill, 59 million acres would be removed from production of wheat, feed grains, and cotton. This is nearly triple—repeat, triple—the acreage that will be retired under the recently augmented set-aside programs established by the administration, which itself is large enough to be troublesome to me and others worried about the inflation problem.

Retirement of anything like 59 million acres creates a grave risk of another explosion of farm and food prices, particularly if crops here or abroad this year are subnormal. The impact on meat prices could be felt for several years. At a time when inflation is our most serious domestic problem, this is foolhardy to say the least.

We can debate the right level of cash income support to farmers through Government payments, and I have voted for a generous support level. But every nonrural Member of this House should be able to see at a glance that a massive cutback in agricultural supply through acreage retirement is exactly the wrong approach at a time like this. The conference report should be decisively defeated.

## WHITE HOUSE HEEDS BAD ADVICE ON TUITION TAX CREDIT BILL

(Mr. COUGHLIN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. COUGHLIN. Mr. Speaker, President Carter has once again revealed his inability to discern between good and bad advice by choosing the latter in his arrogant statement concerning the tuition tax credit bill, which after a monumental uphill battle, was finally reported out of the Ways and Means Committee yesterday.

Mr. Carter, during his appearance on national television yesterday, cited the total 3-year cost of $1 billion of the tuition tax credit for higher education as one of his primary reasons for considering a veto of the bill. The President is obviously having difficulty in handling the facts of the issue to make such a short-sighted statement, when the cost of his own plan to expand existing Federal tuition aid surpasses the tuition tax credit proposal by nearly $500 million. Added to the $1.46 billion administration's program, the bureaucratic maze necessary to administer the extra workload created by the expansion of the existing student aid programs, and the costs incurred as a result of the high default rate on student loans, the expense of Mr. Carter's program escalates far beyond any of those student assistance programs presently being considered by this body.

I can only hope that the President will get his facts straight the next time he chooses to make an attack on a program with as much merit as the tuition tax credit plan.

## COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER pro tempore (Mr. WRIGHT) laid before the House the following communication from the Clerk of the House of Representatives:

*April 12, 1978.*

Hon. THOMAS P. O'NEILL, JR.,
*The Speaker, House of Representatives, Washington, D.C.*

DEAR MR. SPEAKER: I have the honor to transmit herewith a sealed envelope from the White House, received in the Clerk's Office at 10:25 a.m. on Wednesday, April 12, 1978, and said to contain a Message from the President wherein he transmits to the Congress the annual reports of six river basin commissions (New England, Great Lakes, Pacific Northwest, Ohio, Missouri and Upper Mississippi), as required under Section 204(2) of the Water Resources Planning Act of 1965.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr.,
*Clerk, House of Representatives.*

## ANNUAL REPORTS OF THE SIX RIVER BASIN COMMISSIONS—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee on Interior and Insular Affairs:

*To the Congress of the United States:*

I am happy to transmit the annual reports of the six river basin commissions, as required under Section 204(2) of the Water Resources Planning Act of 1965.

The Act states that commissions may be established, comprised of state and federal members, at the request of the governors of the states within the proposed commission area. Each commission is responsible for planning the best use of water and related land resources in its area and for recommending priorities for implementation of such planning. The commissions, through efforts to increase public participation in the decision process, can and do provide a forum for all people within the commission area to voice their ideas, concerns and suggestions.

The commissions submitting reports are New England, Great Lakes, Pacific Northwest, Ohio, Missouri and Upper Mississippi. The territory these six cover include parts or all of 32 states.

The enclosed annual reports indicate the activities and accomplishments of the commissions during Fiscal Year 1976. A brief description of current and potential problems, studies and approaches to solutions are included in the reports.

JIMMY CARTER.

THE WHITE HOUSE, *April 12, 1978.*

## EDUCATION DAY, U.S.A.

Mr. NIX. Mr. Speaker, I ask unanimous consent that the Committee on Post Office and Civil Service be discharged from further consideration of the joint resolution (H.J. Res. 770) to authorize and request the President to issue a proclamation designating April 18, 1978, as "Education Day, U.S.A.," and ask for its immediate consideration.

Mr. Speaker, this legislation is identical to House Joint Resolution 767, which was passed under suspension of the rules yesterday. The measures are identical, but the committee would prefer that House Joint Resolution 770 be the joint resolution as passed by the House.

The Clerk read the title of the joint resolution.

The SPEAKER pro tempore. Is there objection to the request to the gentleman from Pennsylvania?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, I would like to direct a question to the chairman of the committee.

This is merely to have the language properly conform to what the committee agreed to; is that not correct?

Mr. NIX. Mr. Speaker, if the gentleman will yield, yes, the gentleman is correct.

Mr. ROUSSELOT. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

The Clerk read the joint resolution, as follows:

H.J. RES. 770

To authorize and request the President to issue a proclamation designating April 18, 1978, as "Education Day, U.S.A.".

Whereas the Congress recognizes a need for the Nation to set aside on the calendar a day devoted to the importance of education to the lives of its citizens and to the general well-being of the Nation; and

Whereas the Lubavitch Movement, which conducts educational activities at more than sixty centers in twenty-eight States as well as around the world, is especially committed to the advancement of education and has proposed the establishment of an "Education Day, U.S.A."; and

Whereas world Jewry marked in 1977 the seventy-fifth birthday of the revered and renowned Jewish leader, the head of the worldwide Lubavitch Movement, Rabbi Menachem Mendel Schneerson, who proclaimed on that occasion a "Year of Education"; and

Whereas the seventy-sixth birthday of this celebrated spiritual leader will occur April 18, 1978, thus concluding the year of Lubavitch Movement activities dedicated to the "Year of Education" and the Lubavitcher Rebbe's milestone birthday: Now, therefore, be it

*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,* That the President is authorized and requested to issue a proclamation designating April 18, 1978, as "Education Day, U.S.A.".

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

## VACATING PROCEEDINGS ON PASSAGE OF HOUSE JOINT RESOLUTION 767

Mr. NIX. Mr. Speaker, I ask unanimous consent to vacate the proceedings whereby the House passed the joint resolution (H.J. Res. 767) on yesterday, April 11, 1978.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

A similar joint resolution (H.J. Res. 767) was laid on the table.

## CALL OF THE HOUSE

Mr. BROOMFIELD. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The call was taken by electronic device, and the following Members failed to respond:

[Roll No. 213]

| | | |
|---|---|---|
| Andrews, N.C. | Dent | Runnels |
| Archer | Dicks | Santini |
| Armstrong | Diggs | Scheuer |
| Ashley | Eckhardt | Spellman |
| Burke, Calif. | Garcia | Teague |
| Burton, Phillip | Harsha | Thompson |
| Chappell | Howard | Tucker |
| Clawson, Del | Mikulski | Udall |
| Clay | Miller, Calif. | Van Deerlin |
| Collins, Ill. | Rahall | Whitley |
| Crane | Rodino | Wilson, C. H. |

The SPEAKER pro tempore (Mr. NATCHER). On this rollcall 401 Members have recorded their presence by electronic device, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

## ELIMINATING ELEMENTARY AND SECONDARY EDUCATION FROM TUITION TAX CREDIT BILL

(Mr. LUKEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

● Mr. LUKEN. Mr. Speaker, I am most disturbed over the action of the House Ways and Means Committee in eliminating elementary and secondary education from the tuition tax credit bill.

I believe that tuition tax credits offer parents and students alike the freedom of educational choice without overriding financial burdens. In my district the parents of almost 25,000 students have expressed a strong desire to choose a religiously based education. These parents have the additional burden of supporting local public schools while paying tuition for the school of their choice. In this time of high taxation and inflation it has become increasingly difficult for them to do so.

At this time, I would also like to express my support for legislation that has passed the Senate Finance Committee, which eventually grants up to $500 in tuition tax credits for all levels of education.

I further believe that the House has indicated its support for a full tuition tax credit bill in its disapproval of the administration's Middle Income Students Assistance Act. Because of this indication of House sentiment, it is my firm belief that an open rule be granted so that the House may express its will on the inclusion of elementary and secondary school students.

Thank you.●

## REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 11003, CLARIFYING AUTHORITY FOR EMPLOYMENT OF PERSONNEL IN WHITE HOUSE OFFICE AND EXECUTIVE RESIDENCE

Mr. YOUNG of Texas, from the Committee on Rules, submitted a privileged report (Rept. No. 95–1051) on the resolution (H. Res. 1127) providing for the consideration of the bill (H.R. 11003) to clarify the authority for employment of personnel in the White House Office and the executive residence at the White House, to clarify the authority for employment of personnel by the President to meet unanticipated needs, and for other purposes, which was referred to the House Calendar and ordered to be printed.

## REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 3787, DIRECTING SECRETARY OF THE INTERIOR TO PURCHASE AND HOLD LANDS IN TRUST FOR ZUNI INDIAN TRIBE OF NEW MEXICO

Mr. YOUNG of Texas, from the Committee on Rules, submitted a privileged report (Rept. No. 95–1050) on the resolu-

tion (H. Res. 1126) providing for the consideration of the bill (H.R. 3787) to direct the Secretary of the Interior to purchase and hold certain lands in trust for the Zuni Indian Tribe of New Mexico; to confer jurisdiction on the Court of Claims with respect to land claims of such tribe; and to authorize such tribe to purchase and exchange lands in the States of New Mexico and Arizona, which was referred to the House Calendar and ordered to be printed.

## CONFERENCE REPORT ON H.R. 6782, EMERGENCY AGRICULTURAL ACT OF 1978

Mr. YOUNG of Texas. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1121 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 1121

*Resolved*, That immediately upon the adoption of this resolution it shall be in order to consider, any rule of the House to the contrary notwithstanding, the conference report on the bill (H.R. 6782) to permit marketing orders to include provisions concerning marketing promotion, including paid advertisement, of raisins and distribution among handlers of the pro rata costs of such promotion, and all points of order against said conference are hereby waived.

The SPEAKER pro tempore (Mr. NATCHER). The gentleman from Texas (Mr. YOUNG) is recognized for 1 hour.

Mr. YOUNG of Texas. Mr. Speaker, from time to time during the period that the Speaker has graciously allotted to me, I will be yielding to other Members of the House. I want to make it clear on the record that such yielding is for the purpose of debate only.

Mr. Speaker, I yield 30 minutes time to the gentleman from Ohio (Mr. LATTA), pending which I yield myself such time as I may consume.

Mr. Speaker, this resolution provides for the consideration of the conference report on the Emergency Agricultural Act of 1978, H.R. 6782. The resolution waives all points of order so that this important conference report might be considered by the entire House. This includes a waiver of section 303(a) of the Congressional Budget Act because the loans and payments based on the increased loan rates and target prices in the conference report are in the nature of new spending authority being considered prior to the adoption by the Congress of the first concurrent budget resolution.

I believe that the Committee on Rules granted the rule on this measure yesterday because a majority of the committee believed that this important agricultural measure should be debated before all the Members so that they could have an opportunity to hear the pros and cons of this measure in order to be able to have an informed basis on which to cast their vote.

Mr. Speaker, on October 31, 1977, the House suspended the rules and passed the raisin marketing order bill, H.R. 6782, by a vote of 396 to 7. On March 21, 1978, the Senate passed its version of the bill by a vote of 67 to 26 containing major emergency farm program provisions not included in the House bill.

The conference report establishes new, flexible target prices and higher loan rates for the 1978 wheat, corn, and cotton crops, expands Agriculture Department authority to encourage the use of grains in making fuel, increases the borrowing authority of the Commodity Credit Corporation, and establishes a raisin marketing order program. On April 10, 1978, the Senate agreed to the conference report on H.R. 6782 by a vote of 49 yeas to 41 nays.

Mr. Speaker, I urge the adoption of House Resolution 1121 so that the House may proceed to the consideration of the conference report on the bill H.R. 6782. I reserve the balance of my time.

Mr. LATTA. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this is an extremely important action that the House will be taking this afternoon and I believe that we ought to, during the consideration of the rule, learn something about this piece of legislation on which we will be voting.

The Senate has already passed this legislation. I know that there is talk that attempts will be made to vote down the previous question and to bring in this bill or that bill on which the House has not had an opportunity to consider to the floor for immediate consideration. I think it is important, therefore, that we yield as much time as possible to those familiar with the legislation itself to explain it. So at this time, Mr. Speaker, I yield 5 minutes to the gentleman from Louisiana (Mr. MOORE).

Mr. MOORE. I thank the gentleman for yielding.

Mr. Speaker, I urge the adoption of the rule. I understand an effort is going to be made to vote down the previous question. I submit to the Members, my colleagues, that we have a real farm emergency existing in this country today. If the Members think not, just visit with some of the Congressmen who come from the States where wheat, corn, or cotton are currently being grown.

My congressional district grows none of these commodities. My congressional district is basically an urban district, but I am here because of having sat through 3 weeks of hearings in the Committee on Agriculture. I am convinced that farmers of these commodities today are an emergency and need help and it is in the best interests of consumers to keep farmers in business.

If we vote down this rule, what we are essentially telling these farmers is that, look, we do not think you are in trouble. Just go home and survive another year, and come back and we will talk about it next year. This is the only vehicle that we have to try to give emergency assistance to farmers who are, indeed, in an emergency today. So I urge the Members to face up to the issue and vote for the rule. Then support the conference report, as did your conferees in the conference committee, as has the Committee on Rules in providing this waiver of the Budget Act, which none of us take lightly, but we feel that this is an emergency and worthy of that waiver.

In the conference committee, we were faced with several alternatives to try to help the farmers. One was to pay them $75 an acre not to plant. The conferees determined that was not a good idea. The farmers do not want a check out of the Treasury; they want to see the price of what they grow go up at the marketplace and get a fair return for what they grow, just like a skilled laborer gets a fair return for his work, just like a businessman gets a profit on what he sells.

Secondly, there was the opportunity to raise target prices, and it was realized that this merely fools the public. We raise the price support which we give the farmer, which he does not want. We do not do anything to cut back production, and we wind up having the Treasury or the taxpayers paying the difference. The farmers do not want that either. They want it to be paid for in the marketplace where it should be and it will not be that big an increase.

The conferees settled upon this approach, this flexible parity approach, which offers to the farmer a higher target price, for the more land he takes out of production, with the hope and realization that the market price will rise to that level or, hopefully, even higher, eliminating any target price payments out of the Treasury, or certainly reducing the amount that would otherwise be necessary.

If the Members doubt there is an emergency that makes this sort of legislation necessary, look at some of the statistics. In 1 year's time we have seen about a $2 billion drop in farm income—in 1 year, 1976–77.

Mr. Speaker, we also saw in that 1-year time period the exports of agricultural products go down about $2 billion. We have seen inflation in that same time period go up 7 percent. It has been calculated that these farmers growing these commodities have a drop in earnings today in real dollars to about what they earned in 1940. None of the rest of our constituents earn what they did in 1940 and it is not fair to expect cheap food at the expense of farmers earning what they did in 1940 which is not earning a living wage today.

In 1975, about 41.8 percent of the food dollar went to the farmer. Last year it was 38.8 percent.

In 1975 the value of wheat in a pound of bread was 4½ cents. In 1977 it was 2½ cents. Bread has gone up in price. Wheat has gone down in price, but bread is higher now than it ever was before.

In 1975 a 12-ounce box of corn flakes had a value of corn in it of 4½ cents. Last year it had 3½ cents.

Relating back to net farm income figures, in 1933 about 6½ percent of the total national income went to farmers. In 1976 it was about 1½ percent.

What it boils down to is simply this. The cost of farming has gone up, like everything else. The income to the farmer has gone down, not like any other occupation in this country. So today we are eating food at a cheap price, a cheap grain price, which has been contrived by politicians in Washington to keep it that way by depressing farm prices and

supporting farmers with a check from the Federal Government.

This approach gets away from that. This is the market approach. This is the approach that tells Americans we will help farmers in this emergency not by Government payments but in the marketplace where they want it and it should be.

Mr. YOUNG of Texas. Mr. Speaker, I yield 4 minutes to the distinguished majority leader, the gentleman from Texas (Mr. WRIGHT).

Mr. WRIGHT. Mr. Speaker, what I have to say here today is not said as the majority leader. There is no official leadership position. Everybody is on his own to do as he pleases.

I do want to take this occasion to express my deep disappointment that the Rules Committee did not see fit to grant a rule which would permit the offering of some substitute. Many of us would like to vote for a bill that could provide at least a measure of badly needed help to the Nation's hard-pressed family farmers and have at least a chance of becoming law.

Let none of us deceive ourselves. There is no possibility whatever that this bill will become law. The President has publicly announced that he will veto it. I think it highly unlikely that there would be votes in the House to override a veto, and the Senate already has demonstrated that it lacks the votes to do so.

Therefore, the exercise we are undergoing here today is a meaningless charade. It is harmless only to the extent that nobody is deceived into thinking that it means something. The farmer will not be helped, regardless of how one votes, because the bill embodied in this conference report will not become law.

It is regrettable in the extreme that we have no opportunity whatever today to do something real and meaningful for the Nation's family farmers—because many of them desperately need help.

During the early months of this year, I have talked with farmers who have had to sell their homes in order to keep up their payments on their tractors. I have talked with other small farmers whose land has been in their families, debt free, for as long as three generations—and now for the first time is mortgaged to the hilt.

For many of them, whether they stay afloat or go under will depend on this year's crop and crop prices.

So far as those particular farmers are concerned, our voting for this rule and this conference report today is just about as helpful as standing on a river bank watching a man drown and singing a rousing chorus of "He's a jolly good fellow."

We might have extended some real help today if we were given an opportunity to send the report back to conference with an amendment embodying some less costly and less inflationary proposal which had at least some prospect of becoming law.

Members can vote for this bill if they wish. Maybe some of your farmers will be pleased that you have given them three cheers and a pat on the back. But it is not going to help them. Instead of giving the farmers some chance for meaningful help, this rule effectively forecloses any chance that any help will be forthcoming in the immediate future.

I know that many Members have promised their farming constituents that they would vote for "something." If you interpret as "something" a bill which you know will not become law, then perhaps you can feel in good conscience that your commitment has been satisfied. But what the farmers get will not be "something." What the farmers get will be nothing.

Unwilling to be a party to that deception, I am going to vote against this rule. If enough Members vote against this rule, perhaps the Rules Committee could be persuaded to reconvene and give us, the Nation's consumers and thousands of small farmers at least an opportunity for an effective option.

Mr. LATTA. Mr. Speaker, I yield 3 minutes to the gentleman from Maryland (Mr. BAUMAN).

Mr. BAUMAN. Mr. Speaker, if this exercise on the floor today is a meaningless charade, then it is not this House of Representatives or the other body that has made it so.

I am sorry to see the leader of the majority stand here in the well and tell this House that our responsibility is to knuckle under to the President of the United States. If the President wants to accept the responsibility of vetoing this farm bill, then let him accept that responsibility. But those of us in the Congress, whether we are from urban, suburban, or rural areas, also have a responsibility to act when Americans are in trouble.

If this has become a meaningless charade, it is because the President, ever since last September, October, and November, when the dimensions of the farm crisis were obvious to all, has refused repeatedly to act, has thrown up his hands, and has said, "It will all work out. Just go along with the present farm law." That is not good enough.

I suspect that if we had a major flood, if we had a major drought, or if the cities were burning because of riots, the President would have come down here with bills containing expenditures far in excess of this legislation. But, no, for some unknown reason the President has decided that American farmers would be made victims of this so-called charade.

I am not so sure that when the President says, "You can believe me," we can always believe him. He says he will veto the bill, but I wonder if he wants to be the President who accepts the responsibility of smacking every farmer all across this country in the face and saying, "You don't have a problem; it will all just go away." He said he would veto the 1977 farm law and he did not.

I asked the Library of Congress to give me an idea of the magnitude of the spending in this so-called inflation-causing bill, as the White House has described it compared to other spending. How much are we really giving to the farmers?

The Library Research Service came back and gave me this information: In the last full fiscal year for which figures are available, 1975, $21 billion in subsidies went to commerce, business, and industry, and $16 billion in subsidies went to health. Fifteen billion dollars in direct subsidies and indirect subsidies went to housing. And you can go on down the list and find billions and billions of dollars for programs which the liberal Members of this body have never shown any inclination to hesitate and vote for.

Almost everyone has discovered that another large segment of Americans, the farmers, are in trouble, and indeed, as the majority leader said, they are even selling their tractors to pay for their homes.

I am saying to the Members that we have a duty to act, and we may not have another chance to act. The farmers have already planted in the South; they are plowing over on the Eastern Shore of Maryland this afternoon. They need some certitude about Government policy in the next few days. So let us exercise our own constitutional authority. The Congress never had any problems voting on what is right for the people when other administrations were in the White House. Let us not bow to threats. Let us in this instance make sure that we exercise that responsibility and vote to help the farmers. I have twice opposed unwise farm bills in the time I have served here, for the same reason I support this bill—for the best interests of the farmers.

Mr. Speaker, I hope that all of us will be able to go home, whether it be to a city or to a farm, and say that we did the best thing for the farmers, and let us pray that the "farmer" in the White House will do the same.

Mr. YOUNG of Texas. Mr. Speaker, may I inquire of the Chair as to how much time I have remaining?

The SPEAKER pro tempore. The gentleman from Texas (Mr. YOUNG) has 23 minutes remaining.

Mr. YOUNG of Texas. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from Kansas (Mr. GLICKMAN).

Mr. GLICKMAN. Mr. Speaker, I listened to my friend, the majority leader, who makes a genuine amount of sense. And, while his arguments may make some sense, I cannot buy them totally because the administration had given us no idea what they will accept. We have no reason to believe that any farm bill will be acceptable. And for that reason, I think that this body, this House of Representatives, has an obligation to vote up or down on the bill. I strongly favor an up vote. And, therefore, I would urge the Members to vote for the rule, regardless of how they vote on the bill.

A lot of us have given lipservice to the farmers. I have not met a Member of Congress who has not said, "I believe the family farmer should survive." This

is the only opportunity we will have to demonstrate our committment to that lipservice, and I submit to the Members that an up vote on the rule will give them at least that partial opportunity to submit to their people here.

Hubert Humphrey once came to Wichita, my home town, for a speech. We flew over Kansas in an airplane which had been made in Wichita, and he looked out the window and he said, "We Americans do not realize how cheap our food is."

The low prices have been possible because of the incredible productivity of the family farmer in this country and because farmers have often sold their crops at a loss—not even being able to recoup their costs of production—as is true today.

I do not want consumers to have to face skyrocketing food prices, but that will not happen with this bill. In fact, by preserving those efficient family farmers, this legislation should help to hold down those prices in the long run.

In closing, I, an urban member, ask the members of my party, of the party of Hubert Humphrey, to remember the pledge of our 1976 platform. It said, "We must assure parity returns to farmers based on costs of production, plus a reasonable profit." Let us at least give them a chance to achieve that goal by supporting this bill.

Mr. LATTA. Mr. Speaker, I yield myself 2 minutes.

Mr. Speaker, since the majority leader has raised the question of a veto, let me read some quotes from candidate Carter on this subject. In an interview with the Farm Journal of October 1976, he—candidate Carter, now President Carter said—on the subject of vetoes:

Unlike President Ford, who has repeatedly vetoed the actions of the elected Congress, although he was not elected to this office, I would cooperate with and rely upon the Congress. I have stated that support prices, in my opinion, should be at least equal to the cost of production but should not guarantee a profit.

That is a quote from candidate Carter.

In a farm policy speech at the Iowa State Fair Grounds, August 25, 1976, candidate Carter, now President Carter, had these words for the farmers out in Iowa:

We need a President and a Secretary of Agriculture who understand the problems of the family farmer and the American consumer—and if I am elected, we are going to have both.

At a campaign rally in Evansville, Ind., on September 27, 1976, candidate Carter said this:

Gerald Ford has vetoed four times as many bills per year as Richard Nixon. And the bill vetoes have not been designed to have money, they've been designed to keep people out of work, to cut down on veterans' benefits, to keep us from educating and training nurses, to prevent an opening up of the secrets of our government, to stop veterans from training and to keep from having adequate prices for farm products. Those are the kinds of vetoes we've had. And a lot of them have been overridden. . . . We've had a breakdown in the relationship that ought to exist between the President who's supposed to represent us and the Congress, who's also supposed to represent us.

All we want Mr. Carter to do now is to face up to these promises he made in 1976.

What did the Democratic platform have to say on this subject? Let me remind my friends who might be in doubt on the other side. The Democratic platform adopted July 14, 1976—in what city?—in New York City reads as follows:

Without parity income assurance to farmers, full production cannot be achieved in an uncertain economy. We must assure parity returns to farmers based on costs of production plus a reasonable profit.

Today we are going to give our Democratic colleagues an opportunity to support their platform by voting for a full parity bill.

Mr. LATTA. Mr. Speaker, I yield 4 minutes to the gentleman from Colorado (Mr. JOHNSON).

Mr. JOHNSON of Colorado. Mr. Speaker, I urge that we vote for this rule and consider the conference report that has been sent back to us.

I know that many Members are concerned about the cost estimates which have been presented. We will not have time in this short debate on the rule to really get a good look at the cost estimates; but there will be statements made about the costs based on the CBO budget estimate.

Mr. Speaker, let me point out to the Members the flexibility not of the parity program, but the flexibility of the costing analyses that we are getting.

CBO made two cost estimates, one on March 19; and then 2½ weeks later, on April 6. In their latest estimate, CBO said that this program is going to cost $5.3 billion for fiscal year 1978 and fiscal year 1979.

Listen to these assumptions that they have made. This is on April 6. They said that everybody is going to participate to the maximum, that is, 50 percent of the set-aside. That means that for every 2 acres one plants, he sets one aside.

They assume that there will be no payment limitation on individual producers.

They also assume that even though there will be lower supplies, there will be lower prices, lower than they presently are today.

Mr. Speaker, those are the assumptions on which they make their estimate of the $5.3 billion. However, that was on April 6. On March 19 they said this:

The variable parity program has not previously been implemented as a government support mechanism, so there is no historical basis for projecting producers' reactions.

What did they do then? On March 19 they estimated that the wheat producers would set aside 35 percent; corn producers, 32 percent; and cotton producers, 20 percent. Also on March 19 they said that the cost would be $2.3 billion.

Now, here on April 6 they say 90 percent of the wheat producers will set aside 50 percent. In a 2½ week period they changed that 15 percent in their estimates. They now say 50 percent of the corn producers will set aside 50 percent of their land. Two weeks earlier they said they would set aside 32 percent of their land. Also 2 weeks earlier they had said that the cotton producers would set aside 20 percent, but on April 6 they said that 80 percent of the cotton producers would set aside 50 percent.

Who is playing games with whom? They assumed that there would be no payment limitation; but as a matter of fact, we all know there is a payment limitation of $40,000.

To alarm consumers, the CBO has suggested that the flexibility of parity will create reduced supplies and a potential for shortages that will thereby increase the cost of food; but at the same time, to convince other people that we will bust the budget with flexible parity, they have concluded that farm prices will be lower than the actual current level if we reduce production.

Obviously, this is a nonsensical kind of exercise that they have been going through. There is no deductive process and there is no deductive logic in this whole mechanism.

Again, Mr. Speaker, I urge the Members to vote for the rule. Then we can get into the actual figures of what it might or might not cost when we get into consideration of the conference report. There is not any question but what the farmers who are involved in this will not receive a windfall or anything like that.

I urge the Members to vote for the rule and consider the bill on its merits when we get it before us. I think it can be justified to anybody in the country, consumer, producer, taxpayer, from any point of view; and the only way we can get any kind of immediate relief considered by the White House is to pass this particular conference report.

Mr. YOUNG of Texas. Mr. Speaker, I yield 4 minutes to the distinguished gentleman from Connecticut (Mr. GIAIMO).

Mr. GIAIMO. Mr. Speaker, let me say at the outset or make clear at the outset to the Members of this House that we are doing a great deal for American agriculture. The budget resolution which we will report out in the next few weeks will carry an agriculture amount of something in the neighborhood of $12 billion. That ain't "hay," to use an agricultural expression.

The question is the adoption of this particular conference report, the Dole legislation, if you will. This particular conference report is not a good bill.

It is not good legislation. It is inflationary. It is bad, and it should be killed right here, today.

I oppose this rule because it violates the spirit and intent of the Budget Act; because the House and its Agriculture Committee have never had the opportunity to even see this legislation on which the conference report is based; and because the conference report, if adopted, would constitute a disaster for the Federal budget and the economy, with seri-

ous effects on inflation and on the deficit. It violates the Budget Act, as you well know, because it violates section 303 in that we have not had an opportunity yet to study the overall budget implications to the U.S. Government before we vote an entitlement program at this time.

We should not commit ourselves to a particular policy on agriculture until we adopt an overall economic and budgetary policy through our budget resolution, which we will do in the coming months.

The conference report is sure to be vetoed, according to the statements of the President of the United States. Therefore, even if the present farm situation constituted an enmergency which would justify the granting of a waiver of the Budget Act, what good would it do? How would it eliminate an emergency when we are told in advance that this legislation is not going to be signed into law by the President.

The consideration of the conference report is contrary to the best interests of the Nation in that it would add to inflation. It would add between 1 and 1.5 percent to the food consumer price index. It would add another 0.2 to 0.3 percent to the overall consumer price index on top of the 0.3 to 0.5 increase which existing law is causing. That means that it would add in the neighborhood of between 0.5 percent and 1 percent to the overall existing inflation rate of the United States. We start out with a base of somewhere in the neighborhood of 6 percent inflation, and if we add 1 percent, we are well up into the area of 7 percent. Now, if this were truly an emergency, if this legislation were the cure for that emergency, I would say that it could then conceivably justify the granting of a waiver by the Rules Committee of the Budget Act. But it is not the solution to that emergency.

It is a bill which our President himself has told us is going no place. Therefore there is no possible justification for waiving the Budget Act.

For heaven's sakes, why are we violating the Budget Act; why are we in fact wasting our time with legislation here this afternoon which is not going to become enacted? Why do we not get down to the job of trying to write an adequate farm policy, with attention to its effect on inflation, with attention to how it affects all the farmers of America, not primarily a small group of farmers such as the overextended and highly indebted wheat and corn growers, and the cotton growers? Let us get on with the work of integrating farm policies with the other policies of our economy so that we can hold inflation in line.

Mr. YOUNG of Texas. Mr. Speaker, I yield 4 minutes to the distinguished gentleman from Iowa (Mr. SMITH).

Mr. SMITH of Iowa. Mr. Speaker, I want to make it clear to start with that I was for the Foley substitute. I think the Foley substitute is what we should have had about 2 months ago, instead of what the administration did, but we no longer have that as an alternative. We know now also that we do not even have as a practical alternative that this bill will become law. If it passed, the President will veto it, so it will not become law. All we are talking about is, should the House veto the bill or should the President. I think we should let the President have that opportunity. Reasonable persons may disagree about who should veto this bill, but I do not like to hear some of the excuses that have been made in the well today, and yesterday out on the Capitol steps, that this bill is inflationary.

I think I can prove to the Members that it is not. In 1975, according to agricultural statistics, wheat was an average of $3.52 at the farm gate. Today, it is less than $3. In 1975, I bought a loaf of bread, right here in Washington, D.C. It is Wonder Bread, purchased April 18, 1975. Stamped on it is 48 cents. Today, wheat is more than 50 cents less per bushel. Last night I went right down here to a store, and I bought another loaf of the same kind of bread, and stamped on it is 53 cents. The price went up 5 cents at the same time wheat prices were going down more than 50 cents.

I also bought some flour in 1975. It was 85 cents for a 5-pound bag; last night it was 99 cents.

Just to show the Members that the price of the raw product has little to do with the price, let me state this: Corn is selling for much less than wheat as far as the price paid the farmer, but the price in the store is identical for each 5 pounds. It was 99 cents for each. I bought something else, only 3 pounds, not 5 pounds, but I bought 3 pounds of potting soil which was $3.59. That is sacked dirt. So you see, wheat and corn are cheaper than dirt cheap.

The fact of the matter is the raw material does not have much to do with the price of the product.

Also I heard the President say, correctly I think, that the deficit in the balance of payments is a principal inflationary problem. It is. I do not usually use agricultural statistics—I am not all that crazy about them except when they support my position, but these do. They tell us if this bill passes we will ship 6 percent less product overseas and get 6 percent more money for it. We will receive $1 billion more for 6 percent less product. That will help the deficit in the balance of payments and that will help control inflation, by the President's own reasoning which he used yesterday, to wit: "reducing the deficit in the balance of payments will help reduce inflation."

I think we should send him the bill, and the President receives the bill, at least for the first time, the legislation will be at the decisionmaking level in the administration. Then we should hear directly why this bill is so bad and what the President would do to correct the kind of situation we are in. It preserves the possibility that they will yet take administrative action. I think we ought to give him a chance at that time to take administrative action. If we relieve him of the pressure here today, he is not going to do that. But if we give him the bill, at least we will have another chance to secure something administratively.

Although I prefer another approach, under the circumstances, I urge a vote for the rule and the bill.

Mr. NOLAN. Mr. Speaker, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from Minnesota (Mr. NOLAN).

Mr. NOLAN. Mr. Speaker, I commend the gentleman for his statement and urge the adoption of this rule so that this House can have an opportunity to unveil the real facts about the impact that this bill will have on our economy, because the administration has clearly used biased economics to discredit this bill.

Mr. LATTA. Mr. Speaker, I yield myself 3 additional minutes.

Let me say I am always somewhat amused when my chairman of the Budget Committee brings up the matter about busting the budget. He always brings it up about agriculture. He does not bring it up about some of these other matters that bust the budget, and I will get into them more in just a second, but he did mention $12 billion for the farmers but he failed to mention in the President's little document that he sends us on the budget that there is also $9 billion in there that does not go to the farmer. For example, there is the food stamp program, the school milk program, the child nutrition program, and so forth, which add up to $9 billion, but they are charged to the income security function of the budget.

Let me just say we have heard about waivers.

Mr. GIAIMO. Mr. Speaker, will the gentleman yield since he mentioned my name, yield very briefly?

Mr. LATTA. I yield to the gentleman from Connecticut.

Mr. GIAIMO. Mr. Speaker, I did not mean that $9 billion is included in the $12 billion.

Mr. LATTA. I did not say it was. I said it is in the Department of Agriculture budget.

Mr. GIAIMO. That even makes my argument better.

Mr. LATTA. No, it does not. No, we conveniently forget that income security is charged for this $9 billion in its budget.

Let me say we hear a lot about these waivers. We have had all kinds of waivers of the Budget Act starting in the 94th Congress. Here are all the waivers. I will not take the time to read them but I will put them in the RECORD. In the 95th Congress here are the waivers of the budget. I will put them in the RECORD.

Mr. Speaker, the following are the waivers I have referred to:

CONGRESSIONAL BUDGET ACT WAIVERS

BUDGET ACT WAIVERS, 94TH CONGRESS

*Section 401*

H. Res. 337—H.R. 4485. Emergency Middle Income Housing.
H. Res. 341—H.R. 3922. Older Americans.
H. Res. 352—H.R. 4222. School Lunch.
H. Res. 418—H.R. 4115. Nurse Training.
*H. Res. 489—H.R. 6900. Emergency Unemployment Compensation—401(b)(1).

H. Res. 505—H.R. 6860. National Energy Conservation & Conversion Program.
H. Res. 599—H.R. 7014. Energy Conservation & Oil Policy Act of 1975.
*H. Res. 852—H.R. 6461. Public Broadcasting (Sect. 401 & 303(a)).
H. Res. 1092—H.R. 9803. *Conf. Report* Child Day Care Services.
*H. Res. 1155—H.R. 365. Firefighters 401 (b).
*H. Res. 1156—H.R. 366. Public Safety Officers 401(b).
*H. Res. 1214—H.R. 12945. Housing & Community Development 401(b).
*H. Res. 1432—H.R. 13958. Appointment, promotion, separation, and retirement of members of armed forces 401(b).
*H. Res. 1433—H.R. 14070. Higher Education Act 401; 401(b); 303(a).
*H. Res. 1467—H.R. 8911. Supplemental Security Income Amendments 401(b) & 303 (a).
*H. Res. 1489—H.R. 14578. Federal reclamation projects & programs 401(a).
*H Res. 1534—H.R. 15069. Forest & Rangeland Renewable Resources Planning Act of 1974 401(b).
*H. Res. 1548—H.R. 14932. Regional Rail Reorganization Act of 1973, the Railroad Revitalization & Regulatory Reform Act of 1976, the Rail Passenger Service Act, and the Interstate Commerce Act.

*Section 402*

H. Res. 1458—H.R. 14032. Toxic Substances Control Act.
*H. Res. 1512—H.R. 14886. Presidential Transition Act 402(a).
H. Res. 1519—H.R. 14940. Treaty of Friendship & Cooperation between U.S. and Spain.
*H. Res. 1550—S. 22. Revision of Copyright Law 402(a).
H. Res. 1580—H.R. 15636. Water Resources Development Act.

*Section 303(a)*

*H. Res. 852—H.R. 6461. Public Broadcasting 401.
H. Res. 853—H.R. 8529. Rice Act.
H. Res. 854—S.J. Res. 121. Milk Support Prices.
H. Res. 1090—H.R. 12226. Peace Corps Act.
*H. Res. 1141—H.R. 8235. Conf. Report (waived all points of order including that for Sec. 303(a) the reason stated was a waiver had been granted when H.R. 8235 was initially considered).

*Section 303(a)*

* H. Res. 1433—H.R. 14070. Higher Education Act 303(a); 401; 401(b).
*H. Res. 1467—H.R. 8911. Supplemental Security Income Amendments 303(a); 401 (b).
(Note.—Did not waive Sec. 303(a) for H.R. 10210 Unemployment Compensation.)

BUDGET WAIVERS—95TH CONGRESS, 1ST SESSION

*Section 303(a)*

*H.R. 3477—(H. Res. 360) on bill and committee amendment.
*H.R. 6689—(H. Res. 537).
*H.R. 7171—(H. Res. 666) and on S. 275.
*H.R. 8444—(H. Res. 727) and on H.R. 8555 the amendment in the nature of a substitute.
H.R. 8200—(H. Res. 826) and on committee substitute.

*Section 303(a)(2)*

*H.R. 9346—(H. Res. 839) on bill and committee amendment in the nature of a substitute.

*Section 303(a)(4)*

*H.R. 9346—(H. Res. 839) on bill and committee amendment in the nature of a substitute.

* Indicates more than one waiver.

*Section 401*

H.R. 6796—(H. Res. 657) waiver just on committee amendment in the nature of a substitute.

*Section 401(a)*

*H.R. 7171—(H. Res. 666).
H.R. 3199—Conf. Rept. (H. Res. 935).

*Section 401(b)*

*H.R. 6689—(H. Res. 537).
H.R. 6655—(H. Res. 541).

*Section 401(b)(1)*

*H.R. 3477—(H. Res. 360) on bill and committee amendment.
*H.R. 3843—(H. Res. 388) on bill and committee amendment.
H. R. 4800—(H. Res. 411).
*H.R. 6161—(H. Res. 589) on bill and committee amendment in the nature of a substitute.
*H.R. 7010—(H. Res. 601).
H.R. 5959—(H. Res. 643).
H.R. 5646—(H. Res. 632) on bill and committee amendment.
H.R. 6683—(H. Res. 639).
H.R. 6669—(H. Res. 641).
*H.R. 7171—(H. Res. 666).
H.R. 4544—(H. Res. 702) on bill and committee amendment in the nature of a substitute.

*Section 402*

*H.R. 7171—(H. Res. 666).

*Section 402(a)*

*H.R. 692—(H. Res. 270).
H.R. 11—(H. Res. 304).
H.R. 2846—(H. Res. 359).
H.R. 3843—(H. Res. 388).
H.R. 4250—(H. Res. 423).
H.R. 5040—(H. Res 424).
H.R. 4974—(H. Res. 450).
H.R. 3199—(H. Res. 468).
H.R. 6810—(H. Res. 560).
*H.R. 6161—(H. Res. 589).
*H.R. 6804—(H. Res 603) on bill and on S. 826.
*H.R. 7073—(H. Res. 620).
H.R. 4740—(H. Res. 714) on bill and S. 1522.
*H.R. 8444—(H. Res. 727).
H.R. 2176—(H. Res. 728).
H.R. 8309—(H. Res. 776).
H.R. 8309—(H. Res. 815).

BUDGET ACT WAIVERS 95TH CONGRESS, 2ND SESSION

*Section 401(a)*

H.R. 2637—(H. Res. 960) Cargo Aircraft for Air Force.
*H.R. 1614—(H. Res 964) OCS—waiver on bill, on amendment in nature of substitute and on S 9.
H.R. 9214—(H. Res. 990) Authorize the U.S. to Participate in the Supplementary Financing Facility of the International Monetary Fund.
H.R. 11662—(H.Res. 1113) Provide for Establishment of Lowell National Historical Park in the Commonwealth of Massachusetts.

*Section 402(a)*

*H.R. 1614—(H. Res. 964) OCS on bill.
H.R. 9370—(H. Res 998) Aquaculture Act of 1977.
H.R. 3813—(H. Res. 1006) Redwood National Park.
H.R. 50—(H. Res. 1057) Humphrey-Hawkins (Full Employment and Balanced Growth Act of 1978).
H.R. 7700—(H. Res. 1078) Postal Service Act of 1977.
H.R. 11302—(H. Res. 1112) EPA Research and Development Authorization.

In the second session we have had already some waivers.

What really busts the budget, to use that terminology? In this budget resolution, the education, training, employment, and social services function, is up $6.9 billion in budget authority in the budget resolution, and up $4.2 billion in outlays. CETA is in for an 18-percent increase. There is a 24 percent and $2.9 billion increase in the budget authority for educational programs. In social services, the Budget Committee increased the President's request by $593 million.

Health: Outlays are up $5.4 billion, 12 percent; budget authority is up $4.6 billion, 10 percent;

Transportation: Up $5 billion and 35 percent; outlays up 13 percent or $2 billion.

There are major increases in this function for mass transit.

Community and regional development: Up $400 million, or 45 percent in the President's budget for budget authority; 103 percent increase by the Budget Committee, or $7.7 billion, primarily to fund the new urban program.

Other budget busters:

In the accelerated public works program, the gentleman from Texas (Mr. WRIGHT) came in on the last day or so and requested an increase.

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. LATTA. Mr. Speaker, I yield myself 1 additional minute.

The gentleman came into the Committee on the Budget and as a member of that committee offered just a little amendment of $2 billion to the accelerated public works program.

We did not hear anything about that in the press, but there was $2 billion.

Then, countercyclical aid is also up $1.1 billion.

Then, get this, we did not even want this in northwestern Ohio, the Legal Services Corp., a $50 million or 24 percent increase in budget authority; an increase of $89 million or 58 percent in outlays.

Then the Equal Employment Opportunity Commission: Up $19 million or 21 percent in the budget authority; up $21 million or 23 percent in outlays.

And so it goes.

Let me give you another figure that really dazzled me. We had before our Committee on the Budget the Secretary of HEW. Do you know how much his department's increase has been since 1973? Just guess? Your guess would be too low. It is $100 billion. That is the increase to HEW since 1973 by the Secretary's own testimony. Those were for increases for things other than out on the farm. As far as the farms are concerned we are talking about peanuts this afternoon.

Mr. YOUNG of Texas. Mr. Speaker, may I inquire of the Chair how much time I have remaining?

The SPEAKER pro tempore. The Chair will state that the gentleman from Texas (Mr. YOUNG) has 13 minutes remaining and the gentleman from Ohio (Mr. LATTA) has 11 minutes remaining.

Mr. YOUNG of Texas. Mr. Speaker, I yield 3 minutes to the distinguished gentleman from Tennessee (Mr. ALLEN).

Mr. ALLEN. Mr. Speaker, the exercise in which we are about to engage can only be characterized as a charade.

The rule we are being asked to adopt would permit no substitute, no amendment, or even the slightest change in this bill.

By its very terms, the proposed legislation is restricted in its application to wheat, corn, and feed grain farmers and cotton farmers. No amendment may be offered to include growers of peanuts, potatoes, sugarcane, and beets, or poultry farmers, beef-cattle farmers, hog farmers, dairy farmers or those farmers who specialize in producing fresh eggs for the breakfast table.

Yet each one of us here knows that an increase in the price of wheat, corn, and feed grains is bound to increase the cost of producing beef, pork, turkeys, fryers, hens, and eggs, milk and other dairy products, and all other agricultural produce in which wheat or corn is an essential ingredient.

But not one word is contained in this entire bill, recognizing these self-evident facts, or which would seek to guarantee any of these other farmers that they can regain or recapture their increased cost of production. Wheat, corn, feed grain, and cotton—and that's all! All of these other farmers would be excluded completely from the umbrella of protection by which this bill seeks to protect the wheat, corn, feed grain, and cotton farmers.

I am for protecting all farmers, without discrimination. That is, I am for guaranteeing to all genuine, independent and family farmers—two-thirds of whose income is derived from farming and agricultural production—a fair price for what they produce, and a reasonable margin of profit on their investment and labor—assuming efficient and competent management.

But this bill fails to do that, even for the wheat, corn, feed grain, and cotton farmers. And we all know in our hearts that regardless of the action we may take here today, this bill has absolutely no chance whatever of becoming law, in view of President Carter's unequivocal statement on yesterday that he will veto the bill if it comes to his desk.

So what have we accomplished if we adopt this rule and pass this bill without amendment, or consideration of any substitute which might be offered that would have some chance of actually becoming law and helping the farmers?

I for one refuse to be a party to this charade. Let us reject this rule and this ill-considered bill, and then let us set about the business of drafting a bill that will treat fairly all bona fide independent and family farmers whose income is derived from produce of the soil.

It can be done—and it can be done without imposing an undue burden of taxes upon the people of this Nation, and without increasing the price of food and clothing on the shelves of our grocery stores and other merchants of products made from fiber produced on the farms.

I call to your attention my testimony before the Agriculture Committee in which I outlined "A commonsense Approach to the Farmer's Problem," an approach which Congressman E (KIKA) DE LA GARZA, chairman of the Agriculture Subcommittee on Department Investigations, Oversight, and Research, said:

It'd be my guess that if every member of Congress read your paper, we'd have the kind of farm legislation we need on the books tomorrow.

But this rule permits no amendment and no change in the bill. And for these reasons I feel constrained to vote against both the rule and the bill, if it comes before us on final passage.

Thank you, Mr. Speaker.

Mr. YOUNG of Texas. Mr. Speaker, I yield 2 minutes to the gentleman from Florida (Mr. SIKES).

Mr. SIKES. Mr. Speaker, I support the rule and the conference report on the farm bill which is now before us. I consider it essential that this Congress enact effective farm legislation without further delay. It is well into planting time in most parts of the country. The farmer cannot wait while Congress and the administration wrangle about policies and programs. There may not be another opportunity during this year to be helpful to the farmer and he must have help. He needs it now. Farmers are an independent group. Only the stress of necessity would have caused them to organize and work as they have this year to get recognition from the administration and the Congress which should have been forthcoming long ago.

H.R. 6782 will give farmers a chance to obtain the fair share of income they need in order to continue farming this year. Without the kind of relief anticipated by this legislation, more and more family farmers will be forced out of business. The principal problem is the American consumer will pay more for farm produce. That is undesirable. However, in this bill, we are not committing ourselves to a long-term curtailment of production that will destroy our reserve program. A better balance between supply and demand, hopefully, will be brought about by this 1-year program and will enable us to continue enlarging our export markets and effectively increase our use of food in humanitarian contributions.

Frankly, I do not agree with the approach which is provided for the solution of farm problems by H.R. 6782, the Emergency Agriculture Act, but it is all that is before us. The bill is designed to provide emergency short-term help and applies only to the 1978 crop. We will need better permanent legislation so that the farmers can prepare for the years ahead. I hope the committees will begin work promptly to provide a farm bill which will encourage production, which will hold down prices to the consumer, and will aid sales of American farm produce abroad.

My quarrel with this bill is that it will pay the farmers more for producing less through subsidies by idling their land. I do not like the principle of idle land and we should not be committed to it indefinitely. I feel that farmers should be encouraged to produce more, not less. There is a large, unexplored market for American farm produce abroad. Higher production should result in lower prices in our own country to the consumer as well as to larger sales abroad. I realize this also will mean subsidies to the farmers, both for produce to be consumed at home and for products to be exported. We are providing for contingent subsidies in the bill now before Congress. If a subsidy must be paid, I prefer that it be paid for overproduction, not underproduction.

Subsidies on any new program to insure a cost-of-living return to the farmer may require a two-level price system. The objective should be to keep the farmer in the business of producing farm products. We want him to be able to provide ample food and fiber to meet the requirements of the consumer, hopefully without increasing prices to the consumer. We want to assist in the sale of farm products abroad in competition with products of other countries. It is very important that we remember the major cost of farm products to the consumer is not chargeable to the farmer. The middle man, transportation, and the retailer are responsible for a larger share of cost than the farmer.

The simple fact is the farmers' complaints are real and their problems have grown worse year by year. They cannot continue indefinitely to produce without some of the protection which is offered in such large measure to labor and to most segments of the industrial world. We cannot afford to reject this first step toward a better farm program.

Mr. LATTA. Mr. Speaker, I yield 1 minute to the gentleman from Ohio (Mr. GUYER).

Mr. GUYER. Mr. Speaker, we often speak of the necessity of preserving our endangered species. Let me introduce a truly endangered species that well soon may become "Vanishing Americans." I refer to the American farmer.

Many Americans think milk comes from a dairy, bread from a bakery, and meat from a supermarket. Very few people give thought to the fact that the basic sources of all food come from farms and ranches.

American people enjoy about 114 pounds of beef per capita annually. Chances are, if we had to do the slaughtering, we would not eat many steaks.

Agriculture in the United States represents our main chance to obtain a favorable balance of payments in trade with foreign countries.

The American farmer not only supplies more than an adequate food supply for our people, but a surplus over and above our needs. Last year alone, America gave—free of charge—65 percent of all of the food received from all countries, by the rest of the world.

Mr. Speaker, most farmers are too conscientious to loaf and too proud to ask for welfare. But, sir, farmers now are in trouble. Tractors that sold for $22,000 a few years ago, now cost $40,000. Wheat that should bring $5 a bushel, sells for $2.50. A loaf of bread that costs 69 cents, contains less than 4 cents for the farmer's share of the wheat.

Many farmers, especially young farmers, are in debt and cannot pay their land, equipment, and farm payments, having lost thousands of dollars on their crops.

Farmers have a rough way to go. Increased prices of machinery, labor, seed, fertilizer, and living expenses, plus long hours and scant returns—combine to complicate their financial plight. All of this, together with the heavy losses sustained during our most devastating winter, truly places the farmer in a serious financial strait. Perhaps this little verse is nearer to the truth than we might think—

His horse went dead, and his mule went lame,
He lost six cows in a hurricane.
Then a cyclone came on a summer day
And blew the house where he lived away.
Then an earthquake came—when that was gone,
It swallowed up the land that his house stood on
Then the tax collector, he came round
And charged him for the hole in the ground.

Mr. Speaker, in 1976 the Democratic platform contained this statement:

Without parity income assurance to farmers, full production cannot be achieved in an uncertain economy. We must assure parity to farmers, based on production, plus a reasonable profit.

During his Presidential campaign, Jimmy Carter time and time again, promised farmers his full support. It is quite likely, that those promises helped him carry Ohio against Mr. Ford.

Now the President says the farm bill is too costly and will add to inflation. He did not seem that concerned when he gave us a half-trillion-dollar budget.

I just read today that the President made a speech the other day to a bunch of investment people. He said, "If I wasn't President, I would be out there buying some of these common stocks." One fellow said, "If you weren't President, we would buy them, too."

It also seems strange that certain unions have made contracts for higher wages and increased benefits, which resulted in raising the price of an automobile by as much as $500.

It seems inconsistent that we can find money for welfare, food stamps, urban renewal, depressed cities, sewer and water programs, school lunches, disaster aid, foreign refugees, and foreign aid for countries we cannot spell, pronounce, or locate—and then cannot give the American farmer a little lift for his labors.

Today is a signal occasion. Each of us has the privilege and opportunity of voting for the farmer, his family, his community, his customers, and his associates in the agribusiness industry, that provides so many jobs.

The farmer is not only a producer. He is a consumer. He puts his dollars in circulation. He is the bulwark of this country, and the partner of every industry that has made this country great.

I hope you will find it in your heart to vote for your rural American neighbor, as we have traditionally done for our other neighbors around the world.

Mr. YOUNG of Texas. Mr. Speaker, I yield 2 minutes to the gentleman from Michigan (Mr. TRAXLER).

Mr. BURLISON of Missouri. Mr. Speaker, will the gentleman yield?

Mr. TRAXLER. I yield to the gentleman from Missouri.

Mr. BURLISON of Missouri. Mr. Speaker, there is not time to discuss the merits of the bill, but I would hope my colleagues will vote for this rule, so we can have a full discussion of the issues. We need to face the issues. We should not dodge them by voting against the previous question or voting against the rule. We must accept our responsibility and leave it to the President to assume his.

Mr. TRAXLER. Mr. Speaker, I rise in support of the rule and the bill. I want to urge Members to vote for the rule, because there is a fundamental question of the integrity of Congress at stake here. The supporters of this measure, the farmers across America, have been here since last January participating in the democratic process. They have gone from office to office. They have gone to OMB. They have gone to the White House. They are back to our offices. They come to us as a group each week. They do not have a board of directors. They do not have a list of members. They do not pay dues. This is a populist movement coming out of rural America. They are entitled to a vote on what they consider the most important piece of legislation this Congress will confront this year. In the name of fairness, in the name of justice and equity, they deserve a vote. Whatever your opinion may be on the bill, please allow the bill to be considered on its merits.

Our Senate colleagues waived points of order against this legislation based on section 303 of the Budget Control Act so that they could get on to the necessary and democratic consideration of legislation that is of great importance to every farmer in this country. I hope we will do the same. To disallow a vote on this conference report on the basis of a budgetary technicality is a slap in the face of every farmer who believes in our governmental process, and worked since January for this legislation.

Farmers are losing money. They see their losses in every food item that we as consumers buy. In 1975, the farmer received 41.8 percent of our food dollar. In 1977, this percentage dropped to 38.8 percent. Food prices went up, but farmers got less. In 1977, the average value of wheat in a 1-pound loaf of bread was 2.6 cents, yet in 1975, the wheat share was 4.5 cents. The price of bread has gone up, but the farmer's share has gone down. In an average 12-ounce box of corn flakes, the 1977 value of corn was 3.5 cents. But in 1975, farmers got 4.5 cents for the same corn. The price of corn flakes has gone up, but the farmer's share has gone down.

Farm incomes have declined in recent years. Figures computed by the Michigan State University School of Agriculture showed that farmers in Michigan had a farm labor income of only $112 in 1976. These same figures show that cash crop farmers in Michigan will show a farm labor income of a negative $11,965 for 1977.

As of January 1, 1978, farm debt was at $118.7 billion. At the same time, more and more farmers were finding it harder to repay that debt. The Governor of the Farm Credit Administration has told the House Subcommittee on Agricultural Appropriations, of which I am a member, that he is concerned that farmers will be unable to maintain regular payments on their debts because of poor farm income. Credit is no substitute for income, and this Congress must take affirmative action to improve our farmers' incomes.

The bill before us may not be the best solution to the current problem. Neither was the farm bill we passed last August. Even Secretary of Agriculture Bob Bergland admitted that to many of us on Monday when he said that there is "legitimate need to increase the target rates on some of our crops." The administration's action of just 2 weeks ago was an explicit recognition of the need for action, and we can forget about the statements made some 2 months ago that said last year's farm bill was good enough. If it was, we would not be here discussing the matter right now.

The Congress has a responsibility to the consumer and to the farmer. We have a responsibility to provide the consumer with the assurance of a continued food supply at reasonable prices. We also have a responsibility to see to it that the farmer gets those reasonable prices. The fact that some middlemen may take additional profit from our efforts to improve farm income should not be used as an argument in opposition to this bill. We cannot afford to penalize the American farmer any longer, because if we do, we will not have the food supply that we boast about to every other nation in this world.

Members are concerned about the Federal budget. The President has used zero-based budgeting this year to determine our budget priorities. I say that this bill must be one of our priorities. We can make no better investment in our future than guaranteeing the continued livelihood of the American family farm. Farmers are consumers, and for every dollar that they earn, they create purchasing power throughout our economy of 2.1 times their level of spending. No other sector of our economy provides such impetus to our economic growth.

We need to move ahead on this vital agricultural legislation. We must allow for all sides of the issue to be heard here in the people's forum, the U.S. Congress. I urge every Member present to vote in support of the rule to allow for the consideration of the conference report to H.R. 6782, the Emergency Agriculture Act of 1978, and then to vote for the conference report.

Mr. LATTA. Mr. Speaker, I yield 2 minutes to the gentleman from Kansas (Mr. SEBELIUS).

Mr. SEBELIUS. Mr. Speaker, I had not intended to speak on the rule today and to save my remarks for the general debate; but after the majority leader urged that we defeat the rule and also that we vote down the previous question, I felt I should speak. I happen to have

thousands of farmers who have come here in the last 4 months and they are all concrned with whether or not they are going to stay in business. In western Kansas in the farming of wheat, you have summer fallow. In the conference bill in the 1977 act they took away the section that provided if 55 percent of our land is in fallow, you would not have to set aside any more land. A typical farmer in western Kansas has to fallow 1 year before he can plant, so if he is hailed out, he has to fallow again and that makes 4 years for one crop. Then on set-aside acres the land is held out again, it is 5 years before you get one crop, so we are not setting aside acres for any other purpose.

I brought with me a copy of the Congressional Insight, the congressional poop sheet, which continues the scare tactics we have gone through on this whole thing.

In this paper they say, "The emergency farm bill may get ploughed under in the House," there is opposition to it as a budget-buster. Further, they say, "The bill carries a multibillion-dollar price tag and could increase the price of bread by 12 cents a loaf."

The Members will recall, as I dramatized last year with a bread wrapper, that in a present loaf of bread only 3 cents goes for the flour in that pound loaf of bread, and more than that goes to pay them to haul that loaf of bread from the bakery to the supermarket. That is way more than the farmers get. For a 12-cent increase, the price of wheat would have to go to $12.50 for the farmer to get that much. That is the kind of thing that scares you off.

I would very briefly like to reflect on prices. We get Gulf prices, we get Chicago prices, and we get Kansas City prices, but in Kansas, instead of getting $3.30 for a bushel of wheat in Goodland, Kans., they get only $2.67. In Oberlin, Kans., for irrigated corn today, they are only getting $2.19, and $2.20 is the cost of production.

Mr. Speaker, all I am trying to say to the Members is that we should let the farmers have the initiative to decide and not let the USDA make the decision.

He is going to decide for himself, and let us say if he opts to set aside and the USDA says it will be 20 percent for wheat and 10 percent for corn, he is going to get the target price, whatever that is. If he opts for parity and gets $5.04 for wheat, he is going to have a 50 percent set-aside. Normally then he has only set aside one-half, and let us say he has set aside one-third of his acres, then he gets $5.04 for his wheat, and he only gets that if the market price has not gone to that point.

I just say that it is commonsense to do this. It is there, and when we get to comparing the prices with everything else, it is commonsense. I have met with the people who are here; they have spent all this time in Washington, and my office has been full with farmers, wheat farmers and corn farmers

Mr. Speaker, I say to the Members, please, let us adopt this rule and get on with our business.

Mr. YOUNG of Texas. Mr. Speaker, I yield 1 minute to the distinguished gentleman from Louisiana (Mr. HUCKABY).

Mr. HUCKABY. Mr. Speaker, the question that we have before us today is, I think, really very simple.

The American farmer—and by that I mean the family farmer—has come to Washington. He is in trouble. He is in worse trouble than he has been in since the 1930's. With this bill before us, we have our only opportunity to do something for the family farmer.

Let me point out that there is a $40,000 payment limitation in this bill. The large farmers and the corporate farmers will not be involved in these payments. This is for the family farmer.

Mr. Speaker, I urge support and adoption of the rule and the conference report.

Mr. LATTA. Mr. Speaker, I yield 1 minute to the gentlewoman from Nebraska (Mrs. SMITH).

Mrs. SMITH of Nebraska. Mr. Speaker, the time comes in any emergency when it is necessary to bite the bullet. That time is now, and I urge my colleagues to vote for the rule and for the conference report.

Let me make three quick points. First, I remind my colleagues that Members from both urban and rural America are supporting this conference report. That reflects a new unity in this country, a new understanding that everybody has a stake in American agriculture.

Second, I want to talk about the quality of the many hundreds of farmers who have come to my district since the first of January. They are good farmers. They are young farmers. They are dedicated farmers. They love the land. They are willing to work 16 or 18 hours a day. They put everything they have into their land and equipment. All they want is an opportunity to succeed, and they cannot continue selling below the cost of production without going broke.

Third, this bill is the best of the proposals we have before us. It follows the best philosophy. It gives the opportunity for farmers to have some independence, and to exercise some options. It gives farmers a chance to improve prices in the marketplace. It will cost the Government less than other proposals under consideration.

I thank the gentleman.

Mr. YOUNG of Texas. Mr. Speaker, I yield such time as he may consume to the gentleman from Texas (Mr. ROBERTS).

Mr. ROBERTS. Mr. Speaker, I rise in support of the rule and in support of the conference report.

Mr. YOUNG of Texas. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from Colorado (Mr. WIRTH).

Mr. WIRTH. Mr. Speaker, I rise to oppose the rule providing for the consideration of H.R. 6782, the emergency farm bill. This is a difficult position for me to take—Colorado farmers have been extremely hard-hit by rising costs and low prices. But the rule waives one of the most significant reforms adopted by the Congress in the past 50 years.

The Congressional Budget Act requires that bills which would result in new entitlement spending authority not be enacted into law until the adoption of the first concurrent resolution on the budget. The law requires that the first budget resolution be adopted by May 15. The emergency farm bill will result in payments ranging as high as $5 billion—a significant amount of money by anyone's standards—yet it will be brought to the floor without waiting for the first resolution. This avoids the discipline imposed by the congressional budget process, which requires the Congress to set a ceiling on expenditures for the coming year.

In order to arrive at this total figure, it is necessary that the House and Senate Budget Committees consider our national priorities—national defense, housing, agricultural programs—and decide approximately how much we will spend on them. These figures are not plucked from the air—they are the result of many hours of thoughtful consideration, input from the various congressional committees, and expert testimony from witnesses. By deciding how the pie will be divided before the slicing begins, we will have control over runaway spending.

Federal dollars are a fixed resource. We cannot treat them in a cavalier manner, as if they will replenish themselves. The Congressional budget process is designed to force the Congress to decide what our expenditures will be, and how much the Government will collect in taxes.

By waiving the requirement that the bill cannot be considered before the first concurrent resolution, we will be locked into place before the consideration of competing national priorities. We will be left with two choices—to exceed the budget, or to cut back on other programs. Given the lack of discipline with which the Congress approached the emergency farm bill, I have little doubt which alternative will become a reality. And we cannot express surprise when we learn—through conversations with constituents, or through the polls published in the papers—that the American people hold the Congress in extremely low regard. We should not ignore the institutional constraints, as well as the commonsense approacn embodied in the Congressional Budget Act.

In the final analysis, Federal spending will only be brought under control when the Congress—the guardian of our purse strings—takes its responsibilities seriously. If we give in to one segment of our population in this manner, and enact this legislation without regard to competing national priorities, the discipline of the process will be a thing of the past. We will return to the days of spending without regard for the total. And we will have lost control of the Federal budget.

Mr. Speaker, while I am immensely sympathetic with the arguments made by those who are in a difficult farm situation, it seems to me that there is one element here that has not been focused on appropriately, and that is the rule which waives one of the most significant

reforms we have seen in this institution in the last 50 years.

The Congressional Budget Act requires that bills which would result in new entitlement spending authority not be enacted into law until the adoption of the first concurrent resolution on the budget.

A lot of us have worked very hard over the last 4 years to make the budget process work. That was passed in 1974. As the Members remember, it was by a very, very tiny margin that Brock Adams' first ceilings were voted in and how difficult it has been to make that budget process work.

If we are serious about attempting to make that process work and get control over expenditures, we have to vote against this rule and make that process, which the gentleman from Connecticut (Mr. GIAIMO) spoke to, work appropriately.

The question was raised, and I would like to engage in colloquy with the chairman of the Budget Committee, if I might, about previous waivers to the Budget Act. It seems to me that an attempt was made to show that we had waived in the past, and why not waive at this point. I would like to ask the chairman of the Budget Committee to respond to that.

Mr. GIAIMO. Mr. Speaker, will the gentleman yield?

Mr. WIRTH. I yield to the gentleman from Connecticut.

Mr. GIAIMO. Mr. Speaker, the Rules Committee has power to grant Budget Act waivers. The Rules Committee grants these waivers, but it does so in a very limited way. Many bills come up before the Rules Committee which are in technical violation of the Budget Act—by that I mean that they violate the Budget Act—and, in effect, the Rules Committee says, "If you cure the defect by an amendment, we will give you a waiver."

So, in effect, they are no longer in violation of the Budget Act. That is the condition of the granting of a rule. There are only a few bills, seven in number, which have been waived.

Mr. LATTA. Mr. Speaker, I yield 1 minute to the gentleman from South Dakota (Mr. ABDNOR).

Mr. ABDNOR. Mr. Speaker, I would just like to say that I have to disagree with my friend, the distinguished gentleman, the majority leader from Texas. I agree with my colleagues from Iowa and Maryland. They pointed out that the President should have the opportunity to decide whether he is going to veto or sign this bill.

Many of us recall last year when the farm bill was before us, we ended up with some very meager target prices of $2.90 for wheat and $2 for corn. The President again threatened and the word was sent down, "I will veto the bill." But he did not. So I think we all have the right to question him once again.

Mr. Speaker, I rise in firm support of the rule and the conference report.

In this legislation we have an opportunity to enact a historic landmark reversal in our Nation's cheap food policy. This policy has continually relegated farmers to the status of second-class citizens, and it must not be permitted to continue.

According to correspondence I recently received from Secretary Bergland, the per capita disposable personal income of farmers was about 20 percent less in 1976 than that of our nonfarm citizens. On a median family income basis, farm families received over $5,000 less.

A Federal policy which perpetuates this situation is obviously unfair and, I repeat, must not be allowed to continue.

As I told the House conferees in my letter of March 29 during adoption of the Flexible Parity Act: farmers would for the first time be given a real voice in determining the price they receive. At the same time, those who do not feel they need the higher prices would be allowed to produce without restraint, while those who do would be responsible for reducing their production as would be required to achieve the higher price in the marketplace.

Everyone seems to agree that farmers need improved income, but some of those who will vote against the conference report are apparently unwilling to take the necessary action. Others have suggested other solutions, such as direct payments to farmers not to plant or increasing grain reserves. Both of these suggestions tend to further reduce the farmers' ability to control their own destiny, though, and do little to correct the basic flaw in our national cheap food policy.

I addressed the issue of grain reserves further in a letter to the editor of the Washington Post and would like to have it included in the RECORD.

Finally, the Council on Wage and Price Stability and others have said the conference report is inflationary, implying that farmers do not deserve the increased income it is intended to provide. I wrote the Chairman of the Council on that point and ask that my letter to him be included in the RECORD as well.

In my view, it is little to ask that the average American family, which is living on about $5,000 more income each year than the average farm family, should be expected to pay $100 more a year to help establish a healthy farm economy. That is all the Council on Wage and Price Stability estimated the Senate bill would cost the average family, and the Congressional Budget Office estimate for the conference report is even less—only $46 to $63 per year or a mere 30 cents per person per week.

Is that too much to ask? Clearly not.

Indeed, one of my constituents has pointed out that HEW admits to having misspent more than this legislation will cost.

The real question is whether we are really dedicated to giving farm families a fair break or not. Are we willing to reverse our cheap food policy or not? Is all the talk of improving farm income just rhetoric or are we willing to act?

Adoption of the conference report will be a step in the right direction.

I urge my colleagues to vote for this legislation.

[From the Washington Post, Jan. 27, 1978]

FARMERS' WOES: GRAIN RESERVES ARE NOT A SOLUTION

(By JAMES ABDNOR)

I wish to take issue with The Post's Jan. 20 editorial "Farmers Rights—and Wrongs." The Post is correct in noting that there is a broad middle ground where the interests of farmers and consumers meet, but the suggested answer—stabilizing prices through a program of building national grain reserves—is no answer to farmers.

Farmers do not fear collapsing prices. They fear prices staying at the levels that currently prevail. Nor are they anxious about a future that threatens to be worse than today. They fear a future that is no different from today—when our production, processing, transportation and marketing systems provide consumers with the finest quality food at the cheapest prices on earth at any time, while bankrupting many farmers, preventing others from getting into farming and maintaining the rest as paper-rich but money-poor second class citizens.

A system of grain reserves not only is not a solution, but, from the grain farmers' viewpoint, it is worse than no solution at all. If large surplus "reserves" are maintained as a matter of public policy, they will inevitably also maintain prices at inordinately low levels. If the government acquires grain stocks while prices are low and sells them when prices are high, the profit will be at the farmers' expense. Quite simply, the dollars taken out of farmers' pockets when prices are high will exceed those paid them through government acquisitions when prices are low.

No, grain reserves are not a solution to the grain farmers' woes. If so-called consumer interests (farmers are consumers, too) feel reserves are required to ensure against shortages, fine. But, they must be willing to bear the full costs involved, including compensation to farmers for the price-depressing effects of the reserves. Even so, reserves, per se, are not a solution to low market prices.

One solution to low market prices, caused by excess production, is less production. That solution will inevitably come about from normal market factors.

It is, however, an inherent assumption of the federal farm program that the socio-economic and political effects of allowing large numbers of farmers to be driven out of business are unacceptable. Support for the "family-farm system" is nearly universal, but at current funding and price-support levels the farm program is of greater symbolic importance than of practical assistance to many farm families. We are not going to run out of farmers who have families any more than we are going to run out of food, but we may see the demise of the family farm as we have known it, and we will most assuredly see higher farm prices under the agricultural system that results.

TAKING EXCEPTION

It is conceivable, despite the renown productivity of the family farm, that the system that evolves may be even more efficient and able to continue to hold farm prices down, but that is most unlikely. The problems of family farmers are very much a function of their own productivity, competitiveness and lack of market power. As such and faced with the considerable market influences of the big three—government, labor and business—the family-farm system will continue to self-destruct until such time as the agricultural system that remains reaches a more favorable balance of power in the market. To quote from a popular commercial, the mes-

sage to consumers is clearly "Pay me now or pay more later."

Another solution—the one the farm program professes to adopt—is to ensure farmers a fair return for their products. Ideally that means both covering their costs of production and allowing them a decent standard of living. The current farm program fails to do so, and a grain reserve certainly will not do so. I personally would prefer that farmers receive a fair return in the marketplace and intend to continue doing everything I can to achieve such goals, as lowering obstacles to maximization of our agricultural exports. It is theoretically—but hardly politically—possible to provide farmers an adequate income through government payments. However it is done, though, it must be done, and it will be done—unless economic law can be repealed.

Financial returns to agriculture will indeed be higher. The only question is who will benefit—family farmers or others, perhaps large corporate entities. If not family farmers, it seems evident the market power exerted by the agribusinessmen who remain will demand returns in excess of what otherwise might have sufficed. The bottom line, then, is that we can continue to pursue the "cheap food" policy that is espoused in The Post's editorial and elsewhere, but it will doubtlessly be unwise in the long run. The broad middle ground where interests of farmers and consumers meet is in preserving the family-farm system.

Pay now or pay more later—from the consumer's standpoint it's just about that simple. The predicament—indeed, the catastrophe—facing farm families is much more complicated as they watch their life's work and that of their parents and grandparents eroded and lost.

It is in the interest of no one to let this erosion continue.

---

[From the Washington Post, Jan. 20, 1978]

FARMERS' RIGHTS—AND WRONGS

Blocking highways as a method of political protest is intolerable. But these farmers are pursuing a goal that is even more wrongheaded. They want a massive price increase that would severely hurt consumers and send the inflation rate shooting upward. The farmers' distress is real, but they are rapidly squandering public sympathy. Their attempts to block roads are symbolic—more, perhaps, than they realize—of their whole movement, which is pursuing its ill-chosen aims with absolutely no regard for the damage and distress that it might threaten to everyone including, in the end, farmers themselves.

Everybody has the right to protest and to be heard. But nobody has the right to press his cause by harassing and endangering a random selection of his fellow citizens unlucky enough to be caught behind a roadblock. The demonstrations on Route 66 were, in fact, a rather ugly sequence in which tractors hit a couple of police cars and a policeman who was on foot. Holding motorists hostage, by violence, is not permissible. Speaking of symbols, that incident ended with a tractor standing sadly by the side of the road, its back tires blown out by a police shotgun. That offers a pretty accurate picture of the conclusion toward which the demonstrators' present course is taking them.

But it doesn't have to end that way. If these farmers choose to regard everyone else on the road as their enemies, from whom nothing can be obtained except by force, they are bound to be the losers. But we have been arguing on this page for some time—apparently without a great deal of success, so far—that there is a broad middle ground where the interests of farmers and consumers meet. Both have a strong interest in price stability. That means ending the wild market swings that have greatly increased the risks of farming over the past six years. The answer is a program of building national grain reserves. Farmers need to know, when they plant their crops, approximately what the selling price will be. Farming ought not be a roulette game in which extremely hard-working men and women are required to put their whole livelihood at stake on the weather and on the market every year. Farmers, and everyone else, are entitled to the kind of price stability and assurance that reserves can provide.

Instead, these demonstrators are pressing for a big increase in grain prices. If they got it, the first victims would be other farmers—the cattlemen and poultry-men who buy grain for feed. But eventually even the grain farmers themselves would suffer. The present demonstrations, in fact, mark the morning-after that followed the great euphoric binge in farm prices in 1972 and 1973. Because grain suddenly brought higher prices on the market, farm land was worth much more. Now the farmers have been stuck in a falling market with extremely high land costs, high taxes based on them—and a steady inflation in manufactured goods, in part due to rising food prices in years past. The process is circular. Simply raising prices for the farmers won't help them for long.

In fact, these demonstrators don't seem to know much about national farm policy, or markets, or political strategy. Among farmers themselves, these people are outsiders, without much leadership. They aren't being steered, or even supported, by the country's large farm organizations. The leaders to whom they would naturally look—in successive administrations, in Congress, in the farm organizations—have continued to tolerate, year after year, radical and perilous instability in the agricultural markets. That is what has brought these demonstrators—frightened, confused and increasingly vehement—onto the highways and into the capital.

---

HOUSE OF REPRESENTATIVES,
*Washington, D.C., March 24, 1978.*

CHARLES L. SCHULTZE,
*Chairman, Council on Wage and Price Stability, Washington, D.C.*

DEAR MR. SCHULTZE: I was shocked and dismayed to read the Associated Press article entitled "Administration Hits Bill for Farm Relief," which appeared in the March 23, 1978, issue of The Washington Post.

Your concern over the inflationary effects of this legislation is understandable, but seems to indicate a willingness to force farmers to continue to absorb the inflated production costs they must pay, without permitting them the increased income they must have to do so. (I wrote Secretaries Blumenthal, Marshall, and Kreps, who are members of the Council, and Secretary Bergland, who is not; and none of them feels his department can help to lower farm production expenses.) Sympathy is simply not enough—farmers must have higher incomes and they will. The only question is how many will be driven out of business first.

It strikes me as being not at all unreasonable to expect the average American family to pay an additional $100 to re-establish a healthy farm economy, thereby helping to ensure preservation of the family farm system which has brought them the most adequate supply of the highest quality food at the cheapest prices anywhere at anytime on earth.

I find it highly ironic that even as USDA is announcing that two-thirds of the rise in 1977 grocery store prices is accounted for by imported foods, you are suggesting that meat import quotas be raised—this after meat imports have already contributed to excessive liquidation of the domestic cattle herd, thereby inordinately depressing livestock prices. That increased meat imports would now be advocated to prevent cattlemen from recouping their losses is beyond belief!

Are you unaware that in 1977 the farmer's share of each dollar spent in grocery stores for U.S. farm foods was only 38.8 cents? That is less than in 1976! And, of the one-third of the increase in grocery store prices not accounted for by imported foods, most was accounted for by higher processing and distribution costs. Why should every other segment of the food marketing chain command increasing receipts, while farmers are expected to get by with no increase? If you truly feel farmers are not entitled to a $100 raise from each of their customers, how much do you feel they do deserve?

I commend the Administration for its better-late-than-never concern over inflation. It is our nation's number one problem and has had my concern for some time. To use the farmer as a scape goat, though, and to suggest that he can continue to bear the cost of inflation in other segments of the economy without relief is not only unfair, it is inexcusable and contrary to the national interest.

Please reconsider your position and retract the statements made in the Post article.

Sincerely,

JAMES ABDNOR,
*Member of Congress.*

---

[From the Washington Post, Mar. 23, 1978]

ADMINISTRATION HITS BILL FOR FARM RELIEF

The Carter administration yesterday criticized the Senate's emergency farm relief bill as one of the most inflationary government actions in recent years.

The White House Council on Wage and Price Stability said the bill the Senate approved Tuesday would add from two to five percentage points to the rate of food price inflation this year.

The legislation, if enacted, would add at least $100 a year to the average family's food bill because of increased payments by the government to farmers, the council said. The bill next will be considered by the House.

"If the bill becomes law, it would be one of the most inflationary actions of the federal government in recent years," the council said in a statement. While the agency expressed sympathy to the problems of farmers, it said, "we are also concerned about the impact of farm legislation on consumers and the overall economy."

Even without the new farm legislation, food prices are rising faster than expected this year, meaning higher cost to consumers. The increase for the year could amount to 8 percent, officials have said. But the council statement said enactment of the new legislation would bring "a major risk of returning the country to double-digit food price inflation."

Consumer food prices increased at an annual rate of 8.9 percent in the three-month period ending in January, and wholesale food prices rose at an annual rate of 19.4 percent for the three months ending in February. Officials had not expected those sharp increases to continue, however.

The Senate package would add to the average family's food bill through a system of payments to farmers for not planting.

The Senate package faces almost certain overhaul in the House, but changes there are unlikely to lower the cost to consumers.

The House voted 332 to 63 yesterday to seek a conference with the Senate to work out differences on the farm legislation.

If the bill becomes law, the average American family of three that spent $2,583

for food last year will be paying at least $100 more than the $2,686 to $2,738 the government already is predicting for 1978, the council said.

Mr. LATTA. Mr. Speaker, I yield 1 minute to the gentleman from Illinois (Mr. FINDLEY).

Mr. FINDLEY. Mr. Speaker, yesterday morning I heard my good friend, the gentleman from Washington, Mr. TOM FOLEY, describe this conference report as a walking dead man—a very apt description.

It has no chance of becoming law. The only question, as someone else said, that we have to decide ourselves is whether you and I, Members of this body, are going to be recorded for or against the conference report. We can cop out, we can vote down the rule, and avoid a direct vote on the question ourselves. Even though I am for the rule, I am against the bill. I think a strong case can be made against it as being against the interest of the farmer in the short term and in the long term.

However, I do believe that each of us has a duty to our constituents, wherever they may be, to be recorded as voting "yes" or "no."

Mr. LATTA. Mr. Speaker, I yield 1 minute to the gentleman from South Dakota (Mr. PRESSLER).

Mr. PRESSLER. Mr. Speaker, it seems strange to me that only a few years ago when President Ford was in the White House, this body would frequently send legislation to him even though he said he might well veto it.

Now the argument is being used in the House that this legislation is a "walking dead man" or something of that sort.

However, Mr. Speaker, I believe strongly that we have a constitutional responsibility in this body to perform our duty and to let the President perform his. It seems a very strange and a new argument that since the President has said he will veto it, we should not bring the legislation up.

Also, in terms of the rule, I sincerely hope that we do adopt this rule so that we have a chance for a recorded vote.

The American farm movement has been in Washington for well over 4 months; and if they are to go home disappointed, there will be great prices to pay in terms of the losses of our last generation of family farmers, and also I might say, the last generation of our small businessmen. Consumers will be equally affected—for our consumers benefit from the family-sized farm which is the most efficient unit of farm production. If we lose our family farmers, we will have corporate farming—and price fixing—and much higher food costs to the consumer.

Mr. LATTA. Mr. Speaker, I yield 1 minute to the gentleman from Alabama (Mr. DICKINSON).

Mr. DICKINSON. Mr. Speaker and colleagues of the House, we have just gone through the longest coal strike in the history of our country. During the time of the strike, those who were on strike had been making an average of $75 to $100 per day and were striking for better working conditions and greater fringe benefits.

Yesterday, Mr. Speaker, I happened to call a repairman to my house in order to fix my furnace and air-conditioner system. He charged me $24 an hour to come out and do the work.

Mr. Speaker, in almost every segment of our economy, whether it be white collar or blue collar, workers are receiving incremental increases in earnings which permit them to cope with a corresponding increase in the cost of living. This is not true on the farms of this Nation however. The costs of farming have greatly increased in recent years. Farm machinery costs have gone up, fertilizer costs have gone up—everything has gone up for the farmers except the prices they receive for their products.

The American farmer, Mr. Speaker, is not receiving any better prices for agricultural commodities today than he did 20 or 30 years ago. Now we are being given an opportunity to help correct this situation. Clearly there is a crisis in American agriculture today—and today we have the opportunity to take positive and affirmative action in order to help the farmer and promote agricultural stability.

Mr. Speaker, President Carter has indicated that he does not care for this bill. Unfortunately, this administration has shown little care or concern about the farmer or the serious agricultural problems facing our Nation. The House and Senate Agriculture Committees have shown they care. The U.S. Senate has shown it cares. I am deeply concerned, and I hope the House of Representatives is willing to show that we too, care about the farmer.

Mr. Speaker, I am for the rule; I am for the bill. This is not a copout. We should give the President the opportunity to act on this legislation by adopting the conference report.

Mr. LATTA. Mr. Speaker, I yield 1 minute to the gentleman from Minnesota (Mr. QUIE).

Mr. QUIE. Mr. Speaker, in January I told the farmers of Minnesota that there was not much chance of legislation like this being enacted.

To our surprise, pleasant surprise, the other body has taken action to pass this bill. The House members of the conference committee has also taken action in support.

We ought to pass this rule and pass this bill and give the people who have pushed it this far an opportunity to get it through the White House.

Mr. Speaker, we are just about at planting time up in the northern part of the country. We cannot wait any longer.

Let us look at the whole question of the budget. Each one of us tries to keep our own personal budget in balance; but if a child in our own family needs medical help or in any way is in serious need, we set our budget aside and give that person all the help we can.

Mr. Speaker, the agricultural sector of our economy is in serious trouble. The farmer needs help. The proposed help of the administration is to put the commodities in storage and hold farmers hostage for years. This is a better way to help the farmers bring carryovers of grains down and provide a chance to help them get out of this trouble in 1 year.

Mr. Speaker, I opt for this bill to help the farmers to get out of the financial problems they face rather than go back to Government surpluses in Government bins.

Mr. LATTA. Mr. Speaker, I yield myself one-half minute.

Let me say to my colleagues that this is neither a Democrat nor a Republican bill. This is a bipartisan bill.

It came out of a conference committee of the two Houses and it was made up of Democratic and Republican Members. The Senate has acted, and now it is up to the House to act on this measure.

I plead with my colleagues today to respect the honor and the integrity of this conference committee that was appointed by the Congress and permit its report to come up for consideration. The Senate has acted. It is now time for the House to act and to agree with the conferees. I think they have brought forth a good bill and it should pass.

Mr. YOUNG of Texas. Mr. Speaker, I yield such time as he may consume to the distinguished gentleman from Texas (Mr. KRUEGER).

Mr. KRUEGER. Mr. Speaker, I rise in support of the rule and the conference committee report.

Mr. Speaker, today, Members of the House of Representatives will decide whether the much-needed Emergency Farm Act of 1978 will proceed through the legislative process to conclusion, or whether it will be prevented from progressing to the President. I urge my colleagues to approve this crucial legislation.

In the larger sense, Members of the Congress today have the opportunity to vote in favor of the Emergency Farm Act of 1978, and so take action which could herald the beginning of a new American agriculture policy, a policy assuring the farmer a fair return for his product and greater independence from Government interference.

Today's decision is not a responsibility to be taken lightly. The livelihoods of dedicated farmers who have lobbied the Nation's capital, both for themselves and for the thousands who toil at home to produce food for a hungry world, are dependent on our decision today.

Personal testimony by farmers and grim statistics make a highly persuasive case for passage of this conference report. Farm debt has more than doubled in the last 5 years to nearly $100 billion, and farm income has declined nearly $13 billion. Farmers now face bankruptcies at four to five times the normal rate. From across the Nation, farmers have spent their time and money to come to Washington and tell us their stories, and also to tell us that never before have they encountered prices for equipment

so high, and prices for crops so low. They have opened their financial records, and their hearts, to us in order to document the alarming situation they face. In instance after instance, farmers have shown that although their last harvest was their greatest, their latest return was their lowest.

Strong public opinion and goodwill have accompanied the farmers to Washington. A recent Lou Harris poll showed 80 percent of Americans were in sympathy with the goals of the striking farmer, and only 13 percent were opposed.

The Emergency Farm Act of 1978 is the most effective approach to the farm problem. It is the least expensive and least inflationary approach, preferable to other solutions which would increase Federal involvement through direct payment. The bill represents a step away from centralized, Federal planning of agriculture and would help return decisionmaking to each individual farm, thereby allowing farmers to write their own farm programs. Most important, H.R. 6782 grants higher target prices to producers, up to 100 percent of parity, depending upon the amount of acreage each farmer chooses to set-aside. This legislation is necessary if we are to prevent thousands of family farmers from being forced out of farming by bankruptcy.

What the farmers of our Nation have come to Washington to tell us is that they seek parity, not charity. I urge my fellow Members of Congress to join me in taking positive action by voting in favor of vital flexible parity legislation, the Emergency Farm Act of 1978. Also, I ask other Members of the Congress to join with me in urging the President to reconsider his decision to veto this cost efficient and very necessary legislation.

Mr. YOUNG of Texas. Mr. Speaker, I yield such time as he may consume to the distinguished gentleman from California (Mr. LEGGETT).

Mr. LEGGETT. Mr. Speaker, I rise this afternoon to express my opposition to the House-Senate conference report to H.R. 6782, now known as the Emergency Agricultural Act of 1978.

H.R. 6782, a noncontroversial raisin-marketing order bill when it passed this House on October 31, 1977, returns to us today in a cloud of confusion and emotion. It returns also with two substantial amendments: One would increase target prices for wheat, corn, and cotton; the other would create a sliding scale for crop pricing linked to an acreage set-aside program, the latter often referred to as "flexible parity" or the "Dole Dial-a-Parity Plan."

The conference report would establish new, higher target prices and loan rates for the 1978 wheat, corn, and cotton crops to be based on the number of acres the farmer takes out of production. This legislation, if passed, would allow the farmer to select his own target prices by allowing him to decide how much of his own land to set aside.

The Congressional Budget Office and the USDA estimate that this legislation would add as much as $5 billion to our current farm program in fiscal year 1978 and 1979. Retail food prices could increase as much as 4 percent over the incredible 6-to-8-percent increase already forecast. The projected effect on the overall economy would be to increase inflation on a magnitude of 5 percent.

For the past 16 years, I have represented one of the largest agricultural production areas in the United States. In the Fourth Congressional District of California, we are leading producers of rice, peaches, tomatoes, and nut crops.

Contrary to information circulating around Capitol Hill in recent weeks, declining commodity prices and farm incomes in 1977 were the result of large, worldwide supplies of grains, oilseeds, and fibers. Another contributing factor was the liquidation of domestic cattle herds because of unprofitable feeding and poor pasture conditions caused by the drought in the Western United States.

As a result, the realized net income in 1977 declined to $20 billion—in real terms, equivalent to that of 1971—a poor year. The result of this overall situation was a severe cash-flow and debt-repayment problem for farmers. The severity, however, varied greatly by commodity and by region of the country; but nevertheless took its toll on our farmers.

Although lacking in many respects, the administration announced its farm program on March 29, 1978, which would pay farmers to take 5 million acres of corn and cotton out of production. This would be in addition to those previously announced 20-percent wheat and 10-percent seedgrain set-asides. The administration's set-aside program provides loans and payments to farmers if they plant a specified percentage of their acreage in the preceding or current crop year. The existing program would also lift the ceiling on farmer-held wheat and feed grain reserves, waive the interest charges on those reserves after the first of the year to encourage farmers to hold back grain until the market improves, and raise the loan rate for soybeans from $1 to $4.50 per bushel. This plan is in effect now, requiring no action by this body.

Even more encouraging is news that most commodity prices have shown appreciable increases in recent months. The realized net farm income for the first half of crop year 1978 is at an annual rate of $23 billion, or about $3 billion higher than last year. Foreign demand for major crops already points to a record volume of agricultural exports in the current marketing year.

The indications are, Mr. Speaker, that farm incomes for the coming year will be adequate at the very least and that a so-called emergency situation does not exist at this time. Notwithstanding, we are today being asked to grant a rule and waive section 303 of the Congressional Budget Act and consider this legislation. This bill violates the act by authorizing next year's spending before we have even adopted the first budget resolution setting tentative spending levels.

As a member of the Budget Committee, I know my colleagues have not had a proper opportunity to deliberate on this bill. Our committee has just concluded many months of work on the first budget resolution for fiscal year 1979. We are recommending a total budget authority for the coming year of $568.1 billion, with projected total outlays of $501.3 billion and a programed deficit of approximately $58 billion. The committee is recommending a $12.2 billion budget authority and $12.1 billion in outlays for the agricultural function alone.

To add out-of-hand what could be an additional $5 billion to our already oversized national debt, without the opportunity for Budget Committee review, markup or floor amendments, deprives each of us of our obligation to fulfill the legislative process in a responsible manner.

In addition to putting further pressure on credit markets, encouraging imprudent monetary growth that undermines the dollar abroad and accelerates inflation at home, adoption of a waiver and passage of H.R. 6782 could result in significant alterations in production. It could cause the removal of as much as one-third of our Nation's corn, wheat, and cotton acreage. This undoubtedly would create gyrations in the market prices of farm commodities, resulting in unusable markets and quite possibly the loss of critically needed export markets for our agricultural products.

The administration's farm program, most of which is already taking effect, is a better solution to the problems our farmers face. It provides farmers with immediate help, is less expensive, and therefore less inflationary. At the same time, the current program strengthens farm income and will promote steady agricultural growth. By expanding the farmer-held grain reserves, producers can hold their crops and await higher prices without exposing consumers and livestock producers to severe price increases should the Nation experience a poor harvest this fall. Agricultural exports will continue unimpeded. The land diversion aspect of the administration's program strengthens market prices by shrinking price-depressing surplus production, thus bringing our agricultural commodities into better balance with demand.

We have an emergency farm program that is working today, and it does not cost $5 billion more than we can afford to pay. The marketplace is currently providing adequate income levels for the great majority of our farmers. Any further action we take will be an unnecessary expenditure of money we do not have. Exports are up, prices are up, and foreign production is down.

The California Farm Bureau Federation opposes this legislation, the National Grange opposes it, the Consumer Federation of America opposes it, the Poultry and Egg Institute opposes it, and President Carter yesterday promised to veto it.

While I feel very strongly that a healthy agricultural environment is essential to our Nation, we do not need nor can we afford the luxury of this inappropriate and misguided legislation. H.R. 6782 does not serve the best interests of American agriculture or the Nation as a whole. I urge you to join me in voting "no" on the rule and "no" on this conference report.

Mr. YOUNG of Texas. Mr. Speaker, I yield 3 minutes to the distinguished gentleman from Texas (Mr. HIGHTOWER) for the purpose of closing debate.

Mr. HIGHTOWER. Mr. Speaker, "later, later, later," is always used by the opposition.

Mr. Speaker, the oldest argument against anything is to put it off and say, "later." Our distinguished friend, the Majority Leader, says that later maybe we can get a better rule and get a bill that the President will sign. "Let us do it later."

My friend, the chairman of the Budget Committee, says that maybe later, after we consider all the other budget problems, but "later" is not going to be good enough. What is an emergency is always an interesting idea. It depends on whose house or whose barn is burning down as to whether it is an emergency.

Well, I submit, Mr. Speaker, that our barns are burning down; our creek is dry; and the Congress is standing over the well. We have got to have action now. It is not going to be good enough to come back and later try to get a better bill. Farmers are already planting their crops.

We have had farmers here since the first of January. They came then because they thought they could get quick action. They knew that something needed to be done, and they have been reasonably patient as we have come through these weeks and weeks of talk and debate, of trying to decide the best way to address this problem. While those of us who have been involved have been hearing talk of "later," the President has now said no. He says that the farm bill that we passed last year is going to be good enough.

But, I tell the Members now, and I think each Member has heard this story from farmers who have visited their offices, that the farm bill of 1977 is not enough. The Department of Agriculture says that if we will wait and give it time, it will be all right.

If we had a friend out in the middle of a creek or a river trying to swim across who was going down and yelled for help, it would not be good enough for us to stand on the bank and say, "Friend, don't you know that we are going to build a great bridge here next year? Next year you will be able to walk across the river. You will not have to swim."

Neither can we wait until next year. We cannot wait until everything is just right and everybody is in the right mood.

Mr. Speaker, the time is now, and not later.

● Mr. HARRIS. Mr. Speaker, I will vote today against the conference report on H.R. 6782, the "Emergency Agricultural Act of 1978," because it will be devastation to the family budget and the American economy. The Senate rider to the bill includes far-reaching, new policies including increases in targets and loans on wheat, corn, sorghum, barley, and upland cotton and a land diversion program.

PUTTING HIGHER PRICES ON THE FAMILY DINNER TABLE

On March 22, the President's Council on Wage and Price Stability estimated that the Senate farm bill would add two points to the rate of food price inflation. If this bill is enacted into law, $200 more a year could be added to the 1978 family food cost. Under the bill, retail food prices would be 2 to 4 percent higher than the 6- to 8-percent increase already forecast. Higher grain prices will affect other agriculture prices like cattle, pork, and dairy products since the price of livestock feed would increase and also drive up consumer prices.

The current food spiral is eating away at the family budget; the American family cannot continue to absorb Government-stimulated price hikes like this. In the Washington, D.C., area alone, food prices have escalated at least 50 percent in the last 5 years. The Bureau of Labor Statistics reported on March 29 that food prices leaped an unusually high 2.2 percent between January and February of this year—almost double the national increase. This increase followed a 1.2-percent jump between December and January and pushed food prices in the Washington area up to more than 11 percent above what they were a year ago.

BURDENING THE TAXPAYER WITH MORE INFLATIONARY SPENDING

The Council on Wage and Price Stability has also said that enactment of this bill would be one of the most inflationary actions of the Federal Government in recent years. USDA estimates that the bill would cost taxpayers from $3 to $5 billion more than the current farm program. I just cannot see the wisdom of handing out $5 billion to corporate farmers, especially with the 1977 farm bill now in effect. Another $3 to $5 billion is an unwarranted burden for the American taxpayer.

INADEQUATE HOUSE CONSIDERATION

Finally, I object to this bill because of the way it was handled. The Senate added a far-reaching, expensive, new program rider to a minor bill, the Raisin Marketing Promotion Act. This rider did not undergo full hearings and committee and House consideration, with full debate airing all sides of the issue. In my view, the House has not had the legislative opportunity, required by our rules, to give this comprehensive measure full consideration.

I stand firm in my opposition to this bill. I believe the Senate amendments are highly inflationary. I strongly urge you to weigh the facts and vote against the conference report and put the dinner tables of the American family first.●

GENERAL LEAVE

Mr. YOUNG of Texas. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days within which to revise and extend their remarks on the resolution now being considered.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. YOUNG of Texas. Mr. Speaker, I move the previous question on the resolution

The SPEAKER pro tempore. The question is on ordering the previous question.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. HARKIN. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were refused.

So the previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. FOLEY. Mr. Speaker, I call up the conference report on the bill (H.R. 6782) to permit marketing orders to include provisions concerning marketing promotion, including paid advertisement, of raisins and distribution among handlers of the pro rata costs of such promotion, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Washington?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of April 6, 1978.)

Mr. FOLEY (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the statement of the managers be dispensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Washington?

There was no objection.

The SPEAKER pro tempore. The gentleman from Washington (Mr. FOLEY) will be recognized for 30 minutes, and the gentleman from Virginia (Mr. WAMPLER) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Washington (Mr. FOLEY).

Mr. FOLEY. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of the conference report on the bill H.R. 6782. A great number of American farmers have been the victims of a vicious cost-price squeeze over the past year An oversupply of some farm products, especially grains, caused commodity prices to fall to disastrous levels in 1977. These low prices, coming at a time when the costs of production continued to escalate, have created a situation in which many farmers today are facing severe cash-flow and debt-repayment problems.

The House and Senate Agriculture Committees have already acted on emergency credit legislation which, when adopted by the Congress and signed into law by the President, will help to allevi-

ate some of the more immediate financial problems facing farmers. While this legislation is essential, it represents only the first component of a two-step solution. We must also assure that American agriculture has the necessary economic vitality to continue producing to meet the growing demand for our food and fiber products.

In order to insure this, some modification of the Food and Agriculture Act of 1977 is needed.

As you are well aware, the administration recently announced a number of actions it would be taking to achieve a better balance of supply and demand. While these actions will, in my opinion, make a positive contribution toward the improvement of commodity prices this year, there are many who feel that they do not go far enough.

The conference committee, wishing to insure the continued economic recovery of American agriculture during the coming year, has agreed to a number of modifications in the 1977 Farm Act.

The conference report had its genesis in a noncontroversial raising marketing order bill, H.R. 6782, passed by the House last fall. The Senate attached to it provisions of an Emergency Agricultural Act for the 1978 crop year and with these amendments the bill was returned to the House. The House requested a conference to resolve the differences in the measures adopted by both Chambers and the conference report represents the agreement reached in that conference.

The Senate committee first amended the bill to require the Secretary to formulate additional set-aside programs for the 1978 crop year with the objective of diverting 31 million acres from the production of wheat, feed grains, upland cotton, and soybeans. The bill was amended on the floor of the Senate to provide specific price objectives to the additional set-aside program and additional amendments increased the target prices and loan rates for the 1978 crop of these commodities.

During consideration of the bill in the Senate, an additional title was added to provide a flexible parity program. Under the Senate amendment, a system of graduated target prices was established for the 1978 crops of wheat, feed grains, and upland cotton based on the amount of acreage a producer voluntarily sets aside to conserving uses. This title also increased the loan rates for these commodities. The flexible parity program included in title II for the 1978 crops of these commodities differed in a number of respects from the program provided in title I for the 1978 crops of the same commodities.

The conference report adopts in large respect the flexible parity approach of title II of the Senate amendment. It reduces, however, the number of steps of graduation for the target prices and changes the levels established for loan rates and target prices from those contained in the Senate amendment.

Specifically, with respect to the 1978 crop of wheat, the conference report provides graduated target prices in three steps based on the amount of cropland a producer voluntarily sets aside. The target price—now $3 per bushel—would increase to $3.50 a bushel with a set-aside of 20 percent, to $4.25 a bushel with a set-aside of 35 percent, and to $5.04 a bushel with a set-aside of 50 percent. The report also increases the minimum loan rate to $2.25 per bushel. The loan rate under current law for 1978 was previously announced at $2.25 per bushel and will be $2.35 if the average market price during the 1977 marketing year is more than 105 percent of the 1977 loan level of $2.25.

With respect to the 1978 crop of feed grains, the conference substitute increases the target price for corn from $2.10 a bushel under current law to a system of graduated target prices in three steps based on the amount of cropland a producer voluntarily sets aside. The target price would be $2.40 a bushel with a set-aside of 10 percent, $3.05 a bushel with a set-aside of 35 percent, and $3.45 a bushel with a set-aside of 50 percent. The conference report also increases the minimum loan rate from $2 a bushel to $2.25 a bushel.

The loan rates for the 1978 crop of other feed grains would be established as in existing law in relation to the level at which loans are made available for corn taking into consideration the feeding value and average transportation costs to market of grain sorghums in relation to corn. The conference substitute also provides for a graduated system of target prices for the 1978 crops of grain sorghums and barley at such levels as the Secretary determines fair and reasonable in relation to the target prices established for the 1978 crop of corn.

The conference report provides for different graduated target prices for the 1978 crop of upland cotton increased from the current level of 52 cents per pound. The basic target price would be 60 cents a pound. There would be two additional levels, namely, a target price of 72 cents a pound with a set-aside of 35 percent and a target price of 84 cents a pound with a set-aside of 50 percent. The loan rate for the 1978 crop of upland cotton (now 44 cents a pound) would also be increased to 48 cents a pound.

There are additional provisions contained in the conference report relating to other issues. First, it adopts provisions related to raisin marketing orders that were contained in the bill that originated in the House with a few technical and conforming changes. The conference substitute also adopts the Senate amendment which increases the borrowing authority of the Commodity Credit Corporation from $14.5 billion to $25 billion effective October 1, 1978. The increase would be effective only to the extent provided in appropriation acts. This amendment is necessary in the light of the increased outlays of CCC required by this bill and by the ongoing programs provided for in the recently adopted Food and Agriculture Act of 1977.

The conference substitute also adopts a provision that would encourage the production of commodities to be converted into an experimental fuel, popularly called "gasohol." The conference substitute provides that the Secretary may permit set-aside or diverted acreage to be devoted to the production of any commodity (other than the commodities from which the acreage is being set aside or diverted) for conversion into gasohol if the Secretary determines that such production is desirable to provide an adequate supply of commodities for such purposes, is not likely to increase the cost of the price support program, and will not adversely affect farm income. During any year in which there is no set-aside or diversion of acreage the Secretary may make incentive payments to producers who devote a portion of their acreage to the production of commodities to be converted into gasohol. Appropriations would be required to implement the program.

There were a number of provisions contained in the Senate amendments which were not agreed to by the conferees and were deleted in the conference substitute. Among these were provisions that required labeling of imported meat and meat products with the name of the country of origin and provisions of the Senate amendment requiring the Secretary to provide a 3-year guaranteed nonrecourse loan program for specified commodities for which price support is authorized under the Agricultural Act of 1949.

Other miscellaneous provisions provided for in the Senate amendments deleted from the conference substitute include a requirement that the Secretary permit grazing and haying and normal tillage practices on set-aside acreage, and changes in the extended loan program trigger prices and in the prices at which CCC stocks may be released. These provisions were dropped because the conferees believed they were not needed, or were impracticable and difficult to administer.

The conferees also deleted provisions of the Senate amendment that amended the Consolidated Farm and Rural Development Act to expand eligibility for farm real estate and operating loans to include family farm corporations and partnerships and to increase the lending limits for such loans. Comparable provisions are included in the Agricultural Credit Act of 1978, H.R. 11504, a bill which has been reported by the House Committee on Agriculture which provides comprehensive changes in the authority of the Farmers Home Administration, including provisions for an economic emergency loan program. This bill will be considered by the House in the near future.

Mr. Speaker, I hope the Members will join in support of the conference substitute.

Mr. Speaker, I reserve the balance of my time.

Mr. WAMPLER. Mr. Speaker, I yield 3 minutes to the distinguished gentleman from Nebraska (Mr. THONE).

Mr. THONE. Mr. Speaker, I rise in enthusiastic support of the conference report on H.R. 6782, the Emergency Agricultural Act of 1978.

We face a very simple issue today. Are we in favor of agriculture achieving equality with the rest of America? I say,

"Yes." Or, does Congress want to say to the farmer that his occupation should not share in our Nation's rising standard of living? Does Congress want to say to the farmer that he should be content with being a second-class citizen? I say, "No."

Let me remind you very briefly what we all owe to the farmer. One American farmer feeds about 60 people. He does it so efficiently—he does it so economically—that Americans spend a smaller share of their income on food than the people of any other nation in the world. The farmer's efficiency has been one of the most important factors in permitting Americans to reach their high level of affluence, compared with the rest of the world.

Let me remind you very briefly of how serious is the plight of the farmer. He is caught in a vicious price-cost squeeze. Prices for major grains last harvest were less than half what they had been 4 years earlier. Yet the farmer's cost of production—what he must buy in order to produce a crop—doubled in the past 10 years. As a result, last September the comparison of farm income with farm costs reached a 44-year low. Imagine that, if you will. The farmer had not been as bad off for costs compared to income since the depression and dust bowl year of 1933.

What should be done to correct this situation?

Obviously, one way to improve U.S. grain prices is to increase exports. My fellow colleagues, the record shows that this administration has done a fantastically poor job of pushing grain exports. Let me remind President Carter that in the last fiscal year, two of the three major grain exporters—Canada and Australia—increased their exports of wheat and flour. U.S. quantities of wheat and flour sold last year were down 20 percent from the previous year. The legislation we are considering today would have very little cost if the Carter administration would change its ways and begin seriously promoting agricultural exports. There is nothing in this legislation to prevent the administration from getting off dead center and becoming a good salesman for American agriculture.

Another way to improve the lot of agriculture would be to promote energy and industrial uses for farm products. An example is gasohol, a mixture of 90 percent gasoline and 10 percent alcohol made from crops. The Carter administration has an even sorrier record in this field than it has in the area of export promotion. The Carter administration has been an outright opponent of industrial and energy uses for farm products. The administration opposed authorization of funds for such purposes. When funds were authorized, the administration opposed appropriations to fulfill them. When funds have been appropriated for such purposes, the Carter administration has drug its feet about using the appropriations. There is nothing in the legislation being considered today that would prevent the Carter administration from having a change of heart and promoting energy and industrial uses of crops.

The Emergency Agricultural Act of 1978 offers another way to improve the lot of farmers. Flexible parity is the most important concept in this pending legislation. I have supported this idea since it was first advanced. Flexible parity will improve the farmer's lot within a minimum of Government involvement. Farmers do not want the Government telling them how much to plant. Flexible parity allows each farmer to decide how many of his acres he will plant. Farmers do not want to became dependent upon Government for their income. Flexible parity permits each farmer to obtain the great share of his income from the marketplace.

Flexible parity can be a means by which the present huge inventory of grain can be greatly reduced. Once that inventory is reduced, flexible parity can be a means of preventing reoccurence of such a huge glut.

Now, let us consider two of the main claims that are made by the opponents of this bill.

One claim is that passage of this legislation will drive up the cost of food. First of all, I think this Congress should once and for all reject the Nation's cheap food policy. The American policy has been one of depriving the farmer in order to spare the consumer. When did this administration ever show similar concern about holding down consumer prices in other areas? This administration practically forced the coal mine operators to accept an increase of about 40 percent in their costs for wages and benefits. It is my firm belief that the coal strike settlement will have a greater effect in raising costs of food for consumers than the legislation we are considering today.

The passage of this legislation will have little significant effect on food prices. If passage of this bill results in raising the price of wheat a few cents a bushel, will that make a marked change in the price of bread? The answer is, "No." Last year, the price of wheat went down 44 percent from 1976. Yet, the price of bread went up. It is my belief that if the farmer would give away his wheat, the price of bread would continue to go up. This legislation will have little effect on those continuing increases to the consumer.

The other claim is that this legislation could result in a shortage of grain. This is an outrageous argument. The end of the wheat marketing year is May 31. Official Department of Agriculture figures indicate that at the end of next month there will be more than twice as much wheat in storage in the United States as America consumes in a year.

The United States has also tried to get other nations to join in setting up an international reserve of grain to meet world crises. The talks that sought an international wheat agreement recently failed. If the United States will act through this bill to decrease the wheat inventory, other nations will become more reasonable about joining to establish an international reserve.

As I said, the extent of the farmer's plight has been known since last fall. President Carter and his advisers made a poor judgment of how serious the situation is. The President and his advisers kept insisting that nothing needed to be done. The President and his advisers said that the farm strike was only a brief flurry that would rapidly disappear. They said that when planting time came all of the farmers would be in their fields. Obviously, from all of the farmers that we have seen every week since January—and all those we have seen today—not all farmers are now in their fields.

When candidate Jimmy Carter spoke in farmland in 1976, he said,

> I believe that support prices, in my opinion, should be at least equal to the cost of production.

The 1976 Democratic platform, which candidate Carter dictated, contained a promise of parity for farmers.

The proposed legislation would not allow President Carter to fulfill that promise, but it would be a step in that direction.

President Carter has threatened to veto this bill. I think he will think a long time before he carries out such a threat. If he does, the farmer's financial plight, which has already brought on a recession in some rural small towns, will likely be the cause of a nationwide major recession.

President Carter has threatened to veto this bill, but he has made similar threats on other legislation that he did not carry out. I believe that's the same sort of idle threat that President Carter made when the Agricultural Act of 1977 was being considered. Then, a bipartisan group of us raised the target prices both on corn and wheat by 25 cents a bushel over the last figure the President said he would accept. President Carter signed the bill and even tried to take credit for it. I believe we should give the President the opportunity to make an agonizing reassessment of his position on this matter. I believe the President will ultimately sign it. If he does not, then I will vote to override his veto.

To insure continuance of the family farm, to bring about the prosperity that arises from the land, I urge my colleagues to join me in voting "yes" for H.R. 6782.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the distinguished chairman of the Committee on Appropriations, the gentleman from Texas (Mr. MAHON).

Mr. MAHON. Mr. Speaker, I rise in support of the conference report. The farm crisis does exist, and it is a severe crisis. American agriculture needs help if it is to survive as the most productive force in our Nation's economy.

Those who may have doubted that a crisis exists in American agriculture have had every opportunity to learn firsthand about it from the thousands of farmers who have been in Washington. They have told their story and they have told it well, and their story is credible.

Mr. Speaker, a significant aspect of this legislation is the flexible parity proposal. The 1-year trial of this method of supporting agriculture and helping agriculture support itself could be most helpful in the consideration of future farm legislation. As a 1-year experiment, it should be supported. Of course, no one

can predict the outcome of such an approach.

The bill before us is not a perfect piece of legislation, but it is the only measure available to us at the moment. Certainly, the present situation in agriculture is intolerable. We should have taken action weeks ago in regard to the problem which is confronting us.

Before us today is a bill which will improve the American agriculture picture and help the small farmer and farm communities survive.

Mr. Speaker, I urge approval of the conference report.

Mr. WAMPLER. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from Illinois (Mr. MADIGAN).

Mr. MADIGAN. Mr. Speaker, I rise in opposition to the conference report. First of all, because no one knows how many people may participate in this proposed program. We do know, however, what the impact of massive participation in a 35- to 50-percent set-aside of any crops may be.

First, it would have a very adverse effect on our ability to export at a time when our trade deficit is the worst in the history of our country. There simply is no way that 50 percent of something multiplied by 3.45 can ever equal 100 percent multiplied by 2.50.

Second, it would have a very inflationary impact on the cattle rancher at the very time when the administration is talking about removing quotas on imported beef.

Third, the conference report would be another factor in encouraging other countries into even further expanding their agricultural production, so as to further usurp our markets by simply underselling us.

I think it is important to note exactly what the condition of the land is today, particularly in the most productive Midwestern States. The land is still very wet. This wetness will encourage a high participation in a set-aside program and the wetness itself will have a negative impact on yields this fall, probably as much as 100 percent, making, worse the problem that will be created by high percentage set-asides.

Finally, the question needs to be asked: If all this is being done as a means of increasing the farmers' ability to buy goods and services, thereby contributing to the success of the rural economy, then someone needs to explain how that will be accomplished by cutting back by either 35 or 50 percent the demand for fertilizer, fuels, seed, crop insurance, and everything else that goes into agricultural production. If that much of the fertilizer manufacturing capability is shut down in the United States this summer, it will not be back on stream the following spring, because they simply cannot do it that quickly.

Clearly, Mr. Speaker, these things have not been thought out, and when they are added up, it becomes very clear that the conference report should be rejected.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from Mississippi (Mr. BOWEN).

Mr. BOWEN. Mr. Speaker, I was a conferee on this bill, and I am very familiar with it. I have been in this House for only 6 years and on the Agriculture Committee for that period, but I knew that sooner or later we would pass a farm bill that was bad for everybody—bad for farmers, bad for consumers, and bad for taxpayers—and we have finally done it.

My Republican friends on this side of the aisle tell me privately they know this is a lousy bill, but they want to sock it to Jimmy Carter and maybe pick up 30 or 40 new House seats as a result of his veto.

My Democratic friends on this side of the aisle who support this bill tell me they also know it is a lousy bill, but they are mad at Jimmy Carter because he did not do what he should have earlier to solve our farm problems administratively, so they want to sock it to him and let him veto the bill.

All these arguments have some validity, and I am especially disturbed that the administration has not done more and earlier to limit acreage and raise prices, thereby making this legislation unnecessary.

But my unhappiness with the administration is not sufficient for me to abdicate my own process of judgment and my own sense of conscience as to what is right and wrong.

I will not attempt to discuss the merits of this legislation for other parts of the country, but in my state and in my part of the country this bill would, if enacted, be a total disaster for farmers.

The bill would at first glance cause massive cutbacks in production, and this might be true in much of the Nation, where sharp inflation could result, but in the Midsouth and Southeast it would cause massive overproduction of cotton and underproduction of soybeans.

What would you think of a bill that allowed farmers to double and triple cotton acreage and call that a 50-percent set-aside? You would not think much of it, I hope, because that is just what this bill does.

A farmer who planted 100 acres of cotton in 1977 and 200 acres of soybeans could under this conference report double his cotton acreage in 1978, plant 200 acres of cotton and set-aside 100 acres that used to be soybeans. That would qualify as a 50-percent cotton set-aside and make that farm eligible for 100 percent of parity, the 84 cents a pound target price.

This practice followed throughout the cotton-soybean area of the country would inevitably force farmers to plant two-thirds of their crop acreage in cotton and set aside another third of their poorer land. Why gamble on $5, $6, or $7 soybeans when you can get an 84 cents target price for all your cotton on two-thirds of your best land? It would be the only sensible thing to do.

This process carried out widely throughout the South—at this time of the year it would call for some replanting and plowing under—would mean doubling last year's cotton production and cutting 26 million acres and 40 percent of the soybean crop. This would make the cotton price fall through the floor and bring a target price payment of $133 million per penny of exposure, or a total of $4.8 billion in deficiency payments to 100,000 cotton farmers.

Even with a more likely increase of 1, 2, or 3 million acres of cotton, the price would still fall to the loan level, the Government would acquire huge stocks of cotton and make massive outlays in deficiency payments—with a $40,000 payments limitation.

There are, it is worth noting, many farmers for whom a $40,000 payment would not provide an adequate supplement for farm income.

The price of cotton would clearly go through the floor and the price of soybeans through the ceiling. In the first instance, the so-called Dole bill would indeed become a massive Government dole and everything but a market solution, which its supporters claim it is.

I, for one, believe that farmers want their income in the marketplace and not in a dole from the U.S. Treasury.

In the case of soybeans, we could wreck the world market, create a worldwide foreign expansion of soybean production, and bring the reintroduction of export embargoes.

The response of the market next year after this 1-year bill would be a gigantic reaction in the other direction—the very rollercoaster effect we are trying to avoid. This bill works directly contrary to our efforts to stabilize agricultural prices for both producers and consumers.

This bill would be an administrative monstrosity requiring a Department of Agriculture five times the size of the present one to attempt to enforce the program. It would also be a disaster for cattlemen, pork producers, dairymen. poultry producers, and other feeders.

It would, in short, pit one farmer against another, farmer against consumer, and farmer against taxpayer.

It is very sad, in fact tragic, that the House Rules Committee, by a vote of 8 to 7, denied this House the opportunity to consider the Foley bill—a moderate 4-year reform bill which would have passed both Houses and, I believe, would have been signed by the President. If not, I am confident the veto would have been overridden.

If this conference report is defeated today, I urge the chairman of our House Agriculture Committee to begin immediate business meetings to develop new farm legislation, which I, and I know many others, believe is badly needed.

Our farmers need relief; they need it now, and they need it in the long run also, but this bill does not provide it. This is a bill supported by those who know it will never become public law, who know that if it passes this House, it will be vetoed, and that there are neither votes in the House nor in the Senate to override that veto.

We have today heard Members in this well call for support for a bill that they know will never help the first farmer, while they have earlier fought to defeat

legislation that would bring immediate relief and which could be enacted.

Mr. Speaker, I refuse to be a part of this pious process of deluding a group of great and hard-working Americans, the men and women who till our soil and produce our food and fiber. I will vote against this conference report as the quickest and most effective action to get back to the urgent task of drafting new farm legislation.

Mr. WAMPLER. Mr. Speaker, I yield such time as he may consume to the gentleman from Delaware (Mr. EVANS).

Mr. EVANS of Delaware. Mr. Speaker, I rise in opposition to the conference report.

Mr. Speaker, it is difficult not to be sympathetic to the problems of many American farmers. Even though relatively small in numbers, they feed not only 215 million Americans, but countless millions throughout the world. Thus, Government must develop policies which will help them stay in business.

Unfortunately, this legislation, the so-called emergency farm bill, will not benefit either the farmer or the consumer. It is a haphazard legislative attempt to solve problems by getting Government even more involved in agriculture, and it simply will not work.

History has shown that excessive Government involvement in agriculture—as this bill represents—leads to massive inefficiencies in production. Farmers will produce not what the market demands, but what brings the highest Federal subsidy. The result will be massive surpluses in some commodities, and critical shortages in others.

I also believe that one of the ways of increasing farm income is to export more of our farm produce overseas. Yet the massive subsidies that this bill provides will price American farmers right out of the world marketplace.

Further, we must remember that farmers are consumers, too. The poultry, dairy and livestock industries, which are very important in Delaware, will be severely impacted through higher feed grain prices. Costs of production will rise, thus putting these farmers into an even more severe economic squeeze than they are today.

For consumers in general, this bill literally mandates higher food prices. Because of the haste in which this bill is being considered, no one quite knows by how much food prices, already too high, will rise. But it appears that an average family of four would see their food bill increase by as much as $200 to $400 a year. Few Delaware families can handle that kind of increase.

Finally, Mr. Chairman, this bill will shoot holes in an attempt to curb inflation by controlling the growth of the Federal budget. Just yesterday, the President of the United States cited inflation as our No. 1 domestic problem, and called on Congress to restrain unnecessary Federal spending. I agree with him. Yet, today we are considering a bill which will add $5.7 billion to the already massive Federal deficit.

Mr. Speaker, the answer to the farm problem is not paying people not to produce. That has failed before, and it will fail again. The answer is to let farmers, not bureaucrats, determine what they will plant, and then guarantee new markets abroad for these commodities. I urge that this bad bill be defeated.

Mr. WAMPLER. Mr. Speaker, I yield 3 minutes to the distinguished minority leader, the gentleman from Arizona (Mr. RHODES).

Mr. RHODES. Mr. Speaker, the measure before us today is designed to prevent economic disaster for the American farmer and to preserve the family farm. The American small farmer is facing a crisis. If this Congress is unwilling to assist him, he faces the prospect of literally being pushed off his own land. If we are serious in our often-stated desires to preserve the family farm, now is the time to turn those statements into action by supporting this report.

The administration has stated that this emergency farm legislation is inflationary and that it will lead to higher prices at the supermarkets. The fact is, however, that there are no solid estimates of what this bill will cost.

But, if we fail to pass it, I can offer some costs that will ensue. One likely result will be that many American farmers are going to be forced out of business because they cannot make a living at farming. A result of this is likely to be shortages at the supermarkets, and higher prices that usually attend such shortages. There also may be higher taxes required to pay for programs that will be needed, not only to allocate these shortages, but also to deal with the problems of dislocation we will see as the farmers leave the countryside to seek work in other areas.

The administration is trying to portray itself as a friend of the city dweller by opposing this measure, saying the city dweller will have to pay higher prices for food and fiber. But, the city dweller will also have to pay if the bill fails, through shortages, higher prices and probably higher taxes. And, the eventual price in human suffering may well be much higher. Thus, I think a vote for this measure is, in reality, a vote for the city dweller, as well as a vote for the farmer.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from Minnesota (Mr. NOLAN).

Mr. NOLAN. Mr. Speaker, I urge my colleagues to support H.R. 6782, the Emergency Agriculture Act of 1978. This bill, which applies only to the 1978 crops of wheat, corn, and cotton, was reported out of the conference committee on April 5, 1978, and will soon come before the House for final approval.

The Emergency Agriculture Act increases the 1978 support prices for wheat, corn, and cotton to about 70 percent of parity for producers complying with set-asides already announced by the Department of Agriculture. The 70 percent of parity price floor, while an improvement, does not give farmers an opportunity to recover their production costs. Recognizing this deficiency, the conference committee also provided farmers with the option of qualifying for higher target prices under the flexible parity provision, if additional cropland is set aside.

BIASED BUDGET ESTIMATES

The Carter administration has resorted to biased "advocacy economics" in an attempt to discredit the Emergency Agriculture Act of 1978 (H.R. 6782). The administration's economic analysis of H.R. 6782 is based upon worst-case assumptions which have only a remote chance of occurring. The administration conveniently fails to note that if the same worst-case assumptions are applied to the recent USDA initiatives, their own program has disastrous economic implications. No one who understands our farm economy would be deceived by economic analysis based on improbable worst-case economic assumptions. Those who are not familiar with the farm economy should carefully examine the administration's questionable economic analysis.

FOOD PRICE INFLATION

According to the administration, H.R. 6782 will "increase food price inflation to double digit levels."

The above statement is obviously misleading. Economists currently are forecasting a 6 to 8 percent increase in food prices for this year in the absence of any additional farm legislation. USDA predicts that H.R. 6782 will cause retail food prices to increase by 2 to 4 percent. CBO projects a more moderate increase of 1.1 to 1.5 percent, or, a $46-$63 increase in the food bill for an urban family of four—a modest increase in consumer food prices.

H.R. 6782 provides farmers an opportunity to obtain an income which will give them a better chance to meet their production costs and continue farming. If the House defeats H.R. 6782, the Nation's farmers would receive a clear message that they (along with urban consumers) will be stuck with a 6 to 8 percent rise in consumer food prices, but will still be expected to produce at a loss.

In 1972 and 1973, farm commodity prices hit their high marks. Since that time farm income has dropped precipitously, but consumer food prices have failed to drop accordingly. According to CBO and USDA estimates, H.R. 6782 will raise farm income, but not to the peak levels of the early 1970's. From USDA's point of view, however, no matter how low farm commodity prices have dropped, any recovery in prices, regardless of how slight or from whatever depression level, is denounced as inflationary.

It is not fair to continue making farmers the shock absorber for everybody else's inflation.

COST TO THE GOVERNMENT

According to the administration, H.R. 6782 would add as much as $6 billion to the Federal budget.

CBO, in its budget estimate dated March 29, 1978, expected the fiscal year

1979 cost to be $4.2 billion and later revised the figure upward to $5.7 billion. CBO also expected H.R. 6782 to result in a $1.4 billion saving to the Government in fiscal year 1980 as higher market prices reduced Government costs.

Economic analysis is worthless unless costs are weighed along with benefits. USDA, however, has not undertaken any analysis of how increased farm income will expand purchasing power and stimulate the economy.

The administration's economic analysis is also full of contradictions. On the one hand, USDA assumes high participation in the flexible parity program and sharply reduced stocks. This could cause market prices to rise substantially and thus reduce Treasury costs. On the other hand, USDA denounces the alleged high cost of H.R. 6782, ignoring the fact that the worst-case assumptions reduce Treasury costs.

EXPORT MARKETS

According to the administration, H.R. 6782, by sharply reducing production and increasing prices, could seriously undermine our competitive position in world markets.

This is another of USDA's worst-case assumptions, one that applies equally well to the Department's recent initiatives.

The main question which USDA has ignored for decades is: "Why sell at a loss?" By continuing to do so, U.S. farmers are exporting their equity abroad, thus undermining the economic stability of U.S. agriculture. Exports of cheap grain aggravate the Nation's trade deficit. H.R. 6782 will increase the market value of U.S. farm commodities so that even if the volume exported is reduced, the value will increase. In USDA's own issue briefing paper on the American Agriculture Movement's proposal for 100 percent of parity, the Department estimates that at 100 percent of parity, the United States will lose 30 percent of its grain exports, but the value of all commodities exported increases by $7.5 billion the first year and continues upward in subsequent years. H.R. 6782 will not raise farm prices to 100 percent of parity, but any loss of export markets will be balanced by the increased value of the commodities exported.

USDA has been more interested in maintaining the volume of exports rather than increasing the value of the commodities exported—a policy which injures U.S. farmers and increases the Nation's trade deficit.

ADVERSE EFFECTS ON LIVESTOCK INDUSTRY

According to the administration, if H.R. 6782 were enacted, "the higher feed prices that result would adversely affect our own livestock industry."

Contrary to USDA's assertion that producers will set aside the maximum under the flexible parity provisions, CBO estimates that only 60 percent of the feed grain producers will enter the program and the remainder will stay out because they feed their grain. Again, USDA is using improbable assumptions to make its case. The charges that the bill would hurt the livestock industry are not coming from family-size farmers who produce both feed grains and livestock, dairy, and poultry. The opposition is coming from larger than family-size agri-business operations.

The livestock industry has been in its loss situation for several years because cheap feed has induced overexpansion. Raising feed grain prices now will restrain another expansion cycle in the livestock industry, thus leveling out the roller coaster price of meat.

BUREAUCRACY

According to the administration, H.R. 6782 will "require vast new layers of bureaucracy to administer" the new program.

County ASCS officials know how to measure land and they have performed the task competently in the past. Signup and measurement pose no problems.

MAJORITY OF BENEFITS GO TO SMALL NUMBER OF FARMERS

According to the administration, H.R. 6782 "would direct the vast majority of its benefits to a small number of the very largest of our farmers, rather than those in the greatest need of help." USDA estimates that 5 percent of the farmers would receive one-third of the payments under this bill. The bill includes a $40,000 payment limitation.

The administration ignores the fact that 95 percent of the producers cannot survive at 70 percent of parity—which is the latest administration position. Small and medium size family-farmers need better commodity prices in order to survive. According to USDA's own issue briefing paper on the American Agriculture Movement's proposal for 100 percent of parity, the Department states that 100 percent of parity prices "slow the decline in farm numbers" and increase the number of small farms.

The past several decades of farmland expansion have been fueled by low farm commodity prices. Producers had to increase the size of their farms in order to reduce the per unit cost of production. The higher farm commodity prices which will result from H.R. 6782 will slow farmland expansion, and, by increasing market prices, will provide medium and smaller farmers with the income they need to maintain their operation.

It is unusual to find the administration crying crocodile tears for small farmers, given their past track record. Last year the administration did not support an amendment to prevent nonfarm corporations from receiving farm program benefits. This year, the administration failed to provide any funds for the small farm research and extension program authorized by the 1977 farm bill.

The administration supported raising the interest rates on FmHA loans, to the detriment of medium and smaller size farmers. The administration opposed the provision in the Emergency Agricultural Credit Act which authorizes low-interest, graduated payment FmHA loans to new farmers so that they may compete for the purchase of farms, thus reducing farmland expansion by big farmers. Finally, the administration should realize that low farm commodity prices will continue to drive the small- and medium-sized farmers out of the business.

PRODUCERS WILL SHIFT ACREAGE TO CROPS DESIGNATED IN THE BILL

According to the administration, the planted acres of crops not included in H.R. 6782 will be severely reduced.

USDA is particularly concerned about a reduction in the planting of soybeans, but again, the Department employed worst-case assumptions. If USDA fears a substantial movement out of soybean production, such a tide could easily be stemmed by simply raising the soybean loan level.

UNITED STATES WILL BE RESIDUAL GRAIN SUPPLIER

According to the administration, H.R. 6782 would make the United States the prime adjuster of world food supply in order to balance supply and demand.

Currently, with its cheap food policy, the United States is already the residual supplier. Other exporting nations will continue to undersell the United States whether our prices are high or low. The level of prices is not the major factor in the maintenance of export markets. Rather, U.S. farmers do not have an effective marketing agent for their production. Private U.S. grain traders cannot compete with the grain boards which conduct the sales for other nations.

The United States will not be the residual supplier of grain if Congress enacts the Weaver bill, H.R. 11294. This bill gives the Commodity Credit Corporation the authority to designate the Commodity Credit Corporation as the seller or marketing agent for export sales of U.S. grain. Given the great volume of U.S. grain involved in the export trade the CCC will be able to bargain for higher export prices. Such a program gives the U.S. flexibility as a price leader so that we will maintain our current export markets and develop new ones through CCC negotiation of reliable long term sales which private grain trades are unable to transact.

PARTICIPATION IN RESERVE PROGRAM

Again, this fear is based on a worst-case assumption that stocks will be severely reduced.

The existing program, however, has been no more than a last resort measure for farmers. Until the recent administration initiatives, farmers had no economic incentive to lock up their grain for 3 years. Only after heavy pressure from Congress and farmers did the administration agree to raise the storage payments to realistic levels and consider waiving the interest charges. Last year the administration resisted establishing a grain reserve large enough to stabilize supply, but last month the administration finally agreed to increase the size of the reserve stocks.

The current reserve program will never provide farmers with an opportunity to obtain a fair income because the stocks will be allowed to flow onto the market at price depressing levels. Last year, the administration resisted establishing higher loan release and call-in levels. The grain reserve program, the so-called

cornerstone of administration farm policy is therefore a defective mechanism as it now exists.

Under current policy and under the program established by H.R. 6782, the administration has the authority to raise the loan release and call-in levels to realistic levels which will make the reserve program work to protect farmers and consumers from boom and bust prices.

BUYING TIME FOR FARMERS AND CONSUMERS

H.R. 6782 is only a 1-year emergency measure. With or without H.R. 6782, follow-up legislation is necessary for 1979–81.

The recent USDA farm program initiatives provide only a 70 percent of parity floor under farm income. Farmers cannot survive at these poverty levels which are below their cost of production. H.R. 6782 offers farmers immediate economic assistance at realistic levels.

Without H.R. 6782 and without follow-up legislation farmers can expect a continuation of the boom and bust cycle and its erratic swings in commodity prices. For consumers, however, the price of food never comes down when farm commodity prices slid into the bust phase.

I again urge my colleagues to reject the administration's erroneous and panicky appraisal of the Emergency Agriculture Act and to vote in support of H.R. 6782. I also urge my colleagues to request that the House Agriculture Committee immediately begin consideration of a long-range farm program which will stabilize the agricultural economy at price levels fair to farmers and consumers.

Mr. WAMPLER. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from North Dakota (Mr. ANDREWS).

Mr. ANDREWS of North Dakota. Mr. Speaker, I appreciate my colleague's yielding me this time.

One of the things in this entire debate on the rule and in the debate so far on the conference report that bothers me is that nobody has given the American farm families the credit they deserve, credit for being the most efficient and effective producers of food and fiber anywhere in the world.

The consumers who have listened to this debate so far might have the idea that somehow or other the Congress is setting up some type of subsidy or handout to the farmers. Nothing is farther from the truth. The American farmer can compete with any farmer anywhere in the world. The $5 top price for wheat in this bill and the $3.50 price for corn in this bill are lower in fact than the support price on corn and feed grain in almost every nation in the world, certainly in every nation in the Western part of the world.

When our farmers in North Dakota raise wheat and ship it in export in competition with their Canadian neighbors on the other side of the border, they find the Canadian farmer gets an 80-cent-a-bushel rail rate subsidy which the American farmer does not get.

Our farmers can compete with any farmers anywhere in the world. They cannot, however, compete with other governments, and they cannot compete in the face of rigged tariff barriers.

We must give our farm families the help they need so they will be here producing for us during the next several years. If we do, we will serve not only the farm areas but the consuming areas in this country, because that will give us the production we need all over this great land of ours and give us the exports we need to maintain an acceptable balance of payments and pay for the fuel we have to import.

Mr. Speaker, our farm families deserve to be praised, not censored. All we are trying to get for them is a fair shake compared to the markets of the world.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from Iowa (Mr. BEDELL).

Mr. BEDELL. Mr. Speaker, I come before my colleagues today as a member of the House Agriculture Committee to urge that they vote against the conference report on H.R. 6782, the emergency farm legislation.

The congressional district I represent is heavily dependent upon agriculture for its economic well-being. It is one of the leading producers of feed grains, soybeans, and livestock. However, while I feel very strongly that a healthy agricultural environment is essential to our entire Nation, I do not believe that this legislation serves the best interests of American agriculture, or the Nation as a whole.

Let me state that I am in total agreement with those who argue that the average American farmer today is caught in a vicious squeeze between rising costs of production and credit on one hand and sagging income in the marketplace on the other, particularly in the wake of two of the largest grain harvests in history. This is a situation which certainly deserves the attention of our Nation's policymakers. However, after careful study of the proposal and close consultation with farmers in my district, I believe that H.R. 6782 is not the right approach.

My primary concern with this approach stems from the "flexible parity" plan contained in the legislation. The "flexible parity" plan represents a fundamental departure from a market-oriented agricultural system. Among other ramifications, its implementation could place the future of American farm export markets and the economic recovery of our livestock, dairy, and poultry industries in serious jeopardy.

If H.R. 6782 is adopted, as much as one-third of our national corn, wheat, and cotton acreage could be removed from production. Carryover stocks of corn and wheat have been at an alltime high, and they have been a major cause of the depressed grain markets. It is estimated that by the end of the year we will have on hand 1,200,000 bushels of corn or 20 percent of normal production.

If this bill were to become law, and if there should be good participation by corn farmers accompanied by poor weather, we could face an actual shortage and the prospect of embargoes again on exports.

Mr. Speaker, the last thing we need at this time is the possibility of new embargoes. It is a hard fact of life that America no longer enjoys a seller's market in the world grain trade. Past embargoes on sales of wheat, corn, and soybeans have not helped our reputation with major consuming nations like Japan and the Soviet Union which were forced to seek out new suppliers such as Canada and Brazil. If the reliability of U.S. farmers as suppliers of food for the world market is challenged, the U.S. trade balance, to which American agriculture last year contributed a staggering $24 billion in sales receipts, might ultimately be eroded.

Indeed, the failure to provide a safety valve or cap on the amount of land taken out of production, in the event of bad weather, or other unforeseeable circumstances, is one of this measure's most serious flaws.

In addition to its economic ramifications, H.R. 6782 could also mean a particularly cruel hoax for the individual farmers who decide to participate fully in the "flexible parity" plan. The "flexible parity" provision promises farmers full parity price payments guaranteed by the Government if they idle half as many acres as they plant in corn, wheat and cotton. This would be accomplished by direct Government payments to the producer of the difference between guaranteed price (target price) and loan or market price, whichever difference is the least. However, if a crop shortfall should drive the commodity market price to the level of the Government price guaranteed in this bill, the participating farmer would get absolutely nothing. His loss would be compounded, too, because he would have idled up to a third of his land in order to participate in the "flexible parity" plan and he would have a diminished harvest with which to take advantage of the strengthened market prices.

Meanwhile, his neighbor across the road who did not participate in the program would reap the benefits of the higher prices, and be able to plant all his land without taking a single acre out of production.

Under recent action taken by the administration, the corn farmer who sets aside 20 percent of the land he plants is guaranteed about $100 for each acre set aside, no matter what happens to market prices. It seems to me that the present program is much fairer to corn farmers, and does not pose such a threat to export markets.

The farm problem is complex and there is surely room for disagreement as to how to solve it. However, I do not believe that the solution can be found through increased Federal involvement in farm production by means of an extremely complicated acreage set-aside program and a substantial hike in the direct Government payments to producers which will cost between 3 to 5 billion tax dollars beyond current budget provisions.

I believe that the key to improving farm income lies in implementing a pro-

gram which will bring supply and demand into better balance so that farmers can receive a fair price for their products in the marketplace. To my mind, that means increasing markets abroad and decreasing production at home through a sound and reasonable program.

I therefore ask that you join with me in opposing this conference report.

Mr. Speaker, we all agree that farm income is important, and I do not think the question today is whether or not farm income is important or whether this is an inflationary bill. I think the problem is how we can best attack the problems of the farmer.

I come from a corn area. I do not question for a minute that the problems of some of the wheat and cotton areas may be somewhat different from those that we face. My farmers depend heavily upon exports of our product. In that regard, I do not think we are unique. At the end of this crop year, our corn carryover will be 20 percent of 1 year's production. We are requesting that farmers cut production by 30 percent. I ask this question: If we have bad weather, how are we going to have enough corn to supply our foreign customers?

We have had embargoes before. I do not think any of us want any more embargoes. I think it is important that we maintain those export markets.

Mr. WAMPLER. Mr. Speaker, I yield 1 minute to the gentleman from Oklahoma (Mr. EDWARDS).

Mr. EDWARDS of Oklahoma. Mr. Speaker, I rise in support of the farm bill embodied in this conference report.

I represent an urban district, and yet this bill is of critical importance to my constituents. The economic health of the cities depends in large part on the well-being of the farmer. If grain and fiber are in short supply, we in the city suffer.

Yes, this bill has a price tag. But this House consistently votes to spend $7 billion, $8 billion, $10 billion for foreign aid; hundreds of millions of dollars for fish protection. Tens of millions of dollars to preserve historical sites in Lowell, Mass. And now with farmers facing bankruptcy, suddenly my colleagues decide its time to cut Federal spending. My colleagues who spend so much so often who have created the inflation they are now so shocked by, suddenly find that there is a group in America they are not concerned about: Those farmers who consistently get the short end of the stick.

What is sauce for the goose, it seems, is poison for the gander. The Government that helps every nonworker, every nonproducer, has no funds left for those who work hardest, longest, and for the least reward.

And yet the farmers asks for no handout. He asks for no welfare. He asks only for a climate in which he can grow his products and sell them for a profit. He asks that the same Government that drives up the cost of fertilizer and tractors, that stimulates imports and discourages exports, now allow farmers the freedom to use the tools of a free market, the laws of supply and demand to earn a living as they provide the Nation with its food.

No, this bill is not perfect. I would write it differently. Every farmer I know would write it differently. But this is the only bill we have been able to get. It offers some relief for a segment of our society that badly needs relief.

For the sake of all Americans, those who live on farms. Those who live in the towns and those who live in the cities, I urge you to vote for this farm bill. You cannot responsibly do otherwise

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from Tennessee (Mr. JONES).

Mr. JONES of Tennessee. Mr. Speaker, I rise in support of the conference report. I want to emphasize to my colleagues that without a doubt, the American farmers are facing their darkest hour in many decades. Net farm income has fallen from about $33 billion in 1973 to about $20 billion in 1977. I know of no segment of our economy that can sustain the radical drop in income of this nature and still survive.

The farmers have taken in slack. They have tightened their belts. They have produced food and fiber for this country at below the cost of production. Many of us in this body have expressed our sympathy for the farm situation and have pledged ourselves to doing something about it. I voted for this provision in the conference and I intend to vote for it today because farmers need help. They need help this year and if they are going to get help this year, this is the only answer.

We have been told that the President intends to veto the bill as inflationary. I submit that it is his Constitutional right and duty to do as he sees fit. However, it is our right and our duty to address this agricultural situation and to do it quickly. Unfortunately, the issue in this proposal has become a political football. In some ways, I think the farmers who have been visiting in Washington for about 4 months now have been ill advised to pursue this particular type of program. But, I made a commitment to farmers, not only in Tennessee, but also the farmers across this Nation, to do what I could to help.

I have been involved in farming and agriculture all of my life and, yet, I still am astounded to look at what has happened to the cost of producing farm products in the last 4 or 5 years. This bill would provide some relief for 1 year and, even though I am skeptical of its provisions, I think we should give it a fair test.

Farmers need help. They need help this year. They need help today and I intend to support the conference report.

Mr. WAMPLER. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from Montana (Mr. MARLENEE).

Mr. MARLENEE. Mr. Speaker, I rise in support of the conference report. Today, my colleagues, you have the opportunity to change the destiny of the agricultural industry. To change it from an industry doomed to perpetual surplus with a huge grain reserve, to change it from an industry doomed to financial failure, to change it from an industry doomed to take over by corporations and interests outside of the family farms.

As a member of the Agriculture Committee, as a Representative of the second largest grain, farm district and, yes, as a farmer myself, I am totally convinced that the conference report legislation is the best vehicle we have ever devised to take the farmer out of a surplus position and put back in a position where the can deal with the free market system. It can do this without the drain on the Treasury that has been reported by CBO.

Simply under this bill, the farmer voluntarily takes out of production a percentage of his acres. The more he takes out, the higher price he receives on the balance of his seeded acres. A true incentive to take acres out of production. The more acres he takes out of production, the fewer bushels of grain on the market. The fewer bushels of grain on the market, the higher price we have in the marketplace. The higher the market price, the smaller the subsidy payment to the farmer. In their manipulation of costs of the program, the economists overlooked this very simple, ecnomic theory.

In my letter from the Department of Agriculture, Office of the Secretary, Mr. James C. Webster's briefing paper, I quote from page 2 producer response:

H.R. 6782 would offer producers strong economic incentive to participate and, once in the program, to make maximum acreage set-asides. At the highest set-aside compliance level (50 percent), producers' returns over cash costs would be higher than under the current program by $15 per acre for wheat, $33 per acre for corn and $34 per acre for cotton, national average basis.

One thing this bill does not do, my friends, it does not create a huge grain reserve of 200 to 300 million bushels, that would be paid for by the taxpayers. It does not do this. As a matter of fact, today we all received an issue briefing paper from USDA which stated the impacts. Quoting from page 4:

The farmer-held grain reserve would not be workable under H.R. 6782 even with high yields. Under the current program a reserve of 1.6–1.8 billion bushels would be accumulated. The lack of reserves would undermine our reliability as a supplier to domestic and foreign markets.

And again on page 3:

Higher prices and reduced supplies would threaten our ability to meet our food aid commitments world-wide.

My colleagues—higher prices in the marketplace? Reduced supplies? Is that not what we have been working for?

One thing this bill is designed to do is take the farmer from a subservient position to one where he can operate his own farm, make his own independent decisions without the Federal Government.

The farmers have been controlling inflation on their production. From 1940 to 1971 the prices farmers received for

their production increased only 2.7 percent while their costs increased 71.4 percent. Inflation, you bet, but not from the farm.

Then, in 1972, 1973, and 1974 farm grain prices doubled, the price of tractors and combines doubled, then depression. Prices received were cut in half, while prices paid continued to rise until right now the ratio that grain farmers receive for their product in comparison to what they pay is worse than the Great Depression.

Why is it when the farmer wants a price recovery it is suddenly considered inflationary. When he is only trying to recover ground lost in the great grain crash of 1975, it is inflationary. But it is not inflationary.

BUDGET OUTLAYS (ESTIMATED)

*International Affairs; Estimated*

| | (*In billions*) |

|---|---|
| Shipbuilding and operating subsides | $507,109,000 |

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from New York (Mr. RICHMOND).

Mr. RICHMOND. Mr. Speaker, as the only urban member of the House Agriculture Committee, I oppose this emergency farm bill. I am deeply concerned that we have lost sight of the broad-based urban/rural coalition which has taken over 3 years and immeasurable work to establish. As a member of the conference committee on H.R. 6782, I oppose the conference report for the following reasons:

First. The farm bill will raise consumer food prices to unacceptable levels. The bill adds 2 to 4 percent to this year's already expected 7- to 9-percent increase, or up to $200 for an average family of four. This totally unnecessary cost hits hardest on those families who are on tight budgets, working families with children, the elderly, and persons on fixed incomes.

Second. The farm bill helps mostly large farms at the expense of small farms. The largest 5 percent of farms will receive 40 percent of the benefits, while the smallest 60 percent of farms will receive only 15 percent of the benefits. Yet it is the small farms that are in most severe financial difficulty.

Third. The farm bill hurts dairy and livestock farmers. Higher feedgrain prices will cause these farmers to pay more for feed over the next 2 years. Cost of production will rise, putting dairy, livestock, and poultry farmers into another cost-price squeeze.

Fourth. The farm bill is inflationary and will increase the Federal spending deficit. Total cost of the bill is estimated at $5.7 billion, most of which will be paid out of the U.S. Treasury. The overall Consumer Price Index will rise a full 1 percent and the administration's and Budget Committee's plans to control inflation will be wrecked.

Fifth. The farm bill will seriously deplete food stocks. Stocks of U.S. grains could be reduced to 1974 levels. Even higher prices would result, with possible shortfalls for both exports and food-aid programs.

Sixth. The farm bill is not consistent with current laws. Because the bill is for only 1 year, it will destroy the supply-demand balance and artificially inflate prices. When the bill expires, farmers will suffer a serious depression and we will return to boom-or-bust agriculture.

Seventh. The farm bill avoids long-term problems faced by farmers. Such as foreign land speculation, inadequate crop insurance, middlemen profits, overuse of chemicals and petroleum-based energy, increasing foreign markets, and corporate farm takeovers.

Eighth. A farm bill of this scope is not necessary because prices are rising. The prices of wheat and feedgrains have risen dramatically in recent months, easing the farmers' plight. As they approach cost of production, farmers are finding it easier to survive the crisis with less Government assistance.

Ninth. The administration has already acted to help farmers in several ways. By increasing payments farmers receive when participating in the reserve program, purchasing wheat to build an emergency international reserve, raising price supports for soybeans and rice, and adjusting cotton and feedgrain production, the administration has demonstrated its commitment to help farmers.

Tenth. The farm bill will reduce U.S. agricultural exports. The high prices provided by the bill will make U.S. commodities overpriced and noncompetitive on the world market. This could further increase our already serious balance-of-payments deficit.

Eleventh. The House has not had a proper opportunity to deliberate this bill. Since the Senate conference report was never considered by the House Agriculture Committee and never brought to the House Floor, there has been no opportunity for markup, debate or floor amendments. Thus, House Members have been deprived of their responsibility to fulfill the legislative process on this legislation.

Twelfth. Emergency credit legislation has already been approved. The House and Senate Agriculture Committees have already approved a well-thought-out $4 billion fiscal relief package of guaranteed loans for hard-pressed farmers. This bill should be considered by the House in the near future.

Mr. Speaker, during over 3 years in the House, I have gained the confidence of small American family farmers and I appreciate, understand, and support their goals. I do not intend to give up this support by voting for this bill and I strongly urge you, especially my urban colleagues, to join me in my demands for a balanced approach to establishing a sound farm program and vote no on this conference report.

Mr. WAMPLER. Mr. Speaker, I yield 1 minute to the distinguished gentleman from Minnesota (Mr. QUIE).

Mr. QUIE. Mr. Speaker, it has been mentioned a number of times that this program would be harmful to dairy farmers and beef farmers.

Do not believe it. The dairy farmer is going to be in serious trouble if this bill does not pass. The reason is that Government dairy price supports purchases are going up. They are going up, and it was estimated a little earlier this year that Government purchases would be over $1 billion in this year. Last year purchase totaled $700 million, the year before $129 million. The dairy price support at 80 percent of parity expires on March 31 of next year. Unless something is done in the dairy industry to reduce Government purchases supports at 80 percent of parity will not be continued. What needs to be done will not be done, so that the feed prices will continue to increase.

The reason dairy production is up requiring high Government purchases is that the cheap feed has caused dairy farmers to feed a tremendous amount of the feed to their cattle as way of getting rid of it. This has increased production, low beef prices has slowed the culling of dairy herds.

Both higher feed prices and higher beef prices will reduce milk production, reducing Government purchases.

Mr. Speaker, the best thing for the dairy farmer, the best opportunity for him to continue 80 percent of parity dairy price supports beyond March 31, 1979, is that this legislation passes.

I urge the Members to support this bill.

Mr. FOLEY. Mr. Speaker, I yield such time as he may consume to the gentleman from Michigan (Mr. KILDEE).

Mr. KILDEE. Mr. Speaker, it is obvious that there is a serious problem in American agriculture. I think that it is grossly unfair to force the farmers to sell their crops for less than the cost of production. Because of the debts which they have incurred, more and more small farmers are having to sell out to large corporations. In the long run if American agriculture becomes concentrated, large corporations may be able to manipulate prices to the detriment of the consumer.

I do not consider the Emergency Agricultural Act to be an adequate solution to the problem. I would much rather see the farmers planting fence row to fence row and have adequate markets to sell their produce at a price which will enable them to recover their cost of production with a reasonable profit. Because past administrations have not been aggressive in opening up export markets and in negotiating reductions in tariff barriers for American products, this is not an option for the 1978 crop year. An increase in the export markets would help solve two problems. In addition to improving farm price levels, it

would help correct our serious balance-of-payments deficit. To date, the administration has done little to insure the certainty of markets abroad.

In the long run, we really need to develop a comprehensive agricultural policy. This policy will have to balance all of the disparate views and interests.

In the short term, there is a crisis which must be addressed very quickly. The administration has refused even to negotiate over possible solutions to the short-term problem. On Monday, April 10, I was in a meeting with Secretary of Agriculture Bob Bergland. He certainly left the impression that the administration was unwilling to consider any measures. The actions of the administration in communicating with the Rules Committee the next day confirmed this impression. There was a motion to make it in order for the House to consider an alternative measure if the Emergency Agricultural Act should not have sufficient votes for passage. The administration indicated to the members of the Rules Committee that it was unwilling to have any compromise even considered, and the motion was defeated.

For a long time I was genuinely undecided on which way to vote because I was not really satisfied with the bill. I had hoped that the President would work out an acceptable compromise, but the administration refused to even discuss the issue.

I cast my vote knowing that President will veto the bill, if passed, and that there will not be enough votes to override the veto. In many ways, I feel that the vote may be symbolic. It may be a way of demonstrating to the White House that there needs to be a better dialog between the administration and the Congress on the whole range of farm issues.

The passage of the bill will send this message to the President.

I cast my vote in the hope that in the event the bill passes, the consequences of a veto will force the President to consider the problem and come up with a meaningful program. At a very minimum, I hope that the President will accompany the veto with an announcement that additional actions will be taken under existing authority.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from Oregon (Mr. WEAVER).

Mr. WEAVER. Mr. Speaker, President Carter and Secretary Bob Bergland are doing the most effective single thing to help the American farmer stay in the business of raising the food for this Nation; that is, they are invigorating the grain reserve, and by so doing are bringing up grain prices. At the same time they are protecting the consumer by assuring our food supply at stable prices. Both these benefits are achieved at little cost to the Treasury.

I was listening to the speech made by the distinguished and able gentleman from Maryland, when he took this administration and the majority party to task, I would like to point out that in my 3 years in the Congress, on the vote on the farm bill, in 1975, the gentleman from Maryland voted no. On the vote to sustain the veto or the bill to raise target prices, the gentleman from Maryland voted to sustain the veto. In last year s farm bill to raise target prices, the gentleman from Maryland, the minority spokesman, voted no.

Mr. WAMPLER. Mr. Speaker, I yield 1 minute to the distinguished gentleman from Minnesota (Mr. HAGEDORN).

Mr. HAGEDORN. Mr. Speaker, the Emergency Agricultural Act before us today is the best possible piece of legislation Congress can pass at this time to help our Nation's farmers and the economy as a whole.

This legislation will give the individual farmer the opportunity to participate in the program to the degree he deems beneficial to his operations. This legislation is to be commended for providing the incentives to the producer while at the same time allowing him to exercise his own judgment in determining his involvement in the program.

This legislation would also provide the farmer with a fair and equitable return on his inputs, initiatives, and labor. The inflationary cost of production (land, machinery, fertilizer, and energy), coupled with low, unstable market prices has caused serious financial hardships to the farmer. In addition, it has discouraged many young people from becoming involved in the already dwindling farm business. (Less than 4 percent of the U.S. population lives on the farm.) The farmer can no longer accept the sharp cyclical trends in the economy and still survive.

Agriculture and the American farmer have been the backbone of our Nation from the beginning. It is imperative to note that when the farmer falters, so does the entire economy.

When the productivity of the American citizen is declining at an alarming rate, the American farmer's productivity is steadily increasing. It is indeed a social injustice to make the farmer the whipping boy for inflation.

While an overblown campaign has been launched against this legislation, terming it inflationary, I feel several major points have been neglected.

I think it is fitting to point out that in recent years the Presidents that have come into office, and want to attempt to launch an initiative against inflation, seem to want to cut their anti-inflation teeth by vetoing farm legislation.

I think there has been ample evidence offered already this afternoon that this legislation will not be inflationary. It will provide the American farmers with a very basic price, which they deserve. Second, I think we ought to point out that this Congress, in 1977, established a limitation of payments under this section of $40,000 per farmer. I happened not to support that. I wanted to keep it at $20,000, but 230 Members of this body said, "No, we want a higher payment."

That is part of the problem today when we look at these inflated estimates of what this legislation is going to cost. It is that those people who raised this limit, are now saying they are high.

Under title I, section 101, of the Food and Agricultural Act of 1977, there is a $40,000 payment limitation for each farmer. This provision, therefore, offers assistance to the family farmer while at the same time places a ceiling on payments to larger, corporate farmers.

The law of supply and demand would suggest that with the increased incentives to set aside additional acreage, the supply would decrease. However, the demand for these products would push prices up in the marketplace, thus offsetting the need for total deficiency payments. In my view, the $5 billion figure quoted is in itself inflated.

While figures and statements have been made regarding the cost of this legislation, the Congressional Budget Office estimates show that the average family would only pay about $1 or $2 a week more, or about $63 a year with 100 percent parity. Furthermore, I feel that the Harris Survey speaks for itself. The poll shows a 54 to 36 percent majority would be willing to have food prices rise by 5 percent in order to give farmers 100 percent parity. Even more interesting is the fact that urban residents, by a margin of 48 to 37, favored parity and were willing to pay the 5-percent increase.

It is evident from this study that the plight of the American farmer crosses all social and economic barriers. It should also serve as an indicator of the support that has been generated for this legislation.

Following is the article written by Louis Harris entitled "Overwhelming Majority":

[From the Wichita (Kans.) Eagle, Jan. 30, 1978]

OVERWHELMING MAJORITY

(By Louis Harris)

By 80–13 percent, an overwhelming majority of Americans is in sympathy with the farmers who have taken to their tractors to protest falling farm incomes.

Moreover, by 5 to 1 the public supports the basic demand of the farmers, which is to raise the prices of the crops they sell so that they would be based on 100 percent of parity. This would guarantee them a profit and enable them to make ends meet.

Of course, the acid test of such public backing is whether consumers would be willing to pay higher food prices to relive the plight of the farmer. Over the past few years, Harris Surveys have consistently shown that, along with energy and health, more than 8 of every 10 Americans attribute their rising cost of living to the high cost of food. Indeed, in this latest survey of 1,259 adults nationwide, when asked how worried they would be about their own food costs rising rapidly if farm prices were allowed to go up sharply, 35 percent said they were "greatly worried" and another 47 percent were "moderately worried."

Despite this, the public feels so strongly about the plight of the farmer that a 54–36 percent majority would be willing to have food prices rise by 5 percent in order to give farmers their parity goals. To be sure, when people were asked if they would be willing to see their food costs go up 10 percent, a 68–19 percent majority then said they would oppose the farmers' position.

But accepting a 5 percent rise in food costs is not insignificant. There are very few occa-

sions these days when Americans express a willingness to pay more for any product or service.

Part of the reason for this deeply felt sympathy for the farmers can be traced to the fact that most people do not blame farmers for high food prices. By a lopsided 87–4 percent, a majority continues to agree with the charges of farm protest leaders that "food middlemen rather than the farmers are the ones who make most of the profits in food."

In many ways, these latest results are an unusual testimony to the fact that people do not behave strictly according to their own economic self-interest. Farmers are now less than 4 percent of the population. More than 3 out of every 4 Americans live in an essentially urban setting. Yet it is apparent that most people do not view the question as a simple matter of producer vs. consumer interests.

This becomes clear in a more detailed analysis of the pivotal question dealing with people's willingness to see their food prices rise by 5 percent in order to give farmers 100 percent of parity in prices, a level that will insure them a profit on their products:

Among people who live in big cities, a 48–37 percent majority favors parity, even if it means a 5 percent rise in their own food costs. To be sure, rural residents support the move by a higher 60–33 percent. But the key fact is that in the big cities, the issue has not been cast as consumers against farm producers.

Among union members, a high 59–33 percent majority would be willing to pay 5 percent more in food costs to give farmers their price goals. It is evident that union labor is capable of identifying with the plight of farmers, despite the long history of farm and labor union organizations being at loggerheads on most issues in Congress.

The most affluent and educated groups are also most supportive of the protesting farmers movement. Among the college educated, a 57–34 percent majority is willing to pay 5 percent more for food costs, as is an even higher 62–29 percent majority of professionals. Among those with incomes of $25,000 and over, willingness to pay more to see parity given to the farmers reaches a high-water mark of 63–33 percent.

It is evident that the plight of farmers has become a matter of conscience to millions of Americans. And their depth of conviction is such that they are willing to affect their own economic status to see what they feel is just done for farmers.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from Indiana (Mr. FITHIAN).

Mr. FITHIAN. Mr. Speaker, I rise in strong opposition to this bill. I would urge my colleagues on the other side of the aisle and on our side of the aisle to consider what we are going to do to American agriculture if this should become law. We know the politics which brought this here, but I would ask my friends to put the politics behind and consider how important it is to American agriculture to maintain its overseas sales operations. If this bill becomes law, we are going to destroy that.

Second, this is an unworkable bill. Everybody knows it is an unworkable bill. Not one single speaker here today would really defend this as a workable piece of legislation. It is destructive of the livestock industry; it is destructive of the dairy industry; it is destructive of the marketing relations, which will ultimately destroy the grain industry.

I would plead with the Members not to fall into the trap of trying to push this legislation over the edge. Surely, those from the farm belt and those of us who know anything about farming know that this is not the answer to the problem.

Mr. Speaker, I have lived on a farm most of my life. Perhaps better than anyone in this Chamber, I understand the pressures which face the American farmer.

I know the agony of a long, dry growing season and the joy of a bumper yield. I know the sweat and hard work that go into farming and the tough business sense that a farmer must have today to survive. It is no 9-to-5 job and it is often not very profitable. Maybe it is because I have been a farmer myself that I hold such deep respect for the farmers who have been here in Washington over the past few months.

No less than these farmerss who have brought their case to Congress, I want to see the family farm survive. I want American agriculture to thrive again. But I do not believe that we will be doing farmers a favor by enacting the legislation which soon will face us, the emergency farm bill of 1978 (H.R. 6782).

I hope that the farmers whom I respect will take the time to think about this case, so that they might understand that my opposition to this conference report is in the interest of getting a fairer deal for American agriculture and for all our citizens.

When I look out across my district in Indiana, I see row upon row of corn and soybeans. One out of every three rows must go into the overseas market to assure farmers an adequate income. Perhaps my strongest argument against this bill is based upon its potential impact on our farm export market. It is true that this bill may increase the price of our corn and wheat to the point where some of our buying partners may look to other suppliers for part of their needs. But of a larger concern is the likelihood of drastic consequences in the event of any crop shortfall due to poor weather. A production cutback so severe as that proposed in this legislation—on top of the set-aside provisions already announced by the Department of Agriculture—could drain the granary.

Furthermore, this legislation would encourage farmers to take acreage which normally would be planted in soybeans and plant corn instead, with a large segment taken out of production. This would probably force the abrogation of many U.S. soybean trade commitments around the world. The reliability of U.S. farmers as suppliers of food for the world would be challenged again. Ultimately, this will erode the U.S. trade balance, to which American agriculture last year contributed $24 billion in sales receipts.

American farmers cannot afford to lose their markets. Some reduction in planting is needed but can we responsibly remove huge quantities of land from production without any provision for increased grain reserves? I believe that the international ramifications of this bill are so severe that they must be examined fully before this body acts. To approve such far-reaching legislation with so little consideration would ill behoove this House.

Nor would this legislation help those who it is purported to support, the average American farmer. It is estimated that 5 percent of the largest farms in the United States would receive at least 40 percent of the payments authorized by this bill; while 60 percent of U.S. farmers would receive only 15 percent of those benefits. Is it responsible to encourage large farm ownership by directing aid there, rather than to the more productive small family farm, which has been so hard hit by financial crisis during the past 4 years?

Farmers understand the economics of this legislation, too. As taxpayers, they would be spending an additional $3 to $5 billion. No estimates are yet available on the cost to administer such a cumbersome program, which the U.S. Department of Agriculture calls "administratively unworkable," but I can only imagine the expense of the redtape involved; the bill is a bureaucratic nightmare.

Indeed, I believe that this bill is nothing more than a tragic hoax on American farmers. My colleagues know that this bill will be vetoed, as well it should. Any responsible President would use his power to block such a costly, unworkable, irresponsible program as this. Therefore in place of getting 100 percent of parity we will get 100 percent of nothing in the way of help for farmers. It is simply not a valid response to the thousands of farmers who spent their time and money in working for fair farm legislation on Capitol Hill over the past few months.

Farmers know that we can produce a better bill than this, and my colleagues know it, too. Approval of this legislation in pursuit of political security would be irresponsible. I hope we won't lose sight of the fact that these farmers came to Washington asking for good legislation, not simply more legislation.

Let us act on behalf of American farmers not by voting for the first farm bill that faces us since the controversy began last fall. Let us act responsibly in the best interests of millions of family farmers across America. If I were still actively farming today, I would be working against this bill. I hope my farmer friends will understand that I am working against it on the House floor out of an understanding of their plight and a determination to do something about it.

I urge my colleagues to join me in opposing the conference report on H.R. 6782.

Mr. WAMPLER. Mr. Speaker, I yield such time as he may consume to the distinguished gentleman from Minnesota (Mr. STANGELAND).

Mr. STANGELAND. Mr. Speaker, I strongly support the conference report.

Mr. WAMPLER. Mr. Speaker, I yield 3 minutes to the distinguished gentleman from Colorado (Mr. JOHNSON).

Mr. JOHNSON of Colorado. Mr. Speaker, this debate has degenerated to a point where it really is not a debate. It is a statement of conclusions on the part of every person who gets the opportunity to speak, and that is because of the time limitations, and I do not know what we can do about that. But there have been a number of statements that were made that I am sorry we do not have the time to refute, but I can tell the Members as honestly as I know how that I think there are answers to every argument that has been made with respect to excessive costs.

Obviously if the price rises in the market, there will be less payments out of the Treasury. Nobody knows what will happen, but the prices are rising and we know with the grain reserves what they are—and the new release prices for wheat are $3.15 until October and $4 after that—that prices will rise. The Government cannot depress prices by dumping any longer, so the price will rise. As the price rises, that means less payments out of the Treasury.

The argument is that the bill is inflationary, but the highest estimates I have heard are that it will be about $100 per family for a year.

We are at that point where we are saying the people who are losing money have to continue to lose money so that the people who consume their products will not have to pay whatever it will cost to produce the products. Obviously we can't allow that situation to continue.

Under this bill we still are not reimbursing the farmers if they set aside about 35 percent. We are not reimbursing them at a profitable level—at about the cost of production but not at any profit. Do we really expect people to produce without the expectation of a reasonable profit? We do not in any other sector of the economy. Why do we for farmers?

There has been talk about shortages. There is not any danger of shortages. The gentleman from Texas (Mr. POAGE) in the conference committee pretty well rebutted that when the Department of Agriculture made that point and I hope he gets a chance to talk about shortages now.

This bill is talking about and dealing with surpluses. The alleged shortages are not a problem. When we talk about a 35 percent or 50 percent set-aside remember this is the weird Department of Agriculture mathematics. A 50 percent set-aside means we set aside 1 acre for every 2 that we plant, and a 35 percent set-aside means we set aside 1 acre for every 3 we plant.

So do not worry about the talk about shortages.

Now about overseas sales, there have been some statements that this is going to affect our overseas sales. If we had the time I would be delighted to engage in a debate with the gentleman from Indiana who has great expertise in this field. I disagree with him. If we debated it at length the Members would see that there is a tremendous argument against that point of view.

Finally when we say it is unworkable legislation or destructive legislation, I would say to the Members that are attacking by using alarmist language which simply is not justified.

I urge Members to vote for this bill.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from Oklahoma (Mr. ENGLISH).

Mr. ENGLISH. Mr. Speaker, I think there is one thing that is very clear and known to all Members of this House and we have seen evidence of it over the past 4 months. That is there is no real question of need as far as rural America is concerned and no real question of a crisis existing in rural America. There are a couple or three points in this regard I would like to make.

It seems that many over the past few weeks have discovered that this country has an inflation problem. It is a problem many of us have been aware of for some time and many of us have tried to take action to deal with the problem, but I would like simply to point out that there is no group in our society that is affected worse than the American farmer, particularly whenever we consider in the past 4 years this group has had no opportunity to keep up with inflation because the farmer's prices have been falling while others have risen. However, they are the first ones to be asked to bear the brunt of the burden of the inflation fight. Over the past 40 years the Congress has reaffirmed the Nation's commitment to preserve the family farmer as the major producer of our food. Without the passage of this conference report, the demise of family farmers will reach unacceptable levels and it will be the older farmer who will be forced out first—it will be the young farmer. The farmer who is the future of family farming and the future for reasonably priced food. With this in mind I urge the passage of the conference report.

Mr. FOLEY. Mr. Speaker, I yield such time as he may consume to the gentleman from Georgia (Mr. FOWLER).

Mr. FOWLER. Mr. Speaker, I represent a district which is almost 100 percent urban and suburban. Yet I can think of few issues which have a greater effect on my constituents than our country's agricultural policy. Without a healthy farm economy, consumers will eventually have neither adequate supplies of food nor stable prices. Without substantial agricultural exports, our balance-of-trade deficit will grow to intolerable levels and our whole economy will suffer substantial disruptions. Without strong farming and rural communities, the exodus to our urban areas will continue and will further complicate the efforts to solve the problems of our cities. Thus it is clear that agricultural issues are of vital importance not only to the farmer and the rural resident but to all Americans. It is also clear that agricultural policy is intertwined with vital U.S. policies concerning inflation, international trade, finance, and urban affairs.

Given the key role of American agriculture, the economic difficulty suffered by our farmers in recent years is a serious national problem. Lower crop prices, rising indebtedness, and increased costs for energy, labor, and fertilizer, have combined to substantially reduce farm income in many parts of the country. Inconsistent and unpredictable Government policies have certainly contributed to our difficulties and we continue to have an obligation to provide a more stable and economically healthy environment for the American farmer.

I deeply regret that I must oppose the conference report on H.R. 6782, the Emergency Agricultural Act of 1978. In my opinion, this legislation, which states the laudable objective of providing immediate financial assistance and added flexibility for family farmers, is in reality a political haymaker which would, in fact, create more serious problems for farmers, consumers, and our national economy.

Passage of H.R. 6782 could cause serve long-term harm to the family farmer by jeopardizing export markets, by damaging the livestock, dairy, and poultry industries through higher feedgrain prices, by disrupting orderly production and marketing, and by concentrating most of its benefits to the largest farms.

Agricultural exports make an important contribution to the economic well-being of both farmers and the Nation as a whole. For example, in 1976 U.S. farmers fed our own population and still were able to export 55 percent of our wheat, 30 percent of our rice, 45 percent of our soybeans, 32 percent of our grain sorghum, and 26 percent of our corn. These overseas sales also make a major contribution to our national economy. Last year, agricultural exports produced $24 billion in sales receipts for the United States and without them our balance of trade situation would be catastrophic.

By offering large incentives for removing land from production, H.R. 6782 could reduce U.S. corn, wheat, and cotton acreage by up to 33 percent. With so much land out of production, bad weather would cause a serious crop shortfall that would significantly reduce the availability of U.S. commodities for export. Given this prospect, our overseas customers would undoubtedly question the reliability of the United States as an agricultural exporter and would have a strong incentive to locate new, more dependable suppliers in other nations. In addition to this factor, H.R. 6782 would make exports less attractive to our farmers by raising domestic prices and making U.S. commodities less competitive on the world market.

The higher feedgrain costs will cause major difficulties for the meat, poultry, and dairy producers of Georgia and the Nation. Also, under H.R. 6782 farmers would be discouraged from participating in the farmer-held grain reserve program that would provide price and supply stability for these producers.

H.R. 6782 would create disruption and uncertainty in the farm economy. The flexible parity provisions of this legislation would be extremely difficult for USDA to administer and for farmers to comply with since benefit levels would be entirely dependent on the precise amount of acreage diverted from production. Farmers would be subject to additional bureaucratic redtape in order to comply with the complex eligibility requirements. Since it would take some time for the necessary administrative machinery to be put in place, farmers with spring and early summer plantings would be forced to make their production decisions in an atmosphere of doubt and uncertainty.

H.R. 6782 is posed as a 1-year, emergency measure. If the Congress were to adopt such a fundamental change in our agricultural policy in this manner the result would surely be further confusion for the American farmer. If passed and signed into law, this legislation would return the country to the disastrous stop-go, unpredictable governmental policies of recent years that have helped to produce the current crisis.

A final difficulty with the Emergency Agricultural Act is that this legislation would provide the majority of its benefits to the largest farms. Five percent of the largest farms would receive at least 40 percent of the total benefits while 60 percent of American farms would get only 15 percent of the payments. The family farmer would receive only crumbs.

Aside from the negative effects that H.R. 6782 would have on farmers, this bill would also have a detrimental impact on the American public as a whole. USDA estimates that this legislation would cost the taxpayer at least $2 billion in fiscal years 1978 and 1979. The Council on Wage and Price Stability projects that it would add from 2 to 5 percent to retail food prices. With the large amount of acreage that would be removed from production, bad weather could lead to a recurrence of the large-scale food shortages and rapid price increases of 1973–75.

Many American farmers have suffered tremendous financial losses in the past year. They both need and deserve assistance. But this head-long rush to make political hay is the crassest form of deception to the family farmer.

I would urge the House to reject the legislation that is before us today. But I would further urge it to move as expeditiously as possible to consider and enact long-range policies that will truly benefit the farmer and the consumer.

In my opinion, the key to resolving our agricultural difficulties centers around the farmer-held grain reserve program. This program, which accumulates grain stocks during times of surplus and returns these stocks during times of shortage or rapidly escalating prices, will help the farmer by taking surplus commodities off the market. The consumer will benefit through stable prices and a secure supply of food. This approach would address the fundamental problem of our Nation's farm economy: The wide fluctuations in agricultural supplies and prices.

Last year the Congress took a step in the right direction by enacting the Humphrey-Weaver grain reserve, a measure which I was pleased to cosponsor. The program has already achieved some success: 300 million bushels of wheat have been acquired and corn stocks will be taken in beginning on May 1. We should take further legislative action to strengthen the program and I endorse Congressman WEAVER's call for a reduction in the storage costs to farmers.

We should also move swiftly to expand farm credit programs and to target the additional assistance to the farmers most in need of debt relief.

One of the greatest needs of our farmers is to have predictable, consistent governmental agricultural policies. We cannot simultaneously encourage production and scarcity. We cannot tell our farmers to produce for the export market and then turn around and impose export embargoes.

Restoring the economic well-being of America's farms is vital to our country's future. I have no higher priority than to work for the establishment of an effective, and consistent, agricultural policy: one that benefits the family farmer and benefits the Nation.

Mr. FOLEY. Mr. Speaker, I yield such time as he may consume to the gentleman from California (Mr. LLOYD).

● Mr. LLOYD of California. Mr. Speaker, I wish to express my support for the goals of this legislation, for I realize that to lose the family farm is to destroy one of the foundations of our country. We know something is wrong when our farmers, traditionally quiet yet firm supporters of our Government, feel they must come to Washington to present their case to the American people. We know something is wrong when farmers are penalized for their efficiency and superb production record. And we know something is wrong when it is more profitable to bury a crop than to market it.

But I am caught in what I hope is an unusual situation: I am part of a farming family, owning a wheat farm in Washington. Thus, I have a personal understanding of what it is like to see grain destroyed for economic reasons. Because of my economic ties with the farm, and the possible advantages I would gain should this bill pass, I have decided to vote "present" on the legislation, to insure that there can be no misunderstanding of which "master" I serve—the Government of the United States or myself. Clearly, my constituency requires the former.●

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from California (Mr. PANETTA).

Mr. PANETTA. Mr. Speaker, this bill I believe is wrong legislatively because the bill bypassed the committee process. There were no hearings on the legislation, there was no debate, there was no discussion. It is wrong economically not only because of what it does to the budget but because of what it does to inflation and, more importantly to agriculture itself. I say that this bill means that the rich will get richer and the poor will become poorer because the largest 5 percent of the farms will get 40 percent of the benefits.

The bill is wrong for agriculture, and make no mistake about that. If this bill passes and the President vetoes it, and if his veto is sustained then there will be no more momentum for agricultural legislation on this floor. The President will blame the Congress and the Congress will blame the President and the farmers will have no relief whatsoever.

We need to work on good legislation that can be enacted, legislation that will make sense in terms of good legislation and make sense economically and also make sense, more importantly, for the farmers.

Mr. WAMPLER. Mr. Speaker, I yield such time as he may consume to the distinguished gentleman from South Dakota (Mr. PRESSLER).

● Mr. PRESSLER. Mr. Speaker, in addition to my earlier oral remarks during debate on the rule, I want to make one additional point—bread costs more than it did in 1975 when I came to this Congress—but wheat is cheaper. Food costs will go up if farm prices go down? Really? Why isn't the opposite true? The truth is that the farmer has been blamed for rising food costs—but he is innocent. His prices have gone down. I hope consumers understand that.●

Mr. WAMPLER. Mr. Speaker, I yield 3 minutes to the distinguished gentleman from Louisiana (Mr. MOORE).

Mr. MOORE. Mr. Speaker, I thank the gentleman from Virginia (Mr. WAMPLER) for yielding me this time.

Mr. Speaker, I would like to try to answer some of the statements that have been put forth by the opponents of the conference report. I will do this just as quickly as I can, due to limited time.

First, Mr. Speaker, it is charged that the bill is not workable. Sure, it is workable if the administration wants to work it. The conference report was drawn to dovetail right in with the existing legislation of the 1977 farm bill.

The statement was made that the farmers instead of reducing their acreage, would actually plant more cotton under this bill. That is not true. The cotton farmers will reduce their production in order to get the price up. Also, the Secretary of Agriculture in the 1977 farm bill has the power to set aside, the power for diversion, the power of crop reduction, and the power of loan authority and many other authorities to control the amount that is planted. All we are doing is giving him one more tool to use and I know that he will use it and that he can make it work. I say this because on February 27, 1976, when the present Secretary of Agriculture, Mr. Bergland, was a member of the Committee on Agriculture in this House, he wrote a letter to all of the colleagues in the House criticizing then-Secretary of Agriculture Butz for not taking administrative action. In that letter he said that, and I quote:

The law allows him to raise price support levels to 90 percent of parity, and I believe

that is exactly what should be done as soon as possible to offer protection to the farmers who already have their crops in the ground, and for those who would be working their fields soon.

Mr. Speaker, that same situation exists today, and the desires of the Secretary of Agriculture now I am sure are the same as they were when he was a Member of this body. So I say that he will make it work and it will work.

Then, Mr. Speaker, comments were made about wiping out the reserve surplus of corn. The Congressional Budget Office has stated that this bill will reduce the supply of corn by 300 million bushels. That will leave better than 1 billion bushels of corn reserves left in this country. That is exactly what is depressing the corn prices, those reserves, and the biggest part of it will still be there. So this argument is incorrect.

Further, we have heard today that this bill will also destroy the livestock industry. This is wrong as we know good and well that cheap grain means cheap meat and cheap dairy products. The only way you can keep those prices up, and keep them doing well is if the grain farmers are doing well. If you have cheap grain, you overproduce meat and dairy products. This is a common fact of economics. Therefore, all farmers should stick together and want each farmer to make a living wage and get a good profit for what he produces.

Lastly, and most importantly, this is really in the best interests of the consumer. I said earlier I represent a consumer district which is 60 percent urban. The consumer does not fare well when farmers go out of business. When we start importing things like sugar and oil and many other commodities, that does not help the consumer as we have seen. The best way for the consumer to survive, the best way to have a good quality source of food at a fair price, is for the farmer to make a reasonable profit in producing it. Then and only then will the consumer do well. That is what this bill tries to do. It tries to shift the emphasis to the marketplace and to get away from this artificial price support system and the cheap grain policy we have been following in this country.

Mr. FOLEY. Mr. Speaker, I yield such time as he may consume to the gentleman from Oklahoma (Mr. RISENHOOVER).

Mr. RISENHOOVER. I thank the Chairman for yielding.

Mr. Speaker, I rise in support of the conference report and urge a vote for its approval so we can send it down to the White House and let the American Agriculture movement work on them and do the job they have done here.

The SPEAKER pro tempore. The Chair would like to advise all of our friends in the gallery that we are delighted to have you, but no applause, please—no applause.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from Georgia (Mr. MATHIS).

Mr. MATHIS. Mr. Speaker, I wish I had worn my boots as I came down into the well today, because I have never heard so much rhetoric about one piece of legislation as I have about this. I could stand and talk for an hour about the merits of this legislation. One thing is not debatable, and that is this is the only opportunity we will have to do something for the farm community that exists in this piece of legislation today. It is not perfect. There are many things that we could do to perfect this bill, but it is all we have. I think that farmers all across this country are looking to us today to give them a positive sign that representative government does work, at least at one end of Pennsylvania Avenue.

Mr. Speaker, some of my colleagues have said that by defeating this conference report today we can assure consumers all over the world of cheap grain and cotton prices with abundant surpluses for emergency situations. Nothing could be further from the truth or more disastrous in the long run for consumers. Every responsible economist that has spoken on the subject knows that America's farmers are not going to continue breaking their backs for prices that do not cover their costs of production.

The collapse of the farm economy, which the United States is now experiencing, is both a symptom and a cause of economic depression. This conference report can contribute significantly toward alleviating the farm problem for the benefit of all segments of the economy, not just farmers.

Some persons are arguing that Government assistance to farmers is contrary to the principles of free enterprise. In a true free enterprise system, I am confident that farmers could compete with less Federal help than any other sector of the economy. But it is hypocritical to expect farm prices to be determinated by the free market laws of supply and demand when farm costs are being increased by every sort of governmental interference imaginable. Is it free enterprise when the Government destroys foreign markets through embargoes? Is it a free market where a handful of giant, multinational corporations control the production and prices of farm machinery? Is the control of world energy supplies and prices by a cartel of foreign governments a part of free enterprise? Is it free enterprise when the U.S. Government, in concert with the World Bank, subsidizes foreign agricultural production for import to the United States? Is it a free market system where the Federal Government imposes tens of billions of dollars of regulatory costs throughout the food marketing chain from the cultivation stage, where cost-efficient pesticides are banned, to the checkout counter, where wages are set by law, and then the farmer is blamed for high food prices, even when the prices he receives are plummeting?

Mr. Speaker, I say that if Congress wants farmers to produce under free market conditions, then let us send legislation to the floor to accomplish that. Let us repeal the Federal regulatory agencies, let us break up monopolistic organizations, pull out of the World Bank, and quit subsidizing OPEC.

Until that can be done, let us give the farmers this emergency, 1-year bill to assist them in overcoming the burdens the Government has already imposed on them. Maintaining a strong agricultural economy is the most responsible action the House can take, and I urge the adoption of the conference report on the Emergency Agricultural Act of 1978.

Mr. WAMPLER. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from Illinois (Mr. FINDLEY).

Mr. FINDLEY. Mr. Speaker, the assumption is widely held here today that if President Carter vetoes this bill, he will incur the wrath of the American farmer. Those who make that assumption I think underrate the intelligence of the American farmers, certainly of those in the State of Illinois.

I believe that the majority of the farmers of my home State—and my home State produces more corn than any other State and more soybeans than any other State—see the enormity for mischief in this bill, and they will thank the President for vetoing it, and they will thank us for voting against it.

I say it has enormity for mischief because it carries the potential for the retirement of as much as 60 million acres of land, much of that coming out of soybean production, so much so that one USDA official forecast the possibility of a shortage of soybeans, calling for another embargo.

I would like to have the Members consider other consequences of this bill. The Economic Research Service of the USDA at my request came up with an estimate of what this would cost in unemployment in the United States because of the enormous cutback in productive activity by America's farmers, less machinery built, less fertilizer manufactured, less processing, less shipping. They came to the conclusion that this bill would cost 230,000 jobs. Measure that—measure that against the cost of each lost job—loss of tax revenue to the Federal Government, the cost of food stamps, unemployment compensation, and all of that.

It is an enormous price tag on top of the other costs that have been cited. I believe that it would be very prudent on the part of this body to reject the conference report and if it does, I think it will have the applause of the vast majority of the thoughtful farmers of this Nation.

Mr. FOLEY. Mr. Speaker, I yield such time as he may consume to the gentleman from Oklahoma (Mr. WATKINS).

Mr. WATKINS. Mr. Speaker, I stand in support of this bill.

Mr. Speaker, not since the depression of the 1930's has the Nation seen such widespread unrest among farmers. The immediate cause of this unrest is low farm prices, aggravated by several years of drought and a continual increase in production costs, which have more than doubled in the last 10 years. Department of Agriculture figures show that realized net farm income in 1977 declined to $20 billion in real terms, equivalent to 1971. As a result of this economic crunch there have been severe

cash-flow and debt-repayment problems for most farmers. The farmer's return on his investment in 1977 reached its lowest point since March of 1933, and over the past 7 years, farm debt has increased to over $100 billion.

The bill which we are to vote on today, H.R. 6782, would have several beneficial effects, most of which would immediately benefit our farmers and rural communities. It provides farmers with immediate financial assistance that will enable many of them to remain in farming. It provides farmers with needed flexibility by allowing them to take out of production the amount of land that best suits their needs. It will reduce surplus supplies of wheat, corn, and cotton so that supply and demand will be in better balance.

This measure is the least expensive and least inflationary approach to the farm problem. It is predicted that retail food prices will rise less than 1 percent. Even with this modest rise, it is predicted the average family would pay only $63 more a year on their food bill. The American consumer would still enjoy the cheapest food prices of any nation in the world. I submit this is a very minor increase for consumers to absorb in light of the needs of the agriculture community.

Furthermore, the money farmers would receive from this bill would be a stimulus to the whole economy. Every dollar spent by the American farmer stimulates $2.10 of additional business activity.

I urge every Member of the House of Representatives to support this emergency farm legislation. Should we fail to enact this much needed bill, we will be divorcing ourselves from the American farmer, who has given us the standard of living we enjoy today.

Mr. FOLEY. Mr. Speaker, I yield such time as he may consume to the gentleman from Alabama (Mr. NICHOLS).

Mr. NICHOLS. Mr. Speaker, I rise in support of this bill.

I have been favorably impressed with the thousands of farmers associated with the American agriculture movement from Alabama and elsewhere throughout the country who have come to Washington during the winter and spring months seeking answers to the severe financial problems they face in producing food and fiber for the Nation.

As one who has observed lobbyists of every description and for every cause during my service in Congress, I am most appreciative of the manner in which farmers of Alabama have petitioned those of us who represent them in the Congress. They have been courteous; they have been considerate; and though generally naive and unaccustomed to the habits of city life, they have conducted their affairs in what I believe to be a responsible manner.

Even when the goats were turned loose on Capitol Hill, the policemen who were able to run most of them down, did so without animosity and, in general, I am pleased with the conduct of our farm people in the Nation's Capital.

Now as the American agricultural movement enters the countdown stage on farm legislation it becomes apparent to me that, if the farm bill is passed by the House this afternoon that considerable credit must go to those thousands of farmers who, wearing their red and blue caps, denims and work jackets and in many cases accompanied by their wives and sometimes a few children, have accomplished this unparalleled success story in lobbying.

It is my judgment that most Members of Congress from both urban and rural districts share these views and have been generally convinced that the farmers' problems are the Nation's problems and what affects rural people also affects the consumer in our cities. Whatever measure of success comes out of the thousands of visits to congressional offices by the farmers who came to their Nation's Capital, those of us back home who watched and waited are most certainly indebted for their untiring efforts and dedication to American agriculture.

Mr. Speaker, I expect to vote for this bill, not because it is a perfect bill, nor because I agree with everything that it contains, I intend to support it because on this warm afternoon of April 12, when planting time is at hand, it is the only vote that this Congress will have between a farm bill and the alternative of which would be to continue to ask the farmers of this Nation to subsidize daily more than 200 million Americans who are dependent on our farmers for the production of food. I have received numerous calls and letters from individuals who have been frightened over the additional cost of food in the marketplace in the event this bill becomes law.

Mr. Speaker, I believe these claims have been exaggerated for farmers know that the major cost, because of rising consumer prices, can not be layed at the farmers doorsteps. I do believe that food prices might increase a percentage point or more if the measure is enacted but if the price of wheat were doubled the additional amount of wheat in a loaf of bread would be minimal.

And then there is the matter of equity, which surely must be paramont with those of us who make the laws of this land. The farmer is simply not getting his fair share of the food dollars being spent at the retail level. For too many years the American farmer has been on the bottom rung of the economic ladder. This bill represents the manner in which we can partially correct this problem in being fair to the American farmer who is the backbone of this Nation.

Mr. FOLEY. Mr. Speaker, I yield such time as he may consume to the gentleman from Minnesota (Mr. FRASER).

Mr. FRASER. Mr. Speaker, I rise in support of this legislation.

It is not an ideal measure, but it is the only legislation before us which offers some assistance to our farmers. Enactment of this measure will help the farmers from my home State of Minnesota. It is especially important for grain farmers in my State.

This is a 1-year program. The farmers have faced increasing costs of production with decreasing prices. The resulting cost-price squeeze is putting many of our family farmers out of business.

The increases in wheat and corn target prices in this bill which are tied to the land diversion program will insure improved incomes for our farmers. While the bill is not all farmers need or want, it is an improvement on the farm bill we passed last summer.

One of my concerns about this bill is the risk that it will reduce feed grain supplies, given the fact that 65 percent of Minnesota farm income is attributable to the animal sector. We produce nationally, in a normal year, 6 billion bushels of corn. While some estimate this bill may reduce production by a third, this would still leave us with 4 billion bushels. Also, we have to consider the 1 billion bushels of carryover in corn as well as 1 billion bushels of carryover in wheat. So, given the 2 billion bushels that are available, I am less concerned about the feed supply.

The paramount problem facing agriculture today is price depressing surpluses of commodities. It makes good economic sense to take action to reduce this situation in a sound manner. I believe reducing this surplus is in the best interest of both consumers and producers since it will provide for more economic stability.

The conference report on H.R. 6782 establishes new, higher target prices and loan rates for the 1978 wheat, corn and cotton crops to be based on the number of acres a farmer takes out of production. For wheat, the legislation establishes a target price of $3.50 a bushel with a 20-percent set-aside, $4.25 a bushel with a 35-percent set-aside, and $5.04 a bushel with a 50-percent set-aside. The loan rate for wheat would rise from $2.35 to $2.55 a bushel.

For example, with a 350-acre farm, if a farmer selects the $5.04 a bushel parity price for his or her wheat crop, 50 percent of the planted acreage has to be set aside. Under this 50-percent set-aside, if the farmer plants 200 acres of wheat, 100 acres of farmland will have to be diverted to qualify for the higher target price.

The program works similarly for corn and cotton. For corn, a $2.40 a bushel target price is coupled with a 10-percent set-aside, a $3.05 price is coupled with a 35-percent set-aside, and $3.45 a bushel target price calls for a 50-percent set-aside of planted acreage. The loan rate for corn would go from $2 to $2.25 a bushel. For cotton, a graduated target price of 60 cents a pound calls for a 0- to 20-percent set-aside, a price of 72 cents a pound calls for a 35-percent set-aside and 84 cents a pound is based on a 50-percent set-aside. The loan rate for cotton would rise from 44 to 48 cents a pound.

In addition to raising commodity target prices, the farm legislation before us today authorizes the Department of Agriculture to encourage production of ethanol by permitting the use of set-aside land for growing crops that can be blended to make fuel.

Energy costs have gone up considerably since the oil embargo in 1973 and have been reflected in farmers' higher costs of production. With rising oil prices and our commitment to reducing demand for foreign oil, alcohol fuels can help solve the farmer's dilemma caused by skyrocketing fuel costs. Although this is a good start, more can be done at the Federal level through direct Federal support for development and production, marketing assistance, and simplification of licensing for gasohol plant construction.

As a followup to the measure before us, I urge the House and Senate Agriculture Committees to develop legislation to provide long-term assistance to our family farmers. The committees should focus on strengthening farm income by increasing the value and volume of farm exports, providing adequate credit needs and developing solutions to the problems of spiraling prices for land, fertilizer, machinery, and energy which contribute to the escalating costs of production.

Representative RICK NOLAN'S Family Farm Development Act, which I cosponsor, contains a variety of urgently needed, new, and amended programs dealing with farm prices, marketing, taxes, loans, land values, research and education, and conservation. Representative NOLAN'S bill can serve as a framework for developing answers to the problems facing our family farmers.

The Agricultural Trade Act introduced by Representative DAWSON MATHIS, which I also cosponsor, will make it possible to move more aggressively into international marketing of our farm commodities. The bill expands the amount of credit offered by the Commodity Credit Corporation to finance exports of farm products. The legislation also establishes a more systematic Federal policy for the promotion of U.S. exports, establishes U.S. agricultural trade offices abroad to develop new markets for U.S. farm goods, and upgrades the role of agricultural attaches in U.S. embassies. The bill's expanded credit provisions would not apply to nations that are currently barred from receiving credit from the U.S. Government.

Hearings on this bill along with similar measures begin next week in the House International Economic Policy and Trade Subcommittee. As a member of the full International Relations Committee, I will work to encourage the development of our markets for farm commodities abroad.

A lot has been said about how the emergency farm bill will affect consumer food costs. The Congressional Budget Office projects an increase in retail food prices of 1.1 to 1.5 percent, or a $46 to $63 yearly increase in the food bill for an urban family of four. The U.S. Department of Agriculture is making predictions based on the worst possible set of circumstances. I feel their projected rise in consumer food costs is misleading to consumers.

Consumers will ultimately benefit from higher farm prices if prices are more stable. The wide fluctuations in farm prices over the past few years have resulted in a ratchet effect in prices at the supermarket. Consumer food costs rise when commodity prices rise, but stay up when commodity prices go down. Only the middlemen, the food processors and retailers, reap a profit. The cheap food policies of the past have led to boom-or-bust prices for consumers and farmers alike.

For these reasons, I hope my colleagues join me in supporting the urgently needed emergency farm assistance.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from California (Mr. PHILLIP BURTON).

Mr PHILLIP BURTON. Mr. Speaker, I believe that ever since I have been in the House I have supported every bit of farm legislation and I do believe I supported virtually every amendment to bring more justice to our rural community. Regretfully, on this occasion, for two simple reasons, I must vote against the conference report. First, I discount essentially those who argue against the conference report because of its impact upon the American urban consumer. Almost everything we do drives up the cost of living and the cost of doing business for the rural sector of our economy; so it is not on those grounds that I rise in opposition to the report.

First and foremost, as best I can gather from the overwhelming majority of those whose viewpoints I trust, this program really will not work.

Second, and perhaps decisively, it will never become law and, therefore, will be misleading. I want to reject this report and put the pressure on us to come back with a product that will help the farmers and that will work.

Mr. WAMPLER. Mr. Speaker, I yield such time as she may consume to the gentlewoman from Massachusetts (Mrs. HECKLER).

Mrs. HECKLER. Mr. Speaker, I strongly object to the Emergency Agriculture Act of 1978 for the following reasons. The act is based on premises that are false and misleading. H.R. 6782 has been widely promoted to give immediate across-the-board relief to millions of American farmers and is especially targeted to small family farms. In actual fact, small farmers, those earning less than $20,000 per annum, will earn only 15 percent of the benefits of this legislation, while 5 percent of the Nation's agricultural establishments, generally of the larger, better financed variety, will receive over one-third of the benefits of the bill. What's more, a major sector of the agricultural community will actually be prejusticed by the proposed legislation. The Emergency Agriculture Act will cause grain prices to rise resulting in higher feed prices for the Nation's cattle producers. End result: Lower earnings for cattle ranchers, higher food prices, or both.

I object to H.R. 6782 because it is inconsistent with stated White House policy on inflation and price control. This bill will increase the American consumers' food costs by 2 to 4 percent. Food prices are slated to rise 6 to 8 percent anyway. With H.R. 6782 we can look forward to an 8- to 12-percent increase in food prices this year. If we accept H.R. 6782 today, we may be sleepwalking toward double-digit inflation, food shortages, further erosion in our balance of payments and possibly the biggest consumer's revolt in the Nation's history.

I object to the bill for the way it has been hastily conceived without the benefit of committee hearing in the House and pressed upon reluctant or undecided Members without adequate staff work or study. Are we entering an era of legislation by acclamation? Have we abandoned our tradition of a creative, reflective legislative process? The 1977 omnibus farm bill was conceived and written in that nobler reflective spirit. The bill was enacted after long and careful scrutiny by my colleagues on the Agricultural Committee and passed after a thorough, intelligent debate in this Chamber. Already that legislation is improving the economic condition of the American farmer. While H.R. 6782 seeks a remedy in massive public spending, the omnibus bill provides positive, productive solutions to the problem of the American farmer. The problem of the American farm is a problem of abundance, not of scarcity. H.R. 6782 actually seeks to create scarcity in the world's most abundant farm economy. H.R. 6782 mandates to retire from production vast tracts of acreage. This incredible policy of planned scarcity, combined with poor weather conditions, could leave consumers, foreign customers, and aid programs short of grain requirements. It is pathetic and highly lamentable that this esteemed body is asked to offer the world's richest society a barren and negative policy of deliberate scarcity, rather than an intelligent and creative use of the rich land God has given us.

I do not deny that the American farmer faces serious problems. I recognize that the farmers deserve a fair return on their investment and should enjoy the benefits of expanding domestic and world markets but no one will benefit from making the farmer less efficient, his prices less competitive, his exports smaller, and the health of the larger community in which he lives more sickly and inflationary.

The omnibus bill of 1977 directed its energies to exactly the kind of creative, productive measures that do credit to the standards of the representative body we serve. The act finances farmer-held grain reserves, implements land diversion programs, and above all encourages the export of American agribusiness to a hungry and fast-growing world population. In all, the omnibus bill of 1977 will increase farmers net income by $3 to $4 billion annually.

And today, I sadly report, sir, we are asked to dismantle the creative, epoch-making legislation of last year to offer the American people more massive Federal handouts and worse, scalpers' prices for the Nation's consumers in our supermarkets. The Emergency Agriculture Act is a poorly conceived, shoddy rush job; it is the wrong bill, at the wrong time, conceived for the wrong reasons.

Mr. WAMPLER. Mr. Speaker, I yield 1 minute to the distinguished gentleman from Massachusetts (Mr. CONTE).

Mr. CONTE. Mr. Speaker, I rise in defense of the paramount interests of the vast majority of Americans, the same

Americans whose economic plight has been totally ignored by the conferees. I am referring to the American consumers, the taxpayers, and the vast number of American farmers and ranchers, who strongly oppose this massive ripoff of the public Treasury for the select benefit of the "privileged few." I urge my colleagues to vote for what is in the best interest of the majority of Americans, who are facing the possibility of double-digit inflation, dramatic increases in food prices, the weakening of the dollar abroad, the declining food exports, and all the other bleak economic conditions which are surfacing, and oppose this special interest proposal.

We all have heard of the immediate, urgent necessity of enacting this irrational and inflationary proposal, but I suggest that it is time we overcome this panic to try to outgive the administration, and carefully consider the disastrous consequences of this act. We all have listened to the arguments of the farm interests who have been camping out in this town for the last few months. But, we have not benefited from the arguments put forth by the majority of Americans—the consumers, and the taxpayers, who do not have the luxury of taking 3 months off to lobby Washington. Now, we are witnessing the vocal opposition to this proposal that has been flooding our offices over the past week. The arguments against this boondoggle are most persuasive. The impact on the economy is appalling. According to the Congressional Budget Office, food prices will increase by 3 percent next year alone, with the enactment of this proposal. That is in addition to the projected 6- to 8-percent increase which will result from current farm policies. The American consumer will be socked with an additional burden of over $5 billion annually, which averages out to over $100 for a family of 4. This will play havoc with the food component of the consumer price index, by raising that figure approximately 2.5 percent in the first year. The result will be an increase of ½ to ¾ of a percent in our inflationary figures which will go a long way in pushing the figure back up to double digits.

With all of these catastrophic effects, one should be able to expect great rewards in return. Well, upon close examination, you can see who is being rewarded. I have already named the people who will be penalized by this ill-conceived proposal. Now, I think you would be interested in knowing who will benefit. It is not the obvious, the entire farming sector, but only the wheat, corn, and cotton producers, to the acute disadvantage of the dairy, poultry, and livestock producers. Of those privileged who will receive this giveaway, approximately 5 percent of these farms, the largest ones, will receive an estimated one-third of the money, or $2 billion. These are the same "struggling" farmers whose income averaged approximately $50.000 last year. The individuals who are really deserving of support, the small farmers, who comprise 60 percent of all farming operations, will receive only 15 percent of the giveaway, according to the Congressional Budget Office. Thus, we are again subsidizing the large farming operation to the obvious disadvantage of the struggling, small farmer.

Mr. Speaker, it must be asked, why are we sacrificing our future economic security for the benefit of the privileged few? Why are we so anxious to negate the new 4-year Agriculture Policy Act we adopted last year, without seeing the possible benefits of that hotly debated policy? Why are we caving in to this small but noisy special interest? This giveaway is not in the best interest of the consumers, not in the best interest of the taxpayers, not in the best interest of the poultry, dairy, and livestock producers, not in the best interest of this country's future grain reserves, and finally, is not in the best interest of our competitive position in the world agriculture markets. This is a high price to pay for a select few. This is especially foolhardy when we consider the track record we had in 1973–74, under circumstances similar to what we will be creating with this proposal. We ran short of reserves, fell into double-digit food inflation, which was followed by deep recession. We are now asking for the same nightmare, for what? For the select benefit of a few. We are tampering with our future economic security with the reduction of our grain reserves. Congressional Budget Office projections place the reduction of carryover stock at approximately 24 percent. This dangerously low level coupled with bad weather similar to what we have been experiencing the past few years, could result in severe grain shortages, the likes of which we have never experienced. Again, for what—for the benefit of a select few.

Mr. Speaker, it is time we place the sincere interest of the consumers, the taxpayers, and the other farming sectors, all comprising the vast majority of Americans, above the special interest of these large, high-income, farming operations. It is time we reject this misguided philosophy of paying farmers higher deficiency payments for growing less, the so-called pay-not-to-grow philosophy that flies in the face of those millions of starving individuals throughout the world.

Mr. Speaker, the President has marshaled the conviction to say "no" to this group with their hands out, and into the taxpayers pocket. I can only hope that the majority of my colleagues will consider the dire consequences of this massive boondoggle and join me in outright rejection of this $6 billion raid on the Treasury. I urge the defeat of this one-sided proposal.

Thank you, Mr. Speaker.

The SPEAKER pro tempore. The Chair desires to advise that the gentleman from Washington (Mr. FOLEY) has 12 minutes remaining, and the gentleman from Virginia (Mr. WAMPLER) has 6 minutes remaining.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from Iowa (Mr. HARKIN).

Mr. HARKIN. Mr. Speaker, I will vote for this conference report, but not enthusiastically. As a matter of fact, I am going to hold my nose and vote for it, because I would rather have had the Foley substitute to vote for. I refer to the Foley substitute that lost by one vote in conference and lost by one vote in the Committee on Rules.

If we had that substitute, we could vote against the conference report, vote for the Foley substitute, and produce a much better bill, one that could be passed and signed by the President. And I submit that if the President did not sign that bill, we would have the votes to override his veto. The Foley bill is a much better bill.

However, without the alternative and for reasons enunciated earlier by my distinguished colleague, the gentleman from Iowa (Mr. SMITH), we must vote for this conference report and send the bill down to the White House. We have to do that in order to put pressure on the President to do the things that are necessary this year to get the prices up in the marketplace, that is, to push our exports, to insure that there will be no embargoes, to make sure that our meat import law is fair and equitable and to make a better incentive for set-aside. These are the things that will make sure that the prices in the marketplace this year are high.

Mr. Speaker, if passage of this conference report accomplishes that, it will serve our purpose, and I urge my colleagues to vote for the conference report today.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from South Carolina (Mr. JENRETTE).

Mr. JENRETTE. Mr. Speaker, I have listened carefully to all the arguments here today. None of the arguments, however, have had nearly the effect on me that the picture of the plight of the farmers and the picture of the small farmer going out of business.

Hundreds of farmers have been in my office and in the offices of other Members, and their problems parallel those of the Chamber of Commerce, they parallel the problems of the Amtrak workers, the Postal Service, and they parallel the problems of all those who have come to us and asked for help. We have given help to those other people.

Now we have a segment of our society that has been the backbone of our society that is asking for our help, and I think we must give it to them. I say to the Members that we must pass this legislation.

As one of the earlier supporters of the President, let me say that I believe it is necessary that we pass this legislation and make sure this segment of our society is not ignored. This is their day in court. We must not let them down.

Mr. Speaker, no other legislation has meant so much to the farmers, and let us, in this court of deliberation, show that we care for the American farmers and the farmers of the future.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from California (Mr. KREBS).

Mr. KREBS. Mr. Speaker, I have always been told that confession is good for the soul. The bill that is responsible

for this mess is, I suppose, my raisin bill, and I want to apologize to the membership for that. However, in clear conscience I cannot support this conference report.

There is no question that there are many farmers in this country who are in deep trouble, and I do not think there is any qustion that each and every Member of this House wants to help the farmers. But I do not think that we can help one segment of agriculture by creating new problems for other segments of agriculture, and that is exactly what this bill will do. We may be solving some problems, although that is debatable, but for many farmers in other sections of the country we are going to create new problems. We would create problems for farmers in California, specifically the cotton farmers, who represent the epitome of the free enterprise system which so many on both sides of the aisle have for some reason ignored today.

This legislation certainly is not going to do anything for dairy farmers, despite the comments of my good friend, the gentleman from Louisiana (Mr. MOORE), that the dairy farmers enjoy high feed costs.

Mr. Speaker, I urge the Members to vote against this conference report.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from Missouri (Mr. BURLISON).

Mr. BURLISON of Missouri. Mr. Speaker, there has been a number of fallacious arguments that have been advanced in opposition to this conference report today, and I would like to take my 1 minute briefly to address a few of them.

It has been stated a number of times that the farmers under this program will set aside the maximum amount of their acreage, thus imperiling an adequate production and supply. I would argue with that, on the basis that those conclusions do not take into consideration many things. For instance, all of the cotton producers who have cotton gins or an interest in cotton gins will insist that their land produce. And all of the meat growers who raise their own feed will continue to produce that feed for their own use. Other examples could be cited if time permitted.

One of the other fallacies is about the cost of this bill. These costs estimates are overstated. They are high on their face. A principal factor overlooked is the decrease in cost, because of the decline in deficiency payments under the conference report. If significant acreage is removed from production, it necessarily follows that supply will be reduced and prices in the marketplace will increase. Costs to the Government in the form of income support payments will thus be eliminated or reduced.

Those who purport to represent meat producers proclaim that this bill will be damaging to them. Over the long term that cannot be true. A subsidy to the grain producer is an indirect aid to the meat producer. To the extent that Government helps the grain producer, it keeps him in business and reduces the price that must be ultimately paid by the grain buyer or user.

Several of our city-suburban colleagues have complained about this legislation substantially increasing food and fiber prices. This is not so, as so vividly portrayed by the gentleman from Iowa (Mr. SMITH) during debate on the rule. While bread and cereal prices have spiraled upward in the grocery store, prices received by farmers for wheat and corn have plummeted downward. At the same time that cotton shirt prices have escalated in the department store, commodity prices received by the cotton farmer have deescalated. The fact is uncontestable that the farmer gets very little of the consumer dollar while said consumer continues the cheap food policy in this country by paying only 17 percent of his income for food. The Russians and Chinese, in contrast, pay upward of 50 to 60 percent.

For one moment, for the sake of argument, let us concede that opponents are correct when they allege that this bill will increase food prices about 1 percent or $50 to $100 per family per year. I submit this is an outrageously low price to pay to keep farmers in business to keep providing food and fiber at reasonable prices to our people. Clearly, this conference report should be approved.

Mr. WAMPLER. Mr. Speaker, I yield such time as he may consume to the distinguished gentleman from South Carolina (Mr. SPENCE).

Mr. SPENCE. Mr. Speaker, I rise in support of this conference report.

We have heard a lot today about helping the American farmer and agriculture to survive. I would just like to add that we are really helping our constituents, the consumers of these farm products. If our farmers do not survive, our consumer constituents do not eat. It is just that simple.

Mr. WAMPLER. Mr. Speaker, I yield such time as he may consume to the gentleman from Ohio (Mr. WHALEN).

Mr. WHALEN. Mr. Speaker, I rise in opposition to the conference report on H.R. 6782. Flexible parity will not be the answer to the financial problems besetting American agriculture. The House should reject this bill today and direct its conferees to return with the original House legislation providing necessary emergency-lending authority to those farmers that need it.

Mr. Speaker, for the past 2 years, farmers have found themselves caught between high production costs and debt-servicing payments on the one hand, and comparatively low farm prices on the other. Very simply, grain prices are below the cost of production.

But the long-term interests of grain producers, livestock farmers, and consumers alike do not lie in pushing farm prices up to artificial and unsustainable heights. Such a program, either through excessive support payments or large crop set-asides, can only produce another boom-bust cycle that we seek to prevent.

Rather, the answer to the farm problem, embodied in the omnibus farm bill passed by this House last year, is greater price stability. Stability can be achieved through a farmer-held reserve program, through support levels and release prices within equitable ranges, and through adjustments of targets prices on the basis of future production costs.

I repeat that these concepts are part of the 1977 Farm Act, and I submit that their effects are just now being felt.

Already this year, net farm income is approximately $3 billion higher than last year. This is without any new entitlement programs, either through flexible parity or USDA set-aside proposals. Furthermore, agriculture prices are now rising dramatically and implementation of the 1977 farm program promises to continue that trend.

The economic arguments against H.R. 6782 as now written are well known and well founded. If the flexible parity concept were to become law, it would raise consumer food prices and aggravate inflation. It would increase the Federal budget and, hence, the Federal deficit. It would reduce U.S. agriculture exports and further erode our balance of payments.

If enacted, flexible parity tied to set-asides would deplete food stocks. It could lead to huge and dangerous crop production adjustments. Discounting the fact that USDA frankly has conceded that flexible parity is bureaucratically unmanageable, if it did succeed in aiding the grain farmer this year, flexible parity would do so at the expense of livestock and dairy farmers.

And finally, Mr. Speaker, almost ironically, because of the circular nature of the farm price process, price increases granted to the farmer this year through flexible parity would be returned to him next year in the form of higher land costs, higher taxes based on them, and a steady stream of inflation in manufactured goods. Unfortunately, the inflationary impact of H.R. 6782 would hit farmers just about the time that the emergency aid envisioned in this bill would expire.

Realistically, the issue before us today is not flexible parity. Arguments for or against H.R. 6782 are essentially moot. The fate of this bill has been preordained.

The President has announced, as recently as yesterday, that he will veto this bill. Monday's vote in the Senate on H.R. 6782, which passed by a slim 49 to 41 majority, indicates that any override attempts will be futile. The flexible set-aside proposal cannot now be passed into law.

Thus, the real issue before us today is one of time. It is actually whether the House will recommit H.R. 6782 today, or have it recommitted by Presidential veto next week.

Mr. Speaker, what farmers need are programs that work equitably to support prices at fair levels. There is little doubt that both farmer and consumer would be served by a more stable market in farm commodities. However, stock management, rather than high Federal support payments or acreage restrictions,

should be the main instrument of our farm policies.

There is legislation that can bring reasonable stability to farm and food prices, at levels that mean prosperity to farmers. It is not the conference report on H.R. 6782. It is Public Law 95–113, the Food and Agricultural Act of 1977.

I will not vote to send to the President a bill that I know he must and should veto, at the expense of allowing our policies time to function properly. I suggest that this can be done. I hope my colleagues will join me in voting to recommit H.R. 6782.

Mr. WAMPLER. Mr. Speaker, I yield 1 minute to the distinguished gentlewoman from Nebraska (Mrs. SMITH).

Mrs. SMITH of Nebraska. Mr. Speaker, in my judgment every citizen of America has a stake in this legislation. Farmers cannot continue to "set the table" for America at a loss. As more farmers reach the point of no return and go out of agriculture, the basic cornerstone of this Nation's economy starts to crumble, unemployment increases, and our whole structure is in trouble.

This legislation is designed to help small farmers, with a $40,000 ceiling on the payments. If we can help our farmers continue to operate efficiently, we, the consumers, are going to continue to have foodstuffs at a reasonable cost, and the hardy men and women who make up agriculture in America are going to continue to stay on the farms. We will have the best food on Earth, as we have in the past, at reasonable prices, and we will be able to share our bounty with the rest of the world.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from Louisiana (Mr. HUCKABY).

Mr. HUCKABY. Mr. Speaker, I rise in strong support of this measure.

The American farmer, American agriculture, is the most efficient machine that has ever existed in this world. The American farmer has a problem because of surpluses, because of world weather conditions in the last few years. This bill is an attempt to reduce surpluses and to allow the American farmer to stay in business. It is not going to affect our export business whatsoever. We are still going to be able to sell all of the commodities overseas that we can.

It has been stated here twice that the largest 5 percent of the farmers will get anywhere from 30 to 40 percent of the benefits of this bill.

That simply is not true. The largest farmers will not even participate in this program with the $40,000 payment limitation, Only the small- and medium-size farmers are going to participate in this program.

Mr. Speaker, the American farmer, the last of the free enterprise system, is becoming more and more a vanishing breed. If we do not begin to do something today here in this Congress to protect him, he will soon be a completely vanished breed.

Mr. WAMPLER. Mr. Speaker, I yield 1 minute to the gentleman from Michigan (Mr. BROWN).

Mr. BROWN of Michigan. Mr. Speaker, what kind of double standard do we have?

We want to stamp our foot down on the agricultural industry of this country, which is the heart of our economy; but we still can subsidize the maritime industry; we can provide trade adjustment payments for industries where imports have impacted harmfully on such industries; we can pass minimum-wage laws, Davis-Bacon acts, and many other similar measures, which either give a subsidy or add to consumer costs.

Mr. Speaker, I think it is about time that we did at least the same thing for agriculture as we have done for all the other sectors of our economy.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from Montana (Mr. BAUCUS).

Mr. BAUCUS. Mr. Speaker, I think all of us agree that the farmers are in trouble and need help, but the President has, unfortunately, put us in an impossible position where we must choose to vote for or against a bill, and he is probably going to veto it. We will have a difficult time here in the House and perhaps in the other body in overriding that veto.

Still, Mr. Speaker, I think we have a responsibility. We have to do what we can for the farmers. That means we have to send to the President a message, a message that the farmers are in trouble. They are going broke.

I would like to speak in favor of H.R. 6782, the Emergency Agricultural Act of 1978. The higher prices this bill provides are necessary for farmers throughout the country.

But rather than concentrate on what the bill does for farmers, I would like to talk about what it will do for the Nation as a whole. We have been selling our wheat and feed grains overseas at less than the cost of production. This is a problem not only for our farmers—who are going bankrupt—but also for our national economy.

Last year the United States ran a $10 billion trade deficit. Our enormous purchases of manufactured goods and oil were nowhere near balanced by exports.

The only bright spot on this otherwise bleak landscape is agriculture. We sold almost $10 billion worth of grain overseas last year. All told agricultural exports brought in about $23 billion from foreign countries.

Overseas sales are crucial to American agriculture. One of every three farm acres in this country produces goods for export. But we cannot make farmers or our Nation better off by selling goods below the cost of production.

Administration sources have said repeatedly that this bill would destroy export markets. But the USDA analysis of H.R. 6782 shows little or no effect on the quantity of goods exported.

Additionally, several weeks ago the USDA did an analysis of the American Agricultural proposal for prices at 100 percent of parity. That analysis shows that if prices increased to 100 percent of parity, the quantity of overseas sales would decrease slightly. But export income would increase $7.5 billion in the first year.

The huge trade deficit we have been running causes the dollar's value to decline. We have an opportunity to cut the deficit as much as one-half by passing this bill.

The administration and some Members of Congress have stated that this bill could lead to commodity shortages that would upset domestic and overseas markets. They fail to account for the enormous reserves we have now. These huge reserves are the result of high prices in 1973–74 that led to a "plant fence to fence farm policy."

On January 1 our domestic supply was 1.9 billion bushels. We consume about 750,000 bushels a year, and export roughly a billion bushels. That means we could supply our normal export and domestic demands for the next year without additional production.

But even the worst USDA estimate of high farmer set-asides and low yields shows wheat production of 1.28 billion bushels.

This bill would not destroy export markets or lead to domestic shortages. What it will do during the 1 year it is in effect is put our domestic supplies back in line with world demands. Even with poor weather, we will maintain adequate reserves.

Neither the Congressional Budget Office nor the USDA in analyzing this bill considered its positive economic impacts.

In my State of Montana, and in other agricultural regions, it is not just farmers suffering from low farm prices. Small towns are in even worse shape.

Farmers just do not have the cash to make their normal purchases of equipment and supplies. They are even curtailing their normal purchases of clothing and household goods.

The result is small-town merchants going broke. And, the problems do not stop in small towns—just ask any farm equipment manufacturer. All of you have businesses in your districts that supply farmers, and as long as farm prices are depressed, those businesses will suffer.

By restoring rural purchasing power, we can revitalize the entire American economy. As responsible representatives of the American people, we must consider the cost of this bill—but we must also consider the economic benefits it provides.

Finally, I will touch on inflation. There may be some inflationary impact of giving farmers fair prices. But, as Mr. Carter said in his message yesterday:

> Inflation cannot be solved by placing the burden of fighting it on only a few.

We have to fight inflation—but forcing farmers into bankruptcy is not the way to do it.

The President's threat to veto this bill should not keep any of us from voting yes. We have got to send him the message that Congress is concerned and dedicated to the goal of improving farm income.

Farmers constitute a reserve of stability and vitality that throughout his-

tory has contributed to the strength of this Nation. Farmers from all over the country have contributed funds to send delegates here to tell us that their way of life is threatened by low prices.

My fellow Democrats, I think also we should give the President the message that part of our party platform reads that without parity for the farmers, our economy will suffer and crops cannot be produced. We must assure the farmers a reasonable profit based upon the cost of production.

Mr. Speaker, I urge adoption of the conference report.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from Kentucky (Mr. HUBBARD).

Mr. HUBBARD. Mr. Speaker, I rise in strong support of the conference report on the Emergency Agricultural Act of 1978; and I urge my colleagues to support this much-needed legislation.

With interest I have listened to previous speakers from urban areas who oppose this bill.

Mr. Speaker, farm families may only constitute 4 percent of the population of the United States, but I submit that the role they play in the Nation's economy is a crucial one. The farmer is the largest consumer of all; and when he purchases a combine or a tractor, it creates employment in the factories and in the cities.

Mr. Speaker, some have said this bill will be inflationary by allowing the farmer to receive a fair return on his investment. Just think about what will happen if we allow the family farmer to go bankrupt. That is exactly what will happen in many cases, and we will find many large agribusiness firms and foreign investors will be buying up this farm land and taking over control of the farm land instead of leaving it with individual farm families.

Mr. Speaker, I believe sincerely that if this bill passes the House today, the President of the United States will change his mind and sign the bill. I would say that he is in real trouble in my district if he does not.

Mr. WAMPLER. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from Kansas (Mr. SEBELIUS).

Mr. SEBELIUS. Mr. Speaker, as principal sponsor of this legislation in this body, I appreciate this opportunity to discuss H.R. 6782, the Emergency Agricultural Act of 1978.

In this current debate, opponents of this bill have understandably expressed concern over rising food costs, increasing Government spending and the danger of fueling the fires of even more inflation. I share this concern.

Consumer groups and others have stated flatly that this bill will raise food costs anywhere from 3 to 5 percent. The administration has stated the bill's cost could reach $13 billion, some $5 billion more than the current program. The President, in his message yesterday, underscored the importance of winning the battle against inflation and warned he would veto any bill he regarded as inflationary.

This legislation has been publicized in this fashion by the national media to the extent that I am sure some of my colleagues consider this emergency bill little more than an inflationary, consumer ripoff.

I would urge my colleagues that before you buy this kind of labeling, you consider the following points:

First, the cost of the bill: Let me stress that this is a 1-year temporary bill. The Congressional Budget Office estimates there will be a $400 million savings this fiscal year. There is now sufficient evidence to show that administration cost estimates are in error and by a very wide margin..

In a memorandum prepared by the Congressional Budget Office for Senator HERMAN TALMADGE, the CBO estimated that with moderate farmer participation, the total cost of this bill would be $2.7 billion. Clearly the administration's $5 billion cost estimate we have seen bandied about in a spate of "Dear Colleague" letters assumes the worst set of circumstances. In addition, these cost estimates do not take into consideration the $40,000 payment limit for each farmer. Including this payment limitation the bill's cost would be reduced by another 20 percent.

Let me also point out that in terms of cost, the substitute to this bill offered in conference by the gentleman from Washington and chairman of the House Agriculture Committee, Mr. FOLEY, comes with a price tag of $3 billion. Many of our farmers have told me my colleagues across the aisle have advised them they should be realistic and support the Foley substitute and yet this emergency bill would cost less and is the least expensive of the alternatives that have been offered.

More important, should we not pass this bill, I can assure you there will be a cost that will have to be paid. In wheat farm country, we are in the midst of the worst economic crisis since the "Great Depression." Perhaps the first question you must answer is whether you believe the farmer is in trouble. In fact, our current crisis is actually worse than the depression days due to massive debt and the danger of solid farm operations going under if we do not experience a turnaround.

It has been popular for critics of this legislation to say problems in farm country today are limited to the young farmer, the farmer who capitalized on $4 and $5 wheat and the big grain producer. To be sure, these folks are in trouble, but so is everyone else in farm country.

The farm depression has already had a ripple effect throughout every community in the Great Plains and its repercussions are now beginning to be felt nationally.

We are not crying wolf in farm country—we are facing an agri-tragedy. We stand to lose a generation of farmers. Look in the galleries. Our plight is real. This display of citizen participation has been the greatest farmer involvement in Government since the days of Kansas populism. These folks have the support of businessmen, bankers, professional people, and wage earners and their prayers.

Every one of these farmers and their families here today in Washington are not here by choice. For their own sake and for the sake of consumers throughout our Nation, they should be back in farm country doing what they do best—producing food for this Nation and for a troubled and hungry world.

However, there is a very good and simple reason why these folks have been so persistent and remain in Washington and why we are considering this emergency legislation. These farmers are not the issue and the current farm movement is not the issue. The issue is the social and economic crisis tha* exists in farm country that brought the farmer to Washington in the first place. This issue has not gone away and it will not go away unless we respond fully. If we do not respond fully to this problem, the cost to farmers, consumers and to every citizen in this Nation may be irreparable.

Second, we should address the issue of food costs. On prime time television, we have heard that passage of this bill will raise retail food prices up to 5 percent and cost families an additional $300 a year for food costs. Mr. Speaker, these assertions are simply not true. The Congressional Budget Office estimates the average family will pay somewhere between $43 and $63 a year more on its food bill or $1 or $2 a week as a result of this legislation. I believe that most Americans are willing to go along with this kind of increase in order to help the farmers.

Third, this measure will not only help the farmer, but will help our entire economy. Every dollar spent by the American farmer stimulates 2 more dollars of additional economic activity. This bill will halt further layoffs within our argribusiness industry, create jobs, add to our balance of trade, offset some of the tremendous deficit we are experiencing from oil imports. This legislation will help create real dollars that will be turned over and over again within our economy.

Mr. Speaker, there are numerous other allegations regarding this legislation that demand full discussion and clarification. However, rather than go into additional comments at this time, let me simply say it is my contention and belief that this bill over the long term will respond fully to the economic depression in farm country, help us return to a balanced supply-demand picture with ample stocks for domestic and foreign needs, and represents an investment rather than a cost.

I fully endorse the President's commitment to slow down and halt inflation, the worst enemy of the farmer and every citizen. But, I do not think we can accomplish this goal by suddenly making the farmer the whipping boy for inflation. It has been the farmer who has suffered the most from inflation and

whose economic problems have been unprecedented.

Mr. Speaker, in 1952 the average wheat suport price within my district of Kansas was approximately $2.22 a bushel. That was 25 years ago. Today, the loan support price within my district of Kanlike to have someone explain to me how that can be inflationary.

Finally, I believe there is another issue of importance and that issue is equity. No one in our economy works harder or can match the productivity record of the American farmer. We are faced with a paradox of enormous irony; the man whose job it is to feed this Nation and a troubled and hungry world cannot obtain a fair price for his products to the extent he can stay in business. This bill represents a means by which we can fully correct this problem and be fair to the man who is the backbone of our Nation.

Mr. FOLEY. Mr. Speaker, I yield such time as he may consume to the gentleman from Texas (Mr. PICKLE).

Mr. PICKLE. Mr. Speaker, I rise in support of this legislation, and particularly want to commend the gentleman from the valley (Mr. DE LA GARZA) for the leadership he has given on this measure.

Mr. FOLEY. Mr. Speaker, I yield such time as he may consume to the gentleman from Florida (Mr. FUQUA).

Mr. FUQUA. Mr. Speaker, I rise and support this conference report. The American farmer is in need of help. Farm income is at its lowest level in the last 20 years. Yet food prices are among the highest ever. This bill may not answer every question, but it provides relief for farmers who need it so bad.

Mr. WAMPLER. Mr. Speaker, I yield myself the remaining time.

Mr. Speaker, I rise in support of the conference report on H.R. 6782. This bill has been through one of the most tortured parliamentary processes that I have witnessed during my service as a Member of this body.

As reported by the committee of conference the bill was only for 1 year, affecting the 1978 crops of wheat, feed grains and cotton.

I believe most Members who have been involved with this legislation want to help our grain and cotton farmers.

Both systems would cost about the same, it seems. CBO's first cost estimate of $5.7 billion for the conference report is obviously too high. A more reasonable estimate, using comparable assumptions, would place this closer to a $2 billion figure.

When it comes to the merits of the legislation let me say that it will substantially boost farm income from grain and cotton production in 1978. These sectors of agriculture are at present experiencing some very rough times and unless something is done many good family farmers will be broken.

Members from districts that have no feed grains, cotton, or wheat may ask "Why should I vote for this conference report?"

I say the answer is that it is good for America.

A strong grain/cotton economy produces jobs.

It stimulates U.S. exports.

It helps our balance of payments with foreign nations.

It strengthens the dollar.

It keeps producers producing so that inflation is mitigated.

It preserves a land tenure system of many small landowners.

And it ultimately provides American consumers with the lowest cost, best quality food of any people in the world.

I would also like to make a couple of other points that seem to have been overlooked in the frenzy of criticism generated against this bill by the administration.

The first point I would like to make is that the conference report is not a partisan matter.

The "flexibility parity" legislation introduced in the other body was also sponsored by a number of Republican and Democratic Members of the House. That original legislation, however, did not raise CCC loan levels on feed grains, cotton and wheat.

The conferees did that.

The gentleman from Georgia (Mr. MATHIS) was the author of the amendment to raise corn loans to $2.25 per bushel.

The gentleman from Texas (Mr. DE LA GARZA) was the author of the amendment to raise cotton loans to 48 cents per pound.

And the gentleman from Washington (Mr. FOLEY) was the author of the amendment to raise the wheat loan to $2.55 per bushel.

Another very important change in the original "flexible parity" bill was the deletion by the conferees of the "antidumping" provisions of that proposal.

The original flexible parity proposal prohibited the Government from selling (or causing the sale of) grain from Government-owned stocks or from farmer-held (but Government-controlled) reserves for prices less than full parity.

As I say, this important feature was dropped, again at the insistence of a majority of the House conferees.

I hope, therefore, the Members of this body will understand why I contend this conference report is not a partisan instrument. It carries the brands of both political parties and it is truly a bipartisan effort—the proof of which is the fact that every conferee except one from both the House and the Senate signed this conference report.

Finally, will the President veto this bill?

Frankly, I don't know.

He says he will, but he says a lot of things.

If he does, it is up to us to discharge our constitutional responsibility, just as it is his duty to exercise his.

In conclusion, I would like to make one basic point, and that involves the very reason we are debating this bill today.

Realized net income to American farm and ranch people fell by 7 percent last year—from $21.9 to $20.4 billion.

U.S. farm exports are dropping, farm debt is increasing and inflation is chewing up family farms across the Nation. That is why thousands of farmers have come to Washington.

That is why we have this bill in this Chamber today—and that is why we should pass it today.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from Illinois (Mr. SIMON).

Mr. SIMON. Mr. Speaker, one out of every seven farmers in the State of Illinois lives in my district. We have to help the American farmer—no question about it—but this is not the way to do it.

Everyone here knows this bill is not going to become law. Let us get a bill that genuinely helps the farmer that does not adversely impact on the balance of payments, that does not adversely impact on inflation, and that does not adversely impact on hungry people beyond our borders who need food. We can have such a bill geared to target prices, similar to the old Brannan plan that some of us remember from some years ago.

This is not a sound approach. Let us face it. Let us kill it now so the President does not have to do it.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from Georgia (Mr. BRINKLEY).

Mr. BRINKLEY. Mr. Speaker, recently the question was asked a group of us: "Which of your children do you love the most?" We were surprised because we love all of our children equally well. And then the questioner responded with his own answer. He said: "In terms of need or in terms of attention you love that child most, who needs it the most." Today that child who needs this the most is the American farmer. That great populist William Jennings Bryan said:

> When the cities are destroyed, they will be built again; but when the farms are destroyed, grass will grow in the streets of the cities.

Food does not grow on the grocers' shelves nor does fiber just appear on the haberdashery shelves. Let us meet our responsibility to the farmers, that is the basic thing, and then let others meet their responsibilities.

Mr. FOLEY. Mr. Speaker, I yield 1 minute to the gentleman from Texas (Mr. DE LA GARZA).

Mr. DE LA GARZA. Mr. Speaker, this country was founded by men and women who cared and who dared. They pledged their lives, their fortunes, and their sacred honor on a novel experiment called democracy. No one has contributed to this concept more fully and without reservation than our farmers, at every level and in every corner of this great country of ours. We now have an opportunity, the rare opportunity of lending a helping hand to this group.

This may not be the total solution to the problem. This is emergency action. voluntarily electing to set aside anygery, but no one can deny the need is there. This is a very small token of recognition, may I add, for past contributions. It is an investment in the future. We can and should do no less.

● Mr. QUAYLE. Mr. Speaker, I plan to support the conference report to H.R. 6782, the Emergency Agricultural Act of

1978. It represents a voluntary, short term solution to the serious economic problems facing many of our family farms in America today.

The flexible parity provisions provide the family farmer a 1-year opportunity to achieve parity in the marketplace by voluntarily electing to set-aside anywhere from 10 to 50 percent of the land during the 1978 crop year.

Last year I established an Indiana 4th District Agricultural Advisory Committee which includes farm representatives from each of the counties in my congressional district as well as representatives of the major farm organizations.

The committee recently submitted to me its recommendations on farm policy and agreed that a combination of increased voluntary set-asides coupled with higher target prices would be beneficial to the farm economy and should be a general objective. The committee emphasized to me that whatever action Congress takes to enhance grain prices, it should not increase Government involvement nor aggravate the inflationary spiral.

The flexible parity approach will help the farmers in the marketplace with a minimum of governmental involvement.

President Carter and others cry out that this is an inflationary bill. There is little question that inflation is the No. 1 problem confronting the Nation today, and the farmer has been one of its prime victims. However, we should not make the family farmer the whipping boy for inflation by denying him the limited incentives provided in this emergency bill.

It is difficult to estimate the number of farmers that will eventually elect to participate in this program. The fiscal consequences, in my judgment, will not be as severe as predicted by the administration. There is little question that this compromise conference report is less expensive than the measure as passed by the Senate which included more costly land diversion and higher target price provisions.

The Congressional Budget Office has reported that this bill will raise food prices anywhere from 1.1 to 1.5 percent. This translates to about $63 more a year on the food bill of the average family. It is questionable that the inflationary impact will be as severe as the minimum wage hikes which were enacted earlier by this Congress and signed by the President.

Mr. Speaker, I urge the adoption of the conference report as a signal from this Congress that we are interested in saving the family farms of America. Under leave to extend my remarks, I include a statement of policy recommendations from the 4th District of Indiana Agriculture Advisory Committee:

STATEMENT OF POLICY RECOMMENDATIONS FROM THE 4TH DISTRICT OF INDIANA AGRICULTURE ADVISORY COMMITTEE, MARCH 31, 1978

The 4th District of Indiana Agriculture Advisory Committee, which was appointed by Congressman Dan Quayle, has been at work since February 3, 1978, to develop recommendations on agricultural policy and legislation for submission to the Congressman.

We now wish to submit to Congressman Quayle this statement of policy recommendations which represent the best thinking of the Committee, and request that the Congressman study the recommendations and take whatever action he deems appropriate.

We recommend that this Agriculture Advisory Committee remain active, and provide continuing input to the Congressman, and at the same time, encourage him to continue to communicate with the Committee as well as all farm families within the 4th District.

There is good reason for deep concern about the economic plight of the farmer and the survival of the family farm in the Nation. Soaring inflation coupled with declining crop prices have posed serious threats to many farmers who are strapped with heavy financial burdens.

It is important that these problems be addressed promptly. In many instances, we find that government policies—including actions of the Congress—have contributed to the farmer's plight.

Inflation constitutes a number one problem for all Americans—but it hits especially hard at the farmer because his costs have risen while commodity prices have dropped.

Government bureaucracy, paperwork, and red tape impede the efforts of farmers, as well as other citizens, in their participation in government programs.

Our tax laws represent a deterrent to the transferring of land from a farmer to his heirs and there is urgent need to constantly update these laws, enact reforms, and provide tax breaks that will encourage young people to continue family farm operations.

We believe that recent efforts by farmers from across the country to focus attention on these and other problems have been beneficial and have helped educate consumers, congressmen, and bureaucrats alike.

We acknowledge the need for action in regard to improving grain prices—but we would hope that such action would not result in increased government involvement nor aggravate the inflationary spiral.

We recognize that no simple answers exist. Farm problems vary from state to state depending on farm size, commodities involved, management procedures and other climatic and economic factors. It is important, however, that we continue to have open dialogue between farmers and their elected representatives, at all levels, to find ways to best turn around the economic disaster facing the farmers. Such a disaster would have a "ripple effect" throughout the entire national economy.

Following are the recommendations which have been agreed to by a majority of the members of this Advisory Committee:

INFLATION

The Advisory Committee finds that farmers especially are placed in a difficult position by inflation, with reduced income, and recommends that Congressman Quayle take initiatives, and support actions, that will reduce unnecessary federal spending, lower the federal deficit, and result in less but more efficient government.

In recent months prices at the grocery store have gone up—but prices received by the farmer for his products have gone down. An educational effort aimed at the consumer is needed.

We recommend that in reporting of Consumer Price Index statistics—especially as they apply to food costs—the government should make an effort to break down prices received by farmers for their commodities, e.g. grain, meat, dairy products, as compared to supermarket prices.

EXPORTS

The Advisory Committee is concerned that insufficient actions are being taken by the Administration to expand U.S. agricultural exports. We believe that more aggressive initiatives insofar as export sales are concerned would have a positive effect on commodity prices.

The Advisory Committee also believes that inaction in last year's longshoreman's strike; shortage of hopper cars; and storage facilities hamper the exporting process.

It is imperative, if we are to expand exports, that improved rail transportation must be provided to grain centers, including smaller elevators. A solution must be found to the persistent shortage of hopper cars to haul grain. Barge transportation should be improved, and specifically, the Committee calls for expediting the modernization and improvement of Lock & Dam 26.

The Advisory Committee finds that the Panama Canal is vital to the shipment of U.S. agricultural commodities now and in future years. It is essential that the Canal be kept open and its neutrality guaranteed.

We favor a reduction in trade barriers, and generally advocate a free trade policy that will permit the market to work without governmental interference.

While the Committee does not object to trade with either the Soviet Union or the Peoples Republic of China, we believe such transactions should be on a cash basis. We further feel that agricultural sales with other Nations should be on a cash basis, as much as possible.

The Advisory Committee expresses its concern over the Carter Administration policies which are apparently aimed at making food a tool of our foreign policy. We recommend that red tape and delays in making food shipments under the Food for Peace program (P.L. 480) be investigated and legislative action taken to speed the process regardless of foreign policy considerations.

Specifically, we recommend that overseas U.S. Agricultural Trade Offices be upgraded for the purpose of carrying out trade promotion activities, and that the United States locate agricultural counselors in nations with which the U.S. has diplomatic relations.

We support a resolution directing the President to instruct U.S. negotiators participating in the Multilateral Trade Negotiations, the Secretary of Agriculture, and the Special Representative for Trade Negotiations to set as their goals both expansion of U.S. agricultural markets abroad and increases in prices of U.S. agricultural exports to levels sufficient to assure, for U.S. farmers, a return on those exports equal to that which would be available at domestic parity levels.

We urge that the Commodity Credit Corporation make prompt disclosure of foreign sales.

We believe Congress should be consulted by the President before any embargo actions are imposed.

IMPORTS

The Advisory Committee believes that a "reasonable approach" should be taken in regard to the levying of import tariffs because of the United States' growing objective to export more of our agricultural products.

However, the Committee strongly supports the labeling of all foreign food imports so that the origin of the country is clearly seen by the consumer.

The Advisory Committee supports legislation providing that food stamp recipients could not use food stamps for buying foreign foods that are so marked and indicated on their packages, or for foreign-produced meat and meat products. We think it is reasonable that American taxpayers' dollars spent in federal food programs be used on American farm products.

FOREIGN INVESTMENTS

There are growing reports of foreign investments in U.S. farmland and other agribusiness facilities in the United States. Land values in the corn belt are reported to have tripled in the past 10 years. The first and only survey of foreign investment was com-

pleted in 1974, and found that there was $45 billion invested by foreigners in U.S. land, property, plants and equipment. The Advisory Committee urges continued monitoring of this activity with a report made to the American people.

CREDIT RELIEF

The Advisory Committee supports the new economic emergency loan program which has been approved by the House and Senate. However, the imposition of more debt on hard-hit farmers can only be viewed as a temporary stop-gap measure. At the same time, the Committee views with alarm the red-tape and long delays which apparently are a pattern in seeking loan assistance through the Farmers Home Administration.

The credit relief legislation, now pending in a House-Senate conference committee, establishes a new emergency loan program for established and reasonably successful farmers and farmer corporations that had temporary credit problems because of a general tightening of agricultural credit and an unfavorable relationship between production costs and prices received for agricultural commodities.

Loans could be used for mortgage payments and operating expenses, getting into new crops or otherwise "reorganizing" a farm, refinancing existing debts and for certain other purposes. Individual loans are limited to $400,000 in the House bill, $500,000 in the Senate version.

The House bill also created a special 3 per cent interest loan program to cover mortgage and operating expenses of low-income farmers including new farmers.

ENHANCING GRAIN PRICES

The Advisory Committee has devoted much of its time to the discussion of methods of enhancing prices which farmers receive for their grain commodities. There are some who believe that no action should be taken by government. Others feel that government, which guarantees a large segment of hourly workers a set minimum wage, should, at the very least, legislate that farmers are entitled to a guarantee that their commodities should not be sold below the cost of production.

Needless to say, the recent nationwide effort of the American Agriculture Movement has sparked the attention of both the Administration and the Congress. Numerous bills have been introduced.

The Administration on Thursday, March 30, made its first significant concessions to farmers by using existing laws to institute the first paid land diversion program since the early 1970s. About 4 million fewer acres of corn would be put into production as a result. It is estimated the action would raise farm incomes by $3 billion to $4 billion a year.

The Advisory Committee believes that Congressman Quayle should give serious consideration to supporting parts of legislation now before a House-Senate Conference Committee, as a short-term solution to present problems.

The Advisory Committee is generally supportive of those actions which are voluntary and not mandatory.

Following is a brief summary of the three major provisions of legislation now before the Conference Committee:

*Talmadge land diversion program*

1. Requires the Secretary of Agriculture to set aside at least 31 million acres of cropland for crop year 1978, in addition to the 15 million acre wheat and feed grain set-asides already announced by the Department of Agriculture.

2. Authorizes direct payments to farmers, only for that portion of land they set aside beyond the levels in the previously announced program. Payments are estimated at about $75 an acre.

3. Stipulate the following distribution for the additional setaside: 15 million acres of wheat, 10 million acres of feed grains, three million acres of cotton, three million acres of soybeans.

4. Mandates specific market price objectives for the land diversion program, and authorizes the Secretary to set aside additional land or take certain other steps as needed to bring market prices up to those objectives. The price objectives are: $3.50 a bushel for wheat; $2.50 a bushel for corn; $6 a bushel for soybeans and 60 cents a pound for cotton.

5. Waives the $40,000 upper limit on total payments to an individual farmer authorized by the 1977 farm law.

6. Requires payments of at least 50 per cent of the total due a farmer at the time a program contract is signed.

*McGovern target price, loan program*

1. Raised target prices and loan levels for certain commodities as follows:

Wheat target price to $3.55 a bushel, from $3–$3.05; wheat loan to $2.85 a bushel from $2.25–$2.35.

Corn target prices to $2.50 a bushel, from $2.10; corn loan to $2.25 a bushel from $2.

Cotton target price to 70 cents a pound, from 52 cents; cotton loan to 50 cents a pound from 44 cents.

*Dole flexible parity program*

1. Creates a sliding scale of target prices for crop year 1978 and linked it with the set-aside program. Participation in the announced set-aside programs is a condition for eligibility and payments would be made only on set-asides in addition to the already established programs.

2. Establishes seven wheat target prices ranging from $3 a bushel for farmers who set aside 20 per cent of their cropland to $5.04 a bushel for those who set aside 50 per cent of their land. The higher figure represents 100 per cent parity, calculated under the 1910–1914 formula.

3. Established eight corn target prices ranging from $2.10 for a 10 per cent set aside to $3.45 for 50 per cent set aside.

4. Establishes a single cotton target price of 70 cents a pound for a 20 per cent set aside.

5. Raises commodity loan rates for wheat to $2.85 a bushel, and for corn to $2.40 a bushel.

6. Discourages farmer participation in federal grain reserves programs.

7. Permits grazing and haying on all crop year 1978 set-asides.

The Advisory Committee believes that a combination of increased voluntary set-aside coupled with higher target prices would be beneficial to the farm economy and should be a general objective.

Finally, the Advisory Committee urges Congressman Quayle to give careful consideration to other long-term legislative proposals affecting the farmer which are now before the Congress. Such proposals should be the subject of future discussions and consideration by the Committee with the Congressman.

BUREAUCRACY

The Advisory Committee finds that there are too many regulations, and we think that for too long, government agencies run by unelected bureaucrats, have been left free to come up with impractical, mischievous and in some cases downright ridiculous restrictions.

At the present time, we are concerned about promulgated regulations concerning nitrites and nitrates which could destroy the pork industry. Further research is in order before such drastic regulations are implemented.

The Advisory Committee recommends that all federal agencies, including the Agriculture Department, submit their proposed regulations to Congress for adequate review and analysis before being promulgated. Congress should have a 30-day period to veto regulations it finds unacceptable. "Sunset legislation" also should be enacted requiring all government departments and agencies to periodically justify their continued existence.

We are concrned about actions by OSHA and EPA which impede food production and contribute to higher food prices. Congress, through its oversight committees, should investigate and eliminate unnecessary regulations and harassment.

Congress should re-examine Section 208 of the Clean Water Act as it applies to rural communities and farms. In any case, enforcement should be kept at the local level.

An economic impact statement should be required on rules and regulations promulgated by federal agencies and departments.

ADVOCACY OF THE FARMER

We believe that the Department of Agriculture should be representative of, and an advocate of farmer problems and the farmer. We are concerned that the Department does not necessarily reflect the farm voice as much as it should.●

● Mr. ARMSTRONG. Mr. Speaker, agriculture is the backbone of the American economy, and the key to future prosperity. No democratic nation in history has survived as a strong and independent power without a strong and prosperous agricultural sector.

Americans spend a lower percentage of their paycheck on food than any other nation in the world—about 18 percent of the average American's wages go to food purchases. At the same time, the U.S. farmers feed not only Americans, but export enough food to feed another 200 million people.

In the United States, 2.8 million farms and 4 million farmers supply enough food for almost half a billion people. If you break that down, the average farmer produces food for almost 100 people every year, and that does not include nonfood crops such as cotton, leather, wool, linseed oil, et cetera. Every year there are fewer farms, fewer farmers, and yet they produce more.

And the reward for this incredible record?

There has been no reward, as we all know. Since 1970, farm earnings, after adjusting for inflation, have decreased. At the same time, the capital investment of the average farmer has approached $200,000. Family farmers are generally working harder for less return than any other working people in America.

In my own State of Colorado, the 1977 realized net farm income was down 22 percent from 1976, and amounted to only half of the 1974 realized farm income. The average income for Colorado farmers and ranchers, after expenses, was $8,992 in 1976—the lowest it had been since 1971. But in 1977, that net income dropped even further, dipping close to $8,000.

By contrast, that figure is roughly half the U.S. average family income in 1977.

Low income is only half the story, however. As farm prices and income have declined, farm production costs have skyrocketed. Colorado farm expenditures

have risen 120 percent over the last 10 years and are expected to rise at least another 7 percent in 1978.

True, food prices have increased 150 percent in the last 10 years, but that increase has not gone to farmers, but to the transportation, the wholesalers, the retailers, and to the various governments in taxes. The farmer has ended up with less, and many people wonder why farmers are upset.

At a time when consumer prices have doubled in the past 10 years, and tripled in the past 30, the prices farmers have received for their crops has increased only 80 percent over 30 years, less than 3 percent per year at a time when inflation has been more than 5 percent per annum.

For these reasons, I am pleased to support the conference report on H.R. 6782, the Emergency Agriculture Act of 1978.

American farmers need help, and they need it now—not next year, or 3 years from now.

Congress and the administration have heeded every other political pressure group's requests, many of which have not deserved assistance nearly so much as the struggling farmers.

But the administration, and unfortunately, some Members of this body are so concerned about the impact of the Emergency Agriculture Act on inflation that the facts tend to be ignored.

According to the Congressional Budget Office. the 2-year additional cost of H.R. 6782 would be $5.3 billion. This cost estimate is based on the unrealistic assumption that 90 percent of all wheat producers would set aside at least 50 percent of their acreage.

The actual impact is likely to be a highly doubtful projection.

While the administration has cited the existing farm program as helpful, recent actions by Secretary Bergland have not given farmers any great hopes. On April 7, 1978, the Secretary of Agriculture announced the administration's crop loan levels for 1978. Despite promises, the loan levels for wheat and all feed grains were at the same level as in 1977. So, despite increasing costs of production, farmers cannot borrow any more on their crops this year than they could last year.

At the same time the administration is failing to help farmers, they continue to help the country. Only our continuing and massive exports of farm production has kept the dollar from sliding further on the world market and helped offset the growing dollar cost of imported oil. Yet even here, the administration seems unwilling to help the farmer or the country.

Just a few weeks ago the State Department advocated that agricultural attaché offices be eliminated in five foreign countries and reduced in five others. These 10 nations where the agriculture attaché cuts were recommended provided a market for $3 billion worth of U.S. farm products in 1976.

The administration has failed to take constructive action on reducing Japanese and Common Market tariff barriers to U.S. farm exports and, in fact, led the American people to believe the Japanese were willing to permit increased imports of American beef. The Japanese evidently do not agree.

With this background, you can see why the farmers, and consumers, of the United States need the speedy passage of the Emergency Agriculture Act of 1978.

The question is not inflation, no matter what the administration claims. While Government-generated inflation has created the economic plight facing farmers and wage earners today, under the circumstances I have outlined, it would be a grievous mistake to make the farmers of America the scapegoat of an anti-inflation campaign.

Farmers are as willing, perhaps more willing than most Americans, to do their part in the fight against inflation. But to demand that they bear the brunt of the burden because they and their families comprise only 4 percent of the population is to my mind unconscionable.

The other 96 percent of the American population has benefited for generations from the hard work and industry of American farmers. But farmers do not live in a vacuum. When the minimum wage goes up, when the price of energy skyrockets, when the wages of truckers, government employees, steelworkers, et cetera, go up, so do the costs of farming. When the Congress legislates new environmental programs, higher social security taxes, and more deficits, farm costs increase.

Farmers cannot control these increased costs which we in Congress have so often passed on to them. That's why they need this legislation.

Possible increases in farm program costs may seem big until you make a few comparisons to other programs supported by the administration.

The Emergency Agriculture Act would cost less than half the $6.3 billion to $7.4 billion the Inspector General estimates the Department of Health, Education, and Welfare misspent last year because of waste, fraud, and abuse. The Emergency Agriculture Act can hardly be deemed inflationary compared with other programs sponsored or supported by the administration:

A substantial hike in the minimum wage that will increase unemployment and add approximately $10 billion annually to the cost of doing business in the United States;

A 39-percent wage increase over 3 years for coal miners, which could boost the price of steel and electric utility bills by at least 10 percent;

Social security payroll tax increases that will take an additional $227 billion from Americans over the next 10 years;

Proposed new energy taxes that would extract $72.5 billion from the economy by 1985;

New oil tanker regulations which would cost consumers another $1 billion;

A cargo preference bill which Secretary Blumenthal estimated would have added $1 billion a year to the fuel bill of Americans; and

Budget proposals adding up to a total of $87 billion for next fiscal year. The interest that taxpayers will have to pay on that debt is in itself greater than the entire cost of the Emergency Agriculture Act of 1978.

Even this partial listing makes it clear that a rejection or a veto of the Emergency Agriculture Act would be only a token gesture in the fight against inflation. But it would be a disaster for American agriculture.

Agriculture is a key sector of our domestic economy, and our greatest hope for redressing our dangerous imbalance of trade. If the farmers are hurting now, we can be certain the rest of our economy will be hurting a few years down the road. To deny farmers the assistance they need today, simply to effect a cosmetic economy, is virtually to guarantee higher food prices and perhaps food shortages in the years ahead.

If we are serious about fighting inflation, then we should place the blame on the real causes.

The farmers have not created inflation, nor should they bear the brunt of fighting it. Instead we should enact legislation which will support farmers and their efforts, those efforts which have given us the cheapest food of any industrialized nation in the world.

In this effort, I urge all Members to support the conference report on H.R. 6782, the Emergency Agriculture Act of 1978.●

● Mr. CORCORAN of Illinois. Mr. Speaker, during the debate today on H.R. 6782, the conference report which accompanied the Emergency Agricultural Act of 1978, I was reminded that an important era in agriculture is ending. When I left our family farm some 20 years ago, I did so because the Federal Government had such a grip on agriculture that our land could only support one or two families. Since then, two major developments in Government policy have occurred: First, in recent years, until the last year or so, we have seen less Government involvement in the marketing of farm products and improved profits for farmers—good news for the farmers. Second, we have witnessed an increasing trend of bureaucratic agencies, such as EPA, OSHA and the like, playing an increasing role in agriculture—bad news for the farmer. Under the Carter-Bergland administration, we are going back to the bad old days of agriculture. This reverses the good news of farm profitability, and will eventually lead to continued tinkering on the farms of this country.

It is with these considerations in my mind that, after considerable thought, I decided to vote "no" on the conference report. This report will not only be inflationary, it will impede the shipment of American goods abroad, a very alarming consequence. The target prices and the loan levels in this legislation will simply make U.S. products less competitive in world markets. It also will encourage higher prices through planned scarcity, which could create world food shortages in the event of another serious drought in other producing countries. Finally, the program will be virtually impossible to administer effectively and efficiently.

I discussed this conference report and all of the controversy leading up to the

vote today with many farm leaders and farmers, as well as other concerned citizens throughout the 15th District of Illinois. They opposed this bill almost unanimously for many of the same reasons to which I have previously alluded.

The overwhelming concern expressed by my constituents was their desire to eliminate further Government involvement in their daily lives. If I heard it once, I heard it several times—"Tom, please help get government off our backs, and out of our pockets." I heartily agree. The typical American farmer provides us with so much, and in return he asks for so little. He does not seek a handout or a free ride. Instead, he asks only that the Government not stand in the way of his own efforts.

On February 4, 1978, I held a seminar on agricultural information in Pontiac. During that seminar I heard from more than 200 farmers, farmwives, and agribusinessmen who expressed their concerns to me regarding the serious problems which now face the American farmer. These people do not support the unrealistic concept of 100-percent parity for their products. They are not violent strikers, as are some of our brothers and sisters in other parts of the country. They have but one common interest: To be prosperous and productive. They want to strengthen their individual economies and the economy of the United States through increased sales of American farm products abroad, among other methods.

In 1977, I sponsored a resolution which called on the Carter administration to develop a comprehensive program to promote the sale of American farm products overseas. On February 21, of this year, I cosponsored a bill which would, among other provisions, establish agricultural trade offices and designate several agricultural counselors to actively seek foreign markets for American products. This is the direction the American farm movement needs to pursue.

The immediate problems facing the farmers of this country—caused primarily by bad Government farm policies—can be solved on a 1-year basis by extending credit to cover the costs of land and machinery purchases they have made in recent years. Moreover, while repudiating the fallacies in the 1977 farm bill the Congress could act today to make its provisions effective on an emergency basis with reasonable payments for the acres to be idled. This entire approach should be scrapped after this year so we can return to the free market system with the Government role essentially limited to export promotion.

Mr. Speaker, this multibillion dollar farm conference report was considered without the benefit of any hearings in committee. This legislation proposed only apparently for 1 year, could cause irreparable long-term damage to the economy of every farmer and his family in this country.

Let us defeat this report and send the conference committee back to work out an emergency plan which is truly in the best interests of the American farmer.●

● Mr. RINALDO. Mr. Speaker, I oppose the conference report to H.R. 6782, the Emergency Agricultural Act of 1978. The economic picture in this country is presently very bleak. We are suffering from a sizable deficit in our balance of payments; the dollar is taking a drubbing in the international monetary market; unemployment continues to affect far too many Americans; the stock market is in the doldrums; and inflation continues to rise.

In spite of these symptoms of our economic ill health, we are being asked to render the patient still weaker instead of vigorously fighting to regain fiscal well-being. In the conference report before us today, we are being asked to approve sizable increases in cash payments to producers who agree to reduce their acreage of wheat, corn, and cotton crops. The conference committee is asking Congress to approve a crop reduction to a maximum of 50 percent set-aside, with payments supplementing market prices to reach the equivalent of 100 percent of parity.

If the House approves this conference report, it will add 4 percent to food prices this year. This is in addition to the 6- to 8-percent increase in prices already projected by the Department of Agriculture. Approval of the farm bill will increase deficit spending by adding approximately $5 to $6 billion in budget outlays in fiscal year 1979. Large set-asides can cause food reserves to decrease to serious levels, and make U.S. farm goods less competitive in international markets. Adding this degree of fiscal disruption to an already faltering economy is unconscionable. I urge my colleagues to join me in taking this opportunity to register their votes in favor of fiscal responsibility.●

● Mr. FRENZEL. Mr. Speaker, this conference report presents a tough decision. It purports to help agricultural producers, and there surely is a broad consensus that some farmers need help.

It is the one farm bill on which we can vote that could be effective prior to this year's planting season. It is time that the administration could take, and will surely take, some action under existing law, but this vote today is our only chance to have a piece of the action.

This vote also allows us to put some pressure on the President. He usually needs pressure before he becomes concerned about problems or wants to take action. The opportunity to prod the President, to encourage action on his part, and to accentuate his embarrassment is appealing.

This approach is also appealing in that it is an ingenious approach to a vexing problem. It seems to offer more promise than some of the old solutions, in which classification I include the Talmadge approach. It will give an incentive for reduced planting. Despite all of these reasons to vote for the bill, I am obliged to vote against it.

In the first place, it is, by general agreement, a very inflationary proposal made in already very inflationary times. While most Americans would like to see help for farm families who need help, it appears that this bill would be more expensive than is necessary.

There is no more important problem facing our country now than inflation. The minority group in this House has articulated the importance of this problem with great vigor. I, personally, feel a strong commitment to hold spending down to reasonable levels. I find the potential spending levels which could be caused by this bill to be too high.

And, while this policy is innovative, it is also complicated and untested. It has been hastily drawn to meet an acknowledged emergency. It is acknowledged to be difficult to administer and enforce. It seems to have loopholes. It seems to offer unnecessarily generous subsidies to take land out of production, without any guarantees that production will decrease proportionately.

But perhaps the most dangerous aspect of this bill is that it puts us deeper into bureaucratic programs. Under the previous two administrations, this country took giant strides to disencumber itself from bureaucratic, counterproductive farm programs that had resulted in heavy surpluses and depressed farm prices.

We ought to be very, very careful before we permit ourselves to sink back into another such program. Even though this bill is presented as a single year proposal, farm programs have a way of extending themselves.

Finally, I am bothered by the concept of parity. The use of a concept based on conditions existing more than a half century ago, and one which is confusing even to those who have tried to understand it, is troubling. I would hope that whatever farm program is ultimately executed will be based on a firmer foundation than that of parity.

For these reasons, I am compelled to vote no. I would like to vote for help for the agricultural producers who are suffering obvious hardship, but I think this solution is not the right one.●

PERSONAL EXPLANATION

● Mr. CARR. Mr. Speaker, I voted today in favor of the conference report on H.R. 6782, the so-called Emergency Agricultural Act of 1978. My "aye" vote is a vote of solidarity with the many American farmers who face imminent and serious economic problems, and my vote symbolizes my concern that inadequate and unstable farm income threatens the agricultural production base of our Nation—a base on which we all rely.

Nevertheless, in the context of the bill before us and the manner in which it was brought before us, my vote can only be considered as symbolic, and is intended to be considered as such. This is, of course, a less than ideal vote in a less than ideal situation. Despite the many weaknesses of this legislation, however, I think we must demonstrate that there is a significant constituency in this House for fair and reasonable agricultural reforms. We need to insure that the issues which have been brought before us in recent weeks do not disappear along with this bill, which will disappear.

Although I am by no means an expert on agricultural issues, there appear to be numerous problems with H.R. 6782.

It is not clear that the bill would really help hard-pressed American farmers, and even if it would provide assistance, it might cause more problems than it would solve. The legislation would give added fuel to the fires of inflation which ravage all consumers—including farmers—and would hinder our efforts to restrain the growth of the Federal budget. The bill would also have uncertain but potentially devastating impacts on our agricultural exports—and all farmers have a stake in seeing that these exports are maintained while new foreign markets are found. Finally, the bill might hurt some farmers and dairy and cattle ranchers, and the agricultural community is correspondingly divided over this bill.

I also have strong objections to the manner in which this legislation was considered. As you know, H.R. 6782 was originally a noncontroversial bill dealing with the marketing of raisins, and the emergency farm provisions were not added until the bill was considered in the Senate. As a result, the House has not had the opportunity to hold hearings on the bill, to study its provisions in depth, or to amend and perfect those provisions. The facts about this bill have not been made clear, there has not been sufficient time for opposing viewpoints to be aired, and the legislative process has been circumvented. Finally, I suspect that this legislation is a partisan political ploy by Senator DOLE, who may be more concerned with placing the administration in a no-win situation than he is with drafting a farm bill which could be passed and which really would help American agriculture.

Now that the House has defeated this bill, it has no future, but I think there is a future for more productive and more carefully drafted farm legislation, and I urge Government officials and farmers alike to work together to create a more acceptable legislative product.●

● Mrs. COLLINS of Illinois. Mr. Speaker, I rise in opposition to the conference report on H.R. 6782, the Emergency Agricultural Act of 1978.

Although I am sympathetic to the fact that the real income of farmers has declined in recent years, I do not believe that this legislation provides a remedy that is either fair to the American consumer or is in the long-term interests of U.S. agriculture. The basic purpose of the conference report is to implement the notion of "flexible parity," an ideal with great political appeal in certain regions of the country, but without any real economic merit. As embodied in H.R. 6782, wheat, feedgrain, and cotton farmers would be permitted to set their own price support levels through a formula that would raise price supports in proportion to the amount of land taken out of production. The legislation would raise both the target prices that the Government agrees to give farmers directly and the loan prices that the farmer can borrow by "loaning" his crop to the Government.

The trouble with this approach is that it ignores the effects of higher farm prices on consumers, on the rate of inflation generally, and on the world food supply situation. Furthermore, it offers no solution to the recurrent cycles of boom and bust that are largely responsible for the predicament in which American agriculture finds itself today.

As a Representative of a district in parts of which food costs make up a large percentage of living expenses, I am highly sensitive to the upward trend in supermarket food prices in recent months. According to the Consumer Price Index, food prices rose 8 percent during 1977 while the average price of all commodities rose by 6.8 percent. Over the last 5 years the price index for food has risen by 56 percent while the index for all items went up by 46 percent. According to the White House Council on Wage and Price Stability, this legislation, if enacted, would add at least $100 a year to the average family's food bill and would bring with it a major risk of returning the country to the double-diget food inflation of a few years ago.

Furthermore, the legislation abandons the hope of building grain reserves at a very time when the Sahel and other famine-prone regions of the world are once again threatened with massive food shortages. Neither America nor the rest of the world can afford to subsidize such a shortsighted answer to America's agricultural problems.●

● Mrs. SCHROEDER. Mr. Speaker, the Emergency Agricultural Act of 1978 would harm farmers and consumers alike.

This bill will not benefit the farmers in greatest peril and would further aggravate their problems.

First. The largest 5 percent of farms will receive about one-third of the payments.

Second. It would harm American farmers in the world market. U.S. farm goods would become less competitive on international markets and customer nations would find new, more reliable suppliers.

Third. The huge land retirement required by this bill would shrink grain supplies to very low levels, leaving farmers and foreign markets extremely vulnerable to a poor harvest.

Fourth. It would result in further land inflation because higher commodities prices boost land costs. This in turn would make it more difficult for young people to get into farming.

H.R. 6782 will hit equally hard at the consumers.

First. Retail food prices would be 2 to 4 percent higher than the 6 to 8 percent increase currently being forecast.

Second. The bill has the potential for driving food supplies to dangerously low levels and leaving the consumer in a very vulnerable position should there be a bad harvest.

The taxpayer would be forced to subsidize this program by increasing the budget an additional $3 to $5 billion over the current program.

The overall impact of this bill would boost inflation by .2 to .3 percent.●

Mr. FOLEY. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. VOLKMER. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 150, nays 268, answered "present" 1, not voting 15, as follows:

[Roll No. 214]

ANSWERED "PRESENT"—1

Lloyd, Calif.

NOT VOTING—15

| | | |
|---|---|---|
| Burke, Calif. | Eckhardt | Spellman |
| Burton, John | Howard | Teague |
| Clawson, Del | Rahall | Udall |
| Crane | Rodino | Van Deerlin |
| Dent | Runnels | Whitley |

The Clerk announced the following pairs:

On this vote:

Mr. Teague for, with Mr. Van Deerlin against.

Mr. Udall for, with Mr. Dent against.

Mr. Runnels for, with Mr. Rahall against.

Mr. Whitley for, with Mr. Howard against.

Until further notice:

Mr. Rodino with Mrs. Spellman.

Mr. Eckhardt with Mrs. Burke of California.

Mr. John Burton with Mr. Del Clawson.

Mr. RUDD changed his vote from "nay" to "yea."

So the conference report was rejected.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

## GENERAL LEAVE

Mr. FOLEY. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the conference report just considered.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Washington?

There was no objection.

## LEGISLATIVE PROGRAM

(Mr. WRIGHT asked and was given permission to address the House for 1 minute.)

Mr. WRIGHT. Mr. Speaker, I take this time in order that we may announce to the Members the program for the remainder of the day and the rest of this week.

Immediately today we will take up consideration of the only other bill on the schedule, H.R. 3161, the firefighter's basic workweek. If we can finish that bill today—and we should be able to do it, under a 1-hour open rule—then tomorrow we will try to complete the remainder of the week's schedule, having removed from the program consideration of the bill, H.R. 1, Ethics in Government Act.

That measure will be considered at a later date.

We hope that tomorrow the House will be able to complete consideration of the following bills:

H.R. 11003, the White House authorizations;

H.R. 11302, the EPA authorizations, fiscal year 1979; and

H.R. 3787, the Zuni Indians Court of Claims case.

Mr. Speaker, each of those bills comes to the House under a 1-hour open rule. If we are able to complete consideration of those three bills, then we will not have a session on Friday.

## REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 1, ETHICS IN GOVERNMENT ACT OF 1977

Mr. MOAKLEY, from the Committee on Rules, submitted a privileged report (Rept. No. 95–1954), on the resolution (H. Res. 1128) providing for consideration of the bill (H.R. 1) to require candidates for Federal office, Members of the Congress, and officers and employees of the United States to file statements with the Comptroller General with respect to their income and financial transactions, which was referred to the House Calendar and ordered to be printed.

## BASIC WORKWEEK OF FEDERAL FIREFIGHTERS

Mr. MOAKLEY. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1067 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 1067

*Resolved*, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 3161) to amend title 5, United States Code, to improve the basic workweek of firefighting personnel of executive agencies, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Post Office and Civil Service, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider the amendment in the nature of a substitute recommended by the Committee on Post Office and Civil Service now printed in the bill as an original bill for the purpose of amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or to the committee amendment in the nature of a substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions.

The SPEAKER pro tempore. The gentleman from Massachusetts (Mr. MOAKLEY) is recognized for 1 hour.

Mr. MOAKLEY. Mr. Speaker, I yield the customary 30 minutes to the gentleman from Mississippi (Mr. LOTT), pending which I yield myself such time as I may consume.

Mr. Speaker, this is the rule providing for the consideration of H.R. 3161 concerning the basic workweek of Federal firefighters.

This is a 1-hour open rule.

The resolution provides for the committee amendment to be considered as an original bill for the purpose of amendment. This is the customary procedure when a substitute text is reported. Without this provision an amendment to an amendment would be ruled out of order as tertiary.

Since the adoption of a substitute would preclude any instructions in the motion to recommit, the rule makes in order a motion to recommit with or without instructions. This involves no controversy and simply protects the minority.

Mr. Speaker, at the present time Federal firefighters work an average 72-hour week. This legislation would reduce that workweek to 56 hours and, in effect, reduce the pay of these personnel.

The bill recognizes the unreasonable schedule of three 24-hour shifts. But the bill must be judged primarily on its effect on the Government.

The current schedule produces considerable dissatisfaction by requiring Federal firefighters to put in a longer workweek at lower pay than municipal firemen. As a result, each year we lose nearly one-quarter of our work force to more attractive jobs in the private sector and municipal fire departments.

In view of the highly specialized nature of their work protecting military facilities and nuclear sites, it is very important to try to retain our most experienced firefighters. This is not only a matter of public safety, there is a cost factor since the Federal Government is a self-insurer.

Minimization of loss through retention of experienced workers is a difficult factor to measure. The Congressional Budget Office felt it could not even try. But it is a factor which must weigh heavily in measuring the fiscal impact of this legislation.

I am well aware that there is controversy over this legislation. Nevertheless, the Committee on Rules has recommended an open rule. No points-of-order are waived. There are no unusual procedural factors. The rule simply makes it in order for the House to debate the legislation and to consider amendments which any Member might wish to offer.

I feel that the rule provides a fair and orderly procedure for the consideration of the bill and I urge its adoption.

Mr. LOTT. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this rule provides 1 hour of general debate for the consideration of H.R. 3161, to change the basic workweek for Federal firefighters. Under the rule the bill will be open to all germane amendments. There are no waivers of points of order in the rule. In order to preserve the normal amending process, the rule provides that the committee amendment in the nature of a substitute will be in order as an original bill for the purpose of amendment.

The primary purpose of this bill is to provide that the regularly scheduled administrative workweek of each Federal firefighter will average 56 hours per week. In addition, the bill authorizes payment of 25 percent premium pay to firefighters who have a 56-hour workweek. Under existing law, Federal firefighters are paid 25 percent premium pay for a 72-hour workweek.

The Congressional Budget Office estimates that the enactment of H.R. 3161 will result in additional costs of $6.7 million for fiscal year 1978 and $24.3 million for fiscal year 1979. These costs are based on the assumption that an additional 2,200 firefighters will be hired as a result of the reduction in the firefighters' workweek.

Mr. Speaker, I support the rule on this bill.

Mr. Speaker, I yield 5 minutes to the gentleman from Illinois (Mr. DERWINSKI).

Mr. DERWINSKI. Mr. Speaker, the only reason I am taking time under the rule, is that I feel I have a better audience now than I will in 10 or 15 minutes. I am also hopeful of having the House cast a second vote for responsibility, since it rejected the farm conference report just a few minutes ago.

Mr. Speaker, I would like to remind the Members that this bill is opposed by the administration; specifically, by the Civil Service Commission, the OMB, and the Department of Defense.

I would also like to remind the Members that, if I understood correctly, our President has called for voluntary wage and price restraints. This voluntary wage and price restraint policy will, presumably, apply to the Federal Government as well.

The President, in a very heroic fashion, has proclaimed that he will limit the annual pay increase for Federal employees this year to approximately 5.5 percent, much less than they asked for.

Mr. Speaker, if I could refer to the committee report on this measure, page 11, I would like to read from a letter from the chairman of the Civil Service Commission, Mr. Campbell, to the chairman of the committee. It reads:

> The purpose of H.R. 3161 is to reduce the hours of duty of firefighters in the Federal service without reducing their pay. * * * H.R. 3161 provides, in effect, an additional increase in hourly regular rate of pay for these employees of approximately thirty percent.

Mr. Speaker, here we are, the day after the President has called for voluntary restraint, about to take up a bill which provides for a 30-percent increase in pay for a very, very select group of Federal employees. The precedent is awesome. If this bill is passed, we will find the House Committee on Post Office and Civil Service pouring out dozens of measures for every special group of Federal employees.

Mr. Speaker, at some point we are going to be forced to draw the line. I suggest we draw the line here and now.

I suggest that this measure, which would cost $24 million in its first fiscal year impact and $35 million by fiscal year 1982, is not in and of itself a staggering sum; but the importance is that by rejecting this bill, we are saying that we want to treat all Federal employees equally. We are not going to single out a select group and give them special consideration.

It seems to me especially inappropriate the day after the President has called for voluntary wage and price controls for the House of Representatives to pass a bill providing 10,000 Federal employees with a 30-percent pay increase and with no extra work required.

Mr. Speaker, this bill was defeated in the previous Congress by a margin of approximately 20 votes. Given the caliber of the freshmen class in this Congress, given the added maturity of the Members who have returned from previous Congresses, I would hope that wisdom would prevail and the President's position would be sustained this afternoon.

Mr. LOTT. Mr. Speaker, I have no further requests for time.

Mr. MOAKLEY. Mr. Speaker, I yield 2 minutes to the gentleman from Virginia (Mr. HARRIS).

Mr. HARRIS. Mr. Speaker, it is not my intent to debate the bill on debate time for the rule. I think we ought to go ahead and adopt the rule.

I do think the point has to be made that the allegation that this somehow increases firefighters' pay by 30 percent is simply wrong. This bill does nothing more than bring into conformity the Federal hours for Federal firefighters to that which is in 95 percent of all municipal systems. It is an antiquated procedure to keep firefighters on duty 72 hours per week. This bill brings into conformity with nationwide practice the Federal firefighters, and attempts to do nothing more.

I think the rule should be adopted, and I think the bill should be passed.

Mr. MOAKLEY. Mr. Speaker, I yield such time as he may consume to the gentleman from Ohio (Mr. LUKEN).

Mr. LUKEN. Mr. Speaker, I rise today in support of the measure to reduce the regularly scheduled administrative workweek of Federal firefighters. I wholeheartedly support this bill and consider this a significant step in recognizing the extraordinary role that firefighters play to insure the safety of all citizens.

As a former mayor and council member of the city of Cincinnati I have had many occasions to observe the gallantry of the firefighters of that area. They have tremendous demands on their time and are subject to countless danger. This bill, although limited to the Federal level, is of major importance, because it is the first step to recognizing the need for reform of working conditions for America's firefighters.

At present these Federal firefighters work a 72-hour workweek with three 24-hour shifts. This bill, if enacted, would reduce this workweek to 56 hours.

It is essential that we consider the many demands put on firemen. They are subject to numerous pressures and are expected to respond at all times in a professional manner—always ready to enter the most dangerous places and take the risks for the rest of the citizens. Their job is hazardous and one of the most important community services.

We must recognize the Federal firefighters have quite a variety of responsibilities, even exceeding those requirements of municipal firefighters. We are told that they deal regularly with munitions, chemicals of an unusual nature, aircraft fuels, nuclear products, and even forest fires.

In addition the members of the Federal firefighting force are involved extensively in fire prevention.

My comments here are consistent with the statements I have made in urging the passage of a bill I have sponsored to upgrade firefighting and fire prevention and, therefore, fire protection throughout the country. This country loses 12,000 lives yearly, and we do not even know whether that figure is complete, because of the neglect of the American people and the Federal Government, and all local governments in adequately providing necessary fire protection.

Finally, the 72-hour week is outmoded. This is a throwback to conditions in municipalities that existed 20 years or more ago.

It is time we brought fire protection out of the dark ages in this country, and I believe this is a step in the right direction.

Mr. MOAKLEY. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the resolution.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. QUILLEN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 374, nays 5, not voting 55, as follows:

The Clerk announced the following pairs:

Mrs. Spellman with Mr. Del Clawson.

Mrs. Burke of California with Mr. Eckhardt.

Mr. Teague with Mr. Rahall.

Mr. Dent with Mr. Udall.

Mr. Whitley with Mr. Howard.

Mr. Van Deerlin with Mr. Runnels.

Mr. Rodino with Mr. Cochran of Mississippi.

Mr. Annunzio with Mr. Fish.

Mr. Brademas with Mr. Evans of Delaware.

Mr. Breaux with Mr. Coughlin.

Mr. Sisk with Mrs. Heckler.

Mr. Ashley with Mr. Marlenee.

Mr. Brown of California with Mr. Crane.

Mr. John Burton with Mr. Pressler.

Mr. Evans of Colorado with Mr. Treen.

Mr. Fascell with Mr. Bonior.

Mr. Phillip Burton with Mr. Diggs.

Mr. Flowers with Mr. Edwards of Alabama.

Mr. Foley with Mr. Fowler.

Mr. Rosenthal with Mr. Hightower.

Mr. Ullman with Mr. Long of Maryland.

Mr. Charles H. Wilson of California with Mr. Thornton.

Mr. McFall with Mr. Ottinger.

Mr. Moss with Mr. Maguire.

Mr. Perkins with Mr. Quayle.

Mr. BEILENSON and Mr. WEAVER changed their vote from "nay" to "yea."

So the resolution was agreed to.

A motion to reconsider was laid on the table.

Mrs. SCHROEDER. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 3161) to amend title 5, United States Code, to improve the basic workweek of firefighting personnel of executive agencies, and for other purposes.

The SPEAKER pro tempore. The question is on the motion offered by the gentlewoman from Colorado (Mrs. SCHROEDER).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 3161, with Mr. DODD in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentlewoman from Colorado (Mrs. SCHROEDER) will be recognized for 30 minutes, and the gentleman from Illinois (Mr. DERWINSKI) will be recognized for 30 minutes.

The Chair now recognizes the gentlewoman from Colorado (Mrs. SCHROEDER).

Mrs. SCHROEDER. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, the Federal Government employs approximately 11,500 civilian firefighters. About 10,500 of this number are employees of the Department of Defense. The remainder are employed by the Department of Transportation, the Nuclear Regulatory Commission, the Department of Agriculture, and the Veterans' Administration.

Federal firefighters have a variety of responsibilities which are not required of most municipal firefighters. Department of Defense firefighters, for example, must be familiar with the steps necessary to prevent and combat fires connected with munitions, exotic chemicals, aircraft fuels, and nuclear products. Department of Agriculture firefighters are responsible for dealing with the threats of fire to national forests. Nuclear Regulatory Commission firefighters must be familiar with the massive problems of fire at nuclear powerplants. The Federal Government is a self-insurer of its losses and has, as a consequence, a direct incentive to prevent fire-related losses. The responsibility for fire prevention falls on Federal firefighters and their record of fire prevention is good.

H.R. 3161 amends chapter 61 of title 5, United States Code, relating to hours of work, to prescribe a new basic workweek for Federal firefighters. Under existing law, the authority to fix the hours of work of Federal employees, including firefighters, rests with the heads of employing agencies. The typical workweek of the Federal firefighter now is 72 hours, consisting of three 24-hour shifts. Each shift contains an 8-hour period of actual work and a 16-hour period of standby status. During the standby period the firefighter has a sleeping period; however, the entire standby period may be interrupted without additional compensation not only for emergencies but for duties normally performed during the designated work period. In no case may a firefighter be away from assigned duties—that is, firefighting, fire preven-

tion or inspection tours, or standby at the firehouse—during the 24-hour shift.

Public Law 93-259, the Fair Labor Standards Act Amendments of 1974, provided a special overtime provision for employees engaged in fire protection activities or law enforcement activities. Department of Labor regulations interpreting these FLSA amendments have provided that since January 1, 1977, firefighters working over 54 hours in a week shall be entitled to time and one-half overtime. As a result of this change in the FLSA, the vast majority of non-Federal firefighters are working 54-hour workweeks or less.

Although the FLSA applies to Federal firefighters, the Department of Labor regulations do not. Instead, the Federal firefighter workweek is governed by Civil Service Commission rulings. The computation of Federal firefighter pay is much more complicated because of these rulings, because provisions of title 5 of the United States Code also come into play. The key issues of debate on H.R. 3161 required that these provisions be explained.

PREMIUM PAY

Section 5545(c)(1) of title 5, United States Code, provides that Federal employees who regularly perform substantial amounts of standby duty beyond a normal tour of duty shall receive an additional sum as compensation in lieu of overtime, night differential, Sunday and holiday pay. This sum is called premium pay. It is a percentage not to exceed 25 percent of base pay. The actual percentage of premium pay is fixed by the Civil Service Commission on the basis of overtime, nights, Sundays, and holidays worked. Irregular overtime work beyond the scheduled 72 hours results in further overtime compensation.

As a result of this requirement, many Federal firefighters receive the maximum percentage of premium pay—25 percent—which the Civil Service Commission may authorize. They receive the maximum amount because they work 72 hours per week, they work at night, they work a certain number of Sundays and holidays. Were it not for this special premium pay provision, Federal firefighters—and other Federal employees in like circumstances—would receive for their present workweek a combination of amounts, including time and one-half overtime pay, night differential pay, and Sunday and holiday pay.

FLSA REQUIREMENTS

Section 207(k) of title 29, United States Code, subjects Federal firefighters to the overtime provisions of the Fair Labor Standards Act (FLSA). Since January 1, 1977, the FLSA has required overtime pay to firefighters for all hours worked in excess of 54 per week.

Under the FLSA, overtime work is compensated for at a rate of one and one-half times the employee's regular rate of pay. For Federal firefighters, the regular rate of pay is determined by dividing the firefighter's total remuneration—base pay plus 25 percent premium pay—by 72 hours. Under a decision of the Comptroller General (G-51325, March 19, 1976), Federal firefighters who have a 72-hour workweek are considered to have been paid at their regular rate of pay for each of the 72 hours in their worksheet.

Therefore, according to the Comptroller General, firefighters are entitled to be paid only at the rate of one-half times their regular rate of pay for the 18 hours of overtime work (72-54) under the FLSA. In the case of a GS-5, step one, firefighter, for example, each of the 18 hours is worth only an extra $1.66 in FLSA overtime pay. Furthermore, since such overtime must be actually worked to be paid, a firefighter who takes annual or sick leave, performs military service, or is called to jury duty, suffers a reduction in FLSA overtime pay.

Mr. Chairman, I think a bit of history of the Federal Government's treatment of its firefighters shows that the firefighters are justified in their perception. In the mid-fifties firefighters were on a 60-hour schedule. Most municipal departments were then working 80-hour weeks. At that time, a long forgotten bureaucratic change was made. By applying the premium pay provisions of title 5 to Federal firefighters, their hours were increased (by 20 percent) to 72 per week, while their additional pay set by the premium pay statute under the same interpretation which the Civil Service Commission is still foisting off in its attempt to claim that firefighters premium pay under H.R. 3161 would be too high—was upped only 12 to 15 percent. As a result of this move, one-fifth of the firefighters were then fired as excess—because of the additional bargain hours which their brethren were now required to work. Moreover, it took tons of haggling by the firefighter unions to finally get the Civil Service Commission to increase premium pay to the 22 to 25 percent which Federal firefighters now receive. My guess is that few Federal firefighters now with the Government were around for these times. However, the misunderstanding lingers on.

The general view of Federal firefighters, as revealed during the hearings on this legislation, is that they are being treated unfairly. They work a scheduled 2 hours per week and receive about the same pay which most municipal firefighters receive for a 54-hour week. They view themselves as being required to work 18 hours of overtime for which they are paid at a rate which is a dollar less than the minimum wage. This additional 18 hours per week over which they have no control apparently is a significant factor in determining the duration of a firefighter's employment with the Federal Government. Although other benefits for Federal firefighters are similar to those offered municipal firefighters, about 23 percent of Federal firefighters left their jobs last year.

Mr. Chairman, I now want to answer the major arguments posed against H.R. 3161.

First, opponents claim that the bill is bad because it interferes with agency discretion to set hours for employees. The bill will remove part of this discretion. However, agencies will retain authority to set hours and schedules within the 56-hour framework the bill creates. Should Congress permit agencies discretion which has resulted in Federal firefighters being scheduled for a third more hours than 95 percent of the municipal firefighting work force is scheduled?

Second, opponents claim that the bill is bad because Federal firefighters already have a "great deal." That is, they do not fight as many fires as their municipal counterparts because they spend about 50 percent of their time on fire prevention, versus a municipal average of 20 percent of time. Federal firefighters do this for a couple of reasons: It would not pay the Government, as a self-insurer of losses, to have great numbers of fires. Moreover, it would not pay anyone if some of the fires which Federal firefighters have to face broke out—fires, for example, connected with armament laden military aircraft or nuclear materials. The benefit comparison that opponents use is an apples and oranges approach. Certainly, Federal firefighters can retire after 20 years; other Federal workers generally cannot. However, most municipal firefighters have 20-year retirement plans comparable to Federal firefighters.

Third, opponents claim that statutorily retaining 25 percent premium pay for Federal firefighters is unfair to other Federal employees who receive premium pay. This argument ignores the fact that all Federal employees receiving premium pay, except firefighters, do so after 40 hours per week. It also neglects the fact that if premium pay were reduced from 25 percent to the 15 percent or so that the Civil Service Commission has stated would fit a 56-hour workweek, Federal firefighters would be among the lowest paid of all firefighters. If the premium pay provision in H.R. 3161 were really as out of line as opponents have claimed, I would think that ample opportunity has been offered to propose an amendment to change the provision, but none has been offered.

Fourth, opponents claim that Federal firefighters will be getting a substantial reduction in hours for only a "slight wage decrease averaging considerably below hourly minimum wage rates." This is true. Under H.R. 3161 Federal firefighters will lose 16 of their 18 hours of FLSA overtime which they are currently working each week in excess of 54 hours at less than the minimum wage rates. The Government is getting a great deal on the paltry wages they get away with paying for 18 additional hours of work per week. When your pay amounts to peanuts in the first place, that is all you stand to lose when your hours are reduced.

Fifth, opponents claim the bill will require excessive costs to replace the firefighter hours which will be lost when the workweek is reduced. There are several points to be made on this argument. First, the Congressional Budget Office estimates that the reduction alone in FLSA overtime pay in 1979 for current firefighters will cover more than a third of the estimated costs for hiring new firefighters. Also, with hours more comparable to municipal fire departments,

we might be able to start trimming the excessive training costs for new firefighters to replace the approximate 23 percent turnover our Federal fire departments experienced last year. Moreover, if Federal fire departments had not been subject to an approximate 25 percent reduction in force during the last administration, increased personnel required to implement this bill would have been drastically reduced.

Mr. Chairman, I believe that H.R. 3161 is a sound approach to bringing Federal firefighter hours out of the Dark Ages. I urge my colleague's approval of the bill.

Mr. SKELTON. Mr. Chairman, will the gentlewoman yield?

Mrs. SCHROEDER. I am happy to yield to the gentleman from Missouri.

Mr. SKELTON. Mr. Chairman, may I ask, how many more is the few more required to be hired?

Mrs. SCHROEDER. There are about 2,200 more that will be needed.

Mr. SKELTON. Mr. Chairman, I thank the gentlewoman.

Mrs. SCHROEDER. Mr. Chairman, I would like to compliment the gentleman from Virginia (Mr. HARRIS) who has worked hard and long on this legislation and has got it through the Committee on Post Office and Civil Service and has spent many hours working in the committee on this bill.

Mr. Chairman, I yield such time as he may consume to the gentleman from Virginia (Mr. HARRIS).

Mr. HARRIS. Mr. Chairman, the bill before us today, H.R. 3161, to reduce the working hours of Federal firefighters, will simply adjust the working hours for this group of 11,500 Federal workers. Currently, the typical workweek is 72 hours, consisting of three 24-hour shifts. This bill prescribes a 56-hour workweek and will accommodate a 24-on-48-off work schedule.

The basic point of the bill is equity: most municipal firefighters, through collective bargaining, have reduced their workweek to around 56 hours a week. Federal firefighters cannot bargain over hours and the Civil Service Commission has not moved to bring their workweek in line with their municipal counterparts.

The result of the current schedule has unfortunately been frequent turnover. Last year, about 23 percent of Federal firefighters left their jobs. This means in essence, that the Federal Government is a training ground for municipal firefighters and we are losing talented individuals to protect our VA hospitals, military and other Federal installations.

H.R. 3161 has three basic provisions: First, it provides that the regularly scheduled workweek shall average 56 hours per week over a 21-day period. This would mean that overtime work in excess of 56 hours could not be regularly scheduled; second, it provides—as does current law—that each firefighter is entitled to 25 percent premium pay in lieu of all other premium pay under title 5 for the 56-hour week; and third, it clarifies the overtime pay provision and provides that each firefighter is entitled to overtime pay under title 5 for all official hours of work over the 56-hour-per-week standard.

It has been argued that this bill is somehow a salary windfall for Federal firefighters. Our committee's research has shown that not only do municipal firefighters work shorter hours, they also earn at least $500 more per year. Or stated another way, Federal firefighters now work 33 percent more hours each week than municipals but receive only 12.5 percent to 23 percent more pay. There is one further point about pay that I would like to make. The Civil Service Commission's pay comparisons are with cities with over 10,000 in population. True comparability would compare firefighter salaries with the actual locality, like our Federal blue-collar local prevailing rate system. In other words, in areas like Washington, D.C.—large metropolitan areas—municipal salaries are much higher than in a community of 10,000. It is not fair to lump all municipal salaries together in this fashion.

The facts are, that under this bill, Federal firefighters will actually lose money. The following comparison dramatically shows what the average firefighter, a GS–5, step 4 ($10,955 per year) earns under current policies and would earn under this bill:

| | |
|---|---|
| I. 72-hour weekly tour of duty (present schedule): | |
| Base pay for 40 hours | $210.80 |
| 25 percent premium pay | 52.70 |
| FLSA overtime for 18 hours | 32.94 |
| Total | 296.44 |
| II. 56-hour weekly tour under H.R. 3161: | |
| Base pay for 40 hours | $210.80 |
| 25 percent premium pay | 52.70 |
| FLSA overtime for 2 hours | 4.72 |
| Total | 268.22 |
| Loss in FLSA overtime pay | $28.22 |

There are currently 12,500 Federal firefighters in all but a dozen or so States. The Department of Defense is the largest employer of firefighters, with approximately 10,500. The Department of Transportation, the Nuclear Regulatory Commission, the Veterans' Administration and other agencies employ the remainder. These firefighters provide important protection for many Federal installations, standing guard at defense bases, veterans hospitals, some civilian airport and other Federal Establishments. While some would like to portray the firefighter as one who "stands idle" much of the time, firefighters actually have a variety of duties, including fire prevention and other fire-related services. A Federal firefighter must maintain a proficiency in a variety of subjects, ranging from the combustibility of materials to general air traffic control techniques. Firefighters are subject to hazard and are often required to work on Sundays and holidays. Our pay, benefits, and hours policies should reflect the fact that firefighters must be compensated for their knowledge, ability, and the considerable risk they incur in protecting lives and property.

It has also been argued that this bill would set up a special class of Federal employees, that other employees, like nurses and medical technicians have to work "off-hours" or nonstandard hours. To this I answer, these other groups of Federal employees are not engaged in potentially hazardous work, like firefighters. And if we should take a look at all hours and pay policies for these various groups, I invite the Civil Service Commission to submit legislation to the Congress. Speaking as one member of the Post Office and Civil Service Committee, I am sure our committee would welcome a proposal.

H.R. 3161 was the subject of complete hearings in our subcommittee on September 26, 1977 and was reported to the full committee unanimously on September 27. On January 25, it was ordered reported by a full committee vote of 18 to 4. In the last Congress, a similar bill was narrowly defeated in the House by a vote of 184 to 204. I hope that some of the misunderstandings that prevailed in the last Congress have been cleared up today and I urge my colleagues to support this bill to make more reasonable the working hours of this special group of civil servants.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I am happy to yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, the gentleman from Virginia (Mr. HARRIS) knows that in the past I have been very sympathetic to this legislation. However, I am somewhat concerned about our putting a flat limitation on the amount of overtime, whereas the gentleman mentioned that in municipal, county, and local firefighting groups there is no limitation on the hours they can work on overtime.

Mr. HARRIS. Mr. Chairman, although there was such a limitation in a previous version, there is no limitation in this bill on the amount of overtime they can work. All this bill does is require that the regularly scheduled workweek schedules out at 56 hours. If it is needed that the Federal firefighters work more overtime than that, they can be required under this bill to do so. There is no flat limitation on overtime in this bill.

Mr. ROUSSELOT. Mr. Chairman, I thank the gentleman.

Mr. DERWINSKI. Mr. Chairman, I yield 5 minutes to the gentleman from New York (Mr. GILMAN).

Mr. GILMAN. Mr. Chairman, I rise in support of H.R. 3161, a bill to reduce the basic workweek of our Federal civilian firefighters.

First of all, I would take this opportunity to compliment my colleagues, the distinguished gentlelady from Colorado (Mrs. SCHROEDER) and the gentleman from Virginia (Mr. HARRIS) for their unwavering and untiring efforts in the last Congress and this Congress in managing this legislation which in my opinion is long overdue.

The goal of H.R. 3161 is to reduce the workweek of the Federal civilian fire-

fighters, numbering some 12,000 in our Nation, from 72 hours per week to 56 hours per week. This reduction will insure for the first time comparability for Federal civilian firefighters with their municipal counterparts throughout the country. The average workweek of the typical municipal firefighter in this country, as was pointed out to the Subcommittee on Employee Ethics and Utilization during its deliberations, is less than 50 hours per week with many fire departments working as few as 42 hours per week.

Another contribution which I believe this bill will make to the betterment of firefighter working conditions is in regard to their entitlement to overtime compensation under the Fair Labor Standards Act. Currently, a Federal employee who is a firefighter is entitled to a "reduced" overtime rate of compensation under the act. The critical factor in determining overtime entitlement is the employee's work period. Where the work period is 72 hours, like that of many Federal firefighters, the base rate of pay for purposes of computing overtime is diminished when compared to the firefighter with a 54-hour workweek or the typical GS employee working 40 hours a week. As a hypothetical case, if an individual is hired to work 72 hours a week as a firefighter for a rate of $144, the base pay is determined by dividing 72—the number of hours of the work tour or work period—into 144, the weekly compensation. This yields a base pay of $2 per hour. Thus, the firefighter is paid $2 for each of the 72 hours he is on duty. In addition, the firefighter is entitled to overtime compensation under the Fair Labor Standards Act for each hour of duty exceeding 54 hours in a workweek, but since he has already been paid $2 per hour for each hour between 54 and 72, he is only entitled to $1 more per hour for the 18 hours of overtime.

It is not surprising that most firefighters find this method of computing overtime deprives them of reasonable overtime compensation and frustrates the purpose of the Fair Labor Standards Act. Under the provisions of this bill, Federal firefighters will be entitled to a fair and "real" overtime rate of compensation which will provide them with the full benefit of the Fair Labor Standards Act.

By reducing the basic workweek for Federal firefighters to 56 hours, the Federal firefighter will, like most other employees, be actually entitled to 1½ times his regular rate of pay when the length of the firefighter workweek exceeds the maximum workweek established by the Fair Labor Standards Act.

As this bill establishes a 56-hour workweek for Federal firefighters, my hypothetical firefighter hired to work a 72-hour tour of duty for $144 per week would have a base rate for purposes of overtime computation of $2.57 per hour, rather than $2 per hour when the basic workweek is 72 hours. And since this firefighter has only received the base pay for each of the 56 hours he is on duty, he would be entitled to the base pay of $2.57, plus one-half of base pay, $1.29, for each hour of work in excess of the 54 hours a week established under the Fair Labor Standards Act.

Contrary to some who argue that this legislation creates a pay bonanza for the Federal firefighter, quite the opposite is true. In the committee report on page 9, it actually shows the average Federal firefighter's pay would be reduced from $15,407 to $13,938 anually. A net reduction of $1,469 per year. This certainly is not a pay bonanza.

There are those who will also argue that there is no apparent problem of recruiting Federal civilian firefighters. However, the truth of the matter in any area of good business is the ability of an employer to maintain a stable workforce. The average turnover in Federal fire departments is 23 to 26 percent annually. The reason for this high turnover is that the Federal Government initially hires firefighters at a GS-3 level of pay and once these firefighter trainees gain sufficient experience they seek employment with the cities and towns which offer them generally higher wages for far less hours of work.

I believe that it is encumbent upon the Congress to provide the best possible fire protection for the American taxpayers' Government installations. And I submit that the best insurance of this is a stable Federal firefighter force.

Federal firefighters assume a grave responsibility, as in DOD installations where they have complex and difficult functions to discharge which do not come within the scope of responsibilities of the great majority of municipal fire companies. Combustible munitions, chemicals, and petroleum, and nuclear products essential to modern warfare must be properly stored under safety and fire prevention programs requiring careful and constant supervision. The value of the properties in storage now runs to billions of dollars, and aside from the ever-present possibility of accident, there is always the potential for terrorist or enemy attack in case of war or domestic disturbance. All these elements must be taken into consideration as essential elements all fire prevention and fighting plans.

The American taxpayer deserves the benefit of a highly motivated and qualified firefighting workforce. Anything less could prove catastrophic given the hazards and conditions described above.

Passage of H.R. 3161 would restore the element of fairness denied Federal firefighters as a result of the implementation of the 1974 FLSA amendments, and in addition immeasurably improve the morale and long term stability of personnel.

Accordingly I strongly urge my colleagues to support this most needed legislation.

Mr. DERWINSKI. Mr. Chairman, I yield myself 4 minutes.

Mr. Chairman, I find myself this afternoon once again in the interesting position of administration spokesman urging the rejection of this special interest legislation. I do not know how much longer I can shoulder this burden for the administration, but I have been looking in vain to the other side of the aisle for a member of the President's party to present the White House viewpoint.

My purpose in bringing to your attention—and particularly to the attention of my dear Democratic colleagues—the strong opposition of the Carter administration to H.R. 3161 is really to perform an act of unprejudiced political charity. The President obviously has enough problems of major consequence and does not need nor deserve the embarrassment of having a bill foisted upon him which he has determined to be not in the public interest.

Actually, there is no partisanship involved in opposing this bill. The Civil Service Commission under the Ford administration objected to the 94th Congress's version on the grounds that it afforded unjustified preferential treatment to a select group of employees. To refresh your memory, that bill was defeated in the House on August 4, 1976, by a vote of 184 to 204.

H.R. 3161 is a slightly restyled version of that legislation, but with the same underlying purpose. This legislation proposes to reduce the workweek of Federal firefighters from 72 hours to 56 hours with no corresponding reduction to premium pay. Further, it would preclude regularly scheduled overtime beyond the 56-hour week. Firefighters now receive 25 percent premium pay in addition to their basic pay, as well as overtime pay for all hours in their tour of duty in excess of the average 54-hour workweek.

The Carter administration has examined the proposal contained in H.R. 3161 and has come to the same conclusion.

In his report to the Congress on H.R. 3161, Civil Service Commission Chairman Alan K. Campbell said:

> This (legislation) would establish Federal firefighters as a favored class of employees separate from other Federal employees who perform standby duty . . . The Commission cannot support a reduction in the hours of duty of Federal firefighters without a concomitant reduction in the percentage of annual premium pay. The Commission, therefore, is strongly opposed to enactment of H.R. 3161.

The Department of Defense, which employs about 90 percent of the Federal firefighters (approximately 10,500 of 11,559 in Federal service) is strongly opposed to the bill.

In its testimony to our committee, DOD said:

> It is the position of the Department of Defense that its firefighters are fairly and adequately compensated through the 25 percent premium pay benefits, through the provisions of the Fair Labor Standards Act Amendments of 1974, and through the government comparability raises. An overabundance of qualified applicants for DOD firefighting positions nationwide further indicates that the compensation and benefits of the Federal firefighters are adequate.

The Congressional Budget Office estimates the cost of this legislation, in fiscal year 1979, to be $24.3 million. This figure would continue to rise, reaching in fiscal year 1982 an additional personnel expense of $35.1 million. This estimate is based on the assumption that because of the reduction in average work hours of

current firefighters under this bill, additional firefighters would have to be hired to maintain the current level of service.

It is estimated an additional 2,200 firefighters would have to be hired under this bill. Current civilian personnel manpower ceiling projections do not allow for these additional personnel; consequently an increase in the ceiling would be necessary.

Mr. Chairman, all in all, H.R. 3161 is a bad bill. It is unamendable and should be rejected outright as its ancestor was in the 94th Congress.

If the Members will look at the report, they will find the DOD, OMB, and the Civil Service Commission all pointing out, quite logically and in a thorough nature, why this legislation should not be passed. It sets a bad precedent. For fiscal years 1978 and 1979, it will add $31 million in unbudgeted funds. A month from now many of the Members will be posturing in favor of the balanced budget amendment. But just remember, if we defeat this bill, that is a $31 million additional deficit we do not have to allow for. There are dozens of special interest bills like this stacked up in the Committee on Post Office and Civil Service. If we let this one roll, it is "Katy bar the door," they all come rolling out. This is only 31 million immediate dollars in cost, but it is a very vital principle. This bill will complicate admnistrative procedures in the Department of Defense where most of these people are employed. I would suggest that the Members take one final look at the minority views, at the letter of Mr. Campbell, and then join me in voting the bill down.

Mr. KETCHUM. Mr. Chairman, will the gentleman yield?

Mr. DERWINSKI. I yield to the gentleman from California.

Mr. KETCHUM. I thank the gentleman for yielding.

Mr. Chairman, May I say to the gentleman that as he has stated the administration is opposed to this bill. I suppose it is an effort to fight inflation. We all heard the President's great speech the other day—I am wondering, and I must ask my friend, where then is the majority leader? He gave us a great speech just a little while ago why we must back up the President of the United States, and I am just wondering where he is.

Mr. BAUMAN. Mr. Chairman, will the gentleman yield?

Mr. DERWINSKI. I yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Chairman, I rise in support of H.R. 3161 which deals with the basic workweek of Federal firefighters. The need for legislation of this type is clear. Federal firefighters are required to work 16 hours a week more than their counterparts in municipal firefighting units while the municipal firefighters earn on an average at least $500 more per year than the Federal firefighters. Under these circumstances, it is not surprising that 23 percent of all Federal firefighters left their jobs last year.

I think it is important to point out that we are dealing with a basic case of equity for those people we hire to provide fire protection. The job of the Federal firefighter is considerably more complicated than his counterpart in municipal service. On Federal installations on which these men and women serve, they are required to deal with the hazards of munitions, exotic chemicals, aircraft fuels, and nuclear products. We should be aware of the heavy costs involved with training the replacements of those who are leaving the Federal firefighting service in order to familiarize them with the specialized techniques used to control fires among these materials. We are speaking of possible fire hazards involving sophisticated and extremely costly equipment. Approximately 90 percent of the Federal firefighters are employed by the Defense Department and are stationed at military bases around the country. It is the job of the Federal firefighters not only to contain and extinguish a fire on these installations but to prevent fires amoungst these volatile and extremely dangerous materials. They have done a commendable job in this effort, and we should consider the consequences of allowing the highly trained professional Federal firefighter to leave his post for employment elsewhere simply because his employment requirements are vastly disproportionate to those elsewhere in that profession.

In my mind we would be "penny wise and pound foolish" if we were to take the risk of a major disaster at a military installation or nuclear powerplant. I believe we should make every effort to keep the good people we have right now and I support this bill, because it will take this step by bringing the workweek of these firefighters into line with the rest of their profession.

Mr. DERWINSKI. Mr. Chairman, in order to expedite the proceedings and and as an act of diplomacy, I will relinquish the floor and urge a "no" vote.

Mrs. SCHROEDER. Mr. Chairman, I yield back the balance of my time.

Mr. DERWINSKI. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. Pursuant to the rule, the Clerk will read the committee amendment in the nature of a substitute recommended by the Committee on Post Office and Civil Service now printed in the reported bill as an original bill for the purpose of amendment.

The Clerk read as follows:

*Be it enacted by the Senate and House of of Representatives of the United States of America in Congress assembled,* That (a) chapter 61 of title 5, United States Code, relating to hours of work, is amended by inserting after section 6101 the following new section:

"§ 6102. Basic workweek of firefighters

"(a) The regularly scheduled administrative workweek of each firefighter shall be an average of 56 hours per week, computed on the basis of a period of 21 consecutive days. The duration and frequency of work-shifts occurring within such period shall be determined under regulations prescribed by the Civil Service Commission.

"(b) For the purpose of this section, 'firefighter' means an employee in an Executive agency, the duties of whose position are primarily to perform or to supervise work directly connected with the control and extinguishment of fires or the maintenance and use of firefighting apparatus and equipment. Such term does not include any employee who has a regularly scheduled administrative workweek of 40 hours which is established under section 6101(a)(2)(A) of this title."

(b)(1) Section 5545 of title 5, United States Code, is amended by adding at the end thereof the following new subsection:

"(e)(1) Each firefighter with a regularly scheduled administrative workweek established under section 6102(a) of this title shall be entitled, in lieu of premium pay provided by other provisions of this subchapter (other than premium pay provided in paragraph (2) of this subsection, to premium pay equal to 25 percent of so much of his annual rate of basic pay as does not exceed the minimum rate of basic pay for GS–10.

"(2) Hours of work officially ordered or approved in excess of the regularly scheduled administrative workweek established under section 6102(a) of this title are overtime work and shall be paid for in accordance with the rates specified in section 5542 of this title.

"(3) For the purpose of this subsection, 'firefighter' has the meaning given it in section 6102(b) of this title.".

(2) Section 5545(c)(1) of title 5, United States Code, is amended by inserting ", unless subject to subsection (e) of this section," after "shall receive".

(3) Section 5547 of title 5, United States Code, is amended by striking out "sections 5542, 5545(a)–(c), and 5546 (a), (b)" and inserting in lieu thereof "sections 5542, 5545 (a), (c) and (e), and 5546 (a) and (b)".

(4) Sections 5595(c), 8114(e), 8331(3)(C), and 8704(c) of title 5, United States Code, are each amended by striking out "section 5545(c)(1)" and inserting in lieu thereof "section 5545 (c)(1) and (e)(1)".

(c) The analysis of chapter 61 of title 5, United States Code, is amended by inserting after the item relating to section 6101 the following new item:

"6102. Basic workweek of firefighters.".

SEC. 2. The first section of this Act shall take effect at the beginning of the first applicable pay period which begins at least 60 days after the date of the enactment of this Act.

Mrs. SCHROEDER (during the reading). Mr. Chairman, I ask unanimous consent that the committee amendment in the nature of a substitute be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentlewoman from Colorado?

There was no objection.

Mr. DERWINSKI. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I will remind the Members that the White House considers this bill so bad that it is unamendable. Therefore, on behalf of 1600 Pennsylvania Avenue, I urge a "no" vote on final passage.

The CHAIRMAN. Are there any amendments? If not, the question is on the committee amendment in the nature of a substitute.

The committee amendment in the nature of a substitute was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. DODD, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee.

having had under consideration the bill (H.R. 3161) to amend title 5, United States Code, to improve the basic workweek of firefighting personnel of executive agencies, and for other purposes, pursuant to House Resolution 1067, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. DERWINSKI. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 241, nays 129, not voting 64, as follows:

[Roll No. 216]

The Clerk announced the following pairs:

Mr. Annunzio with Mr. Del Clawson.
Mrs. Spellman with Mr. Eckhardt.
Mr. Dent with Mr. Crane.
Mrs. Burke of California with Mr. Rahall.
Mr. Teague with Mr. Udall.
Mr. Whitley with Mr. Howard.
Mr. Van Deerlin with Mr. Runnels.
Mr. Rodino with Mr. Thornton.
Mr. Breaux with Mr. Maguire.
Mr. Jones of Tennessee with Mr. Diggs.
Mr. Sisk with Mr. Treen.
Mr. Brown of California with Mr. Marlenee.
Mr. Rosenthal with Mr. Ambro.
Mr. Perkins with Mr. Ullman.
Mr. Moss with Mr. Quayle.
Mr. Ashley with Mr. Beard of Tennessee.
Mr. Bingham with Mr. Byron.
Mr. Brademas with Mr. Hansen.
Mr. Hawkins with Mr. Holland.
Mr. Mikva with Mr. Fowler.
Mr. Sikes with Mr. Sarasin.
Mr. Santini with Mr. Thone.
Mr. Vander Jagt with Mr. Vanik.
Mr. Ottinger with Mr. Hammerschmidt.
Mr. Hannaford with Mr. Cochran of Mississippi.
Mr. Phillip Burton with Mr. Evans of Delaware.
Mr. Duncan of Oregon with Mr. Mattox.
Mr. Evans of Colorado with Mr. Long of Maryland.
Mr. Moffett with Mr. Edwards of Alabama.
Mr. Pursell with Mr. Stockman.
Mr. Meeds with Mr. Tucker.

So the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

## GENERAL LEAVE

Mrs. SCHROEDER. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and include extraneous material on the bill just passed, H.R. 3161.

The SPEAKER. Is there objection to the request of the gentlewoman from Colorado?

There was no objection.

## THE PLIGHT OF THE VINS FAMILY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Alabama (Mr. BUCHANAN) is recognized for 5 minutes.

● Mr. BUCHANAN. Mr. Speaker, the Soviet Government has again raised questions in the minds of people around the world with regard to its intentions on complying with international agreements. This time, the occasion is the conviction of Peter Vins, who is a Helsinki monitor in the Ukraine and the son of Georgi Vins, a long-imprisoned Baptist leader.

By signing the Final Act of the Conference on Security and Cooperation in Europe, known as the Helsinki Final Act, the Soviet Government committed itself not only to compliance with the human rights provisions, but to promoting them as well.

With the conviction and sentencing to a year at hard labor of Peter Vins, the Soviet Government has emphasized that it not only plans to disregard the promises it made at Helsinki, but also to punish those who dare call attention to this lack of compliance.

Peter Vins' crime, in Soviet terminology is "parasitism." This is a Catch-22 provision whereby the Soviet Govern-

ment first arrests an individual for expressing rights guaranteed by the Soviet Constitution and then files criminal charges against him for not working while in jail for the first conviction. Such is the case with Peter Vins.

He was first arrested in December as a result of his activities as a Helsinki monitor and for possessing two Bibles. Following his release in January he went to Siberia to visit his father, who is in a forced labor prison there. Upon his return, he was rearrested, this time for not having a job while he was in prison for the earlier conviction and while he was visiting his father.

Mr. Speaker, the courage of the Vins family over many, many years of harassment and and repression is an inspiriation to those of us in the free world who may have a tendency to take such rights as freedom of speech and religion too much for granted. Peter Vins' grandfather died in a Soviet prison camp. His crime was that of being a Baptist minister. His grandmother, at the age of 62, was sentenced to prison for 3 years for expressing her religious beliefs.

His father is serving his second 5-year term in a Soviet forced labor camp, again for daring to practice and preach his religion. Two years ago, Peter went on record as urging the Soviet Government to release Georgi Vins and to permit the exercising of religious beliefs.

And now, the Soviet Government has compounded its crime. Not only has Peter Vins been imprisoned, the Soviet Government has refused to take action on his application for emigration for himself and his family so that they might be reunited with other members of their family in the West.

Mr. Speaker, if this is the type of compliance we can expect from the Soviet Union on international agreements, I would suggest to the Department of State that it cease negotiations on the SALT Treaty immediately. For, as we have seen with the Helsinki Act, an agreement may contain many important commitments, but the value of these commitments is lost if one of the parties fails to honor them.

If the Soviet Government expects us to give credence to its promises on SALT or any other agreement now being negotiated, it must begin to comply with those agreements already signed.●

## EASTERN AIRLINES A300 AIRBUS PURCHASE RAISES QUESTIONS ABOUT NOISE REDUCTION LEGISLATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. VANIK) is recognized for 10 minutes.

● Mr. VANIK. Mr. Speaker, the airport and aircraft noise reduction bill diverts tax revenues from needed airport safety and development projects and provides a fund to the airlines for the purchase of new and more profitable aircraft. Witnesses supporting the legislation testified that the bill, in addition to helping reduce aircraft noise, would create domestic employment and help balance our trade deficits through the development of new aircraft for sale abroad. In the last week, actions by PanAm and Eastern Airlines have shown that the employment/balance-of-payments arguments are suspect. In the case of Eastern's purchases of the new A300 airbus, there are questions of unfair trade practices and excessive export financial subsidy.

The contribution that our aerospace industry makes to our export sales requires that our trade policy in this area be evenhanded. However, the United States cannot afford to have the American lead in commercial aircraft production destroyed through foreign subsidies; by bargain basement financing arrangements or other trade distorting aids to export.

In the sale of these A300 planes, however, the issue of possible unfair trade practices is so serious that Congressman GUY VANDER JAGT, a member of our subcommittee, has asked that we hold hearings on this case, and I am inclined to support that request, to examine the financial gimmickry that accompanied this sale. I note that late last year, the International Trade Commission considered initiating a 337 unfair trade practices investigation into the sales promotion effort being made on the A300, but did not proceed with a full investigation. If there have been unfair trade practices, I question why we need to provide tax revenues to assist the airlines in purchasing subsidized foreign aircraft.

I have had serious reservations about this bill since the committee began considering it on February 6. As reported, this legislation would reduce various airline users' taxes by 2 percent, and impose a separate excise tax mandated to be passed through the passengers. Airlines would then receive a credit, according to a formula, for purchasing new aircraft, or retrofitting or reengining old planes, in order to meet the new stringent Federal noise abatement standards.

The industries claimed that since the new regulations were retroactive to old aircraft, the airlines required some assistance if regulations were to be met. However, by law, the FAA is supposed to determine that noise abatement rules are economically reasonable, technologically practicable, and appropriate for the particular type of aircraft. If such a determination was made, I would like to know why the airlines need this subsidy.

Testimony during the February 6 hearing abounded with declarations that the tax benefits would increase American employment, assure the continued superiority of the American aircraft industry, and help right the U.S. balance of trade. One of the bill's sponsors testified:

> The bill is balance of payments legislation. One of the top items of export of the U.S. has long been our aerospace technology and equipment . . . The legislation will lead to the development of a new generation of aircraft and will undoubtedly spur our aerospace industry . . .

Paul R. Ignatius, president and chief executive Officer of the Air Transport Association of America, argued that by passing the bill:

> . . . You would create tens of thousands of jobs . . . You would be helping to maintain the historic leadership of the United States aircraft manufacturing industry . . . Finally, you would help the United States in its export balances program because aeorspace exports, I believe, next to agricultural exports have been the most important single category.

The airline and aircraft industries threatened that failure to pass this portion of the noise abatement bill would leave the American aircraft industry at the mercy of subsidized European aircraft industries. Within 2 months of their testimony, however, airlines placed $1.2 billion worth of orders with European aircraft industries—with options on additional purchases that will be financed in part by the $2.5 billion tax giveaway proposed by this bill.

The merit of the job creation/balance-of-payments arguments was destroyed by—

First. The announcement on April 5 that PanAm was purchasing $250 million in Rolls Royce RB211 engines for use in the new Lockheed Tristar airliners "which are to replace its aging fleet of Boeing 707's * * * Pratt and Whitney and General Electric, the two major American aircraft engine builders, both fought for the order. * * * The shift to Lockheed and Rolls Royce represents a major policy change on equipment on Pan American's part."

Second. On April 7, Eastern Airlines signed a $778 million contract for 23 new A300B twin-engine, wide-body planes produced by Airbus Industrie, a consortium of five European nations, although the engines will be U.S.-made, General Electric products. It is reported that both United and Allegheny are considering purchases of the A300B. Articles reporting the purchase indicate that this contract also includes options on 25 of the smaller A300–B10 200-seat planes plus 9 additional 244-seat versions of the A300.

Eastern's action focuses attention on the serious question of unfair trade practices and excessive export subsidies. The Eastern arrangement includes a rather intricate financing method for the sale. Airbus Industrie has allowed Eastern Airlines to use almost gratis four of the planes, worth at least $25 million each, since December, and Eastern will now hold these planes on long-term lease. The news articles further described this complicated arrangement:

> Out of the total price, $552 million will involve external financing. Airbus Industrie has agreed to arrange for $250 million of 10-year export credit financing through European banks, guaranteed by the appropriate export credit guarantee agencies. In addition, Airbus has agreed to provide about $96 million of manufacturer's subordinated financing to Eastern.

I am not in any way arguing against the purchase of foreign aircraft or parts, per se. We have dominated the world aircraft market for decades, and competition—assuming it is fair—must be

accepted. I do want to emphasize, however, that the arguments in support of diverting tax revenues from badly needed safety projects to capital for the airlines cannot be based on the promise that this will create U.S. jobs or balance our trade deficit. The recent purchases made by these American airlines show us that their arguments, weak as they are, are not even very credible.

The weakness of the airlines' arguments only adds to the turbulence disrupting the flight of this ill-begotten aid. Its flight was already threatened by the strong arguments against further subsidy. Airlines have a minimal effective Federal income tax rate, below 10 percent. In February, the Senate Finance Committee voted to extend by 1 year the time in which airlines may offset 100 percent of their tax liability with the investment tax credit. This measure could have airlines up to $50 million. Last week, the CAB agreed to allow a 3-percent increase in domestic fares, costing travelers an additional $140 million annually. What more do the airlines want?

This legislation to transfer taxpayer funds to the airline industry should be permanently grounded. When the Ways and Means Committee and the House once again debate H.A. 8729, I will urge that the bill be rejected.●

## THE MINORITY MENTAL HEALTH SUPPORT AND DEVELOPMENT PROGRAM ACT OF 1978

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. STOKES) is recognized for 10 minutes.

● Mr. STOKES. Mr. Speaker, I am today joining my congressional colleagues, Senators INOUYE and MATSUNAGA in introducing legislation which would establish within the National Institute of Mental Health in the Alcohol, Drug Abuse and Mental Health Administration an identifiable division of minority group mental health programs. The charge of such a division would be to foster development of mental health programs for the improvement of minority group mental health.

The need to establish such a division has been consistently manifested by the disproportionate representation of minorities within every negative statistical indicator of health. Moreover, the need has been further evidenced in statistics on morbidity and socioeconomic problems and in the resulting high percentage of minorities as compared to whites in correctional institutions and public inpatient psychiatric facilities. At my request, the Congressional Budget Office undertook a series of studies to examine the causes of and possible remedies for racial inequalities.

One of these studies, "Health Differentials Between White and Nonwhite Americans," published 6 months ago, found that differentials in health status between whites and nonwhites persist, despite considerable recent progress in narrowing the gap. Nonwhites still experience nearly 50 percent more bed disability, 70 percent higher infant mortality, and a life expectancy 6 years shorter than that of whites. This means that the average nonwhite male in America will not live to collect social security or to have his terminal illness paid for by medicare. While the Federal Government has attempted to address the disparity of health services between blacks and whites, blacks are still four times as likely as whites of the same age group to die of hypertension, 60 percent more likely to die of tuberculosis, 50 percent more likely to die from diabetes, and four times more likely to die from chronic kidney disease.

Educational inequality is also a factor which contributes to stress. And stress has long been recognized as a major contribution to a variety of physical and mental illnesses. According to the Congressional Budget Office's study on educational disparities, black Americans tend to have less formal schooling than white Americans. Though some strides have been made by blacks in the area of educational attainment, more than two-thirds of the white population had completed at least 12 years of school while fewer than half or 47.0 percent of the black population had. Most of the analyses of enrollment, attainment, and achievement data arrive at the same conclusion: That differences between blacks and whites along these educational measures are attributable largely to noneducational factors such as family income, parental education, socioeconomic status of the student's community and notably, the opportunities for upward mobility in the job market once he has completed his education.

Studies also show that unemployment creates stressful situations for laid-off workers and their families as well. Unfortunately, nonwhites are overrepresented in the statistics on unemployment. Although the situation of minorities in the labor force has steadily worsened since 1974, the unemployment rate for nonwhites has been about double that for whites for some time. In August 1977, the unemployment rate for whites was 6.1 percent while the rate for nonwhites was 14.5 percent. For those males 14 years of age and over who did have an income, median income in 1975 was $5,560 for blacks and $9,300 for whites. Furthermore, white males who were high school graduates had a median income in 1975 only about $100 lower than that of black males who were college graduates. Other statistics show that, compared with whites, blacks are disproportionately concentrated in the categories of jobs in which the rates of pay are lower. Blacks are underrepresented relative to whites among professionals, managers, and craftsmen; they are overrepresented in semiskilled jobs and unskilled jobs and are particularly underrepresented among administrators.

Mr. Speaker, if all these discouraging statistics are not convincing enough to prove that minorities are stress-ridden, all we need do is look at the statistics on poverty. Minorities are overrepresented in that area too. Ten percent of all American families are classified as below the poverty income level. Whereas fewer than 8.7 percent of white families are poor, in comparison, over 30 percent of black families, 34 percent of Native American families, and 21 percent of families with Spanish origin fall into this category. To be poor means not only to have less money to purchase health care; it also means a greater likelihood of an environment characterized by the overcrowded, unsafe housing, poor sanitation, and inadequate nutrition, and a lack of self-awareness which all together predispose illness. Although poverty and illness transcend racial lines, to be overrepresented in every negative indicator of socioeconomic problems, imposes severe and oftentimes unbearable internal conflicts.

The scarce number of studies done on minority mental health point to historic neglect as being culpable for minorities being overrepresented in every analysis of these inequities and to disinterest for reinforcing them. According to a former Director of the National Institute of Mental Health:

> Racism in this country is a product of more than 300 years of systematic subordination of Indians and blacks by the white majority, plus later subordination of still other groups. It pervasively influences every single institution in our society.

The plight of blacks in this country is a prime example of the effects of individual and institutional discrimination. The role of racism must be clearly understood as a phenomena in this country with its socioeconomic and intrapsychic components. It is one the basic roots of American culture. As such, it functions as part of the etiology of much of the mental illness seen in America's minority populations. Stresses endured by minorities in the United States because of racism have been unrelenting. Discrimination has limited minorities' access to housing, employment, and adequate income, severely limiting their life choices. This limitation provides minorities with a bleak choice—doomed if they actively resist and doomed if they passively accept. The outcome is internal conflicts, repressed anger and inner stress that erupt into behavior that is socially or psychologically dysfunctional. It translates into outbursts among individuals within minority communities, often against each other or in self-destructive behavior.

Consequently, minorities are disproportionately represented in statistics on abusers of alcohol and drugs. Suicide has become one of the leading causes of death among minority young adult males and the rate for black women has risen more than 80 percent in the last 20 years, surpassing that for white men and white women. Studies show that minority suicides result when the ability to cope with internalized frustration and anger at institutional racial bias breaks down. Furthermore, studies show that a nonwhite is over seven times as likely to be a victim of homicide, more than likely at the hands of another minority.

Disruptive stress as a cause of societal turmoil was documented in the Kerner

report on the riots of the sixties and recently in the preliminary report of the President's Commission on Mental Health. According to this September 1977 report:

> America's mental health problem is not limited to those individuals with disabling mental illness and identified psychiatric disorders. It also includes those people who suffer the effects of a variety of societal ills which directly affect their everyday lives. Vast numbers of Americans experience the alienation and fear, the depression and anger associated with unrelenting poverty and the institutionalized discrimination that occur on the basis of race . . . the nation must realize the terrible emotional and mental damage that poverty and discrimination cause.

Unfortunately, America's mental health service delivery system has not responded to these realities of minority mental illness. In fact, racial and cultural indifference has been operative as an impediment to quality mental health services for American Minority Groups.

Until recently, there has been minimal concern for the mental health of black Americans. This has been evident in racist stereotypes which have too often pictured blacks as being too lackadaisical and carefree to have emotional problems. Society's response to real or imagined black mental illness has been incarceration rather than medical treatment. This is manifested in the rates for blacks in correctional institutions which are over nine times greater than those for whites and over four times higher in facilities for juvenile delinquents. This data suggests vast inequities in the handling of behavior problems of persons from different social and racial backgrounds. When blacks are treated, they are either traditionally overdiagnosed or underdiagnosed. The reluctance to diagnose blacks as affectively ill is excessively compensated by the predilection to diagnose blacks as schizophrenic and more likely to be chronically ill.

In fact, until recently, psychiatrists were taught that blacks were not susceptible to depression. When blacks have been legitimately diagnosed as having emotional problems, rarely have examiners considered social, economic and environmental factors as primary contributors. Rather, psychiatrists have overstated emotional and psychological reasons why blacks have mental problems. In short, traditional methods neglected the fact that blacks undergo tremendous stress as an element of routine existence. Inner city concentration, slums, high unemployment rates, police brutality, underemployment, poverty level wages, menial employment, discrimination, and broken families are all factors which produce minority mental illness. It is no wonder that admission rates for blacks to State and County mental hospitals stand at 344 per 100,000 or more than twice the rate for whites.

Mr. Speaker, to understand the high rate for black mental patients, it is important to note that traditional mental health indicators cannot accurately measure the mental status of minorities. For example, definitions of "Pathology and Normality" are relative. It is believed by mental health professionals that an individual was "normal" to the extent that in one's lifetime one was able to "assimilate the historically hard-won wisdom of society and to experience the fruits thereof." To the extent that one had failed, one was said to be "abnormal." The inequities with which minorities are faced underline the fact that because of the historical patterns of discrimination and racism found in America relatively few minorities have experienced the fruits of assimilation into American Society.

If we are to respond to the clear mental health needs of minorities, it is crucial that we recognize the prerequisite of substantially increasing the number of minority mental health professionals who, because they share the same racial experiences, the same socioeconomic background, or similar lifestyles and value system, are more capable of accurately diagnosing the mental heath state of nonwhites. The sparcity of minority psychiatrists in this country must be corrected. No longer can this Nation tolerate a situation where the ratio of black psychiatrists per 100,000 blacks is 2.4 while the ratio for whites is 13 psychiatrists per 100,000 patients. These statistics, Mr. Speaker, in view of the documented dismal state of affairs, detail the Federal Government's historical lack of significant attention to minority manpower requirements.

The Federal answer to the appalling discrepancy between psychiatric treatment provided to white Americans and nonwhite Americans are the community mental health centers. The goal of these centers was to reduce institutionalization and effectively address the evinced need in the black community. Today there are approximately 650 centers funded at $269 million and serving 2.7 million persons. However, these centers have not achieved their goal. Admissions to public inpatient psychiatric facilities occur nearly twice as frequently among blacks as whites, and 22 percent of all such admissions are for nonwhites, whereas these centers serve a population which is 12 percent nonwhite. The location of these centers, lack of outreach, effective community communication, and a lack of racial insensitivity are all factors which undermine the effectiveness of this program.

As a result of systemic insensitivity, the mental health service delivery system in America continues to put America's minority population in a position where they are forced to experience and attempt to endure daily macro and micro insults to the person. If the system continues to perpetuate neglect, it can never truly be termed a system of care for minorities. To accurately address the status of minority mental health in this country, a definitive commitment must be made on the part of the Federal Government.

Mr. Speaker, the Minority Mental Health Support and Development Program Act of 1978 offers such a commitment by providing for the establishment of a division within the National Institute of Mental Health, the mental health needs of minority populations would receive the level of attention which they deserve. Critical support through this division would be aimed at the development of strategy to increase the minority population's mental health manpower, the study of the effects of racism upon minority and majority institutions and individuals, and the development of systems to assist minority populations in coping with the effects of racism. Moreover, bilingual and bicultural mental health programs would be developed and special and innovative programs would be directed toward the training of mental health workers in institutional settings and of mental health professionals in racial sensitivity.

Mr. Speaker, the concerns that this division are to address are currently served in part by the present center for minority group mental health programs at NIMH. However, because of limited fiscal resources and prescribed authority due to the nature of such a unit, the center is not equipped to substantively address the unique mental health needs of minorities. The center has only had the capability of funding one research and devleopment center for native Americans, one for Asian Americans, two for blacks and two for hispanics. The research and development center at Howard University, and the Charles R. Drew Post graduate School in Los Angeles, Calif., are two examples of centers which are taking a positive step toward resolving inequities in the mental health research arena. Unfortunately, these centers cannot resolve the mental health problems of all black Americans. The establishment of a clearly identifiable division is the solution.

My bill would establish a legislatively mandated minority entity which would insure the stable existence of a massive focal effort which is not subject to administrative changes. Mr. Speaker, the unique mental health needs of minority group persons are Herculean in scope and deserve concentrated attention, manpower, and support on the part of the Federal Government. The minority mental health support and Development Program Act of 1978 would provide for this vitally needed pledge.

Mr. Speaker, I cannot emphasize strongly enough the urgent need for a national commitment to improve the minority mental health in America and to eliminate institutional indifference which has pervaded America's societal structure and impaired the mental health of not only minorities but of all Americans. I strongly urge you to join me in my efforts to rid our Nation of the indifference which has been the underlying cause of many of society's social and mental ills, by your support of the Minority Mental Health Support and Development Program Act of 1978.

H.R. 12102

A bill to amend the Public Health Service Act to provide for the establishment of a Division of Minority Mental Health Programs within the National Institute of Mental Health, and for other purposes

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may be cited as the "Minority Mental

Health Support and Development Program Act of 1978."

SEC. 2. The Congress finds that—

(1) at least 39 million Americans are members of ethnic and racial minority groups;

(2) as a result of historical and present racism, minority group members are disproportionately represented within every negative statistical indicator of health morbidity and socio-economic problems and are at increased risks for mental disorders;

(3) minority group members are disproportionately represented among the Nation's mental health human resources, representing four percent of the Nation's psychiatrists while admission rates to public mental hospitals for non-whites are more than double those for whites;

(4) such phenomena as schizophrenia, alcoholism, drug abuse, homicide, and suicide are disproportionately higher for non-whites than whites, and minority income levels, housing conditions, and educational attainment, which impact upon minorities mental health, are substantially below that of our Nation as a whole, and minority individuals continue to suffer from stresses of prejudice and racism;

(5) in fiscal year 1976, despite these alarming statistics, less than seven percent of all National Institute of Mental Health research awards were of major relevance to minorities;

(6) there is administratively established within the National Institute of Mental Health the Center for Minority Group Mental Health Programs which, although the focal point for minority activities, was only able to administer in fiscal year 1977, four percent of the total National Institute of Mental Health budget for research and training, because of an inadequate budget; and

(7) the Center, considering its minimal staff and limited budget, has made remarkable strides in six years of existence, focusing upon the unique mental health needs and resources of the Nation's minority populations.

SEC. 3. Part (G) of title IV of the Public Health Service Act is amended by inserting after section 455 the following:

"DIVISION FOR MINORITY MENTAL HEALTH PROGRAMS

"SEC. 456. (a) The Secretary shall designate the Center for Minority Group Mental Health Programs of the Institute as a division of the Institute to be known as the Division for Minority Mental Health Programs (hereinafter in this section referred to as the 'Division').

"(b) The Secretary, acting through the Division shall—

"(1) support programs, including demonstration projects, with regard to the delivery of mental health services to minority populations;

"(2) develop a plan to increase the minority population's mental health manpower;

"(3) develop bilingual and bicultural mental health programs;

"(4) study the effects of racism upon minority and majority institutions and individuals;

"(5) develop systems to assist minority populations in adapting and coping with the effects of racism; and

"(6) develop special and innovative training programs aimed at the elimination of institutional racism;

"(c) The Secretary, acting through the Divisions, may carry out subsection (b) by making grants to, and entering into contracts with, professional associations, nonprofit entities, and State and local agencies.

"(d) There are authorized to be appropriated such sums as may be necessary to carry out this section.".●

## THE PRESIDENT'S URBAN POLICY STATEMENT: A GOOD START

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 5 minutes.

● Mr. REUSS. Mr. Speaker, on March 27 President Carter submitted to the Congress his proposals for a national urban policy. I commend the President for his statement. He has set in motion a policy process that if sustained holds the promise of halting the deterioration of our urban centers and improving the quality of life they offer.

It would be easy to snipe at the President's proposals. But at this early stage, this would put in jeopardy the policy process the President has initiated and ill serve our cities and their people.

No other President has endeavored to set out a comprehensive urban agenda for the Nation. To his credit, President Carter made this one of his first priorities. The commitments he has now undertaken represent significant departures from past policies. We have some benchmarks from which we can gauge our progress. Consider the following:

The President has promised to revamp existing urban aid programs to make them more consistent in their objectives and efficient in their administration, and to insure that the people most in need receive their benefits.

He has promised to initiate an urban impact review process to insure that agency program proposals and regulations do not inadvertently harm our cities.

He has requested a new executive order that will clearly direct Federal agencies to locate their facilities in cities. He has ordered more Federal procurement, including Defense Department procurement, from firms in high unemployment areas.

He has emphasized the need to preserve and rehabilitate existing infrastructure in urban areas—highways, public buildings, housing, commercial structures—rather than to tear up additional countryside. He has explicitely endorsed the objective of discouraging sprawl patterns of development in the administration of EPA's water and sewer grants.

He has proposed an incentive program to encourage States to do more to help their cities, and rightly said that this program should be reviewed when general revenue sharing comes up for renewal in 1980.

He has committed his administration to greater minority participation in Federal grants and contracts.

He has recognized the need to enlist neighborhood groups in efforts to maintain and revitalize their communities.

Above all, he has emphasized improved private sector collaboration with government at all levels to bolster local tax bases and provide jobs for those too long excluded from the mainstream economy. We lack details. But the targeted job credits, the differential 5-percent investment tax credit, and the activities proposed for the national development bank sound like steps in the right direction.

The principles the President has embraced are no mean undertakings. Yet mayors, Governors, neighborhood leaders, and others have all found some reason for discontent. I suggested that caviling at this point is not what is needed. All the real tests for the President's policies and programs lie ahead. Active White House leadership will be required to refine them and put them into effect. The President will need constructive suggestions and all the support he can get. Let us not shoot the piano player just as he has really begun to play.●

## AMERICAN DREAM ACT REINTRODUCED WITH COSPONSORS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. ANNUNZIO) is recognized for 5 minutes.

● Mr. ANNUNZIO. Mr. Speaker, I am today reintroducing the American Dream Act for myself and the following members of the Banking, Finance and Urban Affairs Committee: Mr. REUSS, Mr. ASHLEY, Mr. MINISH, Mr. MITCHELL, Mr. FAUNTROY, Mr. NEAL, Mrs. SPELLMAN, Mr. D'AMOURS, Mr. PATTISON, Mr. MATTOX, Mr. VENTO, Mr. GARCIA, Mr. HYDE, Mrs. FENWICK, Mr. STEERS, and Mr. EVANS of Delaware.

Since the original introduction of the American Dream Act on January 30 I have received letters from all over the country supporting the legislation. A vast majority of letters have come from senior citizens who see the legislation as a means of increasing their income without having to give up their homes. Since many of these senior citizens are living on fixed incomes, it is imperative that they have an alternative source of funds such as that considered under the American Dream Act in order to fight inflation.

Mr. Speaker, I have made one change in the legislation since the original introduction of the bill in order to make certain that homeowners using these two mortgages are adequately protected. I have added the language that maximum consumer safeguards shall be required in any such mortgage. This provision will make certain that in a reverse annuity mortgage a senior citizen would not lose his home if he outlived the money available under the mortgage.

The American dream has always been to own your own home and to have enough income to retire on in comfort. That is why I am calling this bill the American Dream Act. It will make that dream a more certain reality.

This double-barreled legislation will allow federally chartered savings and loan institutions to offer two types of alternative mortgages. The first, designed to help young couples and newlyweds, would be a form of graduated payment mortgages, or GPM. Monthly payments would begin at a reduced level and increase gradually over the life of the mortgage. Both the rate of increase and the interest rate would remain fixed for the duration of the loan.

Currently many young people are forced to rent or to postpone buying a

home—even though they may have a steady but small income. Their income, however, can be expected to rise and as it does, so does their ability to handle a larger mortgage payment. Under GPM, homeownership would now be possible for couples in the early years of marriage. And studies show that the impact would be tremendous. The graduated mortgage payment would allow 11 percent of current renters under the age of 35 and up to 2½ million couples to own their own homes.

The second kind of mortgage, called a reverse annuity mortgage or RAM, would permit senior citizens—many living on fixed incomes—to draw equity from their homes without having to sell. The homeowner would not only retain ownership but also receive a monthly cash payment based on the equity of his house. When the homeowner dies or decides to sell, the amount of these payments is merely deducted from the proceeds of the sale and returned to the lender.

Mr. Speaker, what happens today when these senior citizens leave the work force to live on social security or some other pension plan? In many cases inflation devours their pension income, yet that same inflation that increased the value of their homes cannot be used to make ends meet. Why should they have to wait until death to reap the economic fruits of 30 years of mortgage payments?

Under a RAM, senior citizens can live in their own homes for the rest of their lives—homes they bought and paid for. The potential is enormous. It is estimated that senior citizens currently have a net equity of $90 billion in their homes. And by the year 2000 one in four Americans will be 65 or older. The American Dream Act will help lay a foundation to deal with the problems senior citizens face and to offer a new source of income at a time when it is most needed.

I am firmly committed to the concepts of this bill. Since the American Dream Act merely grants permissive rather than mandatory authority to make the loans, I am optimistic that we can deal with it speedily, without protracted hearings. I would even attach this bill to another legislative vehicle if that could insure immediate relief for the millions of Americans who find their dreams slippery and elusive.

Mr. Speaker, the quicker we can get these mortgages on the books, the quicker we can help the people. I urge support for this bill and will do all I can to see it passed swiftly.●

## DEATH IN TRANSIT—III

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 5 minutes.

Mr. GONZALEZ. Mr. Speaker, hazardous cargoes create many kinds of dangers; some are susceptible of exploding; some pose the threat of radiation poisoning; some can burn with tremendous speed and heat; some can cause death or injury by noxious fumes; some can burn or kill by corrosive action; and some can cause death by rapid decompression, which is nearly the same as an explosion.

By far the greatest hazardous cargo disaster of all time occurred in my own home State of Texas when a shipload of ammonium nitrate exploded at Texas City, leveling a wide area near the port and killing 561 persons. This was back in 1947, and for years afterward the site of that explosion resembled a bombed-out city. That disaster remains the greatest reminder of the hazards that dangerous materials can pose but other, smaller disasters constantly press upon us the reality that we have not solved our problems. In fact, the potential for catastrophe is great and growing.

There are 320,000 miles of railroad track in this country, but only 300 Federal inspectors available to check those tracks for safety. Tracks can go literally for years without a Federal safety inspection. It has been estimated that it would cost perhaps $3 billion to put all the railroad track and roadbed in this country into first-class shape, but there is no evidence that this kind of investment is forthcoming.

One old railroad hand told me that he always had great problems in getting his company to part with a few thousand dollars to fix up dangerous track, but they always had the cash to pay for emergency operations to pick up the pieces after an accident.

You have to wonder whether the railroads are poor, or whether they really do not care about the condition of their track and equipment.

You have to wonder, because we know that tank cars being produced in the last several years are not as safe as older cars were.

Thousands of new cars were built with high-carbon steel wheels, which last a long time, but which also develop cracks if they get overheated, as they do when brakes stick. It is now illegal to use that type of wheel on tank cars, but there are still many thousands on the road, and they will remain there until a crash replacement program can be finished.

You have to wonder, because on that ill-maintained track and roadbed are running cars that are far bigger and heavier than ever used before. These supercars cause vastly more wear and tear than older cars did—and yet we know that tracks are not being as well maintained as they were decades ago. That is why the rate of derailments has actually doubled in the last 10 years.

But faulty track is not the only thing that invites disaster from trains carrying hazardous cargo.

In my home city of San Antonio there are no less than 216 railroad grade crossings. Each one of these crossings creates a collision hazard.

What is more, a train that blocks a grade crossing can cause tremendous problems for emergency personnel. A police vehicle or a fire truck cannot move through a train that is occupying a grade crossing. And some of these trains are extremely long.

The San Antonio fire chief tells me that just a few days ago he sat at a grade crossing for 22 minutes waiting for a long freight train to clear. He was not on an emergency run, but if he had been, there would have been a great problem in finding a way around that train.

It is, according to Texas law, illegal for a train to occupy a grade crossing for that length of time, but plainly that law is not being enforced. It probably will not be.

Meanwhile, we have a situation in which there could be a derailment with a spill or explosion at one of these grade crossings, but it would be immensely difficult for emergency equipment just to reach the scene—let alone deal with the problem.

San Antonio's fire department is trained and hopefully equipped to deal with hazardous cargo accidents of many kinds—but it is not possible to do this if large areas are blocked off by a long train, as can happen at no less than 216 grade crossings within the city limits.

There have been proposals in the past to have through freight trains routed around the central city of San Antonio, but clearly this would be a difficult and expensive proposition. Yet it is clear that hazardous cargoes pose a continuous threat to the community, and that this threat is compounded not only by the dangers that grade crossings create in themselves, but further in the blockage of emergency access by trains within those crossings—trains that could be stopped dead and creating enormous dangers through leaking or burning cargo.

We are confronting a situation in which it is not enough to just repair track and roadbed. We are confronting a situation in which there are 25,000 tank cars that do not meet current safety standards, and of which a mere 25 have been repaired. And we are facing a situation in which there are multiple grade crossing hazards, each one of which can make it extremely difficult for emergency vehicles to reach the scene of an accident, whether that problem involves the train or not.

As the fire chief of San Antonio suddenly realized, while sitting for 22 minutes at a downtown grade crossing, there could have been a fire on the other side, or even somewhere on the train, and he would have had a very hard time getting there. It was a sobering thought, and it ought to stand as a warning.

Texas City happened 31 years ago. It is a miracle that there has not been another such holocaust since that time. We are luckier than we deserve to be, and we cannot expect to forever escape the consequences of neglect and carelessness.

## ADEQUATE FUNDING FOR VA'S ONGOING HOSPITAL AND MEDICAL CARE PROGRAMS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. ROBERTS) is recognized for 5 minutes.

● Mr. ROBERTS. Mr. Speaker, when the President submitted his budget in January, I expressed the view that the recommended budget for hospital and medical care for veterans was deficient. There is ample evidence before the committee to show that because of lack of funds veterans, especially non-service-connected veterans, are currently being told they must seek hospitalization elsewhere. We have found that even service-connected veterans are being required to wait for extended periods of time in VA hospitals and outpatient clinics throughout the country before being able to see a physician or to receive timely laboratory services. The reason for these delays is very simple. The agency does not have the funds necessary to adequately staff its hospitals, outpatient clinics and other health care facilities. The Committee on Veterans' Affairs recommended that the President's hospital and medical care budget be increased by $400 million during the next fiscal year; however, the Budget Committee, in its markup of the first resolution, has included only $45 million in outlays above the amount requested by the President. Obviously, we have a difference of opinion as to what constitutes proper care for our veterans.

I can assure my colleagues that this has happened throughout the country, and I cite the following series of correspondence concerning the treatment of veterans at the VA hospital in Portland, Oreg., as an example of the difficulty being encountered by veterans in obtaining a timely delivery of medical services at this facility.

DISABLED AMERICAN VETERANS,
*Washington, D.C., March 22, 1978.*

JOHN D. CHASE, M.D.,
*Chief Medical Director, Department of Medicine and Surgery, Veterans Administration, Central Office, Washington, D.C.*

DEAR DR. CHASE: Enclosed are copies of correspondence from Supervisory NSO John G. Hurt of our Portland, Oregon office and veteran John W. Taylor pertaining to "the backlog problem in the audiology clinic at the Portland VA Hospital."

Since NSO Hurt indicates that the backlog results from "understaffing and appropriate funding," it is requested that necessary corrective action be taken to make available additional funding and staff at the Portland VA Hospital to remedy the intolerable situation of approximately 200 veterans on the waiting list for hearing aid evaluation.

Your early response to this request will be appreciated.

Sincerely,

NORMAN B. HARTNETT,
*National Service Director.*

---

DISABLED AMERICAN VETERANS,
*Portland, Oreg., March 8, 1978.*

Mr. NORMAN B. HARTNETT,
*National Service Director, Disabled American Veterans, National Service Headquarters, Washington, D.C.*

DEAR MR. HARTNETT: This is in response to your letter of January 23, 1978, directed to Mr. John P. Clark, Hospital Director, V.A. Hospital, Portland, Oregon, concerning the above-named veteran's difficulty in obtaining a binaural eyeglass hearing aid. In your letter you included a postscript requesting that you be advised as to the individualized attention rendered by this office regarding this veteran's request.

The backlog problem in the Audiology Clinic at the Portland V.A. Hospital was first brought to my attention by this veteran in November, 1977, and at that time I contacted the Administrative Section of the hospital and was advised that they were aware of the existing backlog and that the problem was due to understaffing and inappropriate funding. During my conversation with the Administrative Section, I suggested that they possibly readjust their budget to alleviate the extreme backlog. Subsequent to my request they have contracted fee basis physicians to work part time to reduce the current backlog. This has helped service-connected veterans waiting for tests and hearing aids; but, in my opinon, the situation still remains inadequate. The Administrative Section states that this is a budgetary problem and no further improvement is foreseen under the current appropriation set aside for this facility. They have however informed me that they are complying with Public Law 94–581 to insure that service-connected veterans are receiving priority treatment.

I have also received a copy of Mr. Taylor's letter to you dated February 21, 1978, concerning his remedy to the problem, which is additional staffing in this area. I wholeheartedly agree with his suggestion, but I am not aware as to how this can be accomplished unless additional funds are provided to improve the existing deficiency.

Sincerely,

JOHN G. HURT,
*National Service Officer.*

---

SALEM, OREG., *February 21, 1978.*

NORMAN B. HARTNETT,
*National Service Director, D.A.V., Washington, D.C.*

DEAR COMRADE HARTNETT: Not much is accomplished if one complains but does not offer a remedy. In my letter of 9 Nov. 77 I complained; now I shall suggest a remedy.

The Chief of Audiology of the Portland, Oregon, VA Hospital, Stephen A. Fausti, Ph.D., has taken an interest in my case and personally has seen me three times. First he referred me to a professional technician who replaced parts of my eyeglasses hearing aid frames. On February 8 he himself adjusted the temples and in so doing gave me great relief from the irritation I had been experiencing.

Dr. Fausti appears to have his department well organized. He is young, alert and himself a worker. However, he has one strike on his operation: He needs one or more professional people to help carry the load.

Two hundred service people are waiting for hearing tests. The administrative as well as the technical work of the department must be staggering!

Thank you for the job you are doing for the D.A.V. and for your interest in my case.

Very truly yours,

JOHN W. TAYLOR.●

---

## HEALTH AND SOCIAL SERVICES IN CONGREGATE HOUSING

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. PEPPER) is recognized for 5 minutes.

● Mr. PEPPER. Mr. Speaker, I am today introducing a bill which will provide the supportive services needed in federally funded housing for older people. Joining me as a prime cosponsor is my able and distinguished colleague, Mr. EDWARD ROYBAL, who chairs the Subcommittee on Housing and Consumer Interests, as well as other members of the Aging Committee.

We cannot deny that the Federal Government has done a great deal—although not nearly enough—to provide many forms of housing to the elderly and this need continues to be a great need. However, a "brick and mortar" approach by itself is insufficient. This approach makes no allowance for the health and social services and these people often need to avoid premature institutionalization. As a result, many older persons are forced to live their lives in what amounts to one-room prisons. With the knowledge we have concerning the needs of this deserving group, let us move forward and provide the necessary congregate services such as health, food, security services, which will enable older persons and the handicapped to live independently as long as possible.

I do not stand alone in making this proposal to you, but these recommendations have stemmed from hearings held by the Aging Committee, from practitioners in the field, and most of all from the elderly themselves.

One of the problems in the present delivery system is that services are not well coordinated and are often inaccessible because of distance and superficial barriers, thus making it impossible for the elderly to receive such services. A GAO study in Cleveland, Ohio, revealed there were 118 service providers who were serving the elderly in that city alone. It is absurd to expect persons in need of the services to weave through the bureaucratic maze in order to receive something which in the end will be of benefit to us all. Congregate services would be provided in the building in which they live and would not be necessarily dependent on distant service providers.

As the original author of title VII nutrition programs, I am aware of what can be done in neighborhoods as title VII programs alone provide daily balanced means to 400,000 elderly; however, the sad commentary to this is there are 800,000 more on the waiting list. Such waiting lists for services are not the exception but the rule. I say that to illustrate the point that here is a service which not only has the potential to provide hot meals but the potential to be the focal point for a coordinated system of services to those who live in their own homes. HUD has been able to provide meals to about 25,000 elderly in federally assisted housing. However, this is insignificant when one considers the hundreds of thousands who live in such housing.

It is a known fact that after a few short years in housing projects that these individuals often need at least one or more supportive services in order to maintain their independence. My bill brings under one roof a system that is capable of adjusting to meet the needs of those who live in assisted housing. Older people would not have to weave through the bureaucratic maze to receive their fair share.

May I remind you that some 80 percent of the elderly prefer and do live in their own homes. This group is being served by the Older Americans Act and social services funded under title XX of the Social Security Act. The gap in the delivery system is to the elderly who live in group housing situations. In public housing alone one out of every three persons is over 65. In addition to public housing are

the many other programs funded under HUD which cater solely to the elderly, housing over 600,000 older persons.

The elderly who reside in this housing are the poor or near poor who cannot afford to purchase service when it is needed. When even the most minor illness strikes, they often have to be placed in our society's warehouses for the elderly—nursing homes—that could have been provided more appropriately and less expensively in their own homes if minimal support services had been available.

Mr. Speaker, I would call your attention to a recent GAO study, which was done at my request, Home Health—The Need for a National Policy to Better Provide for the Elderly. This study stated that,

> Until older people become greatly or extremely impaired, the cost of nursing home care exceeds the cost of home care including the value of the general support services provided by family and friends.

There is no logical or rational reason why we must continue to support policies which are as counterproductive as those which perpetuate the nursing home cycle. It is time to act on a policy with a strong basis both in terms of economics and the well-being of our older citizens.

Mr. Speaker, I would be remiss not to mention KGO-TV in San Francisco and their contribution in developing the legislative recommendations that are the basis for this bill. Through their outstanding documentary "Old Age: Do Not Go Gentle", they have brought to the attention of the public and the Congress the plight of the elderly because of the lack of adequate services.

In addition, I want to thank my distinguished colleague, Congressman ROYBAL, who chairs the Housing Subcommittee of the Aging Committee, for joining with me in this important legislation and in special joint hearings today.

Our bill is not meant to take away from similar, although less comprehensive, legislation that is pending before the Congress such as the bill introduced by Senator WILLIAMS and Mr. ST GERMAIN. It does represent our commitment to do all that we can toward enactment of the strongest possible bill in this area this year.

With your permission, Mr. Speaker, for the benefit of my colleagues, I would like for my bill to be entered into the RECORD in its entirety at this point.

H.R.—

A bill to provide health and social services in a congregate setting in federally assisted housing projects for the elderly and handicapped

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

GRANTS FOR FACILITIES AND SERVICES

SECTION 1. (a) The Secretary of Housing and Urban Development shall make grants, to the extent of funds appropriated to carry out this Act, for the purposes of—

(1) financing the construction or rehabilitation of congregate facilities in existing, rehabilitated, or newly constructed federally assisted housing projects for elderly and handicapped individuals and families; and

(2) financing the provision of congregate services, through the use of such congregate facilities, for elderly and handicapped individuals and families residing in such projects and in housing located in the immediate vicinity of such projects.

(b) Any such grant shall be made to the entity responsible for the project with respect to which the grant is made.

(c) Any recipient of a grant for the construction or rehabilitation of such congregate facilities shall be entitled, upon completion of the construction or rehabilitation of such facility, to an annual grant for the provision of congregate services as long as the congregate facility and the housing project in which such facility is located continue to operate for the same purposes for which they operated when such congregate facility was initially opened.

(d) The amount of any grant made for the construction or rehabilitation of a congregate facility may be up to an amount equal to the total cost of constructing or rehabilitating such congregate facility.

(e) Any recipient of assistance under this Act shall encourage private contributions, and shall attempt to utilize financial assistance from the Department of Health, Education, and Welfare, other Federal agencies, and State and local governments to assist in the financing of construction, rehabilitation, and services assisted under this Act, and the Secretary shall in no way preclude or discourage the use of such contributions or assistance for the purpose of improving the facilities and services assisted by this Act.

(f) Any recipient of assistance under this Act shall provide outreach activities designed to inform eligible recipients of the availability and nature of the services financed under this Act.

(g) The amount of any grant made for any fiscal year for the provision of congregate services may not exceed the amount which the appropriate area agency on aging (or the appropriate State agency on aging in the case of an area in which an area agency has not been established) has certified, pursuant to regulations issued by the Secretary, is needed to meet the needs, during such fiscal year, of the elderly and handicapped individuals and families for whom the services will be offered. Such agency shall assess such needs every three years and report the findings and conclusions of such assessment to the Secretary.

(h) No grant may be made under this Act for the construction or rehabilitation of congregate facilities unless the appropriate area agency on aging in the area in which such facilities are to be located has certified, pursuant to regulations issued by the Secretary, that there is a need for such facilities; except that, in the case of an area in which such an area agency has not been established, the appropriate State agency shall make such certification.

(i) The Secretary shall, in making grants under this Act, give priority to constructing and rehabilitating congregate facilities in existing federally assisted housing projects for elderly and handicapped individuals and families.

(j) Any recipient of assistance under this Act shall, to the maximum extent practicable, employ elderly and handicapped individuals in the provision of the services financed by such assistance.

REGULATIONS AND ACCESSIBILITY OF RECORDS

SEC. 2. (a) The Secretary shall issue regulations for the purpose of assuring that all congregate facilities constructed or rehabilitated and all services provided with assistance under this Act are utilized in an economical, efficient, and effective manner for the direct benefit of elderly and handicapped individuals and families.

(b) Each recipient of a grant under this Act shall agree, as a condition of receiving such grant, to provide the Secretary with access to records and other documents made in connection with the receipt and expenditure of funds received under this Act.

AUTHORIZATIONS OF APPROPRIATIONS

SEC. 3. There are authorized to be appropriated such sums as may be necessary for the purpose of carrying out this Act.

USE OF INFORMATION CONCERNING ALTERNATIVE TECHNOLOGIES

SEC. 4. The Secretary shall obtain information from other Federal agencies, including the National Aeronautics and Space Administration, for the purpose of utilizing alternative technologies in the construction or rehabilitation of facilities, or in the provision of services, assisted under this Act. Any Federal official from whom the Secretary requests such information for such purpose shall provide such information to the Secretary.

DEFINITIONS

SEC. 5. For purposes of this Act—

(1) the term "area agency on aging" means the agency established for an area pursuant to section 304(a) of the Older Americans Act of 1965;

(2) the term "congregate facilities" means facilities utilized for the purpose of providing congregate services;

(3) the term "congregate services" means health, nutrition, food, and security services and housekeeping and chore services, and other services which are essential for independent living or which assist frail or impaired elderly or handicapped individuals and families to remain independent in their own homes where possible and thereby to avoid having to reside in nursing homes;

(4) the term "elderly and handicapped individuals and families" means individuals and families who are receiving, or are eligible for, assistance under the United States Housing Act of 1937 because of their income and age or handicapped status;

(5) the term "federally assisted housing projects for elderly or handicapped individuals and families" means any rental housing project (A) which has a substantial number of elderly or handicapped individuals and families, or both, as tenants, and (B) which receives assistance under the United States Housing Act of 1937, section 236 of the National Housing Act, section 101 of the Housing and Urban Development Act of 1965, or title V of the Housing Act of 1949, or the construction of which was assisted by a loan received pursuant to section 202 of the Housing Act of 1959;

(6) the term "Secretary" means the Secretary of Housing and Urban Development; and

(7) the term "State agency on aging" means the agency established for a State pursuant to section 304(a) of the Older Americans Act of 1965.●

## MICROWAVE HEALTH HAZARD IN THE MICROWAVE LANDING SYSTEM?

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. WEISS) is recognized for 5 minutes.

● Mr. WEISS. Mr. Speaker, the Committee on Governments Operations, of which I am a member, submitted to the House today a report entitled, "The Microwave Landing System (MLS) Controversy." I voted to approve this excellent report which concerns the integrity of the Federal Aviation Administration (FAA) in competing for design approval from the International Civil Aviation Organization (U.N.) for its version of the MILS.

However, I have grave reservations with respect to other aspects of the MLS.

I do not believe MLS development should be encouraged without a complete discussion of all controversial elements connected with this topic—specifically possible health hazards associated with the use of microwaves in the MLS.

Those who will recall the discovery of Moscow's use of microwaves to eavesdrop on personnel in our Soviet Embassy know that there is much more to be concerned with regarding microwave equipment than merely the way in which a Federal agency competes for design authority. The microwave exposure incident in Moscow emphasized the health hazards associated with this technology. There is a vital health question linked to the use or any microwave equipment: What level of microwave radiation is acceptable and will not pose a serious threat to the public?

I recently requested the FAA congressional liaison office to report to me on the filing of an environmental impact statement (EIS) on the MLS. According to the FAA there has so far been no EIS filed with Congress on the MLS. Such a statement must be made available to the public so that any question about health hazards may be openly debated.

On March 24, 1977, during a colloquy with several colleagues on the House floor when the FAA authorization (H.R. 3965) was being debated, I was advised that there was no health hazard associated with the MLS. However, I pointed out at that time—

> I would feel happier if we could have studies done in this area, so that the FAA would be subject to the same kind of studies and scrutiny that are being made of commercial utilization and other utilizations of the microwave.

It is apparent that an EIS and other studies would be invaluable in this respect.

In a highly regarded book, "The Zapping of America" by Paul Brodeur, published last year on the subject of microwaves the potential health hazards were raised in relation to another kind of air-to-ground navigation system:

> At the Naval Air Station at Quonset Point, Rhode Island, . . . three civilian employees among a group of eight technicians who were engaged in the overhaul and repair of Tactical Airborne Navigation equipment (known as TACAN), which is similar to radar in operation, either have developed cancer or have died of it since 1970. One of these men died of lung cancer in 1970; another died of cancer of the pancreas, lungs, and liver in 1973; and the third man, who left the Naval Air Station in 1973 to work on TACAN for the Federal Aviation Administration, has been found to have cancer of the pancreas, lungs, and liver.

The author points out that the man who died of pancreatic cancer was only 31 years old. This is highly unusual when one realizes that 99 percent of all reported cases of pancreatic cancer occur in people over 40, and most of them occur in people in their fifties and sixties.

It seems to me that there are serious questions which remain unanswered concerning possible microwave health hazards. There may indeed be no reason to be concerned with the MLS as a hazard to health, but the public should be assured that no such hazard exists.

Finally, I would point to the fact that a clear legislative responsibility exists here. The Government must act responsibly in assuring that the public is provided safe standards for microwave use. At present the U.S. standard for microwave radiation—based on a recommended guideline adopted by the Occupational Safety and Health Administration, the Department of Defense and the electronics industry—is 10 milliwatts per square centimeter. There is, however, compelling evidence based on the experience of other countries, that this standard is grossly inadequate. Whether or not it is an adequate standard must be determined by Congress and then a standard must be enacted into law.●

## TRIBUTE TO JEANNE THOMSON ON OCCASION OF HER RETIREMENT

(Mr. PERKINS asked and was given permission to extend his remarks at this point in the RECORD.)

● Mr. PERKINS. Mr. Speaker, the month of April is usually a joyous time because it means springtime. But this year, the arrival of April has a significance for us on the Committee on Education and Labor which I do not like to contemplate.

That is because the first of this month marked the retirement of our much beloved Miss Jeanne Thomson, a member of the committee staff for nearly a quarter century.

For many years, Jeanne Thomson's has been the first face encountered by the general public upon entering the main committee offices in the Rayburn Building. And her voice on the telephone has been the introduction to the committee by thousands and thousands of people on the Hill and elsewhere.

Until the arrival of data processing, Jeanne has been the undisputed mistress of the Committee Calendar. She had in her head a capacity for bill numbers, public laws, and details of legislative status that is unmatched.

Four chairmen of the committee have been fortunate to have her as legislative assistant: Samuel McConnell, Graham Barden, Adam Powell, and CARL PERKINS.

Because of her long service, she has a wealth of knowledge about the origins of major labor and education legislation—some of which have been obscured by the passage of time. She has been invaluable to us as a sort of "memory bank" with a high sense of humor.

And this store of knowledge contains a great deal more than the dry bones of legislative enactment. She knows the people involved, too.

I do not know of anyone who has such a wide knowledge of the people on Capitol Hill and in the executive branch. She can pick up a telephone and accomplish more with a single call than many of us can do threshing around in the bureaucracy for a week.

Jeanne is a warm, generous, and uncomplicated woman with an instinctive fondness for almost everyone she meets. She has maintained behind her desk a veritable gallery of photos of children and dogs attached to members of the committee staff.

She has compassion and gentleness enough to weep over a story of someone else's misfortune, and is tough enough to bellow all the way down the hall "Where the hell have you been" to a staff member who has not kept her informed of his whereabouts.

A native of McKeesport, Pa., Jeanne came to the committee in 1954 after first having worked for the National Association of Manufacturers.

I tried to talk Jeanne out of retiring, but her mind is made up. Although she will be at her home in Arlington, I suspect there will be many occasions in the years ahead when she will be receiving a telephone call from someone here at the committee who will want to know who introduced a certain bill back in 1967, or what the Rules Committee did with one of our bills in 1959.

In retirement, she knows she has the good wishes and the affection of all of those with whom she has worked—and the hundreds of others on the Hill who are her friends.

We are going to miss that lady.●

## FEDERAL ASSISTANCE FOR MAMARONECK HARBOR, N.Y.

(Mr. OTTINGER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

● Mr. OTTINGER. Mr. Speaker, today I am introducing legislation to relieve a terrible financial burden placed upon the village of Mamaroneck, N.Y., by the Federal Government. My bill amends the local cooperation agreement for the Mamaroneck Harbor navigation project and allows the Federal Government to pay the costs associated with the dredging of the harbor, including all costs associated with the disposal of the dredged material.

The saga of this project started 1 year ago, when the village was informed that the fiscal year 1978 budget contained $523,000 for the operation and maintenance of the Mamaroneck Harbor by the New York District, Army Corps of Engineers. The funds were to be used to dredge the east and west basins of the harbor, as well as its main channel.

News of the funding came as a relief to village officials and residents, as the harbor is the mainstay of Mamaroneck's economy and was in need of maintenance.

Last fall, during negotiations with the Army Corps over the dredging of the harbor, village officials learned that because of a local cooperation agreement authorized by Congress years ago, the village was responsible for furnishing dredge spoil disposal areas and for covering all costs associated with disposal of the dredged material if upland disposal areas were not available. At the time the original local cooperation agreement was made, these costs were minimal. The village was able to dump the dredge spoil at an upland disposal site, or it could dispose of the spoil in the Long Island Sound at a small cost to the locality.

In recent years, however, conditions have changed drastically. Environmental

concerns have prompted the closing of dumping sites in the Sound, and the development of land in and around the village has precluded the availability of open space suitable for the dumping of dredge spoil upland. If the village was to have its harbor dredged, the only alternative for dumping of the dredge spoil was a disposal site located in the open sea. It was determined that the local costs associated with dumping in the open waters would amount to roughly one-half million dollars—$500,000.

The village had several months to raise the needed funds. After a series of unsuccessful attempts to tap potential resources—local, State, and Federal—the village was forced to relinquish its prerogative to the appropriated funds and to forgo having its harbor dredged during the current fiscal year.

The corps is presently engaged in a 3-year study of the feasibility of using dredge spoil to build islands in Long Island Sound, which would provide an inexpensive avenue to disposing of the spoils. The bill I am introducing provides the necessary short-term relief to the village of Mamaroneck, pending completion of the study. Should the harbor be allowed to silt up, the entire economy of the village would suffer greatly. The village derives over $530,000 annually in property taxes on the residential, commercial, and parkland on and adjacent to the waterfront. In the harbor area, there are five boatyards which employ 153 people with annual salaries in excess of $2,171,000. Other industries which are directly related to the harbor—and which sustain the village economy—include the yacht and beach clubs with 100 full-time and 300 part-time employees.

Sales made to boating people contribute greatly to the overall receipts of the businesses in the community. Realtors in the village also depend heavily upon the prosperity of the harbor, as it is probably the greatest factor influencing sales and values of properties located away from the waterfront.

My proposal will provide immediate relief and will allow the village to continue functioning as a healthy and vital community. Hopefully, within the next 4 years, the corps will complete its study on the use of dredged material to create islands in Long Island Sound, and it will be possible to provide permanent and comprehensive relief to those small municipalities which must have their harbors maintained, but cannot afford the high costs of dumping the material in the open sea.

The complete text of the bill follows:

H.R. 12064

A bill to modify the project at Mamaroneck Harbor, New York, relating to the Federal share of the maintenance costs of the project

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the navigation project at Mamaroneck Harbor, New York, authorized by the first section of the Act entitled "An Act authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes", approved September 22, 1922 (42 Stat. 1038), the first section of the Act entitled "An Act authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes", approved August 30, 1935 (49 Stat. 1029), and section 101 of the River and Harbor Act of 1960 (74 Stat. 480) is hereby modified to provide that the Federal share of the cost of any dredging necessary to maintain such project, including the cost of the disposal of any dredged material resulting from such dredging, shall be 100 per centum.●

## LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. JONES of North Carolina (at the request of Mr. WRIGHT), for April 10 and 11, on account of official business.

Mr. RODINO (at the request of Mr. WRIGHT), for today, on account of illness.

## SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. LIVINGSTON) to revise and extend their remarks and include extraneous material:)

Mr. COLLINS of Texas, for 30 minutes, on April 13.

Mr. KEMP, for 5 minutes, today.

Mr. BUCHANAN, for 5 minutes, today.

(The following Members (at the request of Mr. AKAKA) and to revise and extend their remarks and include extraneous matter:)

Mr. VANIK, for 10 minutes, today.

Mr. STOKES, for 10 minutes, today.

Mr. REUSS, for 5 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 5 minutes, today.

Mr. CONYERS, for 5 minutes, today.

Mr. LE FANTE, for 5 minutes, today.

Mr. ROBERTS, for 5 minutes, today.

Mr. PEPPER, for 5 minutes, today.

Mr. WEISS, for 5 minutes, today.

## EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Mr. LIVINGSTON) and to include extraneous matter:)

Mr. FINDLEY.

Mr. MCKINNEY.

Mr. MOORE.

Mr. BEARD of Tennessee in two instances.

Mr. COLLINS of Texas in three instances.

## SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 2424. An act to amend the Act incorporating the American Legion so as to redefine eligibility for membership therein; to the Committee on the Judiciary.

## ENROLLED BILL AND JOINT RESOLUTION SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill and a joint resolution of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 9179. An act to amend the Foreign Assistance Act of 1961 with respect to the activities of the Overseas Private Investment Corporation; and

H.J. Res. 578. Joint resolution authorizing the President to proclaim the third week of May of 1978 and 1979 as "National Architectural Barrier Awareness Week".

## ADJOURNMENT

Mr. AKAKA. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 7 o'clock and 38 minutes p.m.), the House adjourned until tomorrow Thursday, April 13, 1978, at 11 o'clock a.m.

## EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

3844. A letter from the Director, Office of Management and Budget, Executive Office of the President, transmitting a cumulative report on rescissions and deferrals of budget authority as of April 1, 1978, pursuant to section 1014(e) of Public Law 93–344 (H. Doc. No. 95–319); to the Committee on Appropriations and ordered to be printed.

3845. A letter from the Director of Legislation, Department of the Navy, transmitting notice of the Navy's intention to sell the vesssel *Tawakoni (AFT–114)* to the Republic of China, pursuant to 10 U.S.C. 7307; to the Committee on Armed Services.

3846. A letter from the Director of Legislation, Department of the Navy, transmitting notice of the Navy's intention to sell the vessel *William R. Rush (DD–714)* to the Republic of Korea, pursuant to 10 U.S.C. 7307; to the Committee on Armed Services.

3847. A letter from the Counsel, National Railroad Passenger Corporation, transmitting a report on the Corporation's activities under the Freedom of Information Act during calendar year 1977, pursuant to 5 U.S.C. 552(d); to the Committee on Government Operations.

3848. A letter from the Acting Chairman, U.S. Nuclear Regulatory Commission, transmitting a plan for research to improve the safety of light-water nuclear power plants, pursuant to section 205 of the Energy Reorganization Act of 1974, as amended (91 Stat. 1482); to the Committee on Interior and Insular Affairs.

3849. A letter from the Under Secretary of Energy, transmitting a report on the study of the use of the Barnwell Nuclear Fuel Plant located in South Carolina in support of the nonproliferation objectives of the United States, pursuant to section 106(d) of Public Law 95–238; to the Committee on Science and Technology.

3850. A letter from the Chairman, U.S. Nuclear Regulatory Commission, transmitting the 11th report on abnormal occurrences at licensed nuclear facilities, pursuant to section 208 of Public Law 93–438; jointly, to the Committees on Interior and Insular Affairs, and Interstate and Foreign Commerce.

3851. A letter from the Secretary of Housing and Urban Development, transmitting a semiannual report on State implementation of energy conservation standards for buildings, pursuant to section 311 of Public Law 94–385; jointly, to the Committees on Interstate and Foreign Commerce, and Banking, Finance and Urban Affairs.

3852. A letter from the Attorney General, transmitting a draft of proposed legislation to clarify and revise various provisions of title 28 of the United States Code relating to the judiciary and judicial procedure regarding judicial review of international trade matters and for other purposes; jointly, to the Committees on the Judiciary, and Ways and Means.

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. SISK: Committee on Rules. House Resolution 1126. Resolution providing for the consideration of H.R. 3787. A bill to direct the Secretary of the Interior to purchase and hold certain lands in trust for the Zuni Indian Tribe of New Mexico; to confer jurisdiction on the Court of Claims with respect to land claims of such tribe; and to authorize such tribe to purchase and exchange lands in the States of New Mexico and Arizona (Rept. No. 95–1050). Referred to the House Calendar.

Mr. DODD: Committee on Rules. House Resolution 1127. Resolution providing for the consideration of H.R. 11003. A bill to clarify the authority for employment of personnel in the White House Office and the Executive Residence at the White House, to clarify the authority for employment of personnel by the President to meet unanticipated needs, and for other purposes. (Rept. No. 95–1051). Referred to the House Calendar.

Mr. BROOKS: Committee on Government Operations. Report on the Microwave Landing System (MLS) controversy (Rept. No. 95–1052). Referred to the Committee of the Whole House on the State of the Union.

Mr. BROOKS: Committee on Government Operations. Report on FAA determination of "No Hazard" for structures near airports. (Rept. No. 95–1053). Referred to the Committee of the Whole House on the State of the Union.

Mr. BOLLING: Committee on Rules. House Resolution 1128. Resolution providing for the consideration of H.R. 1. A bill to require candidates for Federal office, Members of the Congress, and officers and employees of the United States to file statements with the Comptroller General with respect to their income and financial transactions. (Rept. No. 95–1054). Referred to the House Calendar.

## PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ULLMAN:

H.R. 12050. A bill to amend the Internal Revenue Code of 1954 to provide a Federal income tax credit for tuition; to the Committee on Ways and Means.

By Mr. RANGEL (for himself and Mr. CONABLE):

H.R. 12051. A bill relating to the application of certain provisions of the Internal Revenue Code of 1954 to specified transactions by certain public employee retirement systems created by the State of New York or any of its political subdivisions; to the Committee on Ways and Means.

By Mr. ANNUNZIO (for himself, Mr. REUSS, Mr. ASHLEY, Mr. MINISH, Mr. MITCHELL of Maryland, Mr. FAUNTROY, Mr. NEAL, Mrs. SPELLMAN, Mr. D'AMOURS, Mr. PATTISON of New York, Mr. MATTOX, Mr. VENTO, Mr. GARCIA, Mr. HYDE, Mrs. FENWICK, Mr. STEERS, and Mr. EVANS of Delaware):

H.R. 12052. A bill to authorize the Federal Home Loan Bank Board to allow Federal savings and loan associations to issue graduated payment and reverse annuity mortgage instruments; to the Committee on Banking, Finance and Urban Affairs.

By Mr. BROOKS (for himself, Mr. FOUNTAIN, Mr. HORTON, and Mr. WYDLER):

H.R. 12053. A bill to reorganize the executive branch of the Government and increase its economy and efficiency by establishing Offices of Inspector General within the Departments of Agriculture, Commerce, Housing and Urban Development, the Interior, Labor, and Transportation, and within the Community Services Administration, the Environmental Protection Agency, the General Services Administration, the National Aeronautics and Space Administration, the Small Business Administration, and the Veterans' Administration, and for other purposes; to the Committee on Government Operations.

By Mr. CARNEY:

H.R. 12054. A bill to amend title 38, United States Code, to authorize the Veterans' Administration to transport to the place of burial the remains of persons who die while receiving care at State veterans' homes and hospitals with which the Administrator of Veterans' Affairs has contracted for services; to the Committee on Veterans' Affairs.

By Mr. DINGELL (for himself, Mr. OTTINGER, Mr. WALGREN, and Mr. GORE):

H.R. 12055. A bill to amend the Energy Policy and Conservation Act to establish the means for obtaining both short-range and long-range comprehensive energy policy analyses; to the Committee on Interstate and Foreign Commerce.

By Mr. DRINAN (for himself, Mr. FOWLER, Mr. GARCIA, Mr. GLICKMAN, Mr. LUKEN, Mr. PATTERSON of California, Mr. ROSE, Ms. SCHROEDER, Mr. SHARP, Mr. STOKES, and Mr. TSONGAS):

H.R. 12056. A bill to provide additional assistance to small business concerns in acquiring procurement information and contracts from the United States; to the Committee on Small Business.

By Mrs. FENWICK (for herself, Mr. KRUEGER, Mr. MARTIN, Mr. GOLDWATER, Mr. STOCKMAN, Mr. KEMP, Mr. VANDER JAGT, Mrs. COLLINS of Illinois, Mr. CEDERBERG, and Mr. EVANS of Delaware):

H.R. 12057. A bill to amend the Internal Revenue Code of 1954 to allow certain married individuals who file separate returns to be taxed as unmarried individuals; to the Committee on Ways and Means.

By Mr. JONES of Tennessee:

H.R. 12058. A bill to establish an Office of Rural Health within the Department of Health, Education, and Welfare, and to assist in the development and demonstration of rural health care delivery models and components; to the Committee on Interstate and Foreign Commerce.

By Mr. KREBS:

H.R. 12059. A bill to provide that the acreage limitations, the residency requirements, if any, and the excess land provisions of the Federal reclamation laws shall not apply in the case of certain contracting entities served by the Kings River and Tulare Lake Basin project, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. LEHMAN (for himself, Mr. ROUSSELOT, Mrs. SCHROEDER, Mr. CORCORAN of Illinois, Mr. GILMAN, Mr. ALEXANDER, Mr. BEVILL, Mr. EDGAR, Mr. EDWARDS of California, Mr. EDWARDS of Oklahoma, Mr. FASCELL, Mr. FLOOD, Mr. GUYER, Mr. HARRIS, Mr. LLOYD of California, Mr. REUSS, Mr. SKELTON, and Mr. SIMON):

H.R. 12060. A bill to amend title 13, United States Code, to provide for the review of Federal authority for the collection of statistical information, to require certain information to be included in committee reports accompanying legislation in which there is provided Federal authority for the collection of information, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. MIKVA (for himself, Mr. COCHRAN of Mississippi, Mr. MURPHY of Pennsylvania, Mr. NOLAN, and Mr. RYAN):

H.R. 12061. A bill to correct inequities in certain sales representatives practices, to provide protection for certain sales representatives terminated from their accounts without justification, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. MIKVA (for himself and Mr. GILMAN):

H.R. 12062. A bill to amend the Social Security Act and the Internal Revenue Code of 1954 to provide that disability insurance benefits and the medicare program shall be financed from general revenue (pursuant to annual authorizations) rather than through the imposition of employment and self-employment taxes as at present, and to adjust the rates of such taxes (for purposes of financing the OASI program) accordingly; to the Committee on Ways and Means.

By Mr. MOORE:

H.R. 12063. A bill to protect American producers of fruits, vegetables, and other crops from unfair competition relating to the use of pesticides; to the Committee on Agriculture.

By Mr. OTTINGER:

H.R. 12064. A bill to modify the project at Mamaroneck Harbor, N.Y., relating to the Federal share of the maintenance costs of the project; to the Committee on Public Works and Transportation.

By Mr. PEPPER:

H.R. 12065. A bill to amend the medicare program to provide for reimbursement for certain extended care services; to the Committee on Ways and Means.

By Mr. PERKINS:

H.R. 12066. A bill to authorize appropriations for the construction of certain highways in accordance with title 23 of the United States Code, for highway safety, for mass transportation in urban and in rural areas, and for other purposes; to the Committee on Public Works and Transportation.

H.R. 12067. A bill authorizing the construction of certain flood control facilities on the Lower Knox Creek, Kentucky; to the Committee on Public Works and Transportation.

By Mr. ROONEY:

H.R. 12068. A bill to extend provisions of the Noise Control Act of 1972, as amended, for 1 year; to the Committee on Interstate and Foreign Commerce.

By Mr. ROONEY (by request):

H.R. 12069. A bill to extend provisions of the Noise Control Act of 1972, as amended, for 2 years; to the Committee on Interstate and Foreign Commerce.

By Mr. RONCALIO:

H.R. 12070. A bill to authorize the Secretary of the Interior to construct, operate, and maintain modifications of the existing Buffalo Bill Dam and Reservoir, Shoshone Project, Pick-Sloan Missouri basin program, Wyoming, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. ST GERMAIN:

H.R. 12071. A bill to amend the Internal Revenue Code of 1954 to allow individuals a refundable tax credit for amounts of wages and other compensation lost as a result of an emergency or major disaster; to the Committee on Ways and Means.

By Mr. ST GERMAIN (for himself and Ms. OAKAR):

H.R. 12072. A bill to provide for the furnishing of congregate housing services under the U.S. Housing Act of 1937; to the Committee on Banking, Finance and Urban Affairs.

By Mr. STAGGERS (by request):

H.R. 12073. A bill to amend the Communications Act of 1934 to extend and improve the provisions of such act relating to long-term financing for the Corporation for Public Broadcasting and relating to certain grant programs for public telecommunications, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. THONE:

H.R. 12074. A bill to establish the natural resources conservation program; to the Committee on Agriculture.

H.R. 12075. A bill to amend the Public Health Service Act to provide for revision of the National Institute on Aging; to the Committee on Interstate and Foreign Commerce.

By Mr. THONE (for himself and Mrs. SMITH of Nebraska):

H.R. 12076. A bill to amend the Internal Revenue Code of 1954 to authorize a tax credit for certain expenses of providing higher education; to the Committee on Ways and Means.

By Mr. WATKINS:

H.R. 12077. A bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to provide assistance for the prevention and detection of arson; to the Committee on the Judiciary.

Mr. ULLMAN (by request):

H.R. 12078. A bill to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to provide greater equity and simplicity, and for other purposes; to the Committee on Ways and Means.

By Mr. WAGGONNER (for himself, Mr. COLLINS of Texas, and Mr. LLOYD of California):

H.R. 12079. A bill to eliminate the reduction in social security benefits for spouses and surviving spouses receiving certain Government pensions, as recently added to title II of the Social Security Act by section 334 of the Social Security Amendments of 1977; to the Committee on Ways and Means.

By Mr. WAGGONNER (for himself, Mr. PICKLE, Mr. HOLLAND, Mr. FRENZEL, Mr. NOLAN, Mr BURLESON of Texas, Mr. ERTEL, Mr. SAWYER, Mr. JOHN L. BURTON, Mr. BROWN of Ohio, Mr. ROSE, Mr. MCCLOSKEY, Mr. COUGHLIN, Mr. LENT, and Mr. NEDZI);

H.R. 12080. A bill to defer from income certain amounts deferred pursuant to State or local public employee deferred compensation plans; to the Committee on Ways and Means.

By Mr. WEISS (for himself, Mr. ADDABBO, Mr. AKAKA, Mr. ANDERSON of Illinois, Mr. ANNUNZIO, Mr. AUCOIN, Mr. BAFALIS, Mr. BAUCUS, Mr. BEDELL, Mr. BINGHAM, Mr. BLANCHARD, Mr. BOLAND, Mr. BROWN of Michigan, Mr. BUCHANAN, Mr. BURKE of Florida, Mrs. BURKE of California, Mr. JOHN L. BURTON, Mr. PHILLIP BURTON, Mr. CARNEY, Mrs. CHISHOLM, Mr. CLEVELAND, Mr. COCHRAN of Mississippi, Mr. COHEN, Mrs. COLLINS of Illinois, and Mr. CONTE):

H.R. 12081. A bill to extend to all unmarried individuals the full tax benefits of income splitting now enjoyed by married individuals filing joint returns; and to remove rate inequities for married persons where both are employed; to the Committee on Ways and Means.

By Mr. WEISS (for himself, Mr. CONYERS, Mr. D'AMOURS, Mr. DANIELSON, Mr. DELLUMS, Mr. DIGGS, Mr. DORNAN, Mr. DOWNEY, Mr. DRINAN, Mr. DUNCAN of Tennessee, Mr. EDGAR, Mr. EDWARDS of California, Mr. EILBERG, Mr. ERTEL, Mr. EVANS of Georgia, Mr. FARY, Mr. FASCELL, Mr. FINDLEY, Mr. FLORIO, Mr. FORD of Tennessee, Mr. FRASER, Ms. HOLTZMAN, Mr. HORTON, and Mr. HUGHES):

H.R. 12082. A bill to extend to all unmarried individuals the full tax benefits of income splitting now enjoyed by married individuals filing joint returns; and to remove rate inequities for married persons where both are employed; to the Committee on Ways and Means.

By Mr. WEISS (for himself, Mr. HYDE, Mr. JEFFORDS, Mr. KASTENMEIER, Mr. KEMP, Mr. KREBS, Mr. LAFALCE, Mr. LEHMAN, Mr. LENT, Mr. LOTT, Mrs. LLOYD of Tennessee, Mr. MCCLOSKEY, Mr. MCCORMACK, Mr. MCDADE, Mr. MCDONALD, Mr. MCKINNEY, Mr. MARLENEE, Mr. MAZZOLI, Ms. MIKULSKI, Mr. MILLER of Ohio, Mr. MILLER of California, Mr. MINETA, Mr. MITCHELL of Maryland, Mr. MOAKLEY, and Mr. MOFFETT):

H.R. 12083. A bill to extend to all unmarried individuals the full tax benefits of income splitting now enjoyed by married individuals filing joint returns; and to remove rate inequities for married persons where both are employed; to the Committee on Ways and Means.

By Mr. WEISS (for himself, Mr. MOLLOHAN, Mr. MOSS, Mr. MURPHY of Pennsylvania, Mr. MURPHY of New York, Mr. NEAL, Mr. NIX, Mr. OTTINGER, Mr. PANETTA, Mr. PEASE, Mr. PATTEN, Mr. PATTERSON of California, Mr. PEPPER, Mr. RANGEL, Mr. RICHMOND, Mr. RINALDO, Mr. RODINO, Mr. ROE, Mr. ROSE, Mr. ROSENTHAL, Mr. ROYBAL, Mr. RUNNELS, Mr. RYAN, and Mr. ST GERMAIN):

H.R. 12084. A bill to extend to all unmarried individuals the full tax benefits of income splitting now enjoyed by married individuals filing joint returns; and to remove rate inequities for married persons where both are employed; to the Committee on Ways and Means.

By Mr. WEISS (for himself, Mr. SARASIN, Mr. SCHEUER, Mrs. SCHROEDER, Mr. SEBELIUS, Mr. SEIBERLING, Ms. SPELLMAN, Mr. STEERS, Mr. STUDDS, Mr. THONE, Mr. WAMPLER, Mr. WAXMAN, Mr. WHALEN, Mr. WHITEHURST, Mr. BOB WILSON, Mr. CHARLES H. WILSON of California, Mr. WINN, Mr. WOLFF, Mr. RAILSBACK, Mr. YATRON, Mr. YOUNG of Alaska, and Mr. YOUNG of Florida):

H.R. 12085. A bill to extend to all unmarried individuals the full tax benefits of income splitting now enjoyed by married individuals filing joint returns; and to remove rate inequities for married persons where both are employed; to the Committee on Ways and Means.

By Mr. WYDLER:

H.R. 12086. A bill to amend the Federal Aviation Act of 1958 to authorize U.S. international air carriers to carry domestic traffic between U.S. cities on flights operated in foreign air transportation; to the Committee on Public Works and Transportation.

By Mr. ZABLOCKI (for himself and Mr. FOLEY) (by request):

H.R. 12087. A bill to authorize the establishment of an international emergency wheat reserve, and for other related purposes; jointly, to the Committees on Agriculture, and International Relations.

By Mr. DRINAN:

H.R. 12088. A bill to amend title 28 of the United States Code to authorize the payment of reasonable attorney fees and expenses to the prevailing party (other than the United States) in any civil action brought by or against the United States, and for other purposes; to the Committee on the Judiciary.

By Mr. FISHER:

H.R. 12089. A bill to establish a Potomac River Shoreline Area Commission for the purpose of developing a plan for the cooperative management by Federal, State, District of Columbia, and local authorities of certain areas along the Potomac River, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. FISHER (for himself, Mr. CONABLE, Mr. MILLER of Ohio, Mr. MURPHY of Pennsylvania, Mr. O'BRIEN, Mr. PATTISON of New York, Mr. PEPPER, Mr. QUIE, Mr. QUILLEN, Mr. REUSS, Mr. ROE, Mr. SAWYER, Mr. STEIGER, Mr. THOMPSON, Mr. TUCKER, Mr. VANDER JAGT, Mr. VANIK, Mr. WALKER, Mr. WHALEN, and Mr. WHITEHURST):

H.R. 12090. A bill to amend the Internal Revenue Code of 1954 to allow the charitable deduction to taxpayers whether or not they itemize their personal deductions; to the Committee on Ways and Means.

By Mr. FISHER (for himself, Mr. CONABLE, Mr. GREEN, Mr. LOTT, Mr. PREYER and Mr. RANGEL):

H.R. 12091. A bill to amend the Internal Revenue Code of 1954 to allow the charitable deduction to taxpayers whether or not they itemize their personal deductions; to the Committee on Ways and Means.

By Mr. GRADISON (for himself, Mr. EVANS of Georgia, Mr. KASTEN, Mr. KEMP, Mr. MOORE, Mr. BROYHILL, Mr. GLICKMAN, Mr. PATTERSON of California, and Mr. WALSH):

H.R. 12092. A bill to amend the Internal Revenue Code of 1954 to provide for automatic cost-of-living adjustments in the income tax and withholding rates; to the Committee on Ways and Means.

By Mr. GREEN:

H.R. 12093. A bill to amend title XIX of the Social Security Act to provide that certain handicapped individuals shall be eligible for medical assistance; to the Committee on Interstate and Foreign Commerce.

By Mr. KOSTMAYER (for himself, Mr. LUNDINE, Mr. MCHUGH, Mr. GEPHARDT, Mr. GAYDOS, Mr. BONIOR, Mr. LAFALCE, Mr. CORRADA, Mr. OTTINGER, Mr. EDGAR, Mr. VENTO, Mr. MARKEY, Mr. ERTEL, Mr. SEIBERLING, Mr. WEAVER, Mr. PEASE, Mr. PATTISON of New York, Mr. HARRINGTON, Mr. WEISS, Mr. PATTERSON of California, Mr. NOWAK, Mr. RANGEL, Mr. BEDELL, Mrs. SPELLMAN, and Mrs. CHISHOLM):

H.R. 12094. A bill to preserve jobs and stabilize communities by facilitating employee, or employee-community, ownership of concerns that would otherwise close down or move out of the community, and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

By Mr. LAGOMARSINO (for himself and Mr. GOLDWATER):

H.R. 12095. A bill to provide for the protection and preservation of a certain area in the Santa Monica Mountains in the State of California under a greenline park and preserve system established and administered by State and local governments with Federal assistance, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. LEACH:

By Mr. WHITEHURST (for himself and Mr. MADIGAN):

H.J. Res. 849. Joint resolution calling for protection of international waters from further pollution; to the Committee on International Relations.

By Mr. HANSEN (for himself, Mr. MURPHY of New York, and Mr. AMMERMAN):

H. Con. Res. 557. Concurrent resolution expressing the sense of the Congress with regard to the disposition by the United States of any right to, title to, or interest in the propery of Canal Zone agencies and any real property located in the Canal Zone; to the Committee on Merchant Marine and Fisheries.

By Mr. CORNWELL (for himself, Mr. GOODLING, Mr. MCCLOSKEY, and Mr. CHARLES WILSON of Texas):

H. Res. 1129 Resolution expressing the sense of the House of Representatives with respect to the killing of some 1,000 dolphins by Japanese fishermen in February 1978, and encouraging the Government of Japan to reassess its policy in permitting such killing; to the Committee on International Relations.

By Mr. TUCKER (for himself, Mr. WINN, Mr. SEBELIUS, Mr. CEDERBERG, Mr. ENGLISH, Mr. QUAYLE, Mr. MCCORMACK, Mr. FRASER, Mr. EVANS of Georgia, Mr. BUTLER, Ms. HOLTZMAN, Mr. CARR, Mr. HEFTEL, and Mr. PATTERSON of California):

H. Res. 1130. Resolution expressing the sense of the House of Representatives that the study provided for by section 4(d) of the International Investment Survey Act of 1976 be completed not later than December 31, 1978; to the Committee on International Relations.

## PETITIONS, ETC.

Under clause 1 of rule XXII,

441. The SPEAKER presented a petition of the Board of Trustees, Michigan State University, East Lansing, Mich., relative to extending the time period for ratification of the Equal Rights Amendment; which was referred to the Committee on the Judiciary.

## AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 1

By Mr. DANIELSON:

Page 2, line 21, insert "or the Sergeant at Arms of the House of Representatives" after "Clerk".

Page 21, line 15, insert "(other than from the United States Government)" after "income".

Page 22, line 11, strike out "value and identity" and insert in lieu thereof "identity of the source and a brief description".

Page 22, line 13, strike out "(other than from the United States Government)".

Page 22, strike out lines 16 through 23.

Page 23, line 4, insert "personal" after "each".

Page 23, line 14, strike out "except that the identity of the recipient of" and insert in lieu thereof "excluding".

Page 23, line 16, add a period after "1954".

Page 23, strike out line 17.

Page 26, lines 2 and 3, strike out ", and is not in any way, directly or indirectly, related to".

Page 26, line 4, insert "and" after "source,".

Page 26, line 5, strike out ", and the" and insert in lieu thereof "or the estimated".

Page 26, lines 7 and 8, strike out ", and is not in any way, directly or indirectly, related to".

Page 26, line 9, strike out "amount and identity" and insert in lieu thereof "identity of the source and a brief description".

Page 27, line 19, strike out "Campaign receipts" and insert in lieu thereof "Political campaign funds received by a reporting individual or political campaign expenditures of such individual".

Page 35, line 20, strike out "bequest and other forms of inheritance" and insert in lieu thereof "inheritances".

Page 36, line 19, strike out "and".

Page 36, line 25, strike out the period and insert in lieu thereof "; and ".

Page 36, line 19 following the semicolon strike " and "

Page 36, line 25: After "family" strike the period and insert "; and

Page 36, add the following after line 25:

(7) "reimbursement" means any payment or other thing of value received, directly or indirectly, by a reporting individual, other than gifts, to cover travel-related expenses of such individual other than those which are—

(A) provided by the United States or the District of Columbia;

(B) required to be reported by the reporting individual under section 7342(c)(3) of title 5 of the United States Code; or

(C) required to be reported under section 304 of the Federal Election Campaign Act of 1971.

Page 41, line 8, strike out "1978" and insert in lieu thereof "1979".

Page 49, line 3, strike out "1978" and insert in lieu thereof "1979".

Page 50, line 23, insert "(other than from the United States Government)" after "income".

Page 51, line 19, strike out "value and identity" and insert in lieu thereof "identity of the source and a brief description".

Page 51, lines 21 and 22, strike out "(other than from the United States Government)".

Page 51, strike out line 24 and all that follows through line 6 on page 52.

Page 52, line 12, insert "personal" after "each".

Page 52, line 22, strike out "except that the identity of the recipient of" and insert in lieu thereof "excluding".

Page 52, line 24, strike out "in-" and insert in lieu thereof a period.

Page 52, strike out line 25.

Page 55, lines 10 and 11, strike out ", and is not in any way, directly or indirectly, related to".

Page 55, line 12, insert "and" after "source,".

Page 55, line 12, strike out ", and the" and insert in lieu thereof "or the estimated".

Page 55, lines 15 and 16, strike out ", and is not in any way, directly or indirectly, related to".

Page 55, line 17, strike out "amount and identity" and insert in lieu thereof "identity of the source and a brief description".

Page 63, line 7: After "value" insert "'reimbursement',".

Insert at the end of the bill the following new title:

TITLE IV—GENERAL PROVISIONS

EFFECT ON STATE AND LOCAL LAW

SEC. 401. The provisions of this Act, and the regulations issued thereunder, shall supersede and preempt any State or local law with respect to financial disclosure by reason of candidacy for Federal office or employment by the Federal Government.

By Mr. HYDE:

Page 41, insert the following after line 15:

PART C—SPECIAL PROSECUTOR

SPECIAL PROSECUTOR

SEC. 226. (a) Title 28 of the United States Code is amended by inserting immediately after chapter 37 the following new chapter:

"Chapter 39—SPECIAL PROSECUTOR

"Sec.
"591. Appointment.
"592. Prosecutorial jurisdiction; authority.
"593. Removal or termination.
"594. Final report; congressional oversight.
"595. Presentations by Attorney General and Solicitor General.
"596. Special panel of the court.
"597. Termination of effect of chapter.

"§ 591. Appointment

"(a) Upon receiving any specific information that any of the persons described in subsection (b) of this section has—

"(1) knowingly authorized or engaged in any Federal criminal act or omission involving the abuse of Federal office;

"(2) knowingly authorized or engaged in any act or omission constituting a violation of any Federal criminal law regulating the financing or conduct of elections or election campaign; or

"(3) violated any Federal criminal law relating to the obstruction of justice or perjury, or conspired to violate any such Federal criminal law or to defraud the United States;

the Attorney General shall conduct, for a period not to exceed sixty days, such preliminary investigation as the Attorney General deems appropriate to ascertain whether the matter under investigation is so unsubstantiated that no further investigation or prosecution is warranted.

"(b) The persons referred to in subsection (a) of this section are as follows:

"(1) The President or Vice President.

"(2) Any individual serving in a position compensated at level I of the Executive Schedule under section 5312 of title 5 of the United States Code.

"(3) Any individual working in the Executive Office of the President and compensated at a rate not less than the rate provided for level IV of the Executive Schedule under section 5315 of title 5 of the United States Code.

"(4) The Director of the Federal Bureau of Investigation or the Director of Central Intelligence.

"(5) Any individual who held any office or position described in any of paragraphs (1) through (4) of this subsection during the incumbency of the President or during the period the last preceding President held office, if such preceding President was of the same political party as the incumbent President.

"(6) A national campaign manager or chairman of any national campaign committee seeking the election or reelection of the President.

"(7) A Member of Congress (including a Delegate to the House of Representatives or Resident Commissioner in the House of Representatives).

"(c) If the Attorney General finds the matter subject to preliminary investigation in accordance with subsection (a) of this section is so unsubstantiated that no further investigation or prosecution is warranted, the Attorney General shall file a memorandum with the special panel of the court. Such memorandum shall contain a summary of the information received and the results of any preliminary investigation.

"(d) If, after the filing of a memorandum under subsection (c) of this section, the Attorney General receives additional specific information about the matter to which such memorandum related, which information, in the judgment of the Attorney General, warrants further investigation or prosecution, the Attorney General shall, not later than thirty days after receiving such additional information, apply to the special panel of the court for the appointment of a special prosecutor.

"(e) If the Attorney General finds the matter subject to preliminary investigation in accordance with subsection (a) of this section warrants further investigation or prosecution, or if sixty days elapse from the receipt of the information and the Attorney General has not yet determined that the matter is so unsubstantiated that the matter does not warrant further investigation, then the Attorney General shall apply to the special panel of the court for the appointment of a special prosecutor.

"(f) If, in the course of any Federal criminal investigation, the Attorney General determines that the continuation of the investigation or of a resulting prosecution or the outcome of such investigation or prosecution may so directly and substantially affect the political interests of the President, of the President's political party, or of the Attorney General as to make it inappropriate in the interest of the administration of justice for the Department of Justice to conduct such investigation, then the Attorney General shall apply to the special panel of the court for the appointment of a special prosecutor.

"(g) Any memorandum or application filed under this section with the special panel of the court shall not be revealed to any third party without leave of the court. In the case of any such application, the application shall contain sufficient information to assist the special panel of the court to select a special prosecutor and to define that special prosecutor's prosecutorial jurisdiction.

"(h) Upon the receipt of an application under this section, the special panel of the court shall appoint an appropriate special prosecutor and shall inform the Attorney General and the Congress of, and make public, the name of such special prosecutor.

"(i) The Attorney General may request that the court assign new matters to an existing special prosecutor or that the prosecutorial jurisdiction of such a special prosecutor be expanded, and the special panel of the court may make appropriate orders for such assignment or expansion. A special prosecutor may accept a referral of a matter by the Attorney General, if the matter relates to a matter within the prosecutorial jurisdiction established by the special panel of the court.

"(j) A judiciary committee of either House of the Congress may request that the Attorney General apply for the appointment of a special prosecutor under this section. Not later than thirty days after the receipt of such a request, the Attorney General shall notify the committee making the request in writing of any action the Attorney General has taken under this section, and, if no application has been made to the special panel of the court under this section, why such application was not made. Such written notification shall not be revealed to any third party except that the committee may, either on its own initiative or upon the request of the Attorney General, make public such portion or portions of such notification as will not in the committee's judgment prejudice the rights of any individual.

"(k) Upon application of a majority of majority party members or a majority of all nonmajority-party members of a judiciary committee of either House of the Congress, the United States District Court for the District of Columbia may issue any appropriate order (including an order in the nature of a writ of mandamus) commanding the Attorney General to comply with any provision of this chapter.

"§ 592. Prosecutorial jurisdiction; authority

"(a) Notwithstanding any other provision of law, a special prosecutor appointed under this chapter shall have, with respect to all matters in such special prosecutor's prosecutorial jurisdiction established under this chapter, all the investigative and prosecutorial functions and powers of the Department of Justice, the Attorney General, and any other officer or employee of the Department of Justice.

"(b) A special prosecutor appointed under this chapter shall receive compensation at a

per diem rate equal to the rate of basic pay for level IV of the Executive Schedule under section 5315 of title 5 of the United States Code. For the purposes of carrying out the duties of the office of special prosecutor, such special prosecutor shall have power to appoint, fix the compensation, and assign the duties of such employees as such special prosecutor deems necessary (including investigators, attorneys, and part-time consultants). The positions of all such employees are exempted from the competitive service. No such employee may be compensated at a rate exceeding the maximum rate provided for GS–18 of the General Schedule under section 5332 of title 5 of the United States Code.

"(c) A special prosecutor appointed under this chapter may make public from time to time and shall send to the Congress at least annually such statements or reports as such special prosecutor deems appropriate.

"(d) There are authorized to be appropriated for each fiscal year such sums as may be necessary, to be held by the Department of Justice as a contingent fund for the use of any special prosecutors in the carrying out of this chapter.

"§ 593. Removal or termination

"(a) A special prosecutor appointed under this chapter may be removed from office, other than by impeachment and conviction, only by the special panel of the court and only for extraordinary impropriety, or such incapacitation or other condition as substantially impairs the performance of such special prosecutor's duties.

"(b) The office of a special prosecutor shall terminate upon the submission by such special prosecutor of notification to the Attorney General that the investigation of all matters within the prosecutorial jurisdiction of such special prosecutor, and any resulting prosecutions, have been completed or so substantially completed that it would be appropriate for the Department of Justice to complete such matters. No such submission shall be effective to terminate such office until after the completion and filing of the report required under section 594 of this title.

"(c) The special panel of the court may, either on such panel's own motion or upon suggestion of the Attorney General, terminate the office of special prosecutor at any time, on the grounds that the investigation of all matters within the prosecutorial jurisdiction of the special prosecutor, and any resulting prosecutions, have been completed or so substantially completed that it would be appropriate for the Department of Justice to complete such matters.

"§ 594. Final report; congressional oversight

"(a)(1) In addition to any reports made under section 592 of this title, a special prosecutor appointed under this chapter shall, at the conclusion of such special prosecutor's duties, submit to the special panel of the court a report under this section.

"(2) A report under this section shall set forth fully and completely a description of the work of the special prosecutor, including the disposition of all cases brought, and the reasons for not prosecuting any matter within the prosecutorial jurisdiction of such special prosecutor which was not prosecuted. The report shall be in sufficient detail to allow determination of whether the special prosecutor's investigation was thoroughly and fairly completed.

"(3) The special panel of the court may release to the Congress, the public, or to any appropriate person, such portion of a report made under this section as the special panel deems appropriate. The special panel of the court shall make such orders as are appropriate to protect the rights of any individual named in such report and prevent undue interference with any pending prosecution. The special panel of the court may make any portion of a report under this section available to any individual named in such report for the purposes of receiving within a time limit set by the special panel any comments or factual information that such individual may submit. Such comments and factual information, in whole or in part, may in the discretion of such special panel be included as an appendix to such report.

"(4) A special prosecutor, where appropriate, shall promptly advise the chairman and ranking minority member of the House committee having jurisdiction over impeachments of any substantial and credible information which such special prosecutor receives that may constitute grounds for an impeachment. Nothing in this chapter shall prevent the Congress or either House thereof from obtaining information in the course of an impeachment proceeding.

"(b) The appropriate committees of the Congress shall have oversight jurisdiction with respect to the official conduct of any special prosecutor appointed under this chapter, and such special prosecutor shall have the duty to cooperate with the exercise of such oversight jurisdiction.

"§ 595. Presentations by Attorney General and Solicitor General

"Nothing in this chapter shall prevent the making by the Attorney General or the Solicitor General of a presentation to any court as to issues of law raised by any case or appeal.

"§ 596. Special panel of the court

"The special panel of the court to which functions are given by this chapter is the division established under section 49 of this title.

"§ 597. Termination of effect of chapter

"This chapter shall cease to have effect five years after the date on which it takes effect, except as to the completion of then-pending matters, which in the judgment of the special panel of the court require its continuance in effect, with respect to which matters it shall continue in effect until such special panel determines that such matters have been completed."

(b) The tables of chapters for title 28 of the United States Code and for part II of such title 28 are each amended by inserting immediately after the item relating to chapter 37 the following new item:

"39. Special prosecutor."

ASSIGNMENT OF JUDGES TO DIVISION TO APPOINT SPECIAL PROSECUTORS

SEC. 227. (a) Chapter 3 of title 28 of the United States Code is amended by adding at the end the following new section:

"§ 49. Assignment of judges to division to appoint special prosecutors

"(a) Beginning with the two-year period commencing on the date this section takes effect, the chief judge of the United States Court of Appeals for the District of Columbia shall assign three persons who are judges or justices for each successive two-year period to a division of the United States Court of Appeals for the District of Columbia to be the special panel of the court for the purposes of chapter 39 of this title.

"(b) Except as provided under subsection (f) of this section, assignment to the division established in subsection (a) of this section shall not be a bar to other judicial assignments during the term of such division.

"(c) In assigning judges or justices to sit on the division established in subsection (a) of this section, priority shall be given to senior retired circuit judges and senior retired justices.

"(d) The chief judge of the United States Court of Appeals for the District of Columbia may make a request to the Chief Justice of the United States, without presenting a certificate of necessity, to designate and assign, in accordance with section 294 of this title, retired circuit court judges of another circuit or retired justices to the division established under subsection (a) of this section.

"(e) Any vacancy in the division established under subsection (a) of this section shall be filed only for the remainder of the two-year period in which such vacancy occurs and in the same manner as initial assignments to the division were made.

"(f) No judge or justice who as a member of the division established in subsection (a) of this section participated in a function conferred on the division under chapter 39 of this title involving a special prosecutor shall be eligible to participate in any judicial proceeding involving a matter which involves such special prosecutor while such special prosecutor is serving in that office or which involves the exercise of such special prosecutor's official duties, regardless of whether such special prosecutor is still serving in that office."

(b) The table of sections for chapter 3 of title 28 of the United States Code is amended by adding at the end the following item:

"49. Assignment of judges to division to appoint special prosecutors."

DISQUALIFICATION OF OFFICERS AND EMPLOYEES OF THE DEPARTMENT OF JUSTICE

SEC. 228. (a) Chapter 31 of title 28 of the United States Code is amended by adding at the end the following:

"§ 528. Disqualification of officers and employees of the Department of Justice

"The Attorney General shall promulgate rules and regulations which require any officer or employee of the Department of Justice, including a United States attorney or a member of his staff, to disqualify himself from participation in a particular investigation or prosecution if such participation may result in a personal, financial, or political conflict of interest, or the appearance thereof. Such rules and regulations may provide that a willful violation of any provision thereof shall result in removal from office."

(b) The table of sections for chapter 31 of title 28 of the United States Code is amended by adding at the end the following:

"528. Disqualification of officers and employees of the Department of Justice."

Page 41, line 16, strike out "C" and insert in lieu thereof "D".

By Mr. GARY A. MYERS:

Page 3, line 2, strike out "(2)" and insert in lieu thereof "(1) (other than the identity of the source of income), (2),".

Page 3, line 6, strike out "(2)" and insert in lieu thereof "(1) (other than the identity of the source of income), (2),".

Page 21, line 16, strike out "the preceding calendar year" and insert in lieu thereof "any portion of the preceding calendar year during which the reporting individual held a position described in section 201(f)".

Page 25, line 6, strike out the period at the end thereof and insert in lieu thereof "except that this paragraph shall not require the reporting of the amounts of income received while reporting individual was not holding any office or position described in section 201(f)."

# EXTENSIONS OF REMARKS

## "GOING PLACES WITH OL' JOE"

**HON. DALE MILFORD**

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. MILFORD. Mr. Speaker, the Transportation Club of Dallas this week heard some interesting, and I believe valid observations on the relationship between the Federal Government and the transportation industry.

The speaker was Joe P. Johnson, president of the Federal Services Division of Martin Ryan Haley & Associates, Inc.

I believe Mr. Johnson's remarks are interesting reading, and I would like them to appear in the RECORD.

TRANSPORTATION INNOVATIONS VS. GOVERNMENT REGULATIONS

During the recent weeks since I received your invitation to address this luncheon, I have been conscious of many articles appearing in various publications that reinforce my already firm belief that transportation generally may well be more affected by government regulation than any other industry.

I have, for example, the March 24th Business and Financial section from the Washington Post in which every article on the front page of that section refers to regulation or government involvement in some form of transportation.

One article refers to President Carter's order mandating plain English be used in the regulatory publications. Another article concerns the Federal Railroad Administration and its order to remove certain wheels from tank cars. Another article talks about auto sales, another about taxes as related to certain forms of transportation, another concerns the oil tax deadline. And there's another article on Senator Kennedy and his traveling deregulation show and their trucking hearings in the midwest.

Yet another article speaks very appropriately, I think, of government involvement in transportation, where CONRAIL losses are put at $366 million for 1977, with a forecast for no improvement in its financial status for the current year.

I also have the Congressional Monitor for Friday, March 10th—which is not a lot different from any other day—and which lists the Senate and House committee hearings that had been, or were in the process of being scheduled.

Of the 237 committee and subcommitee hearings listed, 47—or 20 percent—refer directly to the transportation industry—hearings on everything from auto repairs to retirement policies for Department of Defense air controllers.

Another publication, the Weekly Regulatory Monitor, covers hearings scheduled by the various bureaucratic agencies. The March 6th issue lists 198 scheduled hearings, of which 36—again almost 20 percent—apply directly to the transportation industry.

This is at the federal level, and says nothing about the involvement of government by the various state, county, city and other local governmental entities in the field of transportation.

It may come as a surprise to those of you who are not bicycle enthusiasts (I am, incidentally) that the League of American Wheel Men and the Bicycle Manufacturers Association are right in there at the Senate hearings on the Carter transportation bill plugging for bikeways, bike facilities and asking for more funding for transportation facilities for the non-motorist.

Is there any hope for innovations in transportation to successfully break through the bureaucratic process and become useful? Is there any *need* for innovations? I say, Yes!

Figures from reliable transportation surveys indicate that between 85 and 90% of the total passenger trips are still by car, with one person per car. We can certainly conclude that transportation pattern shifts are needed.

During the First Session of the 95th Congress in 1977, while endless days of hearings were being held on a broad aviation regulatory reform bill, a well-organized and targeted approach, developed and introduced by the Federal Express Corporation and others, resulted in air cargo deregulation legislation being enacted into law. This legislation passed because it addressed the problems of today.

What are those problems of today? Energy conservation. Cost efficiencies. Better service, and time conservation. Of these, time conservation may be the most significant.

The traveling business person—who comprises the bulk of airline passenger traffic—may well be fed up with the process that requires spending so much time making reservations, driving to the airport, purchasing tickets and checking in. And most airlines practically demand check-in 30 minutes prior to departure even on short flights.

The United States aviation industry, hampered by governmental decisions preventing development of supersonic air transports—and additionally hampered by the removal from the defense budget of research and development funds that would have provided short take-off-and-landing, 45- to 60-passenger jets—is behind the eight-ball.

The recent purchase by Eastern Airlines of the A300 air bus—the largest purchase ever of foreign-built aircraft by United States air carriers—has to be a blow to both the industry and the economy. In spite of the lumps the United States aircraft builders have suffered, however, a short take-off-and-landing, 45- to 60-passenger jet is probably more than a shadow in the crystal ball of air passenger travel.

Additionally, the supersonic air transport for long-range trips is here. The ability to leave Paris at 8 o'clock in the evening and land in the eastern United States at 6:00 p.m., without the usual so-called jet lag, is a way of life that is here to stay—that's time conservation!

If my premise is correct, demand will begin to force the development of new air travel patterns. For instance: A 45-passenger bus will load downtown or at other convenient areas with passengers to the same destination, drive to a close-in, short-field airport, go directly onto the ramp to a plane of like size, and passengers will arrive at destination in about the same time as it presently takes to make reservations, drive to the airport, buy a ticket and check in.

In other markets where the demand is sufficient, the use of planes such as the A300 air bus would then diminish the importance of the so-called engineering marvels known as airports for ordinary passenger travel as we know it today. It would not make them useless or obsolete. The diminished role of air passenger transportation would be replaced with new and massive needs for air freight transportation, with an emphasis on intercontinental air freight movement.

This concept in regards to air passenger and freight movement, and other concepts that we will suggest as we look at some other forms of transportation, actually could be called the modular concept or transportation center development. Intermodal transit programs will probably be key complements in urban economic development programs and the revitalization programs of certain metropolitan areas.

As we look at transportation of freight by trucks, this modal concept will become increasingly important. Statistics presented at the 4th National Conference on "Effects of Energy Constraints on Transportation Systems" indicate that the modal shift concept will become much more prevalent in the movement of freight by a combination of truck and rail. This means increased significance for the freight forwarding approach to the movement of goods and merchandise.

The conference concluded that substantial opportunities exist for energy conservation in the freight transportation industry. These opportunities will bring to bear great political pressures that will no doubt cause certain changes to be effected in the present regulatory system.

Again, in regards to the example I used earlier concerning air cargo deregulation and Federal Express, the changes will address specific needs and requirements. I believe that a one-step-at-a-time transition will occur. Major all-at-once regulatory changes would cause such a need for restructuring the industry that the resultant capital needs could not be met, and the excess capacities resulting from sudden shifts would not be tolerable.

I would be remiss in any discussion of the transportation process if I did not address the use of waterway transportation. I do not care today to become embroiled in any controversy over the waterway user's tax.

I have observed the development of the Arkansas River as a major transportation system from Tulsa to the Gulf. I believe the Trinity has an even greater potential.

Despite opposition because of traditional operating patterns, I do believe that especially the Congress will implement amendments to current laws that would permit response to the points mentioned earlier—energy conservation, cost efficiencies, better service and time conservation.

I am just like the most of you. I believe that government should be involved where it's beneficial to me, and not involved where it's not beneficial. I am not saying that government will become uninvolved in transportation. I think projects such as the development of the Trinity River must be the responsibility of government because the project is too large for private enterprise.

I think the important point for you who are involved in transportation to remember, however, is that government—whatever it is—still is a government of special interest groups. James Madison in the Federalist Papers states that special interest groups and their lobbyists would provide the balance that would keep our system viable.

Elected members of government constantly and vigorously seek your input in order that the right conclusions might be reached. You have both the opportunity and the responsibility to have your input and knowledge become a part of the decision-making process.

If we have succeeded today in convincing you—were you not already convinced—that government does play a role in transportation, then maybe the best advice I can leave with you is that you must develop an effective political posture if you want to be

an effective force in transportation industry changes.

I thank you for having me.●

## RECOMBINANT DNA ACT

### HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. COLLINS of Texas. Mr. Speaker, the burden of Government regulation, so costly and harmful to U.S. industry, is increasingly expanding into our scientific community. I am specifically concerned with H.R. 11192, the Recombinant DNA Act, recently marked up by the Interstate and Foreign Commerce Committee and subsequently reported to the Science and Technology Committee. This legislation, allowing Federal control of DNA research, will severely hinder the field of study with the greatest potential to cure human disease.

During the initial markup, I offered separate views opposing the passage of H.R. 11192. In that light, I wish to offer excerpts from an article by Dr. Bernard D. Davis, an Adele Lehman professor of bacterial physiology at Harvard University. Dr. Lehman's article appeared in the April 5, 1978, Wall Street Journal and clearly documents the dangers of Federal intervention into this highly specialized field.

Excerpts from the article follows:

The need for any legislation is increasingly questioned. It is important to know why the dangers seem so much smaller today.

People for several years have been making recombinants in many laboratories, without a single resulting illness. It is clear that the predicted dangers remain entirely hypothetical.

The recombinant technique is increasingly recognized as a tool of great versatility, comparable to the use of radioactively labeled molecules in studying the chemical processes in living systems. For example, recombinants make it possible to isolate human genes. Moreover, they also make it possible to study the action and the regulation of these genes in the thousandfold simpler background of a bacterial cell. And gene regulation—the selective turning on of some genes and turning off of others is a crucial problem in modern biomedical science.

It is the key to the normal development of a fertilized egg into a human being, and also to the abnormal development of a cancer (a line of cells that have escaped from normal growth regulation). Other uses of recombinants, of more immediate medical and industrial importance, will include the manufacturer of unnumerable useful human products, such as insulin, other hormones, antibodies and antiviral agents. With such benefits in sight we will be paying an extravagant price if we perpetuate restrictions that are not justified by the hazards. Moreover, if this price involved only money, like the tens of millions of dollars wasted on lunar quarantine, it would be bad enough. But it also involves a greater, hidden cost: hindrance of research on diseases that are meanwhile taking human lives.

Though the development of these novel recombinant organisms was created by specialists in molecular biology, the assessment of the possible hazard is a problem in quite a different area of science: infectious disease. Unfortunately, few professionals in this field were included in the early discussions, though they might have kept the scenarios within realistic bounds. The NIH finally assembled a world-wide group of such experts last summer, and they agreed that the proposed recombinants could not be as dangerous as many known disease-producing organisms, which are cultured in thousands of medical laboratories every day.

The bacteria being used in this work are special weakened strains, carefully developed to require nutrients that are not encountered in natural environments.

My next point concerns the class of recombinants containing human DNA. These have particularly broad promise for medical research; but they have been classified as particularly dangerous, because of fear that they might pick up and spread the genes of human viruses. But this fear is based on the additional assumption that these recombinants would be an entirely novel class of organisms, never encountered before in nature. With further discussion this assumption has become exceedingly unlikely. We know that bacteria can take up DNA (though infrequently); and since bacteria have been growing in the colons of our ancestors for millions of years, it is virtually certain that they have often taken up human DNA, released from dying cells of the surrounding intestinal wall. Accordingly, mankind must have long been exposed to recombinants of this kind.

With these developments, the initially very cautious attitude of the scientific community has shifted dramatically. The bluntest critique has come from James Watson (who triggered the development of molecular biology by his discovery, with Francis Crick, of the structure of DNA). Though he was one of those who first voiced caution, he now urges that we abandon the whole expensive bureaucracy of guidelines and release the wasted time and money for solving real health problems. It seems almost certain that Watson will prove right. But meanwhile it also seems clear that public anxiety, generated initially by scientists, cannot be reversed until the true nature of recombinant DNA research is widely understood.●

## CALIFORNIA EXPLORES ALTERNATIVE ENERGY STRATEGIES

### HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. BROWN of California. Mr. Speaker, this past Sunday I addressed the Second International Helioscience Institute on Alternate Energy Conference, which was held in Palm Springs, Calif. I very much enjoyed the event, which was another demonstration of the great support alternative energy technologies have in this country.

One of the news accounts of this conference shows how California in particular is moving ahead in this area. I would like to insert it in the CONGRESSIONAL RECORD for the review by other Members.

The article follows:

[From the Christian Monitor, Apr. 11, 1978]

CALIFORNIANS GO 'SOFT' ON ENERGY

(By David F. Salisbury)

In his office, California Gov. Edmund G. Brown Jr. has a model solar collector which he demonstrates to visitors with considerable relish.

From the Governor to the 350 people who attended the latest conference on alternative energy here recently, Californians have emerged as some of the most ardent supporters for what British physicist Amory Lovins called the "soft path" and what others characterize as a "Jeffersonian" approach to solving the nation's energy problems.

This approach puts primary emphasis on conservation, renewable energy resources, and special transitional fossil fuel technologies as opposed to nuclear power. It is called Jeffersonian because it would ultimately return to the citizen an increased amount of control over and responsibility for energy production.

"California is definitely a leader in solar energy development," says Ted Lucas, author of two books on the subject. Of the roughly 400 solar energy firms in the U.S. today, about a quarter are located in California, he estimates.

Mr. Lucas sees several reasons for this. One is psychological. Californians, he observes, like to feel they are in the forefront.

Another reason is state government. Jerry Brown, he feels, has championed several measures which significantly encourage solar energy development. Finally, there is sunshine itself. California has long prided itself on its sunny climate, so the step to utilization of solar energy is not great.

California Rep. George E. Brown, Jr. is part of a loosely knit solar coalition in Congress which has been trying to get the administration to increase its support of energy sources other than coal and nuclear.

Mr. Brown and several other congressmen visited President Carter April 10 to urge that he develop a strategy and a timetable for the development and commercialization of alternative energy sources.

But regardless of what happens in Washington, California already has taken several steps down the "soft path." Richard Maullin, director of the State Energy Commission, lists these steps:

1. Development of building standards to encourage energy conservation. Rather than mandating specific amounts of insulation for the ratio of window to wall space, the state has taken a "performance" approach. Building on the experience of the northern California City of Davis, the first community in the country to adopt this approach, the state sets overall energy conservation standard which architects can meet anyway they wish.

2. Enactment of a 45 percent solar energy state income tax credit.

3. Creation of a certification system for solar equipment to protect the consumer. Approved systems will be given a special state seal, provided the companies extend a specified warranty.

4. This year the state is spending $2.5 million for public education, including demonstration projects on alterantive energy sources. Next year's budget will increase this to $4 million, if approved by the Legislature.

5. With its large potential for geothermal energy, the state has cut down licensing time for such plants from 18 to 12 months, and may reduce it evern further.

Recently Governor Brown proposed the largest state energy program ever. He would like to spend $500 million over the next five years. Of this, $200 million would go toward energy conservation measures, including retrofitting state and local government buildings to cut their energy consumption by a quarter.

The rest would go toward various energy technologies—including methods to convert forest and agricultural residues into energy, wind turbines, geothermal power plants, and an advanced coal-fired plant that would produce both electricity and a clean-burning gas which could be distributed throughout an area within 150 miles of the plant, all with minimal pollution.

This general approach has its vocal critics within the state. Chief among them are Republican aspirants for the governorship who characterized Mr. Brown's support for conservation and alternatives as exotic and potentially disastrous.

It also runs contrary to the inclinations of the state's utilities, whose strategy was to shift from fossil fuel to nuclear energy. They had intended to generate more than half the electricity in the state with nuclear energy by 1995.

Large segments of the California business community also have been leery of the Brown approach to energy. Many feel the climate in the state has become antibusiness, an impression the Governor has only recently begun to counteract.

Still, California supporters of the alternative energy sources clearly feel they are ahead of the country. They have little doubt that this basic approach is the only one that resolves the conflict between energy and environment while increasing the quality of life.

The energy crisis is "an insurmountable opportunity," summarizes Prof. Donald W. Aitken of San Jose State University, the campus with the largest solar energy construction program in the United States.●

## ABORTION—A MATTER OF CONTROVERSY

### HON. GERRY E. STUDDS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. STUDDS. Mr. Speaker, the issue of abortion is one of the most controversial, emotionally charged, and socially complex concerns we face. It is an issue very poorly suited to rational political debate, and yet it is one upon which Members of Congress have been repeatedly asked to vote.

Deep divisions on this issue exist throughout our Nation, and feelings in the 12th Congressional District of Massachusetts are no exception. Letters which I have recently received express eloquently and thoughtfully the concerns of those on either side of the question.

I would like to share with you some examples from my file of these letters:

From a man in Centerville:

I fervently pray that you will vote against any effort to deny to poor persons the necessary funds to have an elective abortion. To do this would be an outrageous denial of the most basic human right and in my opinion, despite what the Supreme Court has ruled, would violate the equal protection clause of the Constitution.

A New Bedford man told us:

I do not want my tax money to be used to finance abortions, legal or otherwise, simply because I do not believe in killing, or terminating a pregnancy. There is no way anyone can terminate a pregnancy without terminating a life and there is no way anyone can terminate a life without killing someone! Please do not use my money for killing!

In South Dartmouth, a woman said:

The number of coat-hanger abortions is going to increase terribly if Medicaid refuses to fund non-therapeutic abortions. It is disgusting that a woman unable to afford a medical abortion will have to resort to this method to avoid giving birth to an unwanted baby. Abortion is not a luxury that is exclusively the right of the financially able. It is a pressing social, economic, and emotional need for women of all ages.

A man from Marshfield wrote:

I agree with the editor of a well-known magazine when he wrote: "Anyone who kills a human embryo, therefore, has to admit at least the possibility that he or she is killing an innocent human person. He may believe he is not, he may be totally convinced he is not. But the fact is, he has no way of ruling out either the possibility or the probability that he is not."

A clergyman wrote to me that:

No one wants abortions, but neither do we want our nation to go back to all the illegal abortions which were performed before abortions were declared legal. I lost a cousin at the hands of an untrained abortionist, and I don't want to see that happen to anyone.

From a woman in North Dartmouth:

I urge you to support a Human Life Amendment. Why not allow this most controversial subject to be decided by the people—not by seven men who are not even elected to their offices! Why should those seven justices dictate the law . . . ?

A doctor from our district wrote:

Abortion is a solution, however unsatisfactory, to the problem of unwanted pregnancies. Yet those who are most adamant against abortions are the very ones who are preventing the use of contraceptives. I find it both pathetic and ironic that the very people who object to abortions are doing nothing to remove the root cause of abortion.

From a couple in Weymouth:

We feel abortion is morally wrong, and find it galling to support it with our tax dollars.

Social and economic alternatives to abortion, such as unrestricted access to birth control, better sex education, and a guaranteed family income should be developed, together with a streamlining of the Byzantine procedures for adoption.

We are both active in the Pro-Life movement but try to be realistic. There are many inequalities still remaining in our society and they must be removed to allow all of our citizens to live a life of dignity.

However, it is our opinion that abortion is looked upon by many as a panacea, and if it is looked upon as such it would be merely another cosmetic approach to problems.

From a newlywed man in our district:

My wife and I are young newly weds; we have just started our lives together a few months ago. We did not expect or intend to conceive a child, which has happened, and we are not ready to become parents—we cannot afford to physically, mentally or monetarily.

I cannot explain the comfortable feeling I have as I write you this letter, from (an abortion clinic) in Boston, in a bright clean, well-lit waiting room, knowing my lady is in good hands—instead of in some alley hoping like hell the strange man will bring my lady back to me in a healthy condition . . . you see, I love her.

Mr. Speaker, these are only a few of the many letters I have received on this subject.

The diversity of opinion is very clear and very strong.

Our most respected religious leaders are deeply divided on the issue of abortion. Certainly, no national consensus exists on either the question of a constitutional amendment, prohibiting abortions, or on the question of public financing of abortions for the poor.

As I have been telling those of my constituents who ask that I take a stand against abortion:

I understand the strong convictions which prompt many people to oppose the procedure of abortion, and I respect their right to avoid the procedure: I cosponsored a measure—which has since become law—to allow hospital personnel to refuse, without prejudice to their jobs, to participate in abortion procedures should their conscience so dictate.

When the Supreme Court debated abortion in the 1973 Roe against Wade case, it concluded that "we need not resolve the difficult question of when life begins. When those trained in the respective disciplines of medicine, philosophy, and theology are unable to arrive at any consensus, the judiciary, at this point in the development of man's knowledge, is not in a position to speculate as to the answer."

Congress and the State legislatures, having no more or different information available to them, are in no better position to speculate on the subject than the High Court. It seems to me that those who advocate a constitutional amendment banning abortion would be compelling every woman to accept the view that a constitutionally protected person exists from the "moment of conception," even when such a view conflicts with an individual woman's religious or moral views. In view of the personal nature of this question, and the lack of a clear national consensus on the issue, I believe it is wisest for the Government not to intrude—but rather to leave the decision of abortion to the conscience of each woman and the judgment of her physician.

The elimination of Federal medicaid funds for abortions has been the most recent focus of the abortion controversy. I opposed the adoption of the so-called Hyde amendment last December because I believe that it discriminates against those who do not possess the financial resources needed to obtain a medically safe abortion. It establishes, in practical terms, a system whereby the rich can obtain abortions legally, while poor women are forced to either bear children against their will, or to choose the grim alternative of seeking an illegal, cheap abortion.

I believe that the proper role of Congress should be to insure that no coercive laws on the subject of abortion are enacted. Instead, we should make a new and constructive commitment in programs and funds to provide alternatives to abortion in the form of family planning through contraception, pregnancy counseling, and humane foster child and adoption programs.●

## RALPH BUCHMAN—CONSCIENTIOUS CITIZEN AND OUTSTANDING EDUCATOR

### HON. MICHAEL T. BLOUIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. BLOUIN. Mr. Speaker, on Sunday, April 16, it will be my privilege to take part in a tribute to one of Iowa's most conscientious citizens and outstanding educators—Mr. Ralph Buchman.

Mr. Buchman, or Buck to his friends and associates, has decided to leave Epworth, Iowa, and the Western Dubuque High School after 29 years, most of them in the dual role of principal and athletic director.

When he first came to Epworth in 1949, it was a small independent high school with no more than 100 students. A decade later a merger of some similar schools produced the Western Dubuque Community School District and Ralph Buchman became principal and athletic director of a high school with 1,100 students in grades 9 through 12.

Taking in parts of five counties, the Western Dubuque system is the largest school district (area wise) in the entire State.

Through the early years of growth and expansion Buck was there. In fact it seemed to many of us that he was always there.

He was there to open the building in the morning; he was there to help cope with problems all day long; and he was there at every after school event possible whether it was a band concert, a play or an athletic event.

For those of us who believe our children are our future, Ralph Buchman is one of America's unsung heroes.

He served as surrogate father for many of his students and teachers and handed out advice and discipline to anyone who either asked for it or needed it. Not afraid to back a student up against a locker to get his attention, he was also not afraid to dole out generous helpings of the compassion and understanding so vital to someone in his position.

Despite all this, Ralph Buchman is a modest man. But he is an individual who has every right to stand tall and hold his head high as he looks to the future. In his way he has contributed so much to making today better than we might have hoped for and tomorrow even more promising.

I am proud to call this unselfish human being my friend. The people of Western Dubuque especially the students and teachers join me in wishing him well in his new venture and saying how it just won't be the same at Western Dubuque without him.●

## A SPECIAL TELEVISION PROGRAM FOR BALTIMOREANS

### HON. BARBARA A. MIKULSKI

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Ms. MIKULSKI. Mr. Speaker, many of my constituents and my colleagues in the House of Representatives complain about the quality of television programing. As a member of the Communications Subcommittee, I have special interest in this area.

It is with a special note of pride and relevancy that I wish to commend one television program in my city of Baltimore which represents how television can truly serve the public interest. "Square Off" is a weekly panel of current events. That description applies to many public affairs programs—programs that in many instances are put together with little thought and little interest to the viewer; but "Square Off" is different. Each week four Baltimoreans, chosen from a group of 12, discuss the issues in the news of the past week. The discussion is often heated. The panelists' views are strongly held. It is not, by any means, a predictable public affairs program with people who hold predictable views.

The panelists include a school administrator, a senior citizens activist, college professors, lawyers, a social worker, a housewife, a radio personality, and a newspaper columnist. The only thing they share in common is their awareness of the important events in our society and their ability to express their views in an interesting and lively manner.

"Square Off" is well known in the Baltimore community. People talk about it the day after it is broadcast with friends and co-workers. To celebrate "Square Off's" first anniversary, viewers filled a Baltimore hotel banquet room for a live broadcast.

I want to commend WJZ–TV for airing this worthwhile program and urge others to take notice of what television programing can do for a community.●

## CHICAGO JOB TRAINING PROGRAM CITED AS MODEL FOR THE UNITED STATES

### HON. CARDISS COLLINS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mrs. COLLINS of Illinois. Mr. Speaker, I wish to share with my colleagues a recent article in the New York Times describing the highly successful effort undertaken in Chicago between the city, using CETA funds, and local employers, to provide on-the-job training to nearly 2,000 of the so-called chronically unemployed. Although on-the-job training programs have been in existence around the country for many years, the Chicago program is unique in the extent to which the business community has been encouraged to participate actively in both outreach and followup efforts. With congressional action on CETA expected sometime next month, the success of the Chicago experience should provide us with the insight and the inspiration to structure the CETA program to maximum effectiveness.

The article follows:

[From the New York Times, Apr. 10, 1978]

CHICAGO JOB TRAINING PARTNERSHIP OFFERS MODEL FOR U.S. PROPOSAL

(By Nathaniel Sheppard, Jr.)

CHICAGO, April 9—An unusual partnership here between the city and private businessmen has been providing on-the-job training for close to 2,000 people a year who are considered "chronically" unemployed.

The Chicago effort, dealing with people who have been out of work six months or more, has been judged so successful that it is the principal model on which the Department of Labor is basing Federal strategies for lowering unemployment to be contained in Title VII of the revised Comprehensive Employment Training Act, on which Congressional action is expected by the middle of next month.

The program here has turned out metal finishers, carpenters, welders, lab technicians, underwriters, butchers, bookkeepers, offset press operators, locksmiths, mechanics, and carpet layers, to name only a few job categories.

Of 1,122 on-the-job training slots last year in 209 occupations, 258 were professional and technical, 213 were clerical and sales, 213 were in machine trades and the rest involved structural, benchwork, servicing and processing jobs.

Sponsors of the Chicago program say that about 52 percent of the trainees for skilled and semiskilled professions remain with the employer who trained them and that many of the remaining 48 percent go on to further training or better-paying jobs elsewhere.

On-the-job training programs have been in existence around the country for many years, but Chicago's is believed to be the largest—and the most unusual.

Under the program here, the city, using Federal funds, contracts with the not-for-profit Chicago Alliance of Business-Manpower Services, which in turn "buys" training from local employers by paying one-half the salary for apprentices accepted from city and state unemployment lists. It is this combination of special funding, and commitment by business that makes the Chicago way of doing things exceptional.

As the system now works, an employer lists his needs with the business group, which screens the job seekers and matches them with the apprenticeship requirements.

The trainees receive between $3 and $7 an hour with most salaries falling in the $4-an-hour category. Last year, 62 percent of the trainees were black, 20 percent white and 18 percent Hispanic. Sixty percent were males and 75 percent earned less than the $5,800 for a family of four or $3,700 for an individual that is the cutoff for the Federal definition of the poverty level.

Under the Chicago arrangement, the Chicago Alliance of Business-Manpower Services organizes, markets, supervises, and contracts directly for on-the-job training with about 500 local businesses. The organization is an affiliate of Chicago United, a coalition of 42 executives—usually presidents or board chairmen—from major city companies. One half of the executives are from minority groups and about 45 percent of the apprenticeships are at minority-owned businesses.

"One of the reasons the program is so successful is that businessmen are more receptive to programs marketed by other businesses than those suggested by government," said Travis Gafford, executive director of C.A.B.M.S. "It becomes a businessman-to-businessman relationship."

Robert McGregor, who heads Chicago United, said another reason for the program's success was that businesses "no longer have to worry about government red tape."

"People have lost faith in government and are looking more and more to businesses to solve problems," Mr. McGregor added. "Other businessmen know we will be interested in the same things they are interested in—sound management and accountability and results."

According to Samuel Bernstein, assistant to the Mayor for manpower, costs for the program in its first year, which began Oct. 1, 1975, totaled $5.3 million, including $400,000 for administrative costs. The following year, the budget grew to $5.9 million, and this year, outlays are expected to reach $6 million.

"The average salary training graduates receive is $8,860 per year," he said, "com-

pared to an average salary of $8,100 per year for a person who gets straight vocational training in school and $8,000 for a family of four on welfare, including food stamps and Medicaid."

"A FANTASTIC IDEA"

An employer in the program, Gary Majer of the Abbott Metals Corporation, said the program was a "fantastic idea. We couldn't afford to hire people who weren't trained, but with the Government helping this way, we are pleased to give jobs to people who really want to work."

Mr. Majer points to an 85 percent success rate with the primarily Hispanic trainees at his concern who help construct postal and hospital carts, rifle racks and food-warming equipment.

One of the Chicago program's trainees, Georgia Trezrant, works with the American Friends' Service Committee in their "Mothers in Prison" program.

"I was incarcerated myself," she said. "This job makes me feel so good to know I can help someone who is in the same situation I was in."

As the outreach worker for the group, she helps find clothing, housing and food for the children of imprisoned women, who do not hesitate to call her if they are released at night and need a place to sleep. Her employers say she is more effective than anyone else they have had in the position because she relates so well to her clients.

Another trainee, Marina Sue Escamilla, went through basic training in the Air Force, but when they wanted to put her into office work, she asked for a discharge. "I like to be outside," she said. As a CETA school aide at the Joseph Jungman school she is inside and out with the youngest Mexican-born pupils every day.

The Chicago Alliance of Business-Manpower Services program was one of 10 Chicago employment efforts that were lauded by the New York City-based Committee for Economic Development in a recent report.

According to William Hewitt, who heads the Labor Department's Employment Evaluation and Research Sections, Title VII of the revised CETA is to have as its centerpiece the inclusion—for the first time—of private employers in the design, development and approval of training programs.

"Since everyone looks to the private sector to provide jobs, we plan to build a mechanism through which it will have a voice in the development of training programs. Training people for positions the businesses do not want would be futile and we can't wait until people are trained before we start looking for jobs for them," he said.

Under Title VII, a national business council would be established to help develop programs and have a major voice in which job efforts would receive funds, Mr. Hewitt said.

Not everyone, however, is as enthusiastic about the program as Mr. Hewitt and the Chicago sponsors. One thing that has held up Congressional action on Title VII is strong opposition from traditional prime sponsors of such operations—city and county governments. Nevertheless, when Congress does take action, the Chicago influence is expected to be felt.●

## TRIBUTE TO GERALD A. O'BRIEN, INVENTOR OF TAP TRANSDUCER

### HON. JOSEPH A. LE FANTE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. LE FANTE. Mr. Speaker, the development of communications throughout our Nation's history contributed significantly to our advancement as one of the great powers of the world. In the past, New Jersey has been noted for the scientific achievements of Thomas Alva Edison. Now the time has come to pay special tribute to another inventor from the Garden State who contributed immensely to our country's growth by resolving a communication problem that had baffled scientists for over a century.

In 1973, Gerald A. O'Brien, of Jersey City, N.J., developed the "tap transducer," a modified version of the telegraph which acts as a voice transmitter without all the intricate mechanism of Mr. Bell's telephone. In doing this, Mr. O'Brien not only contributed valuable knowledge to science, but also provided a means for creating energy conserving communication for an energy conscious people.

O'Brien's tap transducer looks very much like Morse's original telegraph but works at a much faster rate so that it can transmit a voice much further and louder than the telephone, using one-third the energy. The tap transducer can also be used to detect earthquakes and find defects in airplanes and machinery. It has many communicative possibilities that will make communication less expensive and wasteful.

Born in 1935, Gerald O'Brien graduated from St. Patrick's elementary school in Jersey City and then, after 1 year of high school, entered the work force. Despite his limited formal education, Mr. O'Brien displayed an ingenious talent for solving complicated engineering problems.

That talent was also evidenced in his other patented inventions which should not go unnoticed. These include a portable voice generator that aided deaf mutes in communication and an electromagnetic amplifier sound transducer used to convert acoustical waves into amplified electrical waves.

Mr. Gerald O'Brien deserves credit for his accomplishments and the role they play in keeping ours a well-informed and intelligent society. More importantly, however, he has proved to be an outstanding citizen in his pursuit for a progressive, modernized system for communication.●

## THE LONGHORNS PLAY GREAT B-BALL

### HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. PICKLE. Mr. Speaker, for the past 20 years, most critics scoffed at basketball as played in the Southwest Athletic Conference. When the fall came, a lot of folks put a University of Texas or an Arkansas, and so forth, in the top 10 of football teams; but when winter rolled around, it was a different view—the Southwest teams were sometime the doormat, or nearly that.

In the past 3 years, this has been turning the other way. Now, not only are great football teams coming from the Southwest Conference, but top basketball teams as well.

I am a graduate of the University of Texas; furthermore, the University of Texas at Austin is in my congressional district. So, with great pride I note the winning of the National Invitation Tournament by the Texas Longhorn basketball team. The NIT is a prestige affair and its winner each year is a top flight team.

I might add that the Texas team did not slip by to victory, but won its games with strong margins of victory.

On April 7, 1978, the governing body of the University of Texas System, the Board of Regents, passed a resolution of appreciation to the team and its leader, the irrepressible Abe Lemons.

I include the resolution in the RECORD and add that it echoes the sentiments of millions of Texans:

RESOLUTION

Whereas, the 1978 Longhorn Basketball Team, through skill, determination, hard work, individual and team effort, completed the season with a winning record equal to the highest in the history of The University and went on to become Co-Champions of the the Southwest Conference and Champions of the National Invitation Tournament, the first post-season national championship for any Southwest Conference basketball team, and

Whereas, this athletic achievement was brought about under the leadership of Coach Abe Lemons, whose wit, hard work and professional skill earned him designation as Co-Coach of the Year by the National Association of Basketball Coaches, and

Whereas, Jim Krivacs and Ron Baxter were named Co-Most Valuable Players of the National Invitation Tournament, the first time in twenty five years that two players have been given this honor, and

Whereas, Ron Baxter and John Moore were selected as All Southwest Conference Players, and

Whereas, the entire Longhorn Basketball Team has demonstrated those qualities of character, sportsmanship and teamwork which represent the highest ideals in intercollegiate sports,

Now, therefore, be it resolved that the Board of Regents of the University of Texas System this 7th day of April, 1978, does express its appreciation for the excellence manifested in the performance of the 1978 Longhorn Basketball Team, the leadership and inspiration of Coach Lemons and his staff, and the notable recognition brought to the University by those who played the game of basketball with distinction.●

## STATE DEPARTMENT RECEIVES LIST OF POLITICAL PRISONERS AND MISSING PERSONS IN ARGENTINA

### HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. DRINAN. Mr. Speaker, the Government of Argentina continues to detain thousands of political prisoners, most of them without specific charge and without trial. Compounding this injustice, Argentina's military rulers have refused repeated requests to release a comprehensive list of individuals detained and their status. Thousands of families agonize over the fate of their relatives,

not knowing if they are in prison, where they are jailed, whether they have been charged with a crime, what their physical condition is, or even whether they are alive or are among the ranks of the "disappeared," presumably victims of the right-wing paramilitary forces who seem to operate with impunity.

On March 29, the Council on Hemispheric Affairs, in conjunction with the Argentine Information Service Center, hand delivered to Deputy Secretary of State Warren M. Christopher the most comprehensive list to date of Argentinians who are political prisoners or who have disappeared. They also presented Mr. Christopher with a letter describing the need for action and expressing the hope that the list of 10,000 names would be transmitted to the Argentine authorities.

Deputy Secretary Christopher assured representatives of the two groups that the list would be forwarded to Raul Castro, U.S. Ambassador to Argentina, and that all efforts would be made to bring the list to the attention of the Argentine Government.

In his letter to Mr. Christopher, the Council on Hemispheric Affairs' director, Laurence R. Birns, points out that the Argentine Government has failed to respond, publicly or privately, to Secretary of State Vance's personal request for information about individuals on a somewhat less comprehensive list which he presented to the Government during his recent stay in Argentina. Meanwhile, arrests without charge or trial and unexplained disappearances continue to take place regularly.

Mr. Speaker, the failure of Argentina's military rulers to take the simple humanitarian step of announcing those whom it has arrested and detained indefinitely for so-called "political offenses" stands as one of the most cruel violations of fundamental human rights in a world already overburdened with such abuses. The regular disappearance of many individuals, apparently with at least the tacit approval if not the outright complicity of the Government, makes even more cruel the refusal to list political prisoners, as the families of many cannot know if their relatives are alive or dead.

I was a member of an Amnesty International mission investigating the human rights situation in Argentina. The report of that November 1976 visit concluded:

> The state of martial law in force deprives all the citizens in Argentina of their most fundamental civil and political rights, their constitutional guarantees. What it means in practice is that merely on suspicion of subversion, a citizen may be arrested or abducted, held for a long period incommunicado, tortured and perhaps even put to death. He has no legal safeguards against these measures.

It is evident that the situation in Argentina since release of that report by Amnesty International, recipient of this year's Nobel Peace Prize, has not improved. While boasting of having virtually wiped out the left-wing terrorists whose existence provided the stated rationale for the draconian security measures adopted by the military government, Argentina's rulers retain those measures and seemingly ignore the right-wing terrorists responsible for so much violence.

I commend to the attention of my colleagues Mr. Birns' excellent letter to Deputy Secretary Christopher, and I hope that the State Department will continue to push vigorously for a comprehensive accounting of all political prisoners in Argentina.

The letter follows:

COUNCIL ON HEMISPHERIC AFFAIRS,
*New York, N.Y., Mar. 29, 1978.*

Mr. WARREN CHRISTOPHER,
*Deputy Secretary of State, Department of State, Washington, D.C.*

DEAR SECRETARY CHRISTOPHER: We are writing you at this time to express our appreciation to you for your efforts to improve the human rights situation in Latin America, and specifically in Argentina. We also wish to use this note to you to comment on some recent developments in Argentina, and to offer some recommendations regarding the plight of political prisoners and their relatives in that country.

The executive and legislative branches of the U.S. Government have taken numerous initiatives intended to encourage greater respect for basic human rights by the Argentine military government. The termination of military aid programs, the restriction of sales of certain military materiel, and the negative votes of the U.S. in the international lending institutions have all played a significant role in impressing Argentine authorities of the serious importance that the U.S. attributes to that nation's human rights practices.

Last November, Secretary of State Cyrus Vance delivered to the Government of Argentina a list of persons imprisoned, disappeared, or killed for political reasons, and formally asked the Argentine military authorities to supply the U.S. government with information as to the charges against them, and their places of detention. Other governments, the United Nations' Human Rights Commission, and the Inter-American Commission on Human Rights also have made similar inquiries.

Unfortunately, there has been no response to these concerns, and no real improvement in the human rights situation in Argentina. Kidnappings continue to take place, and right wing terrorist groups within the security forces continue to act with total impunity despite the fact that the government has shown great efficiency in eliminating left-wing subversion.

As an ostensible concession to this U.S. human rights concern, the Government of Argentina published the names of several thousand political detainees. This gesture was seen by some officials in this country as an indication of a new trend towards moderation on the part of the local authorities.

In our view these hopes were premature, if not overly optimistic. Few prisoners are actually being released while new arrests and disappearances continue. As for the names of prisoners which had been published, a careful examination of those listed shows that the majority of them had been detained during the administration of Mrs. Isabel Peron, prior to the military takeover of March 1976. The Argentine Government actually disclosed little information about the thousands of persons who have disappeared in the last two years, and actually denies having any knowledge of the fate of most of them.

It should be noted that the Argentine Government has failed to respond, either publicly or privately, to Secretary of State Vance's personal request, made during his trip to Argentina last year, for information on the situation of prisoners included in the list which he presented to the local authorities during his visit. This list, originally prepared by the Argentine Information and Service Center, has now been updated, expanded and corrected to include nearly 10,000 names.

Meanwhile, prison conditions have continued to deteriorate in Argentina leading to protests and violent confrontations between prisoners and security forces. Last March 14, 165 prisoners in Wing No. 7 of the Villa Devoto prison on the outskirts of Buenos Aires began to protest, peacefully, prison-living conditions. After a series of still-to-be-clarified events, 61 prisoners were dead and many more were seriously injured. There is evidence contradicting the official government version that only common criminals died, and that they died of smoke inhalation and not gunfire.

Irrespective of how these people died or what was their status, these events should be seen as an indication of the deplorable conditions reigning in Argentine prisons and the desperation of the imprisoned. However, there is every reason to believe that at least some at the Villa Devoto prison were killed by security forces and, as the attached list might illustrate, at least some may have been political prisoners.

Given the critical nature of the situation, we would hope that you would be moved to instruct Ambassador Castro to provide the Argentine Government with the new updated and expanded list of political prisoners and disappeared persons and request, once again, information about their places of detention and the charges against them. We also hope that you would see the merit of the U.S. continuing to vote against multilateral loans to Argentina until a noticeable improvement takes place in the human rights situation there, and actively encourage other nations to join the U.S. in these initiatives. In this spirit, we also wish to raise the desirability of suspending all sales and deliveries of military material to Argentine until congressional as well as executive inquiries on pressing human rights matters are satisfactorily answered.

Finally, given the status of political prisoners in the country, we hope that the administration will encourage the immediate implementation of the parole visa program recently recommended by the Attorney General for political prisoners and others wishing to leave Argentina, and that no respite take place in the sanctions that have been taken against the Argentine government until significant, rather than token, change in the current situation occurs.

LAURENCE R. BIRNS,

## BUDGET SHORTAGE FOR VETERANS MEDICAL PROGRAM

### HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. TEAGUE. Mr. Speaker, letters continue to reach my office from grassroot America which show a deep concern that the Congress fulfill its commitment that America's veterans are provided the best possible medical care for those that we owe our very existence to as a free Nation. These letters bring to my attention the lack of adequate funds to continue to provide quality care for American veterans in VA health care facilities.

For over 31 years the veterans medical program has sought to affiliate its hospitals with the approved schools of medicine in this country. The reason for this was to improve the quality of care the veteran receives while at the same time providing the clinical facilities to the medical schools to increase both the quality and quantity of medical education. This partnership is unique in the annals of government and has not only benefited the veteran but the Nation as a whole.

To illustrate the shortsightedness of the administration's budget for fiscal year 1979, there is attached a recent letter I received on the subject of the VA research budget from President Jarvis E. Miller of Texas A. & M. University, together with my response.

Chairman RAY ROBERTS of the Veterans Affairs Committee and the ranking minority member of that committee, the Honorable JOHN PAUL HAMMERSCHMIDT, wrote each member a personal letter on February 28, 1978 outlining the additional requirements. The Congress must act both through the first concurrent budget resolution and through the Appropriations Committee to provide adequate funds for the veterans medical program. While I personally am of the opinion that all veterans programs are based on congressional commitment and needs, there is none of them as important and essential to veterans and the Nation as this outstanding health care delivery system. I ask all Members to familiarize themselves to these needs and to support the provision of these additional funds:

TEXAS A. & M. UNIVERSITY,
*College Station, Tex., March 13, 1978.*

Hon. OLIN E. TEAGUE,
*U.S. House of Representatives, Rayburn Building, Washington, D.C.*

DEAR MR. TEAGUE: Your participation and attendance at our military weekend festivities on Saturday, March 4 was certainly appreciated. As per our conversation, the recent proposed actions by the Veterans Administration Central Office regarding the curtailment of core research funding at the Temple Veterans Administration Center is of serious concern. We view the proposed reduction with alarm since it will have potentially severe consequences for the Temple VAC and for the College of Medicine at Texas A. & M. University.

The College of Medicine and the Temple Veterans Administration Center are cooperating as partners in the development of a college of medicine program under the authority of PL 92-541 (the Teague-Cranston Bill). To accomplish our goals in medical education and care of our veterans, we have made a primary and continuing commitment to improve the academic and research environment at the Temple VAC. We have invested faculty effort and funds from PL 92-541 to accomplish this and view the deletion of core research funding at the Temple VAC as a serious hindrance to the attainment of our mutual goals. I believe the education of future physicians and, ultimately, the care of our veterans, will suffer serious consequences from such a deletion.

We have requested a waiver from the Veterans Administration Central Office for the Temple VAC; however, indications are that this is not likely to be granted. We request your assistance in assuring continuation of these funds for the Temple VAC. The education of Texas physicians and the care of our veterans will benefit from such a continuation.

Thank you.

Sincerely yours,

JARVIS E. MILLER,
*President.*

---

APRIL 3, 1978.

Mr. JARVIS E. MILLER,
*President,*
*Texas A. & M. University,*
*College Station, Tex.*

DEAR MR. MILLER: Thank you for your letter of March 13th regarding the curtailment of the medical research program at Temple.

We are very concerned with the President's proposed budget for medical and prosthetic research. Unless funds are restored by the Appropriations Committees of the Congress, we understand the research programs in some 53 hospitals will be drastically curtailed or terminated altogether. This cannot be allowed to happen.

We are doing everything possible to see that these funds are restored. The Committee on Veterans' Affairs is recommending an additional $18.3 million over the funding level requested by the President for medical and prosthetic research. It is a well known fact that the research conducted by the Veterans Administration has produced excellent results. As you know, two full-time VA employees recently received the Nobel Prize for medicine, and this is no time to cut back in an area so vital to the Veterans Administration medical program.

The research program also enhances the recruitment and retention of physicians in the VA System.

I share your concern and will do everything I can to see that the research program is continued at the Temple VA Center.

I appreciate your letter and shall make your views known to both the Appropriations Committee and the Committee on the Budget.

Sincerely,

OLIN E. TEAGUE,
*Member of Congress.*●

## INEFFECTIVE FEDERAL TAX SYSTEM EXPOSED

### HON. BRUCE F. VENTO

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. VENTO. Mr. Speaker, I rise today to commend Washington Post staff writer Art Pine for his March 27 article that so effectively refutes the common notion that our progressive Federal income tax system results in a major redistribution of income between wealthy and poor taxpayers.

Through studies by the Treasury, the congressional Joint Committee on Taxation, and the Brookings Institution, Mr. Pine has compiled statistics which clearly indicate that taxpayers in all brackets realize about the same portion of the Nation's total income distribution after income taxes as they had before.

This analysis certainly lends credence to the view that the progressivity of our Federal income tax system is not what it is commonly thought to be. Mr. Speaker, I insert this article into the RECORD:

INCOME TAX DOESN'T REDISTRIBUTE U.S. WEALTH

The progressive federal income tax, which is supposed to hit the rich harder than it hits the poor, isn't the great income leveler that it is commonly thought to be, according to new figures.

While the income tax does take proportionally more from wealthier taxpayers than from less affluent ones, it has relatively little effect on the distribution of income in this country.

It's only when government "transfer payments"—such as Social Security benefits, welfare and other major programs—are included that the system actually shifts significant amounts of income from the rich to the poor.

And even that is offset to a large degree by the impact of federal Social Security taxes and state and local taxes. When all federal, state and local taxes and benefits are considered, the system is only virtually proportional—with most taxpayers bearing about the same tax burden.

These conclusions are based on statistics compiled from several sources—the Treasury, the congressional Joint Committte on Taxation and computer studies by the Brookings Institution. Experts caution that the figures are not precise, but they're the best that are available.

The ineffectiveness of the federal income tax system in redistributing income stems from its basic structure:

Although wealthier persons are taxed at higher rates than poorer ones—and pay the lion's share of the total income tax tab—taxpayers in almost all brackets wind up with roughly the same portion of the nation's income pie after income taxes as they had before.

A major reason is that while the effective tax rates vary somewhat for persons in different income brackets, they aren't sharply higher or lower except for those in the very top or bottom brackets—groups that may be extremely rich or poor but comprise relatively small numbers of taxpayers.

For the large group of taxpayers in the $10,000 to $30,000 income bracket the effective federal tax rates vary very little, from a low of 9 percent to a high of 13.8 percent. Above that, the rates rise to 17, 24, 29 and 30 percent—but only 5 percent of taxpayers fall in that group.

The figures provided by the Joint Committee on Taxation show these results:

The richest one-fourth of American households—those with incomes of $17,000 a year or higher—took home 55.5 percent of the income in this country in 1977. After federal income taxes, they still had 53.2 percent. This is so despite that fact that they paid 74.3 percent of all personal income taxes.

The poorest one-fourth—wage earners making less than $5,000 a year—received 4.6 percent of the income that year. After federal income taxes, their share rose to 5.2 percent. (These taxpayers paid less than 0.1 percent of personal income taxes.)

Those in the richest 5 percent of the country—taxpayers with incomes of $30,000 or more—earned 22.1 percent of the income in 1977. After federal income taxes, they still had 19.7 percent of all income. (These figures include all income from capital gains—profits from the sale of stocks or other assets.)

The richest half of American households received 82.1 percent of all income before taxes. After taxes, they still held 80.4 percent. For the poorest half, the income tax boosted their share only modestly, to 19.6 percent, from 17.9 percent before taxes. (The dividing point between these groups was an income of $10,000 a year.)

Moreover, figures compiled by Benjamin A. Okner, a former Brookings tax specialist now at the Treasury Department, show that when all federal, state and local taxes are taken into account, even this modest income redistribution is almost totally offset.

Using 1970 income levels, Okner has estimated the share of national income held by the poorest fifth of the population edges from 4.9 percent to 5 percent, while that of the richest fifth moves from 45.8 percent to 44 percent.

The biggest changes stem from government transfer payments, such as Social Security and welfare benefits. When these are included, the income share of the poorest fifth of the population nearly doubles, to 8.2 percent, while that of the richest fifth moves from 45.8 percent to 44.

FEDERAL INCOME TAX DISTRIBUTION UNDER 1977 LAW FOR 1976 INCOME LEVELS

Filers earning under $10,000: Represent 50 percent of all filers; receive 17.9 percent of all income before taxes; pay 5.7 percent of all taxes; end up with 19.6 percent of all income after taxes.

Filers earning over $10,000: Represent 50 percent of all filers; receive 82.1 percent of all income before taxes; pay 94.3 percent of all taxes; end up with 80.4 percent of all income after taxes.

Filers earning over $17,000: Represent 25 percent of all filers; receive 55.5 percent of all income before taxes; pay 74.3 percent of all taxes; end up with 53.2 percent of all income after taxes.

Filers earning over $30,000: Represent 5 percent of all filers; receive 22.1 percent of all income before taxes; pay 39.3 percent of all taxes; end up with 19.7 percent of all income after taxes.

Source: Joint Committee on Taxation.

These findings were bolstered in an updated study by another Brookings tax analyst, Joseph J. Minarik, using 1977 data. Minarik found the federal income tax burden varied only slightly last year for households in the $17,000 to $50,000 brackets—ranging between 10 and 17 percent.

When the employe's share of Social Security payroll taxes and state and local taxes of all sorts were included, the figures showed the tax burden is proportional for most of the nation's households. Everyone in the $8,000 to $50,000 categories paid roughly 30 to 32 percent of his income in taxes.

The reason is that the mild progressivity of the federal income tax is offset entirely by Social Security and state and local taxes, which tend to hit lower-income families proportionally harder. State and local sales and excise taxes, for example, took 3.8 percent of a $50,000-a-year family's income in 1977, but 10.7 percent of the earnings of a $5,000-a-year household.

Minarik's study shows that the federal income tax has become somewhat more progressive in the past 11 years—both because of recent changes in the tax law and the fact that inflation has pushed taxpayers into higher brackets, where their income is taxed more heavily. And taxpayers in all groups are paying proportionally more in taxes.

However, the increased progressivity in the federal income tax has been offset by the rising share of the tax burden going to Social Security and state and local taxes. As a result, the total tax burden—federal, state and local—still is proportional.

The combination of these figures appears to dispute one of the long-standing impressions about the federal income tax—specifically that it is so progressive that it results in a major redistribution of income between wealthier taxpayers and poorer ones.

Joseph A. Pechman, the Brookings Institution's top tax expert, says the effect of the income tax is redistributing income is small. "Substantial redistribution through the income tax system is not very popular," he notes. Other tax authorities agree.

Nevertheless, conservatives point out while the impact of the income tax is altering the portion of the income pie held by various categories of taxpayers may seem small in percentage terms, it often can mean substantial dollar losses for some taxpayers.

For example, for taxpayers in the $17,000-a-year bracket and up, the income tax produces a shift of only 2.3 percentage points. In dollar terms, however, that amounts to a change of $22.3 billion—or an average $5,000 a taxpayer.

By contrast, for those in the $5,000-and-below brackets, the income tax produces a gain of 0.7 percentage points. However, because there are so many more taxpayers in that category, the already scant amount is spread even thinner. The increase amounts to $263 a taxpayer.

Along with the fact that the tax rates vary so little for the bulk of American taxpayers, there are other factors that tend to reduce the impact of the income tax system in shifting income between rich and poor taxpayers.

To begin with, the tax rates so often cited—the 14 to 70 percent minimum and maximum—are only the marginal rates, and do not apply to all of a taxpayer's income. (The first several thousand dollars is taxed at a lower rate than the second, and so on.)

As a result, the effective tax rates that various income groups pay—the percentage of income that taxpayers actually pay in taxes—is substantially lower, ranging from 5.5 percent in the $5,000-to-$10,000 brackets to a maximum of 30 percent in the $200,000-and-over bracket.

Then, too, taxpayers in higher brackets get a larger share of the tax breaks and deductions—a factor that tends to reduce the amount of taxes they have to pay. For example, only half the income from capital gains is subject to taxation.

The question is, if the income tax system is taxing middle- and upper-income groups at higher rates, and it isn't redistributing that income to the poor, where is the money going?

The answer: Into government coffers, where some is spent on social benefits (which go mainly to the poor) and some on general government. But the tax system itself, while progressive, is only modestly so.●

## OLD CITIES CRUMBLE AND DECAY

### HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. MOORHEAD of Pennsylvania. Mr. Speaker, one of the most serious and least discussed problems facing our Nation's cities is the deterioration of their infrastructure. In city after city, the maintenance and repair of roads, streets and sewers is being deferred. Boston's water pipes are leaking a large volume of their fresh water supply, San Francisco's inadequate sewers resulted in numerous overflows last year and in, perhaps, the most serious incident to date, New York City's West Side Highway collapsed from disrepair.

Initially, fiscal strain resulted in a cutback of operating expenditures. When these reductions did not eliminate the fiscal problems, capital expenditures were also reduced. These reductions in capital expenditures have continued at an increasing rate. I fear our cities and our Nation face grave danger if these reductions continue.

The following is a copy of a recent article by John Herbers which appeared in the New York Times entitled "Beneath the Streets, Old Cities Crumble and Decay." I urge my colleagues to give careful consideration to the serious implications of the situation discussed in this article:

[From the New York Times, Apr. 9, 1978]

BENEATH THE STREETS, OLD CITIES CRUMBLE AND DECAY

(By John Herbers)

America's large, old cities are facing a hidden and largely ignored problem under their streets—an uncharted maze of aging water mains, sewer lines and other subterranean facilities that have deteriorated to the point where they threaten public health and safety.

A rash of recent failures in such systems, which had been neglected for decades as cities struggled to deal with an overwhelming social and financial burden, has focused attention on the threat that they represent and raised the prospect of new demands on the Federal treasury by municipalities around the nation.

Boston is losing half its fresh water through leaky pipes at a cost of $7 million a year. New York and other cities have had serious water main breaks. Inadequate sewers in San Francisco resulted in 80 overflow incidents last year in which raw sewage was flushed into the bay in violation of Federal law.

Ground water seeps into the sanitary sewers of Baltimore, overloading treatment facilities. A few months ago, a small Philadelphia boy drowned in an underpass where the storm sewers were not sufficient to handle the runoff.

Many billions of dollars would be required to update the antiquated network of pipes, cables, tunnels and manholes that strain to support an increasingly technological society.

The Joint Economic Committee of Congress, noting a decline in capital expenditures for such urban networks as streets and bridges, said in a recent report that the neglect "appears to be the single greatest problem facing our nation's cities." The new urban policy announced last month by President Carter, which called for more "targeting" of Federal funds into the central cities, was based in part on the emerging realization that new outlays are needed to rebuild the urban underground.

However, the extent of the need is not yet known nationally because many cities do not know what is in the complex of wires, pipes, cables, tunnels and conduits under their busiest arteries or exactly where that complex is. The original plans have been lost in some cases and have grown inaccurate in others as facilities were expanded haphazardly. The conditions of some systems becomes known only when trouble bubbles to the surface.

To assess the problem nationally, the Department of Housing and Urban Development has commissioned the Urban Institute in Washington to conduct an 18-month study and to report its findings as it proceeds.

CITIES ON "TIME BOMBS"

George E. Peterson, director of finances for the institute and the head of its study, said that the extremes range from East St. Louis, Ill., where the state took over the dilapidated city infrastructure, to Dallas, where computers are used to find failures before they happen. In between, he said, are a lot of cities sitting on "a time bomb."

A spot check of some large and intermediate cities around the country by The New York Times disclosed that the trouble has been building for a long time. In most of the nation's larger cities, sewer and water lines were laid in the 19th century or early in the 20th century, and some of them had a life expectancy of 50 to 75 years.

In the 1930's, when modernization should have started, the Depression struck. In the

1940's there was World War II. In the 1950's the cities began devoloping financial trouble as the white middle-class started moving to the suburbs. In the 1960's the demands were for solutions to social problems and in this decade the emphasis has been on the employment of the poor and on public works projects usually unrelated to the infrastructure.

The extent of the neglect is suggested in a report issued last year by the Twentieth Century Fund for the City of New York, where facilities both above and below ground have reached a critical stage. For example the report said that in addition to extensive work needed on streets and bridges, the city had 1,000 miles of deteriorating sewers that should be replaced over 20 years. It suggested that 1,500 miles of new sewers be built at a cost of $310 million a year. The list of problems with other facilities was similar.

WATER MAINS

Many cities have cast iron water mains that have been weakened over the years by electrolysis or by acid in the soil. Boston, which began laying iron water mains in the 1840's, has a system that carries 150 million gallons of water a day, but loses 78 million gallons a day through leakage. Charles Scales, chairman of the water and sewer commission, said that the entire system should have been replaced, "ideally, yesterday." But because of its financial situation the city can replace only 10 miles, or about one percent of the 1,100-mile system each year.

Houston, a newer city where pipes were laid after the turn of the century, is better off. It loses only 20 to 30 percent of its purified water, but that still totals more than 70 million gallons a day. And because it is low and flat, Houston has received about 3,600 water-damage complaints this year—complaints that leaks have destroyed lawns, undermined sidewalks and caused driveways to cave in.

"In this neighborhood, if there isn't a leak somewhere, we wonder," said Stanley Gafner, who lives in a middle class section of southwestern Houston.

Then there are the spectacular breaks, such as the one that occurred last January at 63d Street and First Avenue in New York City, closing the Franklin D. Roosevelt Drive. In Cleveland, a similar break in a February snowstorm left an area of several blocks of the city isolated for several days.

SEWERS

San Francisco, like a number of other cities, has a combined sewage system—one pipe for both rainwater and human waste. In a storm the flow can grow to 50 times the normal rate. S. Myron Tatarian, director of public works, said that when there is heavy rain, water and raw sewage pour directly into the ocean and bay, bypassing even primary treatment.

"This city ignored changing technology for 30 years," he said. "Bacteria levels in the bay are enormous."

San Francisco is building a system of conduits to hold the sewage in heavy rains and is planning more treatment plants; but in Providence, R.I., which also has a combined system, there is another kind of difficulty and no solution in sight. In recent years low-lying areas of the city have been flooding after every rainstorm and the city is unable even to clean the sewers to obtain maximum flow.

"It would take 10 years to clean up all the sewers in the city," said Joseph Vileno, an official in the Mayor's office.

SEWERS CANNOT HANDLE RUNOFF

Baltimore has had flooding, too, because its storm sewers, which serve the entire metropolitan area, cannot handle the runoff that has resulted from extensive development in the suburbs, according to Frank Kuchta, director of public works. It is a problem common to many cities that supply their suburbs with water and sewage disposal.

"When those sewers were built," said Philadelphia's Water Commissioner, Carmen Guarino, "you didn't have all the blacktop all over. Now, there's no place for the water to permeate. It all winds up in the sewers, and we haven't kept pace."

Deterioration of the sewer lines is an additional difficulty. In Boston, the main interceptor, where the pipes meet, has collapsed four times since 1961. There has been a gaping hole more than 20 feet wide in Massachusetts Avenue since the last collapse, in October.

THE MAZE

More than money is involved in correcting the difficulties. Major disruptions of urban life would be required to repair some of the decay, partly because of underground congestion.

Only one major city, Memphis, is reported to be attempting to keep in one place maps of all its underground facilities. In the oldest cities it would be impossible because of what Charles Borruso of New England Telephone Company in Boston called "the morass of congestion."

"A guy couldn't crawl through there," he said. "If you took all the dirt out, it would look like a set of monkey bars."

GROUND X-RAY MACHINE NEEDED

Theodore Andriotes, head of the bureau of operations for Baltimore, said, "I often thought if someone would invent a ground x-ray machine so we could see what all we have down there, he would clean up."

Under New York and Boston there are abandoned pipes and cables from the last century. In some places, steam pipes that heat up nearby telephone cables and cause trouble. In many manholes, there is not enough room for cables to expand and contract. In Pittsburgh, contractors on a new office building had to weave the foundation around an unused railroad tunnel and an underground spur of the long abandoned Pennsylvania Barge Canal. In Boston, there are sealed off subway tunnels including a circuitious one known as the Burma Road.

FEDERAL AID

Not all cities are overburdened by troubles underground. Dallas, in addition to using its computerized system to forecast failures, has established a regular replacement and maintenance program. Such cities as Chicago, Detroit and Dayton, Ohio, which have multiple social problems above ground, have reasonably efficient infrastructures. But over-all, Federal and local officials say, replacement and repair are not moving fast enough.

"Out of sight, out of mind," said Mr. Guarino of Philadelphia.

Most Federal aid has gone for other purposes. Since 1972, the Environmental Protection Agency has spent more than $17 billion on sewage treatment plants but little to repair or replace the lines leading to the plants.

AGENCY PUSHES FOR IMPROVEMENTS

The agency is using leverage to push the cities into financing their own improvements. For example, it has been holding up the financing for a plant in the southeastern section of Philadelphia until the city agrees to provide sewer lines that would end the infiltration of ground water which requires additional capacity at the treatment plant. The city says it would take 10 years to make the requested repairs on its sewers, and the dispute has not been resolved.

President Carter's new urban policy is designed to provide some help. It calls for redirecting some funds from rural and suburban areas to help cities with their infrastructure. But at best, this would be only a fraction of what is needed, and the city officials are looking for help.

"Unless significant additional amounts of state and Federal aid can be obtained," said David Rossman, the former New York City budget director who headed the Twentieth Century Fund study, "the city faces a decade of serious deterioration in its vital physical support systems."

## CARTER GETS GOOD GRADE

### HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

Mr. EDWARDS of California. Mr. Speaker, observers and analysts traditionally begin on election night with evaluations and predictions of and about Presidents-elect seldom waiting until the President-elect has been in office for any length of time, let alone until inauguration day to publish their words of wisdom and presumably be the first on record to be able to say "I told you so."

I do not think it takes a scholar to possess the kind of patience, temperance and good judgment usually reserved to "give a guy a chance" before announcing Presidential evaluations, but it certainly does not hurt.

Prof. Reo M. Christenson of Miami University has written a letter to the editor of the Washington Post on April 11 which displays the sort of intellectual open-mindedness which I think many of us could benefit from in our haste to judge, at the earliest possible moment, the performance of President Carter, or for that matter, any new officeholder:

A PROFESSOR'S GRADE FOR CARTER: B TO B+

I have been teaching a course on the presidency for many years and naturally follow Carter's administration closely. That doesn't validate my opinion, but it seems to me that Carter is a more capable president than his critics concede.

It takes any president 12 to 18 months to get comfortable in the saddle; allowances must be made for that—and especially for a non-Washingtonian like Carter. But as things look now, his proposed programs have almost invariably been intelligent ones, although necessarily constricted by the fiscal bind and the antigovernmental temper of the times. (And conditioned by the harsh fact that no one—including Carter's critics—has good answers for today's most pressing problems). Certainly those programs are better than Congress is usually willing to accept! And Carter is apparently learning how to deal with that unruly body, judging by his extraordinary efforts on the Panama Canal.

His human-rights posture has yielded modest gains, perhaps as much as we could realistically expect. He seems to be a competent administrator, willing to delegate authority to good people. On the latter point, his selection of people like Andrus, Califano, Young, Schultze, Marshall, Krebs, Strauss, Eisenstadt, Powell, Miller and Webster suggests that he is better at judging political horseflesh than most of our presidents have been.

Carter is a man of decency and integrity—and it is about time we focused on what he does, rather than harp endlessly on the contrast between what he promised and what he now finds it possible to do. When he defaults on a promise, that should not be ignored, but it is really much less important than the quality of what he *does* produce. He is an intelligent and thoughtful person, he works hard, and he has a pretty good feel

for public sentiment. While his speeches are mostly so-so, his best ones have been pretty good. Finally, he has exercised admirable restraint in responding to his condescending and often brutal detractors.

As I survey those characteristics and this performance, I'd say Carter rates a B to B+. Are the press and his own party really giving him a fair shake?

REO M. CHRISTENSON,
*Professor of Political Science,*
*Miami University.*

OXFORD, OHIO.●

## HELP FROM BILL HUNGATE

### HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. FINDLEY. Mr. Speaker, William L. Hungate, who provided us all with abundant wisdom and wit during his service as a Member of this body from Missouri, has not let his new responsibilities as a lawyer and teacher so occupy his time that he has forgotten his old friends on Capitol Hill and the problems we face.

For example, he has written me attaching a form he thinks will be useful in answering constituent mail. It is so ingenious I want to share it with all my colleagues:

ST. LOUIS, MO.,
*April 4, 1978.*

Hon. PAUL FINDLEY,
*U.S. House of Representatives,*
*Rayburn House Office Building,*
*Washington, D.C.*

DEAR PAUL: As one fully acquainted with the efficiency level of your staff and the amount of energy they devote to your office, I thought perhaps the enclosed form would prove handy to you in answering your mail.

I see where the Congressmen are going to computers, but to me, this is much more personal.

Best wishes.

Yours sincerely,

WILLIAM L. HUNGATE.

Mr. Hungate's thoughtful suggestion brings to mind a practice attributed to the late great H. L. Mencken. The editor of the Mercury was, quite naturally, flooded with correspondence unending. He devised a brief acknowledgment that sufficed for all mail. In fact, it was so clever that it relieved Mencken even of the burden of reading the letter to which it responded.

Mencken's solution to floodtide mail was a response consisting only of these words, "Dear Sir, You may be right. Yours truly, HLM." ●

## ARMS EMBARGO AGAINST TURKEY SHOULD CONTINUE

### HON. WILLIAM M. BRODHEAD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. BRODHEAD. Mr. Speaker, I rise to express my opposition to the President's request to lift the arms embargo against Turkey. I do this because Turkey has not made any significant steps toward a resolution of the Cyprus problem.

In 1974, Turkish forces equipped with U.S.-supplied arms invaded Cyprus. In taking this action, Turkey totally disregarded provisions of U.S. law which prohibit the recipients of U.S. arms from using them for offensive purposes.

As a result of Turkey's illegal action, Cyprus has been a divided country. Forty percent of the island is still under Turkish military control, and about one-third of the population, both Greek and Turkish, are refugees.

In October 1975, Congress rejected a total arms embargo against Turkey under assurances from the Ford administration that progress on Cyprus would be forthcoming. That proved to be an empty promise. Today, more than 2 years later, we are again being asked to believe that the prospects for a Cyprus settlement will be enhanced by permitting the sale of more arms to Turkey.

In light of Turkey's past misuse of U.S. arms assistance and its unwillingness to come to grips with the Cyprus situation, I believe that such a policy is unwise. I urge my colleagues to join me in voting to continue the arms embargo against Turkey.●

## JOSEPH C. NETTLETON—A TRIBUTE

### HON. JAMES J. FLORIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. FLORIO. Mr. Speaker, I would like to have the following biography of Mr. Joseph C. Nettleton inserted in the RECORD as a special tribute to a man who has made many contributions for the benefit of his union and its members. Mr. Nettleton retired in January 1978, as vice president of Local 56, Amalgamated Food and Allied Workers Union, Camden, N.J.

Joseph Nettleton joined the amalgamated Food & Allied Workers Union, mated union early in 1939 with local 195 meatcutter and meat manager for the Food Fair Co. He was one of two who started organizing the meatcutters. He became a steward in 1940 with local 195.

When members working in south Jersey formed their own local 56, Joe became a charter officer, serving as its first and only treasurer from January 1941 to March 1954—at which time the office was merged into secretary-treasurer. In 1954, Nettleton was elected vice president and served continuously until his retirement.

His outstanding career exemplifies his active participation in establishing and maintaining local 56. He served as an original delegate to the Retail Joint Council since its inception, serving on the executive board; he was secretary-treasurer of the Camden-Gloucester County Central Labor Union from May 1941 to February 1978; he helped found the Union Reporter newspaper, the official mailing media of the Amalgamated Meat Cutters Unions in the Delaware Valley; and for more than 20 years, Joe served on the executive council of the State of New Jersey AFL–CIO.

Joe is a native of Camden and lived there most of his life. He attended elementary and high school in Camden and St. Joseph's College in Princeton, N.J.

He was active in community affairs, served as trustee, campaign vice chairman, and budget committee member for many years for the United Fund of Camden County.

He was cooriginator of the citizens apprenticeship program (CAP) for 9 years and the only coordinator for this CAP program under the auspices of the Camden Central Labor Union, Union Organization for Social Service, and the United Fund. The program was guiding juniors in the public and parochial high schools who volunteered to have the opportunity of becoming better informed as a future citizen.

Joe Nettleton was appointed a member of the Camden City's Planning Board. He was elected chairman of the board, and served as such for 8 years. During the time he was chairman the crisis of the famous Camden blight hearings and determination" of the planning board took place.

He was appointed a Camden City councilman to serve the unexpired term of 6 months and was elected to serve two

additional terms of 4 years each, a total of 8½ years before he resigned in 1975.

Nettleton is also active in fraternal affairs, having served through the "chairs" of the Foresters of America; Artisans OMP; past grand Knight of Columbus, Immaculate Conception Council 3512. He is a member of the Fourth Degree Knights of Columbus and served on the original Color Corps of the Fourth Degree.

In each and every position of responsibility he has held, Joe Nettleton has proven himself a quality leader genuinely concerned with his union, and his community. His career is truly commendable and his retirement is truly deserved.●

## PROXMIRE RIDICULES RESPONSIBLE RESEARCH

### HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. TEAGUE. Mr. Speaker, I wish to take task with my colleague in the other House, Senator WILLIAM PROXMIRE, for inventing outrageous headlines to ridicule responsible research. This is not a new pastime for the Senator from Wisconsin. He has engaged in these semantic simplicities on many other occasions by picking out a particular piece of research from the National Science Foundation (NSF) budget request and distorting it to make it resemble a boondoggle, financed with taxpayers' money. The latest object of Mr. PROXMIRE's belittlement is a research project entitled, "Computer-Controlled Systems for Locomotion and Manipulation," which culminated in the construction of a robot affectionately dubbed by NSF as the "Bionic Bug."

In a recent press release by the Senator criticizing "Bionic Bug" as fat in NSF's engineering budget, he mentions by outstanding reputation the principal investigator on the project, Prof. Robert McGhee at Ohio State University, but then suggests that the "Bionic Bug" would be most useful on the Ohio State football field.

I consider it irresponsible of Senator PROXMIRE to attack the research of a scientist whom he acknowledges as having a worldwide reputation for excellence in his field. Dr. McGhee is a well-known authority in the area of manipulators and powered orthopedic devices. He has for the past several years engaged in cooperative research with the Michael Pupin Institute in Belgrade, to find more efficient computational means for dynamic modeling of both human gait and artificial articulated mechanisms such as walking machines. Authorities in rehabilitative medicine believe his work will be of increasing value in developing more quantitative methods in physical medicine. Dr. McGhee's experimental study of a sensor-controlled external knee locking system, which grew out of his work on vehicular locomotion, represents, in his own words:

> The first published example of application of a micro-computer to the control of knee joint locking and unlocking using artificial sensory information.

This work now serves as the basis of a U.S. Veterans' Administration contract with one of the world's foremost experts in prosthetic devices, Professor Tomovic at the University of Belgrade. An artificial leg developed by Professor Tomovic with a self-contained microcomputer for knee joint control, will be tested this month with a patient at the VA Prosthetics Center in New York. In fact, Anthony Staros, director of the center stated:

> This is a very hopeful prospect that could be available within the next five to six years with application not only to amputees, but also to paraplegics and stroke victims. Certainly micro-processors can, in the near future, enable us to control the position and stability of lower artificial limbs and braces just as they now permit the functioning of upper extremity devices.

Mr. Speaker, I have long been concerned with the problems of handicapped people, first as chairman of the House Veterans Affairs Committee and now as chairman of the House Committee on Science and Technology. During the past 2 years two different citizen advisory panels established by the Science Committee, have reported to the Congress on how our Nation's vast scientific and technological resources might be better directed toward meeting the needs of the handicapped. These experts have just issued their final report and Dr. McGhee's work, as one example of the great potential for research to aid handicapped persons, should be applauded and not ridiculed. For millions of people who have lost the use of their legs, arms, or both, this research could offer them a new life.

Although the contribution of this research project to rehabilitative medicine would alone justify its funding, there are applications for this same research in other fields as well.

The Jet Propulsion Laboratory has expressed high interest in Dr. McGhee's project because they feel it has important implications for their work in developing machinery for the exploration of planetary surfaces, particularly on Mars. After a visit to Dr. McGhee's project, JPL scientists wrote him stating:

> Of particular interest to us was your walking machine. Your progress has been very impressive, and the potential future developments are most intriguing.

Mr. Speaker, I could continue to relate other examples of application for this NSF research project but I believe that I have clearly identified the frivolity of Senator PROXMIRE's accusation.

As representatives of the people of this Nation, it is our responsibility to insure the proper use of American tax dollars for the benefit of American citizens, but it is also our responsibility to gather all the facts and information and present them to the public in a responsive and not an inflammatory frivolous manner.●

## THE PROPOSED SALT II AGREEMENT

### HON. ROBIN L. BEARD

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. BEARD of Tennessee. Mr. Speaker, the structure of the proposed SALT II agreement is well known:

First. It will consist of a treaty, to remain in force through December 31, 1985, unless replaced earlier by an agreement further limiting strategic offensive arms.

Second. A 3-year protocol is under negotiation; it will be considered an integral part of the treaty. Because of the extension of the SALT I interim agreement, and the inability to conclude a SALT II agreement before the expiration date of SALT I, the United States proposes that the 3-year Protocol period be backdated to October 31, 1977, thus expiring on September 30, 1980. The Soviets proposed that the 3-year protocol period begin when the treaty enters into force.

Third. A joint statement provides the principles and basic guidelines for subsequent negotiations on the limitation of strategic offensive arms.

THE TERMS OF THE SALT II TREATY

First. Upon entering the treaty each side undertakes to limit its strategic nuclear delivery vehicles (SNDV's), consisting of ICBM launchers, SLBM launchers, heavy bombers, and air-to-surface ballistic missiles (ASBM's), to an aggregate number not to exceed 2,400.

The United States has proposed that the SNDV count be reduced from 2,400 to 2,160 from January 1, 1980; the Soviets have countered by proposing an SNDV reduction from 2,400 to 2,250 from January 1, 1981.

Second. Within the aggregate numbers each side has the right to determine the composition of the aggregates. The following limits, however, would apply.

There will be a limit of 1,320 MIRV'd systems, within the SNDV aggregate.

Another limit within the overall SNDV aggregate would provide a ceiling of 1,200 or 1,250 MIRV'd ICBM's and SLBM's.

Within the SNDV aggregate there would be a ceiling of 820 on MIRV'd ICBM launchers.

Third. *The definition of what constitutes a heavy bomber is presented by listing each side's "heavy bombers." For the United States, the heavy bombers listed are the B–52, and the now U.S. unilaterally canceled B–1. On the Soviet side the Bear and Bison are listed.

*The Soviet Backfire bomber still remains a subject of negotiation. It appears that the Backfire bomber's resolution will be left, at least in terms of official acknowledgment, to a Carter-Brezhnev summit meeting. However, the limitations on the Backfire would include a Soviet promise, in the form of a

*Indicates unresolved issue.

letter from Brezhnev to Carter, or in the form of a statement signed by both nations, not to increase the Backfire's present production rate and place collateral constraints on the system, such as a prohibition on refueling exercises, and a limitation on areas where the Backfire would be deployed. The Backfire agreement may or may not be subject to congressional approval; this will depend on the terms negotiated, and the form in which those terms will be presented.

An agreement on how to define new heavy bombers has not yet been reached, except that both sides agree that future case-by-case determinations of which types of aircraft have the capabilities and chracteristics similar to or superior to those of current heavy bombers shall be agreed upon in the Standing Consultative Commission.

The difficulty being encountered with the Backfire bomber illustrates the problems the United States could expect to encounter with any future Soviet bomber system.

Under the treaty air-launched cruise missiles (ALCM's) with ranges in excess of 600 kilometers would be limited to "heavy bombers." *Under the proposed Soviet language the United States could not unilaterally place ALCM's with ranges exceeding 600 kilometers on any aircraft—such as the FB–111 H, or a modified commercial wide-bodied carrier—other than the B–52 or the B–1. As proposed by the United States, the United States could unilaterally declare what constituted a heavy bomber so long as the carrier was counted under the SNDV aggregate.

The definition for the cruise missile range is still under negotiation. The Soviets propose that the definition be incorporated into the treaty and that the definition of range, limited to 2,500 kilometers for the ALCM, would be the maximum distance which could be covered by the missile in straight line flight in its standard design mode.

The United States has proposed, that the agreed statement defining cruise missiles and their range be placed in the protocol. The United States proposes that the cruise missile range definition be defined as the aerodynamic range.

Each side agrees not to develop, test, or deploy ICBM's which have a launch weight greater or a throw weight greater than that of the heaviest ICBM's deployed by either side as of the date of signature of the treaty.

This provision, in effect, would prohibit the United States from deploying any ICBM with a throw weight greater than Titan (8,000 pounds), and the Soviets would not be permitted to deploy an ICBM with more throw weight than the SS–18 (16,000 pounds), classed as a modern heavy ballistic missile. The United States has no ICBM comparable to the Soviet SS–18; MM III is classed as a "light" missile, with 2,000 pounds throw weight, and the Titan is an old U.S. ICBM system—deployment was begun in 1959—of which 54 are presently still deployed.

Both sides agree not to start construction of additional fixed ICBM launchers, and they agree not to relocate fixed ICBM launchers. Additionally, each side agrees not to supply ICBM launcher deployment areas with intercontinental ballistic missiles, or storage facilities, in excess of a number consistent with normal deployment, maintenance, training, and replacement requirements. The definition of normal deployment will be one missile at each ICBM launcher.

Both sides agree not to develop, test, or deploy systems for a rapid reload of ICBM launchers, a provision that can actually no longer be enforced, since they already have so-called "cold-launch" systems, and thus have, in effect, a "rapid" capability.

The United States has proposed that the Soviets agree not to produce, test, or deploy the SS–16, a mobile ICBM; this agreement would include an understanding not to produce the missile's propulsion system, the reentry vehicle, and its guidance system.

The SS–20, a mobile intermediate range ballistic missile (IRBM), which consists of the first two stages of the SS–16, could, of course, be deployed in unrestricted numbers, since it will not be covered by the SALT II agreement.

What will happen to those SS–16's reportedly already deployed in fixed silos still remains to be determined.

Both sides agree not to significantly increase (15 percent or more) the number of ICBM or SLBM test and training launchers.

A provision in the treaty is under negotiation indicating that to insure the viability and effectiveness of the treaty neither side will undertake initiatives which would circumvent the provisions of the treaty.

This provision, the Soviets are insisting, should include a prohibition on the transfer of strategic offensive arms to other States and assisting other States in the development of such systems. The Soviets intend this prohibition to include a ban on transferring components, technical descriptions and blue prints for such arms. This provision is directed primarily against the cruise missile, but it would, of course, cover other systems.

Each side agrees not to interfere with the national technical means of verification of the other, and not to take deliberate concealment measurements which would impede verification.

*Still under negotiation is the notification procedure for the Soviets and United States to notify each other of ICBM flight tests, in advance of such tests, and it would include three areas:

First. Tests which extend beyond the national territory.

Second. Tests which represent a danger to navigation on the high seas.

Third. Tests which do not extend beyond the national territory, but which could be misinterpreted and give rise to concern.

The Standing Consultative Commission, established in 1972, will be used to monitor compliance and serve as the forum for raising grievances.

*Still under negotiation is the procedure for each side listing its numbers of deployed strategic forces.

PROTOCOL

Each side undertakes not to deploy mobile ICBM launches, or to flight test ICBM's from such launchers for the duration of the protocol.

*Each side agrees not to flight test or deploy new types of ICBM's, although the Soviets are seeking one exemption.

*Each side agrees not to flight test or deploy new types of SLBM's, except that each side may have one exemption. The definition of new type for the United States is the C–4 SLBM missile and according to U.S. understanding, the new Soviet SLBM missile would be the SSN–18. Under the Soviet understanding, the new type for the United States would be the C–4, but the Soviets would be permitted to deploy not just the SSN–18, but also the SSN–18 follow-on system for their new Typhoon submarine. The Typhoon would be the equivalent of the U.S. proposed C–4 follow-on, the D–5.

Each side agrees not to flight test or deploy cruise missiles capable of a range in excess of 2,500 kilometers.

Ground- and sea-launched cruise missiles would be limited to 600 kilometers for deployment, 2,500 kilometers for testing.

*The Soviets insist that all armed cruise missiles be included within the terms of the agreement; the United States is proposing that only nuclear-armed cruise missiles be restricted under the terms of the agreement.

JOINT STATEMENT OF PRINCIPLES

First. Both sides agree to continue negotiations for SALT III, based on the principles of equality and equal security. The objective will be to reach an agreement on further limitations and reductions in numbers of offensive strategic forces, including qualitative limitations.

Second. Both sides agree that further reductions and limitations will be subject to adequate verification.

*Third. Both sides agree to seek measures to strengthen stability, including the maintenance and enhancement of the survivability of permitted strategic offensive forces, and further limitations on those strategic offensive arms most destabilizing to the strategic balance.

Fourth. The following items remain under negotiation for the principles:

Reductions in the numbers of strategic offensive arms to levels not to exceed an agreed aggregate number in the range from 1,800 to 2,000, and an agreed aggregate number in the range from 1,000 to 1,100 for launchers of missiles equipped with MIRV's.

A sublimit on the number of launchers of ICBM's equipped with MIRV's.

A reduction in the number of launchers of heavy ICBM's.

Restrictions on the development, testing, and deployment of new ICBM's, and on modifications to existing ICBM's.

Restrictions on the number of flight tests of ICBM's and SLBM's.

Further restrictions on strategic defenses, including air defenses and civil defenses.

Further limitation and reduction strategic offensive arms, taking into account all factors that determine the

*Indicates unresolved issue.

strategic situation, including such factors as differences in the geographic situation of the parties, the existence of forward-based nuclear systems, the possession of nuclear weapons by U.S. NATO allies.

Radical solution of the question of forward-based nuclear systems and carrier-based aircraft in the vicinity of the territory of the U.S.S.R.

Further measures for qualitative limitation of strategic offensive arms, including the question of the prohibition of new types and systems of such arms, as well as agreed limitations on modernization of existing strategic offensive arms.●

## COMMISSION TO PLAN FOR FUTURE LAND USE ALONG THE POTOMAC RIVER

### HON. JOSEPH L. FISHER

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. FISHER. Mr. Speaker, the Potomac River is one of the most interesting and beautiful rivers in the eastern United States. As the main stem of the river runs between Maryland and West Virginia and Virginia, it changes from a wide and bucolic body of water to raging white water and dramatic falls. The shores of the river and the surrounding area are as compellingly beautiful and beguilingly changeable as the river itself.

But the setting for this scenic and historic river is fragile. The pressures for development and recreation use of the river shore are coming to the Potomac as they have come to many parts of the countryside within reach of urban areas. The problem inherent in these pressures is not so much in the changes that they engender as in the possibility that a lack of forethought and planning will result in unattractive and inefficient development and needless loss of access to the river.

Much of the attraction of the Potomac shoreline is found in the diversity of the uses along the shore. Farming and other private land uses contribute greatly to the character of the area. Boating, hiking, fishing, and so on are among the activities through which the public can enjoy the shoreline and its environs. To insure that this diversity continues and that public and private interests are respected a forum is needed to bring these interests. I am introducing a bill entitled the Potomac River Shoreline Commission Act to provide such a forum for the landowners and residents of the river area, outdoor enthusiasts, naturalists, and government at all levels to discuss common problems concerning the Potomac River shores and attempt to formulate common goals for their protection and appropriate use.

The bill will establish a Potomac River Shoreline Commission to prepare an advisory plan for the river and its shoreline between Washington and Cumberland. The 30-member commission will consult with local, State, and Federal bodies charged with responsibility for the river area. In preparing its plan the commission will hold public hearings in the affected area. The plan, which will take effect only through the actions of governmental bodies at all levels, will recommend a cooperative effort between all levels of government and private interests, with each doing what it does best.

The Potomac River Shoreline Commission will have five citizen representatives from each State that borders the main stem of the river, one from the District of Columbia, five at-large public members with an interest in outdoor activities and conservation, one representative from each State government and the District of Columbia, and one member each to represent the C. & O. Canal Historical Park Advisory Commission, the Interstate Commission on the Potomac River Basin, the Environmental Protection Agency, the Army Corps of Engineers, and the Department of the Interior. Not only are the non-Government members a majority of the commission, but at least one member from each of the States and the District of Columbia must be present in order for a quorum to be constituted.

The bill lists the elements that must be included in the plan that the commission will develop. These elements include a statement of the values that the plan is intended to protect and that will guide the planning; a proposed boundary map of the area to be covered by the plan; a description of the role of local officials and citizens in the planning and management of the area; recommendations for land use and conservation; recommendations for the coordination of local, State, and Federal programs and policies with each other and with private interests; recommendations for places where public use will be allowed; recommendations for financing the plan; and recommendations for the way the plan for the area should be managed.

The recommended land use and conservation element is to cover several issues. It will identify locations which are either ecologically fragile or important because of their potential for wildlife, recreation, and scenic beauty. Land management techniques such as easements, public access agreements with private owners, and other methods that will enable the goals of the plan to be implemented will be spelled out in this part of the plan. The land-use element will also provide for the protection and promotion of such existing uses of the area as farming and forestry and those industries and other developments which are consistent with the purposes of the plan. The final feature of this will also provide standards for recreational use of the river, which will indicate, for instance, the kinds of uses that are appropriate for various sections of the river.

The bill provides for the commission to hire an executive director and an independent staff. In addition, the commission may request assistance from the Department of the Interior.

The plan is to be submitted to the States along the main stem of the river, the District of Columbia, and the county governments along the river within 2 years. These bodies will have 60 days to submit their comments on the plan to the commission. After another 60 days during which the commission will make adjustments in the plan based on the comments, the plan will be submitted to Congress. Congress would then have to act to implement the recommendations for Federal action in the plan. The recommendations for State or local government action will have to be implemented by those bodies.

A commission made up primarily of local residents of the shoreline area, appointed by their Governors with the advice of their county governments, will decide what it wishes to accomplish in recommending a plan for the area, and will, in fact, decide what the boundaries of the area should be. The plan will spell out the roles of the local, State, and Federal governments in managing and protecting the area. It will make recommendations for future uses of the shoreline area, taking into account present and future private uses of the land.

In every step of the process the public will be involved, through their representatives on the commission, through open meetings of the commission, and through public hearings sponsored by the commission. The commission is charged with consulting with governmental bodies at all levels, and with organizations and interested people as it progresses in its work. Furthermore, the product of the commission will be advisory with no other powers until the appropriate governing bodies have acted.

Although there have been legislative proposals dealing with the Potomac River in the past, this bill is a new approach and should be studied on its merits. It is the result of consideration of testimony at hearings on the earlier, different proposals and of comments on drafts of the present proposals from many affected organizations, local governments, and individuals. I think that the time has come for people interested in the river area to work together on protecting it and thinking about its future. In this way the natural beauty and pleasures of the Potomac as we know it today, along with appropriate uses, will be available for generations to come.●

## McKINNEY BILL WOULD AID RESTORATION OF HISTORIC AREAS

### HON. STEWART B. McKINNEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. McKINNEY. Mr. Speaker, a precious part of our country is going to waste. All across America, historic homes and neighborhoods are falling into a deplorable state of decay. These buildings, invaluable reminders of our national heritage, are collapsing and often being replaced by stark, soulless structures which cannot hold a candle to the beauty

and architectual excellence of their predecessors. To successfully battle urban blight, a medium must be struck. We must balance the occasional merits of replacement with the more beneficial practice of rehabilitating existing historic structures.

Lately, the trend in urban renewal has been leaning more and more in the direction of rehabilitation. According to Department of the Interior supplement 11593, "National Benefits of Rehabilitating Existing Buildings," the repair and alteration or renovation of nonresidential buildings has grown to nearly $19.9 billion this year. The rehabilitation of residential property may reach 38 percent of the market, or $32 billion. In all, about $52 billion, about 32 percent of all construction dollars, will be spent on the rehabilitation of existing buildings. Congress has responded to this sharp increase by enacting section 2214 of the Tax Reform Act of 1976. This new provision, for the first time, allowed those other than the original owners of certified historic structures the election to deduct from their taxes, over a 5-year period, the cost of rehabilitation with their otherwise allowable depreciation deductions.

An example of the effectiveness of this proposal can be seen in the following hypothetical case documented in "The New Economics of Rehabilitating Older Buildings": Mr. Danford, an unmarried accountant who earns $26,000 a year (which places him in a 40-percent tax bracket) decided to buy a residence as rental property. The house and land which he purchased for $30,000 ($10,000 for the land plus $20,000 for the building are located in a National Register Historic District. Mr. Danford spends $35,000 to rehabilitate the exterior of the house and converts the interior to three rental units. Mr. Danford filled out the Certification of Significance Within a Historic District and Certification of Rehabilitation sections of the National Park Service Tax Reform Act application, sent both to his State Historic Preservation Office, obtained the necessary certification and procedeed to prepare his tax return.

Using the 200-percent accelerated depreciation method allowed for "substantial rehabilitation" of residential rental property under the 1976 Tax Reform Act, Mr. Danford can depreciate the $20,000 cost of the house as well as the $35,000 rehabilitation cost. Assuming a 25-year life on the property (property lives are set by IRS tables), Mr. Danford can deduct $4,400 from his first year tax return. The mathematics involved proceeds as follows: the $20,000 cost of the house is added to the $35,000 cost of the rehabilitation ($20,000+$35,000=$55,000); assuming a 25-year life for the property ($55,000/25), and using the 200-percent accelerated depreciation ($55,000÷25×200%=$4,400). Because Mr. Danford is in a 40-percent tax bracket, his taxes will be reduced by $1,760 ($4,400×40%). Under the old law, the maximum first year deduction would have been $2,750 ($55,000÷25×125%) for a tax savings of only $1,100 ($2,750×40%). Thanks to the Tax Reform Act, Mr. Danford will pay several hundred dollars less in taxes—a significant incentive to rehabilitate.

While this is a step in the right direction, this provision is available only to building owners who can use depreciation allowances, like Mr. Danford who used his building as rental space; and this in effect, rules out almost all noncommercial owners. The bill which I have proposed would extend this useful tax treatment to the private owner of a certified historic structure. It will allow individuals to deduct from their taxes that amount which would normally be deducted as a depreciation allowance. The taxpayer may use the equivalent of a depreciation allowance or he may deduct his certified rehabilitation expenditures over a 5-year period.

As I see it, the net effect of this proposal would be threefold: The enhancement of urban renewal projects, the preservation of the Nation's historical heritage and the restoration of available living space. I would remind my colleagues that enactment of this proposal holds great potential since there are over 1,000 eligible districts in the Nation.

It should be remembered, however, that buildings which qualify as certified historic structures are often in need of repair. More often than not, these buildings need painting, plaster work, surface refinishing and repair of facades and grill work, jobs which frequently require the work of highly paid skilled craftsmen. Any relief which can be provided to homeowners or the owners of any noncommercial historic buildings cannot help but add to the beautification and restoration which is needed in so many parts of this country.

Action has been taken to aid homeowners who wish to rehabilitate certified historic structures. On March 29, 1977, Senator STROM THURMOND introduced S. 1158 which would provide noncommercial rehabilitation election. S. 1158 is currently pending before the Senate Finance Committee where it has received a commitment from Chairman RUSSEL LONG (D.-La.) to be brought up as a floor amendment in the spring.

According to Senator THURMOND'S statement (CONGRESSIONAL RECORD page S5034),

> The early implementation of this provision is essential, as it triggers the deadline provisions of section 2124 . . . In other words, to utilize the provisions of this bill, an owner must act before June (15,) 1981 to begin restoration of his structure.

While my bill is similar to Senator THURMOND'S, I intend to add a provision which will extend the life of section 2124 so that homeowners and owners of other noncommercial structures will be able to take advantage of section 2124 for a longer time than is now possible.

My experience as a member of the District of Columbia Committee and on the Subcommittee on Banking and Finance which dealt last year with New York City's fiscal crisis has made me aware of the need for and the potential of rehabilitation in American cities. By allowing tax relief for private homeowners who rehabilitate their historic homes, we are providing a much needed incentive. Urban renewal cannot stop with the commercial owner. For a comprehensive urban rehabilitation program to succeed, it must encompass every sector of the urban community, both business and private. This bill is designed to further speed the cause of urban renewal begun by section 2124 and in the end, transform many currently decaying historical districts into living monuments to the enduring quality of urban life.●

---

## THE SUNSHINE STATE DECLARES "SUN DAY" AS A DAY FOR SOLAR INFORMATION

### HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Mr. PEPPER. Mr. Speaker, we are all familiar with the efforts of this country to meet its present energy demands and to call upon alternatives to meet the demands of the future. It is exciting and encouraging to realize that solar energy technologies which were virtually unknown by most of us several years ago, are now drawing more public attention each day as viable means to meet many of our energy needs. In keeping with this greatly increased public interest and awareness, and with the natural enthusiasm of our educational institutions, our Governor, the Honorable Reubin Askew, and his cabinet issued an executive resolution calling for solar exhibits and demonstrations in the schools and universities of the State on "Sun Day," May 3, 1978.

This is a timely and very significant way to bring solar technology to the public, and the resolution notes the vehicle provided for such demonstration projects as Public Law 95–93, which provides for academic credit for community services projects undertaken by our young people. I hope that other States may follow the Florida initiative; the resolution and the Governor's actual "Sun Day" proclamation follow:

Whereas, May 3, 1978 has been proclaimed as Sun Day in the State of Florida; and

Whereas, Public Law 95–93, The Youth Employment and Demonstration Project Act, signed into law August 5, 1977, provided that academic credit for community services projects be allowed for youths; and

Whereas, this act includes solar energy devices made of cost free recycled materials, in the definition of community services projects; and

Whereas, it is possible for students at all grade levels to construct effective and efficient solar flat plate collectors from recycled waste materials, or to construct such other solar demonstration projects as may give students a basic introduction to the fundamentals and potentials of solar energy;

Now, therefore, be it resolved, that the Governor and Cabinet of the State of Florida urge all State private and public schools and universities to encourage the construction of a Sun Day, school, demonstration exhibit and hereby make available, at no charge, instructions and information regarding solar collectors and projects through the Environmental Education Office of the Department of Education.

In testimony whereof, the Governor and Cabinet of the State of Florida have hereunto subscribed their names and have caused the Official Seal of the said State of Florida to be

hereunto affixed in the City of Tallahassee, Florida on this 6th day of April, A.D., 1978.

REUBIN O'D. ASKEW,
*Governor.*

COSIGNERS

Cabinet of the State Florida—Secretary of State, Bruce A. Smathers; Attorney General, Robert L. Shevin; Comptroller, Gerald A. Lewis; Treasurer, Bill Gunter; Commissioner of Agriculture, Doyle Conner; Commissioner of Education, Ralph D. Turlington.

PROCLAMATION

Whereas, the energy demands of Florida are presently growing at a rate which would require by the year 2000 six times as much energy as currently needed; and

Whereas, the energy sources now supplying the State's demands are becoming increasingly scarce, and more costly; and

Whereas, the energy resources available to the citizens of Florida must be preserved and are vital to the future; and

Whereas, the utilization of solar energy offers the measure to lessen dependence upon ever dwindling fossil fuels; and

Whereas, broad use of solar energy in Florida must be stimulated by increased public awareness, both now and in the future; and

Whereas, May 3, 1978 will be observed throughout the Nation as Sun Day, a day to observe the importance of the new era of mankind's primal source of energy, the sun; and

Whereas, during the observance of Sun Day, activities will be sponsored by the Florida Solar Energy Center focusing attention on solar energy;

Now, therefore, I, Reubin O'D. Askew, by virtue of the authority vested in me as Governor of the State of Florida, do hereby proclaim May 3, 1978 as

SUN DAY

in Florida and urge that citizens participate in observances designed to inform the public about the program connected with solar energy.

In witness whereof, I have hereunto set my hand and caused the Great Seal of the State of Florida to be affixed at Tallahassee, the Capital, this 13th day of March in the year of our Lord nineteen hundred and seventy-eight.

Attest:

REUBIN O'D. ASKEW,
*Governor.*

BRUCE A. SMATHERS,
*Secretary of State.*

## COMMENTS ON THE BUDGET FOR AGRICULTURE AND RELATED AGENCIES

### HON. MARTHA KEYS

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, April 12, 1978*

● Ms. KEYS. Mr. Speaker, it is with great pleasure that I take this opportunity to share with my colleagues the text of the statement recently presented by President Duane Acker of Kansas State University, which is in my district, before the House Appropriations Subcommittee on Agriculture and Related Agencies. His remarks, addressing President Carter's proposed budget for the Department of Agriculture, are excellent and I highly recommend them to my colleagues' attention:

Mr. Chairman and members of the Committee, my name is Duane Acker. I am President of Kansas State University and I speak to you today on behalf of the National Association of State Universities and Land Grant Colleges.

Farmers, ranchers, owners and operators of private grazing and timberlands—the custodians of our food producing capacity and our renewable natural resources—are in a serious financial and business crisis.

On election night of 1976, I had supper with several young farmers at Anthony, Kansas. Anthony is in Kansas wheat country and near the Oklahoma border. These young farmers were in trouble. They had purchased wheat land in 1973, 1974 or 1975 for $700 to $1,000 per acre. U.S. farmers had been urged to produce. Consumers were worried about $1 bread. Our country certainly needed grain exports to aid our deteriorating balance of payments.

But by the Fall of 1976 these young farmers, who had responded to our country's expressed need and an apparent good business opportunity, were in trouble. They had voted that day for the congressional candidate each thought could best respond to their problems.

As you personally know the crisis has become more severe. Congress can respond. I would like to make six points.

1. A strong nationwide research and education program is a part of that response. We can reveal and we can teach: a) how to produce at lower costs by utilizing genetic resistance to disease, rather than or as a supplement to, the use of purchased disease or insect fighters, b) the concept of minimum tillage—saving tillage costs and sharply reducing erosion, c) how to achieve consistent production with less drought stress or disease effect, d) how to produce with less environmental risk as implied in a) and b) above, and e) how to maintain our capacity to produce.

It is important to individual family farmers, as well as in the national interests, that investments in farming operations not be unduly risked in the long run by possible recurrence of such devastating problems as southern corn leaf blight, or exotic livestock diseases.

2. The President's budget does not respond. That budget calls for an 11.1 million dollar reduction in Hatch agricultural research funds. It calls for an approximate $950,000 reduction in McIntyre-Stennis forestry research funds. It would reduce to zero funds for rural development research called for under Title V under the Rural Development Act of 1972. It reduces, by more than $9,000,000, funds available for several Extension programs, including farm safety and marketing of agricultural products, and would reduce to zero the extension rural development effort, all this at a time when the Extension endeavors in rural development are having notable impact in making rural America a better place to live and work. It provides no increase in Smith-Lever funds for Extension, at a time when Extension's primary clients are in the most serious difficulty they've faced since the 1930's. The President's budget would provide little financial help for the expanded human nutrition research program which has received much congressional support in recent sessions.

In the current fiscal year we have 46 percent fewer nutrition aides within the Expanded Foods and Nutrition Program for low income families than in fiscal year 1971. The President's budget would provide no increase in personnel for this program even though we have effectively learned the value of good nutrition and the impact this program has had on the nutritional status of low income families.

3. Enrollment in our Colleges of Agriculture across the country has increased 182 percent the last 15 years. PL 95-113, of which we witnessed the signing last fall in the White House rose garden, mandates U.S.D.A. to assume a vigorous role in strengthening undergraduate and graduate teaching in agriculture in our nation's land-grant universities. Yet there is no provision in the President's budget to implement this mandate.

4. The states, and in the case of extension, the counties, are responding, and so are commodity and farm organizations. State and local leaders vividly recognize the essential nature of aggressive, forward-looking research and education programs to stabilize and provide for the long time vigor of American agriculture, and farming and ranching enterprises.

In the area of animal health, for example, it has been my privilege to be personally involved in the provision by state legislatures of animal disease research facilities during the last decade in South Dakota, Nebraska and Kansas, at each state's land-grant university. Mississippi State University recently broke ground for a new College of Veterinary Medicine and veterinary research facility.

In Kansas, individual counties have, in two of the last three legislative sessions, sought increased mill levy authorizations to permit them to strengthen the Extension program in their counties.

The wheat, corn, soybean and grain sorghum organizations in Kansas have sought authority from the 1978 Kansas Legislature to assign $200,000 of check-off funds to an educational endeavor at Kansas State University designed to teach foreign grain buyers the good characteristics of U.S. grains.
